There is also a fourth area of long-term investment demand for Government securities apart from private investors-Federal Government investment accounts. These accounts—social security funds, veterans' life insurance funds, civil service and railroad retirement funds, etc.—added substantially to their holdings during the entire postwar period at an average rate of about \$21/2 billion a year until last year. During the fiscal year 1959, however, trust-fund expenditures are exceeding receipts, serving to complicate further the Treasury's task of keeping the short-term debt from growing.

We are just completing a fiscal year in which the largest peacetime deficit in the history of our country had to be financed. contrast, we are looking forward to having sufficient budget receipts next year to cover our expenditures. That fact, in itself, should brighten significantly the opportunities to improve the debt structure. Budgetary soundness has a pervasive effect in improving the environment in which we operate. The confidence which grows out of proving that we can live within our means is contagious

Our willingness and ability to act soundly in managing our debt and in conducting our fiscal affairs is important also to our friends throughout the free world who have a right to look to the United States as an example of fiscal integrity.

While the gold movements of the past 18 months have been in response to the normal functioning of gold in international exchange, the correction of prior adjustments, and the historical rebuilding of monetary reserves, they should serve as a reminder that the postwar dollar shortage has long since disappeared, although there remains a shortage of capital resources in many of the less-developed countries. These gold movements should remind us that other nations have built strong financial and industrial communities and that we must recrient our thinking in order to perform our full responsibility in the conduct of our internal and international economic affairs.

We have demonstrated the ability of a free economy to come out of an economic recession: it remains for us to demonstrate the willingness to pursue appropriate poli-cles during a period of high and rising business activity. Under current conditions, such policies would include at least a balanced budget and sufficient flexibility for the Treasury to permit sound management of the public debt.

We would be less than frank, however, to suggest that living within our means as a National Government will automatically cure the entire problem of managing the public debt. We would also be less than frank if we suggested that the legislation which you have before you will solve all of our problems. We feel very strongly, however, that the proposed legislation can contribute significantly to a fuller realization of our goals of managing the debt in a way that is consistent with sound economic progress.

The President has already outlined his program to you, incorporating principally improvements in the savings bond program, removing the 4½ percent ceiling on Treasury bond interest rates, and an increase in the debt limit. Proposed legislation on these three parts of the program is incorporated in sections 1 through 3 of the first of the bills we have placed before you. With your permission I should like to discuss each of these three items with you, and also to take up the second proposed bill.

to take up the second proposed bill.

Sections 4, 5, and 6 of the first proposed bill deal with three somewhat technical matters on which I am submitting a short written statement for the record. These sections would provide a 10-year statute of limitations on the liability of paying agents who in rare instances may redeem savings bonds by erroneous payments; clarify the statute which exempts U.S. obligations from State and local taxes, and authorize the issuance of bonds to the Government's various trust funds at the same prices as bonds are issued from time to time to the public. If there are any questions on these provisions, one of my associates will be glad to answer them later.

IMPROVEMENTS IN THE SAVINGS BOND PROGRAM

The statement on the savings bond program which was attached to my letter to the Speaker of the House of Representatives on June 8, 1959, contains a complete description of our savings bond plans, if the first proposed bill is enacted.

As I pointed out in that statement, the new savings bond program has three major

features:

(1) All series E and H bonds sold beginning June 1, 1959, will earn interest of 3¾ percent per annum if held to maturity—one-half of 1 percent more than at present—with lesser improved yields for shorter periods of holding.

(2) All series E and H bonds outstanding will also earn approximately one-half of 1 percent per annum more than they do now, it held to maturity, starting with their first full semiannual interest period which starts on or after June 1, 1959, with lesser improvement if redeemed earlier.

(3) All series E bonds on which an extension has already been promised and which had not yet reached first maturity before June 1, 1959, will be offered an improved extension on which 334 percent will be paid if held the full additional 10 years, with lesser yields (starting at 3½ percent) for shorter

periods of holding.

The savings bond program is a program that every American has a right to be proud of. It puts more of the public debt in the hands of long-term investors-few people realize that the average dollar invested in these bonds stays with the Treasury approximately 7 years. It also encourages desirable habits of thrift throughout the Nation. Almost half of the current E- and H-bond sales are accounted for by purchases on payroll savings plans by some 8 million Americans throughout industry and Government. Many of these savings grow out of the convenience of the payroll plan, savings which would not be taking place in such volume if were not for the savings bond program. Corporations throughout America, large and small alike, are administering these payroll savings plans on a voluntary basis because they realize their importance and the benefits to their employees of regular habits of thrift. Similarly thousands of banks and other financial institutions across the country are selling bonds every day without compensation because this is a program they sincerely believe in.

As you know, series E and H bonds are designed particularly for small savers. We have more than \$42½ billion of E- and H-bonds outstanding at the present time—\$38 billion in the accrual-type series E bonds issued at 75 percent of their face value with the interest reflected in successively higher redemption values each 6 months to maturity—and \$4½ billion in series H bonds which pay interest currently by semiannual check to give a sliding scale of investment yields approximating E-bond yields for similar periods of holding. These are the only series of savings bonds which the Treasury has currently on sale, although approximately \$8½ billion of the old series F, G, J, and K bonds (sales of which were discontinued 3 years ago) are still outstanding.

There are many reasons why so many millions of Americans buy and hold series E and H savings bonds. I have already mentioned the convenience of buying bonds on the payroll savings plan, and you are familiar with the convenience of savings bonds redemption privileges throughout the country. Owners of savings bonds never need to worry about market fluctuations; their redemption values at all times are known in advance and are guaranteed by the Treasury. Furthermore, unlike savings accounts, where rates may move either up or down from year to year, the Treasury guarantees whatever rate of interest it puts on the bond for the full term of that bond.

Americans also know that savings bonds are perfectly safe; the Treasury has replaced over a million of them which have been lost or destroyed since the program began. These are attributes of savings bonds which have not changed over the years, quite apart from the relative attractiveness of the interest rate.

### CURRENT SAVINGS BOND TRENDS

Sales of series E and H bonds improved slightly from 1957 to 1958 but were still behind sales for 1955 and 1956. Redemptions in 1958 declined significantly from the 1957 peak. But the 1959 record to date has not been good. Sales for the first 5 months are 6 percent behind a year ago, with a worsening trend. Similarly, 1959 redemptions through May are 9 percent above a year ago, also with a worsening trend. The amount of E and H bonds outstanding (including accumulated interest on E bonds) declined by \$36 million fh April and May—a greater decline than in any 2-month period since the autumn of 1950.

Furthermore, on a cash basis, the net drain on the Treasury of an excess of redemptions over sales of E and H bonds in the current quarter is expected to amount to approximately \$300 million—equal to the cash drain at the low point in the third quarter of 1957. This decline will undoubtedly become much more serious as time goes on unless the present terms of these bonds are improved. Furthermore, we can expect enthusiastic cooperation of financial groups and employers in sponsoring the program only when they can conscientiously recommend savings bonds to themselves, to their customers, and to their employees.

The rate of interest return on E and H bonds is now much less favorable in comparison with savings accounts, as well as with other types of securities—both Government and private—than in earlier years.

At the end of World War II series E bonds paid 2.90 percent for a full 10-year term of holding, as compared with 2½ on long-term

maturities of marketable Government securities, an average of 2% percent on savings and loan shares, 1% percent on mutual savings bank accounts, and less than 1 percent on commercial bank savings deposits.

At the present time the rate on E- and H-bonds held to maturity is 3½ percent as compared with more than 4 percent on long-term Treasury marketable securities, and average rates paid of 3% percent on savings and loan shares, 3½ percent on mutual savings bank accounts, and 2½ percent on accounts in commercial banks. Furthermore, the holder of an E-bond has to wait 3 years to get as much as 3 percent on his money, whereas the applicable rates on savings accounts apply to a far shorter period of holding.

This is the principal reason, therefore, that the growth of savings bonds in recent years has been far overshadowed by the rapid expansion of savings in mutual savings banks, commercial banks, and—particularly—sav-

ings and loan associations.

The percentage increases during the past 6 years are revealing: 52 percent for commercial bank savings, 50 percent for accounts in mutual savings banks, 150 percent for savings and loan shares, and only 21 percent for E- and H-bonds.

Overall series E savings bond rates were improved from 2.90 to 3 percent in the spring of 1952, and from 3 to 3.25 percent early in 1957. In neither case did the increased rate make up for the increased return on competing savings since the preceding change, SOME FEATURES OF THE NEW SAVINGS BOND PROGRAM

The Treasury's present plan attempts to correct this situation by bringing the savings bond program back approximately to the same competitive position that it held in 1952. It would, by so doing, contribute both to a greater awareness of the advantages of thrift throughout the country and to a better structure of the public debt.

Two of the three features in the new program—a higher rate on new bonds being sold and an improved extension term for bonds reaching maturity—follow the same pattern as in earlier savings bond revisions. You will note that we would like to make these changes effective as of June 1, 1959—regardless of when the legislation is approved—so that purchasers will know it is unwise to stop buying bonds on the false grounds that by waiting they could buy a better bond.

The other feature of our savings bond program is new and although it is rather completely described in the attachment to which I have been referring, I want to call it par-

ticularly to your attention.

We feel quite strongly that the Government has an obligation to the millions of Americans who hold E- and H-bonds to improve the future earnings of bonds already outstanding. We plan no additional interest on holdings of savings bonds for any period in the past. But we do feel that each holder of an outstanding bond is entitled to an increase of approximately one-half of 1 percent per annum on the future earnings of his bond if he holds it to maturity just as we are planning to pay one-half of 1 percent more to the buyers of new bonds.

Thus, present holders of E- or H-bonds would have little or no incentive to cash present bonds and buy new ones. Such switching operations would be costly both to the investor and to the Treasury.

The Treasury has, however, an even more important reason for taking this step, a reason which relates to the equitable treatment of all bondholders. The Treasury has something of a trusteeship function on behalf of millions of individual savers who do not follow interest rate trends closely. They buy bonds and hold bonds with under-

standable faith that the Government is

giving them a square deal.

The new savings bond program is expected to add \$30 to \$35 million to the savings bond part of the budget cost of interest on the public debt for the fiscal year 1960. Approximately \$5 million of this increased cost is attributable to the higher rate on new bond sales and to improved extension terms. The remainder is accounted for by increased interest on outstanding E- and H-bonds.

In assessing the true cost of the new program, however, in terms of overall budget costs of interest on the public debt, allowance should be made for some expectation of increased sales and decreased redemptions as a result of the new program in comparison with a continued deterioration of the savings bond picture if present

terms are continued.

The Treasury can borrow more economically through the proposed increase in savings bond terms at the present time than it can by borrowing through marketable securities. We believe, therefore, that the net addition to next year's budget costs for interest on the public debt because of the new savings bond program may be less than \$10 million, and could quite conceivably result in no net increase in all. It is realized, of course, that the gross cost on savings bonds will tend to build up in later years, but the saving in comparison with alternative borrowing would very likely continue to be a sizable offset.

The inauguration of the new savings bond program will depend on the favorable consideration by the Congress of section 3 of the first proposed bill. Section 3 will permit the Treasury to pay interest in excess of the present maximum rate of 3.26 percent, to pay increased interest on bonds already outstanding, and to permit future extensions of bonds for more than 10 years (the present limit) beyond their original ma-

turity dates.

# BACKGROUND ON THE 4 1/4 PERCENT INTERIEST RATE CEILING

I should like to consider next the 41/4 percent interest rate ceiling currently applying to all new issues of Treasury bonds, which includes all new Treasury issues maturing in more than 5 years. Section 1 of the first proposed bill would repeal the

present limit.

The earliest of all public debt statutes, in 1790, authorized the President to borrow money on the credit of the United States for the specific purposes of payment of the foreign debt, funding of the existing domestic debt, and assumption of the debts of the several States. The President delegated this authority to the Secretary of the Treasury, Alexander Hamilton, and this pattern of responsibility continued in general until the early Civil War period. At that time (1861) the Congress directly authorized the Secretary of the Treasury to conduct the financing of the war through the issuance of bonds, 1-year notes and demand notes.

Prior to World War I, however, the Secretary of the Treasury had little discretion in the actual carrying out of the public debt operations. The acts of Congress authorizing the issuance of U.S. Government obligations usually specified the terms and conditions applicable to each individual issue.

World War I brought a change in this situation. Because of the large amounts of borrowing involved and the expectation that a number of loan operations would be required. Congress departed from its previous policy of specifying the terms and conditions of the obligations to be issued. Instead, in the first and succeeding Liberty Bond acts, Congress gave the Secretary of the Treasury broader authority to determine the terms and conditions of issue, conversion, redemption, maturities, payment, and

the rate and time of payment of interest in respect to the several classes of obligations authorized to be issued. Interest rate cellings on Treasury bonds were still set forth in the statutes, however, the last one was

the present 4½ percent rate celling. In making these changes, Congress proceeded in several steps. In the first of the war financing operations of World War I, authorized by the first Liberty Bond Act in April 1917, Congress departed from its policy of determining the specific terms and conditions of each Treasury issue. The Secretary of the Treasury was authorized, with the approval of the President, to issue securities to the extent of \$5 billion at a rate of interest on bonds issued under this authorization not to exceed 3½ percent. The bonds were to be offered at not less than par and no commissions were to be paid; other terms were left to the discretion of the Secretary.

There was an expectation that wartime rates might move higher. It was provided, therefore, that these First Liberty Loan bonds could be converted into bonds bearing a higher rate than 3½ percent, if any subsequent series of bonds should be issued at a higher rate before the termination of the war. It may be noted that the effective return on the new bonds was actually higher than 3½ percent for many owners in comparison with corporate bonds or mortgages, since both principal and interest were exempt from all taxation (Federal, State, and local) except estate and inheritance taxes.

In the same act authorization was given to the Secretary of the Treasury to issue up to \$2 billion of certificates of indebtedness (1 year or less to maturity). The interest rate ceiling of 3½ percent and the tax exemption privileges provided for the bonds

applied also to the certificates.

The Second Liberty Bond Act in September 1917 in effect increased the Treasury's bond issuing authority under both acts to \$7.5 billion and increased the interest rate ceiling on bonds to 4 percent. The conversion privilege was retained for the new bonds except that in this instance the privilege was to arise only once instead of each time new bonds were issued at a rate higher than 4 percent. In this act and thereafter, the rate of interest payable on certificates was left to the discretion of the Secretary. Tax exemption was retained under the Second Liberty Bond Act, but to a lesser degree.

By the spring of 1918, when a third Liberty loan was under consideration, the bonds of the previous loans were selling below par and industrial and other securities were yielding a return much in excess of the rate on Government bonds. The Third Liberty Bond Act (April 1918), therefore, authorized the issue of 4½ percent nonconvertible bonds. The tax exemption status of the new bonds was virtually unchanged from the second liberty loan.

The 4½ percent interest rate ceiling was retained for the \$7 billion of bonds issued under the Fourth Liberty Bond Act (July 1918). In order to make the rate more attractive, however, tax exemption privileges were considerably extended with respect to surtaxes, excess profits taxes and war-profits taxes payable during the war and within a fixed time after the termination of the war.

During the early months of 1919 it became clear that new financing would again be required in the near future. A complicating element in the situation was the fact that the final session of the 65th Congress would terminate on March 4, 1919, considerably before the expected date of the new financing. Carter Glass, then Secretary of the Treasury, wrote to the Chairmen of both the House Committee on Ways and Means and the Senate Committee on Finance and presented a strong case for giving the Treasury greater leeway in setting the terms of new issues. He cited at length the difficulty un-

der conditions then prevailing of fixing the terms of loans considerably in advance of the offering.

In a statement before the Ways and Means Committee on February 13, 1919, the Secretary made a number of specific requests in connection with the forthcoming victory loan, including the request that the interest rate ceiling be removed for notes and for bonds having maturities of less than 10 years. "To withhold from the Secretary of the Treasury the power to issue bonds or notes bearing such rate of interest as may be necessary to make this refunding possible (i. e., refunding the interim certificates issued between the fourth and fifth (victory) loans) might result in a catastrophe," the Secretary stated. He added that: "To specify in the act the maximum amount of interest at a figure sufficient to cover all contingencies would be costly, because the maximum would surely be taken by the public as the minimum." It may be noted that the interest rate on certificates issued in anticipation of the third liberty loan had risen to 41/2 percent a year earlier (February 1918) and had remained at that figure on subsequent issues in anticipation of the fourth and victory loans. Certificate rates later rose to 6 percent.

Before its adjournment, Congress responded to the Secretary's appeal in March 1919 with the Victory Liberty Loan Act. This act granted increased discretion to the Secretary of the Treasury to enable him to deal with the situation as it might develop as far as notes were concerned, but his re-

quest on bonds was not granted.

A note issue (one of the possibilities previously suggested by the Secretary) was authorized in the amount of \$7 billion "containing such terms and conditions and at such rate or rates of interest as the Secretary of the Treasury may prescribe." The notes were to run not less than 1 year nor more than 5 years from the date of issue. In April 1919, the Treasury offered \$4½ billion of 4½ percent 3-4 year gold notes, exempt from State and local taxes (except estate and inheritance) and from normal Federal income taxes, and convertible at the option of the holder into 3½ percent 3-4 year gold notes exempt from all Federal, State, and local taxes (except estate and inheritance). The 4½ percent interest rate ceiling on bonds was thus not involved in the final financing of World War I, but only because no bonds were authorized or issued.

# THE 4 1/4 PERCENT CEILING IN OUR CURRENT ENVIRONMENT

Until recently, the trend of interest rates in the past 25 years has made the 4½ percent ceiling a somewhat academic problem. Except for a short period in the early 1930's, interest rates were low all through the depression. Confidence in the future had been seriously shaken and available savings exceeded the demand for borrowed funds. In World War II interest rates were held down artificially on Federal borrowing and the demands for borrowed funds by State and local governments, businesses and individuals were reduced to a minimum by rationing and other direct controls.

After World War II the demand for funds by non-Federal borrowers began to grow again and interest rates started to rise. This was aided by the fact that the Federal Government has not been able to reduce its debt in the postwar period as a whole. Budget surpluses in the twenties allowed the Federal Government to reduce the public debt by more than one-third (from \$26 billion in 1919 to \$16 billion in 1930). As a direct result, interest rates declined during a period of general prosperity.

Today, current demand for funds by businesses, home builders, State and local governments, and other borrowers continue to push heavily against a relatively modest vol-

ume of savings, and interest rates have risen further. At the present time it is extremely unlikely that the Treasury would be able to issue bonds in any volume at a rate of 4½ percent or less. This is particularly true of the intermediate term area (5 to 10 years) where the volume of new bonds which the Treasury can sell is usually substantially larger than the more limited market for bonds in the long-term area. By the end of May 1959 a number of bonds with more than 5 years to run were selling in the market with yields above 4½ percent.

Chart 7 on the market pattern of rates on outstanding bonds reveals that a large part of the market curve is above 4½ percent. (Chart omitted in the Record.) Furthermore, since the market for longer bonds is very thin (very little buying or selling) the market yield curve in the longer area is low as an index of what the Treasury would have to pay for a long bond if one were to be

issued today.

To date the Treasury has been able under the 4½-percent ceiling to sell bonds beyond 5 years to maturity. Last January we sold more than three-quarters of a billion dollars of 21-year bonds to yield 4.07 percent and in March we sold more than half a billion dollars of 4-percent bonds due in 10½ years. But the market has moved down further since these offerings (down in price, up in yield), and with the present level of interest rates the Treasury would be seriously restricted by the present ceiling from taking advantage of reasonable opportunities to improve the structure of the public debt by issuing intermediate and longer term bonds.

It should be mentioned that since March 1942 the Treasury has had the right to offer securities at a discount. It is permissible under present statutory authority, therefore, for the Treasury to issue a bond with a 4½-percent coupon rate at a price below par to yield any rate of interest to the investor above 4½ percent which may be required by market conditions. The Treasury has not believed it appropriate, however, to circumvent the 4½-percent ceiling in this way and is taking the direct approach to the problem by requesting appropriate legislation.

As the President stressed in his message the Treasury borrows at the lowest interest rate at which it can successfully sell the securities it should issue. However, the Treasury must secure its funds in the competitive market for credit as it exists at the time it needs the money. It must sell its securities at rates sufficient to attract buyers who always have the alternative opportunity to buy outstanding securities or new issues of

corporate or municipal securities.

These are conditions which are true of both Government and private borrowing. Typically, over recent years the average new highest grade corporate security, for example, has cost the borrower about three-tenths of 1 percent more than the market rate on outstanding issues. The Treasury's pricing of new issues has been even closer to the market pattern of rates on outstanding issues than corporate pricing, in comparison between the new Treasury issue interest cost and the estimated market rates. All borrow-ers—including the Treasury—try to do their borrowing as cheaply as possible, but each new issue must be attractive or fail.

Interest yields on long-term Government securities are higher today in the United States than at any time since the 1920's except for a very brief period in the early 1930's. They are still, however, among the lowest in the world. Long-term Government bond yields in Canada average approximately 5 percent; long-term yields in the United Kingdom are almost the same, and have been as high as 5½ percent within the past 2 years.

Any comparison between present interest rates in the United States and the rates on

Government bonds in 1918, at the time the 4½ percent rate was originally established, should also recognize that the original 4½ percent rate was in large part a tax-exempt rate, whereas all Treasury bonds issued since February 1941 have been fully taxable—and at income tax rates which are substantially higher than in 1918.

The request for removal of the limit reflects an honest appraisal of market conditions for what they are—conditions which have now made the 4½ percent ceiling a barrier to effective debt management. Under current conditions, continuation of the 4½ percent ceiling would not only deny the Government the opportunity to extend debt, but also could easily increase reliance on short-term financing to such an extent as to result in further imbalance in the debt structure, add to inflationary pressures, and push short-term rates to relatively high levels.

It has been alleged that the removal of the 4½ percent ceiling would raise interest rates. This is simply not the case. The inflationary aspects of debt management policy under the present ceiling would raise increasing apprehension both here and abroad as to future value of the dollar. Nothing contributes so strongly to forcing interest rates upward as fear of inflation. Those investors who want to invest in fixed-dollar obligations (rather than in stocks) will demand higher interest rates to compensate for their expectation of a shrinking purchasing power of the future repayments of principal and interest.

Those who feel that removing the 4¼ percent ceiling would raise rates need only look to the market for shorter term issues, where no ceiling applies. Treasury 91-day bill rates in a competitive market have moved up and down with the business cycle—up to almost 2½ percent in 1953, down to five-eighths of 1 percent a year later, up to 35% percent in 1957, down to five-eighths of 1 percent a year ago, and up again to over 3 percent now. Even the 5-year rate has fluctuated from below 2 percent to more than 4 percent within the last business cycle.

The President has requested that the limit be removed, not just raised to a higher figure. If the principle of flexibility has any meaning at all, it is clear that applies here. Any figure selected for a new limit would carry with it the connotation that the Government thought that is where interest rates should properly go. As Secretary Glass said in 1919, such a "maximum would surely be taken by the public as the minimum."

### HOW INTEREST RATES OPERATE

Popular discussion of interest rates is often clouded by misunderstanding of their nature in a free market economy. It is often incorrectly stated that the level of rates is determined by actions of the Federal Reserve authorities, or that the Treasury determines general interest rate policy each time it issues a new security. The view is also incorrectly expressed that interest rates somehow are fixed at high levels by large financial institutions.

The rise in interest rates which has occurred since last summer—following a rather sharp decline in the preceding 8 months—has been incorrectly attributed by some to have been the result of Federal Reserve and Treasury policies, and it is said that these policies have, in effect, cost the Treasury large sums in interest payments on the public debt. This view is followed with the suggestion that interest rates are too high and that something must be done to bring them down.

A supplemental statement that I am submitting contains a description of the factors affecting interest rates in our free market economy, a discussion of the forces causing higher interest rates during the cur-

rent fiscal year, and an analysis of the various courses of action which might be effective in inducing lower rates of interest. I shall simply summarize briefly at this point the major conclusions reached in my supplemental statement.

The interest rate is a price, the price of borrowed money. It responds to forces that operate through demand and supply in free credit markets. This being the case, the primary determinants of interest rates are the actions of millions of individuals and institutions rather than those of the Treasury or the Federal Reserve. The rise in interest rates since the end of World War II has resulted primarily from unprecedented demands for credit on the part of individuals, businesses, and State and local governmental units. In addition, the Federal debt has expanded, rather than contracting as it did during the prosperity of the 1920's.

A major factor contributing to the rise in interest rates since last summer has been the record peacetime Federal budget deficit of approximately \$13 billion. During the current fiscal year expansion in several categories of debt-which reflect demand pressures in credit markets-have been moderate in comparison with other recent years. Mortgage debt has increased substantially since last summer, but the total expansion in corporate bonds and notes, State and local government securities, and bank loans has been less than in any fiscal year since 1954. In addition, growth in consumer credit, except for recent months, has been moderate. the other hand, the rise of almost \$9 billion in publicly held Federal securities is in sharp contrast to the moderate increases in fiscal years 1954, 1955, and 1958 and the decrease in 1956 and 1957.

These figures support the judgment that the Federal deficit, rather than debt management or monetary policies, has been an important major factor promoting higher interest rates during this fiscal year, a fact which my supplementary statement treats in detail.

Is there, as some suggest, some practicable way of inducing lower interest rates in this country without causing great harm to our Nation?

The interest burden on the public debt—now about \$8 billion per year—is, of course, of deep concern. Of much more concern, however, is the need to maintain freedom and flexibility in our economy and, at the same time, avoid more erosion in the purchasing power of the dollar. The causes of infiation in a highly industrialized, free market economy are many and complex. Consequently, a program of infiation control must be broad-gaged, and cannot rely on monetary and fiscal policy alone.

Nevertheless, monetary and fiscal policy are indispensable instruments in our attempts to protect the value of the dollar. Logic and experience show that attempts to maintain interest rates at artificially low levels-either through creation of highpowered money by the central bank or by legislative attempts to maintain artificially low interest-rate ceilings—foster inflationary pressures. Inflation works its greatest hardships on people of modest means, whose savings are primarily in savings accounts, savings bonds, insurance policies and similar types of fixed-dollars assets. Furthermore, an inflationary upsurge is usually followed by recession—the greatest enemy of sustained, rewarding economic growth.

Therefore, in any attempts to promote lower rates of interest, I would strongly counsel against some suggested techniques (discussed in detail in my supplemental statement) that would rely upon the ability of the Federal Reserve System to create large amounts of high-powered dollars.

This does not mean, however, that we cannot take actions which, although per-

haps not leading immediately to lower levels of interest rates, would remove some of the significant pressures in the Government fiscal field that have tended to push rates

higher during the past year.

In particular, we must have a clear demonstration of our willingness to maintain fiscal and monetary discipline. A period of high and rising business activity, such as the present, requires a surplus in Federal fiscal operations for debt retirement, and freedom for Federal Reserve authorities to conduct flexible credit policies. A budget surplus in the coming fiscal year can convert the Fed-Government from a net borrower in credit markets to a net supplier of funds, through debt retirement. Pressures on interest rates can be considerably less than if the Treasury had to compete strongly with other borrowers for funds to finance a deficit.

As I have said before, the clearly mistaken view that inflation is somehow inevitable has tended to push interest rates higher. Inflationary expectations generate higher rates primarily because borrowers are anxious to obtain funds that they expect to repay in cheaper dollars, whereas many individuals and institutions with funds to invest prefer equities over debt obligations, or will make loans or purchase bonds only if interest rates are high enough to compensate for the ex-

pected rise in prices.

Any actions that would let borrowers and lenders know that the value of the dollar will be preserved would remove one of the pressures promoting higher interest rates. This can be done only by means of a broadgaged attack on all of the forces and practices that stimulate inflationary pressures. I would reemphasize, however, that under current conditions the most important single action would be a clear demonstration of our determination to maintain fiscal and monetary discipline.

Coupled with this demonstration is the need for greater flexibility in debt management, so that a better balance in the debt structure can be achieved, and so that markets will not become unsettled over such matters as in impinging interest-rate ceiling. The removal of the 414-percent ceiling on new issues of Treasury bonds would be an important and necessary step in this

direction.

The overriding advantage of this approach to reducing pressures on interest rates stems from the fact that the actions would be consistent with the requirements of sustainable economic growth, and would also transmit effects through market forces of demand and supply rather than by means of Government decree or regulation.

By proceeding in this way, the Federal Government would be promoting "maximum employment, production, and purchasing power," as required in the Employment Act of 1946, in a manner consistent with those crucially important but often overlooked words in the act which stipulate that such actions be carried out "in a manner calculated to foster and promote free competitive enterprise and the general welfare.'

NEEDED INCREASES IN THE DEBT LIMIT

I turn now to the third part of my discussion of the major elements in our public debt legislative package, namely the President's request for an increase in the public debt limit as provided for in section 2 of the first proposed bill.

The existence of a restrictive debt limit plays an important part in our struggle for fiscal soundness. Unlike my views on the 41/4-percent interest rate ceiling, I believe a specific dollar ceiling on the public debt serves a useful purpose and can be effective in focusing attention in a unique way on the part of the executive departments, the Congress, and the public to the problems of sound Government finance. Such a limit

should be restrictive enough to accomplish this purpose, yet not so rigid as to impede the normal operations of the Treasury. debt limit changes the President has requested meet this test.

Last July the President recommended enactment of legislation to increase the regular (permanent) statutory debt limit from \$275 billion to \$285 billion and to provide for an additional temporary increase of \$3 billion to expire June 30, 1960. Instead, the act of Congress approved September 2, 1958, increased the regular statutory debt limit to \$283 billion and the temporary increase of \$5 billion for the period ending June 30, 1959, provided for in the Act of February 26, 1958, was allowed to continue in effect. As a result, the statutory debt limit will revert to \$283 billion on June 30, 1959, with no provision for any temporary increase in the limitation beyond that time.

On June 30, 1957, after 2 fiscal years of budget surpluses aggregating more than \$3 billion, the public debt subject to the statutory debt limitation was \$270.2 billion. However, as a result of the recession in late 1957 through early 1958, the Treasury incurred a budget deficit of \$2.8 billion in the fiscal year 1958 and will incur a budget deficit of almost \$13 billion during the year that will end on June 30, 1959, based on the President's January budget estimates.

The financing of these budget deficits is now expected to bring the public debt subject to limit to approximately \$285 billion on June 30, 1959-\$2 billion over the present regular ceiling. As a result the President is proposing an increase in the regular statutory limit to \$288 billion, an increase equal to the \$275 billion debt limit in effect at the beginning of the fiscal year plus the estimated deficit for the current year.

This will enable the Treasury to conduct its debt operations with a margin of \$3 billion to allow for flexibility in debt management operations and contingencies. A \$3 billion margin is essential to proper handling of the Government's operations. The Treasury has been operating on an average cash balance of about \$41/2 billion during each of the last 3 fiscal years. This is relatively small; the average operating cash balance this year has averaged only 69 percent of average monthly budget expenditures—the lowest percentage for any recent year, as is shown on the right side of the chart below.

The Treasury's cash balance is no higher today than it was a decade ago, when budget spending was half its present rate.

The efficient use of cash balances in this way has, however, gone about as far as it can without impairing efficiency of Treasury operations. There are times when a some-what larger cash balance would have given the Treasury much needed flexibility in timing its borrowing operations so that it could ride out a period of market apathy for new issues, rather than forcing the Treasury to borrow in an unfavorable atmosphere because it was running out of cash.

In addition to maintaining an adequate cash balance the Treasury should also be prepared to sell new issues of securities a week or so in advance of the maturity of old securities if such action would add materially to the success of a particular financing operation. This was true, for example, of the recently completed May 1959 financing. As part of this financing the Treasury sold \$2 billion of 11-month Treasury bills with an issue date of May 11 to provide most of the funds necessary to pay off a \$2.7 billion Treasury bill issue maturing on May 15. For the intervening 4 days, therefore, there was an increase in debt of \$2 billion. This was possible only because the Treasury had some flexibility under the \$288 billion temporary ceiling-flexibility which we requested and which the Congress approved last summer.

A third reason for our firm belief that a \$3 billion debt leeway is a minimum relates to the possibility which always exists that there may be sudden demands on the Treasury in event of a national emergency, when the Congress might not be in session.

OUR DEBT PROJECTIONS FOR FISCAL 1960

The outlook for the fiscal year beginning July 1, 1959, is for a level of budget receipts sufficient to cover budget expenditures. Even with this improvement in our fiscal outlook, however, there will still be a large seasonal deficit in the first half of the fiscal year, offset by a heavy seasonal surplus next spring.

There is no distinct seasonal pattern in budget expenditures between the two halves of the year which is based on the January

budget estimates.

On the other hand budget receipts follow a distinct seasonal pattern. Even when the speed-up in corporate tax collections, growing out of revisions in the Revenue Code of 1954, is completed there will still be a substantial seasonal disparity in tax receipts. As you know, smaller sized corporations will continue to concentrate payments in the spring which, together with the concentration of individuals' declaration and final payments, will still result in relatively high tax receipts in January-June of each year. Again, the January budget estimates provide the basis for these figures.

We expect, therefore, that even with a balance between expenditures and receipts for the fiscal year as a whole expenditures will exceed receipts by approximately \$6 billion during the July-December half of the year. The July-December 1959 deficit will be only slightly more than half of the \$11 billion deficit in July-December 1958.

At intermediate points, such as December 15 and January 15, the cumulative deficitand, therefore, borrowing needs-will reach or exceed \$7 billion. That is why the President has requested a temporary debt celling of \$295 billion. We are asking that this temporary limit be provided only through June 30, 1960, although a valid case can be made for a provision that would, for a longer period of time, control the debt at fiscal year ends and yet provide for seasonal requirements within the year. It is entirely appropriate for the Congress to review the debt limit situation each year. however, if it so desires,

Table 1, attached at the end of this statement, indicates in detail our current semimonthly projection of the debt subject to the limit during the fiscal year 1960, assuming a constant \$31/2 billion operating cash balance.1 The projections are stated both before and after the allowance for \$3 billion flexibility. As you will note from the table and also from chart 16 below, on December 15, for example, even the \$295 billion temporary debt limit would appear to be insufficient for a few days but we will be able to operate within that limitation without undue impairment of our flexibility." Chart 16 also indicates the wide fluctuations in the amount of debt outstanding within each month during the fiscal year just ending.

The fiscal 1960 estimates on which the current request for an increase in the debt limitation is based are the same as those contained in the budget which the President submitted to you earlier this year—budget receipts of \$77.1 billion and budget expenditures of \$77 billion. Those esti-mates were prepared 6 months ago and as the President indicated in his message on public debt management, it now appears that interest on the public debt during the forthcoming year will amount to about \$81/2

<sup>&</sup>lt;sup>1</sup> Similar data for the fiscal year 1959 are shown in table 2 at the end of the state-

billion instead of the \$8 billion included in the budget.

As I pointed out earlier, only a negligible amount of this half billion dollar increase (perhaps less than \$5 million) represents the net additional cost of the new savings bond program. For all practical purposes the entire increase is attributable to the rise in interest rates which has taken place since the earlier estimate was made. The President also made it clear in his public debt message that the strength of our economic recovery beyond earlier expectations has improved the revenue outlook for the fiscal year 1960 sufficiently to offset the increased interest cost.

# FACILITATING EXCHANGES OF TREASURY SECURITIES

Before discussion of the remaining sections of the first proposed bill I would like to complete my statement by discussing briefly the provisions of the second proposed bill.

I have already spelled out in some detail the problem of an ever-shortening public debt and the Treasury's determination to issue intermediate and long-term bonds Whenever market conditions are appropriate. Typically, new Treasury bond issues arise either from a new issue sold for cash or a new issue offered in exchange to holders of securities which are maturing within a matter of weeks. Many of these maturing securities were originally long-term bonds, bought initially by long-term investors such as individuals, personal trust accounts, life insuracne companies, mutual savings banks or pension funds. When the bonds approach maturity, however, most of these longerterm investors have already liquidated their holdings and at maturity the bonds are usually held largely by commercial banks or by nonfinancial corporations or other short-term investors. Therefore, both of the traditional methods of issuing long-term securities which the Treasury uses involve a substantial amount of churning in the market as long-term investors seek to raise the cash to pay for a new cash issue or to buy the maturing issue which gives them to right to exchange the maturing issue for the new

There is a third approach, however, to the problem of selling longer-term securities to long-term investors, and it is an approach Which we believe would add materially to the Treasury's ability to encourage such in-Vestors to maintain investment in long-term This approach may be characterized as "advance refunding." It is a technique which was used in the Canadian conversion loan operation last summer, whereby \$6 billion of securities having from 6 months to 8 years yet to run to maturity were exchanged for securities with maturities ranging from 3 to 25 years, an operation involving about 40 percent of that country's national

Because of fundamental differences in the financial systems of the two nations, the U.S. Treasury has no intention of embarking on such an ambitious program in attempting to solve our debt problem. The basic thought behind the Canadian operation should be given careful consideration, however, as to its possible application in the United States in a much more limited way.

One of many possibilities in this direction, when and if market conditions are appropriate at some time in the future, is to offer new long-term bonds to the holders of the large amount of 2½ percent bonds sold immediately before or during World War II. Such a new issue, or issues, would be sold on terms that would be attractive to the Present holders and would permit the Treasury to do a substantial amount of debt extension on a straight exchange basis with existing holders, and, therefore, with a minimum of effect on the Government securities and capital markets. These are investors who already hold substantial amounts of

Government securities. We want to keep them invested in Governments if we can,

Under present law, however, the exchange of one Federal security for another in any refunding operation requires that the gain or loss from the exchange must be recognized for tax purposes if value of the old security on the books of the investor is above or below the market value of the new issue as of the date of exchange. In practice, this type of advance refunding operation would be expected to establish a loss for tax purposes to most holders because the Treasury would be likely to engage in advance refunding only if the obligations to be exchanged are selling below par in the market. The 21/2 percent bonds referred to, for example, were selling at prices ranging from \$83 to \$88 per \$100 bond as of end of May. The terms of the new, longer issue would, of course, be set so that it would be worth approximately the same price in the market as the issue being turned in. Whether an investor would accept such an offer or not would be entirely his own decision. No holder can be compelled to give up his present contract rights by taking an ex-change issue unless he wants to.

Under these circumstances, the present taxable character of the exchange represents an immediate tax advantage to any taxable holder since he may take a loss which he can employ for tax purposes. If he holds the new issue to maturity or sells at a higher price, he may realize a corresponding gain on the new security. He will then have to pay a tax on this gain, but in the meantime, he has had the benefit of postponing the tax on the loss deduction under present law.

Under the proposed bill postponing the recognition of gain or loss, the reason that an investor may find an exchange more attractive, despite the denial of a tax advantage, is because of his balance sheet and reserve position. So long as gain or loss on the exchange must be recognized for tax purposes many governmental authorities who supervise financial institutions require that the institution record the loss on its books. This means a corresponding reduction in earnings and in surplus, which is understandably distasteful to many investors.

If recognition of gain or loss were to be postponed until the ultimate disposition of the new security, however, it would become possible on the assumption that governmental supervisory authorities approve, for the institutional investor to carry the new securities at the same basis of valuation that he has been carrying the old ones. Thus, removal of the need to accept a book loss would make the exchange more attractive to many investors. Any investor who would benefit, under present law, from taking a tax loss could sell the old security and buy the new issue in the market.

Enactment of the second proposed bill would permit the investor to carry over the valuation basis of the bonds which are directly exchanged for the new bonds in this way. This could be done only under rules which we would prescribe for each exchange of securities so that the recognition of gain or loss for tax purposes could be deferred. There would be no change in present provisions of law where exchanges of obligations other than U.S. Government securities are involved.

I would like to emphasize again that the practical application of this bill at the time of any such exchange—to the extent that the bondholder is a taxpayer in the first place—is to postpone recognition of a tax loss and therefore would tend initially to increase rather than reduce revenues. Actually, the effect on tax revenues will be small because of the character of many of the institutions involved—pension funds, mutual savings banks, savings and loan associations, and charitable organizations.

I thank you for your patience in bearing with me through my long statement. I hope it has given you some insight into our problems and why we feel prompt enactment of both proposed bills is essential.

SUPPLEMENTAL STATEMENT ON PUBLIC DEBT MANAGEMENT BY SECRETARY OF THE TREAS-URY ROBERT B. ANDERSON BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, 10 A.M., JUNE 10, 1959.

INTEREST RATES IN A FREE MARKET ECONOMY

As I observed in the main portion of my statement before this committee, popular discussion of interest rates is often clouded by misunderstanding of their nature in a free market economy. The purpose of this supplementary statement is to discuss in some detail the nature of interest ratesparticularly the factors that cause them to rise or fall—the reasons for the increase in rates since last summer; and several alternative courses of action that might be effective in inducing a lower level of interest rates.

Demand and supply in credit markets

Speaking broadly, the interest rate is nothing more nor less than a price, namely, the price of borrowed money. As a price, the rate reacts to the same sort of influences as other prices in a free market economyinfluences that operate through the demand for and supply of funds available in credit markets. Just as an increase in the demand for goods or services tends to increase the prices of these items, so does an increase in the demand for funds tend to increase interest rates. And an increase in the supply of funds available in credit markets has the same basic effect as an increase in the supply of any good or service in any market; price tends to fall. This is true under our present market arrangements; it will remain true so long as credit markets remain free and borrowers and lenders are permitted to manage their affairs with a minimum of interference and regulation.

From the side of demand, the principal impact on interest rates reflects the actions of four groups of borrowers: Individuals, corporations. State and local governmental units, and the Federal Government. Total indebtedness of these borrowers has almost

doubled since 1946.

Individuals, borrowing to finance purchases of a variety of goods and services and to construct or purchase homes, increased their gross indebtedness from \$60½ billion to \$240 billion between 1946 and 1958. gross debt of business corporations, which seek credit to finance working capital needs and for longer run purposes in expanding and modernizing plant and equipment, rose from \$1101/2 billion to \$298 billion. State and local governmental units, confronted with growing needs for schools, highways, and streets, and a variety of other facilities, have borrowed heavily in the postwar period; their gross debt expanded from \$16 billion in 1946 to \$59 billion in 1958. The Federal Government, the fourth major borrower in credit markets, seeks funds to meet seasonal needs and to finance a deficit. The public debt increased from \$259½ billion in 1946 to \$283 billion in December 1958. As of the end of June, the debt is expected to total \$285

The postwar pressure on interest rates arising from the demand for credit is apparent. Concomitant with the large expansion in demand, however, has been a growth in the supply of funds available in credit markets. These funds come ultimately from two sources: Savings or money creation. It makes little difference to the borrower whether the ultimate source is one or the other; dollars flowing out of money creation are fully as spendable as those made available from savings. The ultimate source may be of crucial importance from the standpoint of achieving price stability and sustainable economic growth, however, simply because dol-lars generated through money creation represent an increase in the total pool of dollars available for spending and, if not matched by a more or less equal increase in output of goods and services, tend to force prices up. It is no accident that consumer and wholesale prices have more than doubled during the past 20 years, in view of the fact that a fourfold increase in the active money supply was only partly matched by an approximate doubling of real production of goods and services.

There is no need to go in detail into the various forms of savings-by individuals, business firms, and governmental units-or to differentiate sharply between funds flowing from current saving and those that represent savings of earlier years that subsequently are made available to borrowers, The really important point relates to the distinction between funds obtained from existing pools of dollars and those generated by money creation.

How does money creation take place? Largely through the lending and investing activities of the more than 13,000 commercial banks in this country. Suppose that John Does wants funds for use in his business, or to improve his home, or to meet medical or other expenses. And suppose that he applies for a loan from a commercial bank to obtain the funds. If the loan is granted, John Doe simply signs his promissory note and acquires a credit to his deposit account in the bank. This transaction represents no transfer of existing dollars; quite the contrary, John Doe an extra \$100, \$1,000, or \$10,000, depending on the amount of the loan, but no other individual or institution has any less money. Money creation has indeed taken place. Moreover, not only John Doe, but thousands of business firms, many State and local governmental units, and the Federal Government also borrow, directly or indirectly, from commercial banks. bank credit extension of this type which is not offset by a reduction in other bank loans or investments results in an equivalent amount of new money creation.

Do commercial banks have unlimited ability to create money in this fashion? Not by any means. People borrow money pri-marily in order to spend, and the banker who makes such loans knows that within a relatively short period of time the newly created deposit will probably be withdrawn from his bank. This will probably take the form of a transfer to another bank, perhaps in the same city, perhaps somewhere else in the Nation. But, the important point is that the banker must be able to meet a drain of cash out of his bank; and his ability to do so depends on his cash reserve position. In other words, he cannot afford to make large extensions of credit unless he has extra cash on hand (or on deposit with his Federal Reserve bank) to meet the resulting drains, or unless he is in a position to obtain additional cash as the drains take place.

This is where the Federal Reserve System comes into the picture. Through various devices (e.g., discount policy, open market operations, and control over member banks reserve requirements), Federal Reserve authorities can influence the cost and availability of bank cash reserves. In so doing, the willingness and ability of commercial banks to make new loans and investmentsand thus add to the flow of funds available in credit markets-is very much affected.

The resiliency of bank credit expansion and contraction can serve as an important balancing wheel in credit markets-or, it can operate as a serious destabilizing factor in our attempts to achieve a stable price structure and relatively full and efficient use of our economic resources. The critical question is, of course, the rate at which bank deposits come into or go out of existence. During a period of high and rising business activity, when credit demands are especially strong, and when men, machines, and materials are being used at high capacity, an excessive amount of money creation tends to

add to inflationary pressures. Spending in the economy as a whole may expand rapidly but, with resources in relatively full use, the volume of goods and services that can be produced can only be increased slowly. Inflation is then the result. And judging by past experience, an inflationary upsurge is likely to be followed by readjustment and recession, so that our end objective of achieving maximum economic growth is actually

Since recession is a serious deterrent to sustained economic growth, bank credit expansion may be desirable when economic activity is lagging. Under these conditions, the men, machines, and materials necessary to support increases in production are available. Greater spending by consumers

and business firms is to be desired.

Consequently, sustained and rewarding economic growth—which requires reasonable price stability and relatively full and efficient use of our economic resources can be attained only if the aggregate flow of credit is consistent with the ability of the economy to absorb that flow, when translated into spending, at a given time. And, the Federal Reserve System, in fulfilling its statutory obligations, is constrained to employ its monetary powers flexibly. In a free market economy, an inevitable result of the interaction of demand and supply forces in credit markets-including the impact of Federal Reserve actions—is fluctuations in interest rates.

Stated simply, flexible credit policies, attuned to the business situation as it unfolds over time, can be effective only if interest rates are free to respond to the forces of demand and supply in credit markets. But it must be emphasized that the major forces affecting those rates stem from actions of free and independent lenders of funds. The law of supply and demand is a powerful and inescapable economic force; attempts to thwart it in the past have inevitably led to greater difficulties later on.

At times interest rates seem to decline faster than might be expected in view of basic trends in credit demands, savings, and the availability of bank credit. At other times they seem to rise faster than might seem warranted in view of these forces. For example, the sharp decline in rates in late 1957 and early 1958 seemed to outrun basic forces of demand and supply, and the same can be said of the sharp increase in rates in the summer of 1958.

The explanation of such sharp shifts can be found primarily in the impact of expectations on credit markets. In late 1957 it became clear that recessionary forces were gathering strength. The Federal Reserve System, consistent with its responsibility to conduct its operations flexibly, shifted from the restrictive policy of the preceding 21/2 years toward a policy of monetary ease. In view of the shift in the business situation. which implied a slackening demand for funds in credit markets, and in view of the reversal of Federal Reserve policy, which implied an increase in availability of bank credit, market participants reasoned that the uptrend in interest rates that had prevailed since 1954 would be reversed, and that the outlook for some time to come was for declining rates.

Declining interest rates are synonymous with rising prices for outstanding Government and other types of bonds. Consequently, individuals and institutions with funds to invest tended to step up purchases of such instruments—the supply of funds available in credit markets expanded sharply; and individuals and institutions with bonds for sale became more reluctant to part with them-the demand for funds subsided, relatively speaking. The result: sharp declines in interest rates (or increases in bond prices), stimulated largely by expectations of lagging business and easy money.

The decline in business activity came to an end much sooner than many observers anticipated. In June 1958, the strengthening business picture gave rise to rumors that Federal Reserve policy might be in the process of shifting away from the aggressively expansive policies of preceding months. Many investors in debt instruments, including Government bonds, became anxious to dispose of the securities before interest rates rose and bond prices declined; potential buyers became less anxious to buy. The result: sharp increases in interest rates, stimulated largely by expectations.

Thus, one type of expectation is related primarily to the swings in business activity and the impact of flexible monetary policies. But at times other types of expectations exert important influences. During the past year, the increase in interest rates has been stimulated partly by a growing-but, in my judgment, mistaken-conviction that inflation is inevitable. Many investors have been reluctant to purchase debt instruments. Which carry a fixed interest return and principal payment, as opposed to equities. reluctance to purchase bonds, and the preference for equities, has contributed to relativedly low bond prices (high interest rates) and high stock prices.

It is important to emphasize, however, that effects of expectations are likely to be short-lived, unless later ratified by the expected events. The sharp decline in interest rates in late 1957 and early 1958 could not have been sustained had it not been for the fact that recession did occur, credit demands did subside, and monetary policy did assume a posture of aggressive ease. Again, the sharp rise of last summer was later ratified, in part, by the vigorous expansion of business activity, with the accompanying demands for credit, and the im-Pact of a \$13 billion Federal deficit on credit markets. Finally, the impact of inflationary expectations on the level of interest rates can be minimized only when it becomes clear to participants in free credit markets that the integrity of the dollar will be preserved.

In summary, interest rates in a free market economy are influenced by a number of factors which can best be understood in terms of the forces working through demand and supply in credit markets. Of primary importance on the demand side are borrowings by individuals, businesses, State and local governmental units, and the Federal Government. The supply of funds available in credit markets is mainly a reflection of the availability of financial savings, coupled with net changes in commercial bank credit. Federal Reserve policy, by influencing reserve positions of commrcial banks, affects the rate of flow of bank funds into credit markets.

Before examining the reasons for the rise in interest rates in this country since last summer; it might be worthwhile to discuss briefly two popularly held views concerning the nature of interest rates that, in my judgment, are mistaken.

One often hears the statement that increases in interest rates are necessarily inflationary, in that interest is a cost of doing business and sellers of goods tend to pass on rate increases in the form of higher prices. The people who hold this view overlook the fact that rising interest rates are indicative of pressures in credit markets growing out of strong demands for funds relative to the Inasmuch as individuals and institutions borrow money primarily to facilitate spending, rising interest rates reflect an inability of all potential borrowers to obtain as much credit as they would like to have. In other words, spending is impeded, and the rise in interest rates is one measure of the degree of restriction on spending. And, under normal circumstances, anything that tends to dampen spending when business activity is high and rising tends to diminish—not to augment—inflationary pressures.

Moreover, available figures indicate clearly that interest, as a cost of doing business, is a decidedly minor expense. In 1957, for example, net interest costs of all manufacturing corporations were only four-tenths of 1 percent of gross sales. Thus, of the cost of an article selling for \$100, only 40 cents represented interest cost. Admittedly, interest expenses of wholesalers and retailers, who also must finance some of their operations by borrowing, would add slightly to total interest cost included in items bought by final consumers. Still, however, the contribution of interest expense to total cost would be small.

It has been suggested that public utility rates are influenced significantly by interest costs, since such firms rely heavily on bonded indebtedness. In this case, however, net interest expense is estimated to be less than 4½ percent of gross revenues.

than 4½ percent of gross revenues. The evidence seems clear that an increase in interest rates exerts only a small direct effect on prices of goods and services, and that this impact is far outwelghed by the restrictions on total spending stemming from limited availability of funds in credit markets.

There is also a misconception concerning the identity of the recipients of interest payments on the Federal debt. Some observers appear to believe that large financial institutions are not only the major recipients of such payments, but that their share has increased as interest rates have advanced in the postwar years.

The accompanying table, which presents estimates of the distribution of interest payments on the public debt in 1946 and 1958, indicates clearly that such is not the case. In 1946, the major financial institutions—commercial banks, mutual savings banks, and insurance companies—received an estimated \$2,1 billion in interest on holdings of Government securities, or about 45 percent of the total of such payments. By 1958, the share of these institutions had declined to \$2 billion, representing only 26 percent of total payments.

Estimated distribution of the interest on the public debt, fiscal years 1946 and 1958
[In billions of dollars]

Investor classes	Rudget expenditures	
	1946	1958
Individuals: Savings bonds Other securities	0.7	1.
Subtotal Commercial banks Mutual savings banks Insurance companies Nonfinancial corporations State and local governments Miscellaneous investors Federal Reserve banks Government investment accounts	1.2 1.4 .2 .5 .2 .2 .2 .2 .2 .1 .7	
Total	4.7	7.1

Moreover, a significant portion of the interest income of banks has been passed on to customers in the form of higher rates on time and savings deposits. For example, in 1946 member bank interest payments to depositors were only 20 percent of interest income on their holdings of Treasury securities. Reflecting the sharp increase in rates paid on time and savings deposits in the past few years, member banks in 1958 paid almost 90 percent of their interest income on Governments to depositors.

Other important trends brought out by the table include an \$800 million increase in interest payments on savings bonds, held mostly by individuals; a \$700 million expansion in

parments to Federal Reserve banks, which returned 90 percent of their net earnings to the Treasury; and an \$800 million increase in payments to Government investment accounts, which are operated almost wholly for the benefit of individuals.

These figures indicate, therefore, that a substantial portion of payments on the debt accrue directly or indirectly to the benefit of individuals, many of whom are of relatively modest means. Moreover, the increase in interest payments since 1946 reflects increased payments primarily to individuals, Federal Reserve banks, and Government investment accounts, rather than to private financial institutions.

The rise in interest rates since last summer

Trends in Interest rates over a period of several years, or of several months, can be understood only in terms of the major demand and supply forces at work. Accordingly, it might be worth while to examine closely the increase in rates that has occurred during the current fiscal year in order to gain an understanding of the factors underlying the advance.

Interest rates on Treasury and other securities have risen considerably from the lows reached during the recession of 1957-58. Yields on long-term Treasury bonds, which averaged 3.12 percent in April 1958, had risen to an average of 4.08 percent in May 1959. Average issuing rates on 3-month Treasury bills, which fell below 1 percent in the spring and summer of 1958, have recently risen above 3 percent. Similarly, rates on commercial paper, bankers' acceptances, prime bank loans, corporate and municipal bonds, and other debt instruments have advanced substantially during the past year.

What factors lie behind this rise in rates? First, let's look at the demand for credit. The growth of consumer credit in the current fiscal year has been less than in most recent years. Thus, pressure on interest rates from this source has been moderate, except for the past few months, in which demand for consumer credit has risen substantially. Individuals have indeed been active borrowers of funds, primarily in the form of mortgage credit. Total real estate mortgages, consisting largely of individuals' borrowings, are expected to increase \$18 billion this fiscal year, a greater rise than in any of the past 5 fiscal years. This increase can be viewed as having contributed to demand pressures in credit markets.

Total corporate bonds and notes, State and local government securities, and bank loans have increased less than in any fiscal year since 1954. Thus, these credit demands have not exerted significant pressures on financial markets.

The demand for credit on the part of the Federal Government, to finance a record peacetime deficit of approximately \$13 billion, has been much greater than in any of the preceding 5 fiscal years. The publicly held Federal debt will increase by almost \$9 billion in this fiscal year, as contrasted with increases of \$3.1 to \$3.3 billion in fiscal years 1954, 1955, and 1958, and declines of \$4.7 and \$3.5 billion, respectively, in 1956 and 1957. (The difference between the \$13 billion deficit and the \$9 billion increase in Federal debt in this fiscal year results primarily from a reduction in the Treasury's cash balance.)

These figures demonstrate clearly that the more important demand pressures on interest rates during the past year have stemmed from the increase in mortgage debt and the record peacetime Federal deficit. However, the rise in mortgage debt, although substantial, is not much greater than in fiscal years 1955 and 1956. Thus, it appears that a major factor contributing to the sharply rising demand for credit in fiscal 1959 has been the record peacetime Federal deficit. The addition of almost \$3 billion in Federal securities

to what might be viewed as more or less normal aggregate credit demands could only exert strong pressure on interest rates.

As I noted earlier, however, trends in interest rates are also influenced by forces working through the supply of funds available in credit markets. While data on savings are difficult to interpret in term of impact on credit markets, there appears to be no evidence that a shift in the availability of savings has contributed to the rise in rates during the past year.

As to the timing of the events in the summer of 1958, it is important to note that member bank reserve positions and shortterm money market rates reflected a continmonetary ease until August-a uation of full 2 months following the reversal of market rates on intermediate—and longer term Government bonds. Thus, the market appears to have led monetary policy and, as stated earlier, the market shift resulted primarily from radical changes in expectations. The shift in expectations resulted, in turn, from: (1) a growing comprehension that the recession had ended and that vigorous recovery was underway, with its consequent impact on demand for credit; (2) a belief that Federal Reserve credit policies, in view of the shift in the business situation, would soon move toward restraint in keeping with the requirements of flexible administration of such policies; (3) a realization that in fiscal year 1959 the Federal Government would be confronted with a deficit of \$10 to \$15 billion, with its strong impact on demand for credit; and (4) a growing—even if unfounded-conviction on the part of investors that further inflation would probably occur, stemming from the rigidity of prices during the recession, the impact of business recovery, and the inflationary ramifications of a record peacetime deficit during a period of rising business activity. In addition market pressures were increased significantly by liquidation of heavy speculative holdings of Government and other securities, built up earlier in the year and in June, sometimes on relatively thin margins.

It should be emphasized again, however, that the increases in rates arising from expectations could not have been sustained had not the expectations later been ratified. And most of them were indeed ratified. Business activity has expanded vigorously; a \$13 billion deficit was confirmed by official sources; and Federal Reserve credit policy did shift away from the strongly expansive policies of early 1958. The expectation of continuing inflation has not been confirmed; whether or not it will be depends in no small measure on the degree of fiscal and monetary discipline that is maintained during this period of high and rising business activity.

Furthermore, the available evidence points only to a mild degree of credit restraint since last summer. For one thing, the strong upward trend in production, employment, and income with, as yet, absence of strong inflationary pressures, indicates that credit has been sufficiently available to meet the needs of the economy. Moreover, monetary growth since last summer, as measured by the annual rate of expansion in the seasonally adjusted money supply, has been at least equal to and perhaps slightly greater than what is usually thought of as a normal rate.

All things considered, it seems to me clear that the major factor contributing to the rise in interest rates during the past year has been the \$13 billion Federal deficit. It has exerted a twofold impact: first, by stimulating expectations in the summer of 1958 of strong credit demands and of a further erosion in the value of the dollar; and, second, by adding almost \$9 billion in Federal securities to the demand side of credit markets.

Consequences of various proposals to

Are there any courses of action, open to Congress, the executive branch, or the Federal Reserve System, which might be successful in inducing lower interest rates? It must be emphasized that any such actions, to be effective without leading to later difficulties, must operate through the basic forces of demand and supply. As I stated earlier, the law of supply and demand is a powerful economic force. Any attempt to hold interest rates to artificially low levels would be doomed to ultimate failure unless appropriate steps were taken to adjust demand and supply forces consistent with the selected level of rates. And even then, later difficulties may well arise. The situation is parallel to attempts to maintain price ceilings on goods and services during national emergencies; prices can be prevented from rising, if inflationary pressures are strong, only through resort to rationing, allocation of materials and labor, and so on. Similarly, interest rates can be kept from responding to the forces of demand and supply only through direct intervention in credit markets and a consequent abridgement of economic freedom. It is therefore assumed that any courses of action to be considered would involve influencing demard and supply.

With this stipulation accepted, six proposals might be mentioned. Several of these proposals, however, would so harm the Nation that responsible people would be unwilling even to consider them. They are presented solely for the purpose of bringing forward issues which apparently are often misunderstood.

(1) One approach would be for the Government, through various means, to promote recessionary pressures in the economy. Interest rates commonly decline during recessions, partly because of a slackening demand for funds on the part of individuals and businesses, partly because of a relative increase in availability of financial savings, and partly because of greater availability of bank credit in connection with a flexible shift of monetary policy toward credit ease.

This first alternative is, of course, absurd; no responsible government would attempt to induce recession—with its accompanying loss of production and rise in unemployment—simply to produce lower rates of interest. But the introduction of this alternative highlights the fact that high and rising interest rates are a sign of expanding business. For a responsible government, the choice between high levels of business activity and employment as opposed to low interest rates is actually no choice at all. Stated differently, high interest rates are not an end in themselves; rather they are the usual accompaniment of the active credit demands that characterize expansion in production, employment, and income.

(2) It has been suggested that interest rates could be reduced if the Federal Reserve banks were directed by Congress to purchase all new issues of Government securities; this would tend to reduce pressures on interest rates, since the Federal Reserve banks would in effect create the funds necessary for the purchase of the securities. The actual process would involve credit to the Treasury's deposit balance in Federal Reserve banks in return for the newly issued Government securities.

There are at least two serious objections to this course of action. In the first place, the prohibition of direct sales of securities by the Treasury to the central bank, except under unusual and very limited circumstances, has been an important characteristic of our financial mechanism ever since the establishment of the Federal Reserve System in 1913. As one adjunct to their primary function of influencing the flow of

money and credit, the Federal Reserve banks were envisaged, by the framers of the act, as fiscal agents for the Government—to hold Treasury working balances; to clear Treasury checks; to issue, redeem, and pay interest on Government securities; and so on—not as a source of credit to finance the Government's needs. Experience in a number of foreign countries has demonstrated the dangers of easy access to central bank credit on the part of the branch of Government that has the responsibility for financing the Government's requirements. Fiscal discipline is especially difficult to preserve if the exchequer has, in effect, a blank check on the money-creating authority.

A second major objection to sale of new Treasury issues directly to the Federal Reserve banks arises from the fact that the transaction would provide the basis for a highly inflationary expansion of the money supply. The recipients of Treasury checks drawn on the newly created deposits at the Reserve banks would deposit most of the proceeds in Federal Reserve member banks, and the member banks in turn would send the checks to their district reserve banks for payment. Payment would be effected in the usual way, by crediting-or increasingthe reserve balances of the banks on the books of the Reserve banks. Bank reserves would be increased by the amount of the credits; this would provide a basis for additional lending and investing by the banking system by an amount equal to about six times the increase in reserve balances. Growth in the money supply would there-fore, be strongly stimulated. Interest rate pressures would have been reinstated only at the cost of highly inflationary increases in bank credit and the money supply. Moreover, as I pointed out in the main portion of my statement, strong inflationary pressures tend to promote even higher levels of interest rates.

Recognizing the objection that large-scale purchases of Government securities by the Federal Reserve banks would be highly inflationary, advocates of this course of action sometimes maintain that the inflationary growth in the money supply could be avoided simply by raising member bank reserve requirements. In other words, the new reserves created by the Federal Reserve purchases would be immobilized immediately by increasing the percentages of idle funds that member banks must hold in relation to deposits.

There is an important practical objection to this proposal. The purchase of, say, \$5 billion of new Government securities by the Federal Reserve banks would result in the creation of \$5 billion in new bank reserves, but these reserves would flow into the banking system, and be disseminated among individual banks, in accordance with market forces. No one could predict the ultimate distribution of the new reserves in advance. Some banks would receive a large portion, some a smaller portion; the ultimate distribution would depend primarily upon the location of the individuals and institutions who received the Government payments financed by the deficit borrowing.

An increase in member bank reserve requirements, however, affects all banks in a given classification (central reserve city, Reserve city, and country) equally in terms of percentage points of reserve requirements. Consequently, a blanket increase in reserve requirements of the magnitude required to neutralize the reserve-creating impact of large-scale Federal Reserve purchases of governments might well lead to severe dislocations and disturbances in credit markets. Some banks would have ample reserves, others would find themselves severe'y pinched. It can be argued that market forces would tend to correct these imbalances, and

they would-over time. But in the short run, forces might well be set in motion leading to abrupt swings in interest rates and availability of credit; credit droughts in one part of the country and surpluses in another; and so on. And, in any event, the credit market, while highly efficient, by no means Operates with complete perfection in transferring funds from areas of plenty to areas of shortage.

important practical objection against selling Government securities to the Reserve banks and then offsetting the inflationary impact by raising member bank reserve requirements can be added a more basic objection, if it is assumed that one pur-Pose of the action would be to prevent interest rates from rising. As I noted earlier, purchases of \$5 billion of Federal securities by the Reserve banks would result in an equivalent increase in the money supply as the recipients of the checks deposited the proceeds in their commercial banks. In the first instance, then, there would be an important inflationary impact, resulting from the spending of the funds by the Governand the expansion in the money supply.

A large increase in reserve requirements could, indeed, nullify the growth in the money supply, but only by severely restricting the lending and investing activities of commercial banks. This, in turn, would exert pressure on individuals, business firms, States and local governments, and tend to force interest rates for such borrowers to higher levels. The inflationary impact of the increase in money supply resulting from Treasury borrowing from the Reserve banks can be offset only if credit contraction occurs in other segments of the economy; the \$5 billion increase in deposits held by recipients of the Treasury checks must be offset by a \$5 billion decline in funds of other individuals and institutions. This can be achieved, in free credit markets, only through credit restriction, which implies additional pressure on interest rates. Thus, during a period of prosperity and a growing demand for credit, the choice is either be-tween a somewhat higher level of interest rates, or stimulation of inflationary pressures through monetary expansion. There are no other choices.

The recommendation that Federal Reserve banks buy all or substantial portions of new issues of Treasury securities involves one other aspect that deserves discussion. Specifically, it has been recommended that the Federal Reserve banks be required to purchase only that portion of a new issue that investors other than commercial banks Would not purchase; thus, the Reserve banks, in effect, would replace commercial banks as buyers of Governments. This recommendation is based partly upon the assumption that commercial banks do not perform a necessary service in buying Government obli-Their ability to create money, it is maintained, permits them to buy these securities; but in fact the authority over money creation is constitutionally vested in Congress. Thus, it is argued that the Government should perform this function, through the Federal Reserve banks, without burdening taxpayers with interest charges.

This argument deserves several comments. In the first place, as noted earlier, purchases of Government securities directly by Federal Reserve banks would be highly inflationary. Secondly, whether or not the commercial banks perform a necessary service in creating money, there is little doubt that they perform an important economic function. Demand deposits in commercial banks have assumed a monetary function simply because People prefer to hold funds and make payments in that form, rather than in the form of currency. Moreover, money is essential to efficient performance of a highly indus-

trialized market economy and, if the commercial banks did not perform the moneycreating function, some other institution or

agency would have to do so.

Furthermore, commercial banks do indeed perform a useful service in purchasing and holding Government securities. The business of commercial banking, in essence, is that of holding relatively illiquid assets principally loans and investments--against liabilities that are largely redeemable on de-This involves risk and, in assuming that risk, stockholders of commercial banks are entitled to a return for a service performed. The fact that an asset is a Government security rather than a commercial loan is not germane; marketable Government securities, while devoid of risk relating to interest and principal payments, do possess risk as to the price at which they can be sold in the market. Because of the nature of their liabilities, banks must be preparedand at times may be compelled-to liquidate assets in order to meet deposit drains. They are therefore providing an economic service by holding illiquid assets which the public does not desire to hold at the time, and in return furnishing the public with the liquidity-or money-that it desires.

There are at least two important reasons why the money-creating function should not be assigned wholly to the Federal Reserve In the first place, under our institutional arrangements the money-creating function is closely allied with that of granting credit to a wide variety of borrowers. It is a cardinal principle of our type of government that private institutions should dominate credit-granting activities; otherwise, the ability to obtain credit might rest less on credit worthiness and more on non-

economic factors.

Second, lodgment of the money-creating authority wholly in the Federal Reserve banks, along with expanded authority for the Reserve banks to lend directly to the Government, would permit the Government to finance its residual needs through the Reserve banks and thus bypass the market. This would violate the basic principle set forth earlier, namely, that direct entry of the Government to the central bank for purposes of meeting fiscal requirements should be severely limited.

In many respects, the question of transferring in whole or in part the money-creating function from the commercial banks to the Federal Reserve banks is actually a question of whether the banking system should be nationalized. When it is said that "the commercial banks do not perform a necessary service in purchasing Government securities," it should be realized that there are many other services that the Government could perform for itself. It could, for example, organize its own construction crews to build the interstate highways, rather than encouraging the States to undertake this work through private contractors; it could establish its own transportation network for carrying mail and other Government property; it could set up manufacturing establishments to produce missiles, airplanes, warships, and a variety of items now purchased from private industry; it could, in short, perform many of the economic functions now performed by the private sector of the economy. The crucial question is, of course, whether it could perform those functions as efficiently as private enterprise and, of prime importance, whether the act of doing so would not ultimately destroy economic and political freedom in our Nation.

(3) A third suggestion for inducing lower interest rates would involve a congressional directive forcing the Federal Reserve banks to peg prices of Government securities at some predetermined level, presumably par. Then, if market holders decided to sell Government securities, purchases by the Federal

Reserve banks would provide a floor under which bond prices could not fall (interest rates on Governments could not rise).

The unfortunate experience with this technique between the end of World War II and 1951 should convince serious observers of the dangers involved: the Federal Reserve System could indeed be transformed into an engine of inflation rather than a responsible central bank attempting to promote sustainable economic growth. Once market yields on Governments rose to the predetermined levels, the System would be able to operate in only one direction—as a creator of bank reserves, through purchases of the securities, in whatever amounts market holders might desire. Flexible administration of credit policles would be impossible.

The dangers of this course of action, especially during a period of high and rising business activity, are obvious. Nor is it at all certain that, in the long run, the Federal Reserve banks could be successful in keeping interest rates from rising. As inflationary pressures mounted, borrowers of funds would be strongly encouraged to borrow heavily as soon as possible, in order to repay the debts in eroded dollars. Lenders would be encouraged to cut back on lending, realizing that the dollars they received in payment would be worth less in real terms. Consequently, the pressure on interest rates to increase would magnify; borrowers would be willing to pay higher rates, lenders would be willing to lend only at higher rates. In order to stem the tide, the Federal Reserve banks would have to buy more and more Govern-ment from market holders, and thus create even more bank reserves and provide a basis for further inflationary credit expansion. The spiral could ultimately come to a halt only as a result of a crisis and subsequent readjustment.

Some observers point to experience in this country in 1947 and 1948, when the Federal Reserve was indeed pegging prices of Government securities at predetermined levels, as an illustration of an instance in which the consequences were not too bad. should be recalled that the Federal Government experienced a total cash surplus of almost \$14 billion in calendar years 1947 and 1948. The lesson of that experience is that an inflationary monetary policy can be offset in part by large cash surpluses in Federal fiscal operations; but, if the cash surpluses had not existed, inflationary-pressures would have been much more severe than they were. A disastrous spiral might well have occurred. Nowadays, advocates of system pegging of Government most often do so because of a desire to facilitate easy Federal financing of deficits. The combination of a large Federal deficit and unbridled creation of bank reserves, in a period of high and rising business activity, could only result in the severest type of inflationary pressures, ultimate reaction and recession, and disruption of the process of economic growth.

(4) A fourth alternative that should perhaps be mentioned in passing relates to the apparent preference of some investors to purchase equities rather than debt instruments. To the extent this preference prevails, stock yields tend to be low and bond yields tend to be high. It might be, therefore, that some action which would contribute to a severe break in the stock market would in turn contribute to a shift from stocks to bonds; interest rates would tend to decline.

To suggest that a break in the stock market be induced either through Federal regulation or otherwise would, of course, be irresponsible. Moreover, to the extent that preference for equities over bonds reflects a fear of inflation, the answer to the problem is to remove the bases of the fear of inflation. As stated earlier, this would require, in part, a clear demonstration of the determination of the Government to maintain fiscal and monetary discipline. Conviction on the part

of investors that the value of the dollar will be protected would do more than any other single thing to increase the attractiveness of debt instruments and thereby reduce pressures on interest rates.

(5) Inasmuch as Treasury securities occupy an important position in credit markets, interest rates could perhaps be reduced if significant progress were made in retiring part of the public debt. In this respect, there have been several proposals over the past few months to set aside a specified portion of Government revenues each fiscal year; these funds would be earmarked for

debt retirement.

During a period of prosperity, retirement of some portion of our huge public debt is certainly desirable; if we cannot achieve some debt reduction when incomes are high and rising, there is serious question as to whether we shall ever be able to do so. Consequently, all proposals to establish a fixed annual percentage of debt retirement should be given serious consideration.

Many of the proposals, however, fail to drive to the heart of the problem, in that no provision is made for assuring that Government revenues would actually exceed expenditures by an amount large enough to permit the selected percentage of debt retirement. The use of, say, \$2.8 billion of tax revenues to effect a 1 percent reduction in the debt would, in the absence of a surplus in the budget, achieve nothing; additional borrowing would be necessary to supplant the tax revenues used for debt re-tirement. In essence, therefore, the securities retired would be replaced in the market by an equivalent amount of new securities; interest rate pressures would not be reduced. Moreover, total public debt would actually grow, instead of decline, if the revenue-tax relationship continued to reflect an overall deficit. Again, I should like to repeat that these plans are laudable in purpose; but undue attention to them tends to obscure the hard, basic fact that meaningful debt retirement can be effected only by means of an overall surplus of budget receipts over expenditures.

(6) There is a sixth and final alternative for reducing pressures on interest rates, although it must be admitted that success in pursuing this sixth course of action would not necessarily result in lower rates. This is because the basic trends in demand and supply in free credit markets reflect the actions of millions of individuals and institutions, and these actions might work toward higher rates even though some of the more significant pressures were reduced.

The sixth alternative can be summarized

quite' simply, as follows:

(a) Convert the Federal Government from a net borrower to a supplier of funds in credit markets by achieving a surplus in the budget during periods of high and rising business activity. A net surplus permits the Treasury to retire debt, on balance; consequently Government actions would result in a net supply of funds available for private borrowers, not a subtraction as is the case when the Federal Government borrows to finance a deficit.

(b) Convince investors that the value of the dollar will be protected, thus removing the pressures for higher interest rates stemming from a conviction that further inflation is likely to occur. This can be done only by means of attention to all of the factors and practices that stimulate inflationary pressures. But it should be reemphasized that the most important single action would be a clear demonstration of the Government's determination to maintain fiscal and monetary discipline. During periods of high and rising business activity, fiscal and monetary discipline requires a surplus in the budget, for debt retirement, and freedom for Federal Reserve authorities to pursue flexible monetary policies.

(c) Provide the Treasury with sufficient flexibility for sound management of the public debt, so that a better balance in debt structure can be achieved-including larger amounts of longer-term securities outstanding-and so that bond markets will not become unsettled over such things as an impinging interest-rate ceiling. The Government securities market is understandably sensitive to the existence of an artificial interest-rate ceiling; this is one reason why the President has proposed that the 41/4 percent limit be removed completely, rather than merely raised. An increase in the limit would only act as a signal to investors that the new ceiling is the new normal level as defined by Government action.

As I emphasized in the main portion of my statement, the interest burden on the public debt-now close to \$8 billion-is of deep concern to me. But the alternative to sound fiscal and monetary policies—further shrinkage in the purchasing power of the dollar-concerns me even more. In the long run, no one benefits from inflation; 'by stimulating the excesses that develop in a period of business expansion, and sowing the seeds of readjustment and recession, inflation actually hinders the attainment of a high rate of economic growth. Moreover, inflation strikes hardest at those groups in our society least able to protect themselves. The man of modest means, not the rich man or the large business institution, is the primary victim of a shrinking dollar.

The overriding advantage of this sixth and final approach to reducing pressures on interest rates stems from the fact that the actions it requires would not only be directly beneficial in terms of economic growth, but would also transmit effects through market forces of demand and supply rather than by means of Government decree or regulation. And I would like to repeat that, in proceeding in this way, the Federal Government would be promoting "maximum employment, production, and purchasing power," as required in the Employment Act of 1946, in a manner consistent with those crucially important but often overlooked words in the act which stipulate that such actions be carried out "in a manner calculated to foster and promote free competitive enterprise and the general welfare.

STATEMENT ON TECHNICAL PHASES OF PRO-POSED DEBT MANAGEMENT LEGISLATION BY SECRETARY OF THE TREASURY ROBERT B. AN-DERSON BEFORE THE HOUSE WAYS MEANS COMMITTEE, 10 A.M., JUNE 10, 1959

Sections 1 through 3 of the first proposed bill have been discussed in the opening statement; this statement reviews sections 4 through 6.

Section 4 of the bill would amend section 22(i) of the Second Liberty Bond Act, as amended (31 U.S.C. 757c(1)), to direct the Secretary of the Treasury to relieve any authorized agent from liability to the United States for a loss incurred in savings bonds redemptions where written notice of liability or potential liability has not been given by the United States to the agent within 10 years after the date of the payment. This limitation would be similar to the limitation upon the time within which the Government may proceed against a person who cashes a Government check upon a forged endorsement. In that case the time limit imposed upon the Government is 6 years.

Presently the law directs the Secretary to relieve an agent from liability only when he can determine that the loss resulted from no fault or negligence on the agent's part, regardless of the length of time between the date of payment and the date the loss is discovered. In some cases the time lapse may be considerable because the owner of the bonds may not discover their loss or theft until their maturity or thereabouts, and would

have no reason to expect that they might have been fraudulently negotiated. It should be emphasized that this proposed legislation in no way limits the time within which the real owner may make a claim upon a savings bond which was fraudulently ne-

Where there is a long lapse of time between the date of the payment and the date the United States discovers it has, or may have, incurred a loss resulting therefrom, it would be extremely difficult for a paying agent to prove that the loss resulted from no fault or negligence on its part. In view of this, as well as the fact that the risks involved arise from the assumption of a task which was urged upon them by the United States and which was not related to the ordinary course of their business, the Treasury Department believes that so-called qualified paying agents, that is, commercial banks, trust companies, savings and loan associations, building and loan associations, and similar financial institutions, should have some limitation upon the time during which they may be liable.

Because they would have the same problem of proof, and for the sake of uniformity and orderly administration, the proposed legislation would give the same immunity to the Treasurer of the United States, the Federal Reserve banks, and the Post Office Department or the postal service, which are also accountable for losses incurred by the United States in savings bond redemptions.

The proposed legislation excludes cases arising under special regulations issued by the Treasury Department which authorize qualified paying agents to pay savings bonds without obtaining the signatures of the owners on the bonds, if the agents unconditionally assume liability to the United States for any loss resulting from such payments. In making payments under these regulations, which paying agents requested for their own and their customers' venience, they represent that they have the owners' instructions to redeem the bonds, and guarantee the validity of the trans-

Section 5 of the bill would amend section 3701 of the Revised Statutes (31 U.S.C. 742) to clarify the exemption it accords to interest on obligations of the United States from State and local income taxes.

Section 3701 of the Revised Statutes provides that obligations of the United States shall be exempt from taxation by or under State or local authority. The Supreme Court of the United States has held that this provision also exempts the interest on obligations of the United States from taxation by or under State or local authority (N. J. Realty Title Ins. Co. v. Div. of Tax Appeals (1950). 338 U.S. 665).

In recent years the State of Idaho has taken the position that its income tax law enacted in 1933 has required the inclusion of interest on obligations of the United States in computing gross income (from which taxable net income was determined), and that the Federal statutes have not precluded this requirement. The Idaho statute provided that there shall be levied "upon every individual \* \* \* a tax which shall be according to and measured by his net income."
The term "gross income" (from which taxable net income was determined) was defined to include, among other items, interest received from Federal, State, municipal, or other bonds." The law elswhere provided, however, that "all income, except \* \* \* income not permitted to be taxed under \* \* \* the Constitution or laws of the United States, shall be included and considered in determining net income of taxpayers."

It has apparently been the position of the State of Idaho not that the Federal Government is without power to exempt the interest on its obligations from State income taxes, but rather that it has not exempted that interest from a tax such as the Idaho tax.

The reasoning of the Idaho authorities appears to have been as follows: The Federal statute has exempted the interest on Federal obligations from State taxation, and the State tax statute excluded income not permitted to be taxed by the Federal exempting statute, but the Idaho statute did not attempt to tax this income. Rather, it carefully provided that there should be levied "upon every individual \* \* a tax \* \* measured by his net income." Apparently their position has been that this has a different effect from the State statute before 1933, which provided that there should be levied "upon the net income of every individual \* \* a tax," which was therefore a tax not permitted under the

The Treasury and the Department of Justice have felt that the position of the State of Idaho rests upon a distinction of Words which is without substance. We have not, however, been able to persuade the Idaho authorities to change their position. Since this position does not rest upon a theory of lack of congressional power to exempt interest on Federal obligations from a tax such as Idaho has had, but rather upon the theory that Congress has not exercised its power, the Treasury and the Department of Justice believe that the simplest resolution of the matter would be through congressional action which would clarify exemption by expressly exempting Federal obligations and the interest on them from every form of State and local income taxes. proposed provision would accomplish that purpose.

It should be mentioned that on March 20, 1959, the State of Idaho adopted a new income tax law. The new law declares it to be its intent to impose a tax identical as far as possible to the income tax imposed by Federal Internal Revenue Code. Since the Federal Internal Revenue Code imposes a tax "on the taxable income of every individual" it has been suggested that Idaho may no longer attempt to maintain its position that the Federal exemption statute does not extend to its income tax. We have communicated with responsible State authorities, however, and have been unable to obtain assurances that the State will discontinue requiring the inclusion of interest on obligathe United States in computing tions of State income taxes.

In these circumstances, we believe it to be highly desirable for the Congress to make the exemption statute more specific at this time. If positions such as Idaho has held are adopted by other States the resulting taxation could have a serious adverse effect on the sale of U.S. savings bonds, which are so widely held by individuals, and could have undesirable effects on Treasury financing

Operations in general.

Section 6 of the bill would authorize the issuance of obligations of the United States to Government trust funds at the issue price. The Congress has established some 50 ernment trust funds. Portions of any of these funds not currently needed may be invested in obligations of the United States. With respect to six of these trust funds, however, the Congress has specified that Government obligations may be acquired on original issue only at par. Thus in the act of August 14, 1935, establishing the unemployment trust fund, it was provided that such obligations may be acquired (1) on original issue at par, or (2) by purchase of outstanding obligations at the market price." Substantially identical language has been used in four other provisions dealing with five other trust funds. The trust funds and the citations to the pertinent provisions governing them are: Federal old-age and survivors insurance trust fund and the Federal disability insurance trust fund (42 U.S.C. 401(d)); the railroad retirement account (45 U.S.C. 2280(b)); the special trust account for the payment of bonds of the Philippines (22 U.S.C. 1393(g)(5)); and the highway trust fund (23 U.S.C. 173(e)(2)). The reason for providing in these relatively few cases that acquisition on original issue must be at par is not known.

When the first of these provisions was enacted in 1935 the Treasury could not issue interest-bearing bonds at a discount In 1942 the law was amended to permit issuance at a discount, but none were issued in this manner before last November. Therefore the requirement that obligations be acquired on original issue only at par has not created a problem until recently. With the possibility of more obligations being issued at a discount or at a premium in the future, however, the requirement that these six trust funds acquire obligations on original issue only at par is highly discriminatory against them. For example, the Treasury recently issued 4 percent bonds of 1980 99; the public could subscribe for these bonds at 99 and any of the trust funds other than these six could acquire them at 99, but the law prohibited any of these six trust funds from acquiring them on original issue except at 100. If the Secretary of the Treasury had issued these bonds at par on original issue for account of these funds. they would have earned interest at a lower effective rate than any of the other trust funds or any member of the public acquiring them on original issue.

There does not appear to be any sound reason for this result. It has therefore been recommended that these provisions of law be amended to authorize these trust funds to acquire obligations of the United States on original issue at the issue price, which is the price the other trust funds or

the public would pay.

"The Strategic Lessons of West Berlin,"
a Statement by the National Planning
Association International Committee

EXTENSION OF REMARKS

# HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. BOWLES. Mr. Speaker, the National Planning Association, which has been responsible for so many constructive studies and proposals on matters of vital importance to American policy, has recently contributed a new statement of great importance on the Berlin crisis.

This statement, signed by members of the NPA's International Committee under the chairmanship of Mr. Frank Altschul, is one of the best summaries I have seen concerning the broad Communist challenge now focusing on Berlin.

Under leave to extend my remarks, I include this statement, as follows:

THE STRATEGIC LESSONS OF WEST BERLIN
(A statement by the NPA International
Committee, April 28, 1959—Special Report
No. 52)

Regardless of how the current crisis over West Berlin may be resolved, there are certain lessons to be learned from it which, if ignored by the United States and its allies, presage increasing success for the Soviet Union's probing strategy against the non-Communist world. These lessons are both diplomatic and military. This statement of the Committee on International Policy of the National Planning Association is intended to outline the origin and nature of the crisis over West Berlin and to comment briefly on its implications for the strategy of the Western alliance.

1. On November 27, 1958, the Government of the U.S.R. handed to the U.S. Ambassador in Moscow a note dealing with the situation in West Berlin. A lengthy exposition of the history of West Berlin since the date of occupation by the Western allies is followed by certain concrete proposals bearing on its future. In characteristic manner this historical survey is punctuated with falsifications, the nature of which it is unnecessary to go into here as they have been fully exposed in a pamphlet issued by the Department of State.

Allegedly seeking to put an erid to the abnormal and dangerous situation which has developed in Berlin because of the continued occupation of its Western sectors by the United States, Great Britain, and France, the Soviet Union proposes that the question of Western Berlin \* \* be settled for the time being by making Western Berlin an independent political entity—a free city—without any state, including either of the existing German states, interfering in its life.

The nub of the matter is contained in the statement that "the Soviet Government on its part has resolved to effect measures designed to abolish the occupation regime in Berlin, guided by the desire to normalize the situation in Berlin, in the interests of European peace, in the interests of the peaceable and independent development of Germany."

The Soviet Government asserts that it regards a period of 6 months "as quite adequate to find a sound foundation for a solution of the problems connected with the change of the position of Berlin and to prevent the possibility of any complication if, of course, the governments of the Western Powers do not deliberately work for such complications."

During this period "the Soviet Government proposes to make no changes in the present procedure for military traffic of the United States, Great Britain, and France from West Berlin to the Federal Republic of Germany." "But "if the above period is not used for reaching a relevant agreement, the Soviet Union will effect the planned measures by agreement with the German Democratic Republic."

Stripped of nonessentials, the Soviet de-mand boiled down to this: Either the United States, the United Kingdom, and France accept the Soviet proposals for a change in the status of West Berlin, including the withdrawal of their occupation forces before May 27, 1959, or the Soviet Union, in violation of its solemn agreements, will itself change this status by handing over to the East German Government both its rights and its obligations in regard to West Berlin. These proposals, for reasons clearly stated, have been rejected by all three of the Western allies immediately concerned. The Soviet Union for its part has modified the ultimative character of the date of May 27 and it now seems likely that somewhat prolonged negotiations will take place, first, in a meeting of Foreign Ministers to be held toward the middle of May, and then, by a summit conference scheduled for sometime in July or August:

Whether these discussions will lead to a negotiated settlement only the future will tell. We must hope that, in the light of the resolute position taken by President Eisenhower in accord with our principal

allies and with the full support of the American people, we shall find that the Berlin crisis has been precipitated as just another of those operations which the Kremlin conducts on the periphery of the free world.

But it would not be prudent to take counsel of our hopes. There is a wide and seemingly unbridgeable chasm between Moscow and the free world. Admittedly, the present status of West Berlin is a thorn in the side of the Soviet Union. It provides an escape hatch through which refugees, in-cluding many of the most talented and besttrained individuals, flee the Communist paradise of East Germany at the rate of approximately 200,000 a year. In marked contrast to the drab and desolate condition of East Berlin, it furnishes a showcase behind the Iron Curtain in which the enormous achievements of a community of free men and women are displayed in bright and vivid And, last but not least, it serves as a center from which, by radio and other means, the hopes and ideals of the Western, world are constantly projected into the satellites

Yet it is well to recall that this is a situation that has existed for more than 10 years. Furthermore, while this may be a matter of little import to the Soviet leaders, it is a situation of their own creating. One of the basic understandings reached among the United States, the United Kingdom, and the Soviet Union, and incorporated in the Potsdam Agreement, was that during the period of occupation Germany shall be treated as a single economic unit. It was further provided that to this end, common policies shall be established in regard to a number of relevant economic factors.

From the moment of occupation the Soviet Union proceeded to nullify this provision, administering its zone in flagrant disregard of its commitments. This led step by step inexorably to the division of Germany and to the establishment in the Western zones of the freely elected government of the Federal Republic, while in the Eastern zone a Quisling government, having no sanction in the will of the people it governed, acquired its grant of authority from the Soviet Union, backed by the armed might of its occupation The incredible distortions of history to which the Soviet propagandists have ac-customed us should never be allowed to obscure these obvious facts.

Our legal and our moral right to maintain our position in Berlin has been eloquently set forth not only by the State Department. but by the President as well. It would be superfluous to reargue the case here. And there should be no lingering doubt that at whatever risk we are prepared to maintain that free access to West Berlin to which we are both legally and morally entitled an access which is responsive to the wishes of the people of that beleaguered city. The President has stated in effect that in no event will we strike the first blow. He has made it equally clear that we shall react vigorously to any attempt to deny us that free access, the right to which was formally agreed to at a meeting of the Council of Foreign Ministers in New York in May 1949, and confirmed at a subsequent meeting of that body held

It would be futile to attempt to anticipate the results of the delicate negotiations which are to start with the meeting of the Foreign Ministers at Geneva on May 11. We have no means of telling with certainty just what prompted Khrushchev to raise the issue of West Berlin at this particular moment. Nor can we do more than speculate about his estimate of our will and our potential, which may powerfully affect his future course of action. Yet one thing can be said safely: These negotiations will either end with some measure of agreement reached or they will fail. In the first con-

tingency, the nature of any such understandings will exercise a profound influence on the future orientation of American foreign policy. With the possible substance of such an agreement the present memorandum, is, however, not concerned. But in either contingency, unless by some miracle the question of West Berlin has been definitively settled, we are likely to be faced at some unpredictable date in the future with a renewal of the Soviet challenge to our position there, upon which the future orientation of West Germany may well depend. We cannot tell how much time may be allotted us before the challenge will be renewed. Yet just because of this uncertainty in regard to the time element, a few observations seem pertinent.

At his press conference on March 11 President Eisenhower, in answer to a question, said: "We are certainly not going to fight a ground war in Europe. What good would it do to send a few more thousands or indeed even a few divisions of troops to Europe?" The President's later remarks were open to the interpretation that the United States might respond by the use of nuclear weapons against targets undisclosed if "any threat or any push in the direction of real hostilities" occurred "from

the side of the Soviets."

These remarks lead inevitably to the conclusion that in the administration's view, we may be faced with an appalling and unavoidable dilemma if present negotiations in regard to West Berlin fall, i.e. that we may be forced to choose between capitulation in whole or in part to the Soviet demands and the initiation of atomic and/or thermonuclear war. And we should remember that even if a modus vivendi in regard to West Berlin is negotiated, we may still face this same dilemma, unless our military posture is improved, whenever in the future the Soviets choose to provoke some similar crisis, as we may be confident they will.

But if we are granted sufficient time and apply the lessons learned from the current crisis with dedication, energy, and resourcefulness, it is just possible that we may escape such a baneful choice. There is some ground for hoping that the Kremlin is not yet ready to precipitate the ultimate catas-In any event, it is the view of the Committee on International Policy of the National Planning Association that the administration should act on this assumption. This suggests that it might be part of wisdom to take a new look "the new look."
which first saw the light of day in a speech delivered by the Secretary of State before the Council on Foreign Relations on January 12, 1954 In this address was incorporated "the 1954. In this address was incorporated basic decision" reached "to depend primarily upon a great capacity to retaliate, instantly, by means and at places of our choosing."

It may be that, at the time, this decision was grounded not only in fiscal but in sound military considerations. We then had a predominant superiority in atomic and thermonuclear weapons and, in particular, in the means of their delivery. But much has hap-pened in the 5 years that have since elapsed. The Soviet Union has built up a stockpile of similar weapons, as well as delivery systems of undetermined capability. It has materially strengthened its air defense to the end that it may be less vulnerable to bomber attack. And it has assigned priority to a major program for the development and manufacture of intermediate-range and intercontinental ballistic missileswhich since the time of the Suez crisis it seems prepared to brandish on every occasion of acute international tension.

With this growing Soviet potential, it has become apparent that we have placed our ultimate reliance primarily on weapons which we are increasingly reluctant to use. The "great deterrent" lost much of its validity with the awakening fear that, at a given moment, if SAC had not previously been neutralized by surprise attack, its use by us might invite devastating retaliation by the Soviet Union.

But other considerations began to reinforce this reluctance in the minds of thoughtful individuals. While we, for a time, were bemused by the prospect of developing a "clean bomb," the "tolerable" poisoning of the earth's atmosphere from the testing of weapons on a modest scale has raised the specter of the damage that might be inflicted on nations and peoples not involved in the conflict in the event of the early use of atomic and thermonuclear weapons on a massive scale.

This raises for us a moral issue of deep significance. In these times of uneasily balanced terror, no one can guarantee that atomic and /or thermonuclear weapons will not be used. But since their use is a possibility, it is of vital importance from the point of view of world public opinion that we shift from our shoulders to those of the Soviet Union the onus of threatening such a catastrophe. Our foreign policy has suf-fered great damage through our failure to counteract the Soviets' assumption of the mantle of high morality and their efforts to represent the United States as trigger-happy. ready on the slightest provocation to unthe horror of thermonuclear war regardless of the consequences to nonbelligerents. Our task is to convince the rest of the world that the United States will have other means for defending the cause of freedom than resort to thermonuclear war. But we cannot carry this conviction by words alone. This objective can only be attained if we give meaning to our words through a reassertion of imaginative leadership and through a revision of military policy in conjunction with our principal allies. This revision would involve a massive effort to increase the modernized but conventional forces dedicated to NATO on the continent of Europe and to provide a strategic reserve, available for use if needed, to deal with any new trouble spot elsewhere in the world.

We do not minimize the magnitude of the task involved. Yet we refuse to accept the notion that the free world with its vast resources of manpower and its great industrial capacity is unable to accomplish it. We have come to talk rather casually about the threat to our very survival-to the survival of those values of Western civilization to which we are so profoundly attached. Yet neither we nor our principal allies are behaving as if we recognized the reality of this threat. Let us frankly face the unpalatable fact that higher taxes with the deprivations these involve may prove essential to the successful attainment of our objectives. Let us at last take the full measure of our peril, supporting with dedication whatever measures considerations of national security may require.

That we are not doing this today was clearly indicated in memorandums submitted by the Chiefs of Staff on March 8, 1959, to the Senate Preparedness Subcommittee, outlining their reservations in regard to the current military budget. Hesitating to take direct issue with the President, their Commander in Chief, they, nonetheless, contrived to make it clear that in their view appropriations presently requested were inadequate to place our armed services in a position to meet their responsibilities. The recent testimony of Secretary McElroy, referring to the growing missile gap, was similarly disturbing. And the avowed determination of the administration to proceed with the contemplated reduction in the personnel of the Army and the Marine Corps, while the problem of West Berlin remains unresolved. suggests a somewhat unrealistic estimate of our own position which fully justifies wide-spread concern. The recently released testimony of the Commanding Officer of SAC fully

substantiates the misgivings about the adequacy of our Armed Forces.

The current challenge with which the Soviet Union has confronted us may turn out under the most favorable circumstances to be just another probing operation on the periphery of the free world. It is possible that when the clouds clear away, we may find that nothing more serious has happened than that East Germans have taken the place of their Soviet colleagues at the checkpoints, through which traffic from West Germany destined for the occupation forces in West Berlin must pass, under instructions to continue to permit free access to West Berlin in the manner previously guaranteed us by the Soviet Union. Should this prove to be the case, it would merely suggest that the Soviet Union was not yet ready to assume the ultimate risk. It would mean that we might have more time allotted to us than we had anticipated in which to take measures calculated effectively to parry a challenge merely postponed.

For it should be clear by now that Communist imperialism has in no sense abandoned its ambition to extend its dominion to the farthest corners of the globe. It is equally clear that with the requisite determination and sacrifice, the NATO powers will continue to present a formidable obstacle to the achievement of this ambition. But the Berlin crisis has already demonstrated that our present military posture is hardly calculated to permit us to deal satisfactorily with many contingencies which may arise. Against the day when the masters of the Kremlin consider the moment opportune to face us once again with some new and unacceptable demands either in Berlin or elsewhere, we should strive to provide for ourselves some alternative more palatable than merely the choice between capitulation and nuclear warfare of our initiation.

It is the plea of this memorandum that the administration proceed with vigor and without delay to act on the assumption that we may be given time enough—an uncertain assumption, it is true, but one on which we must act if we are to have any chance of finding ourselves in a more favorable position when the next crisis is upon us. As our purpose should be to avoid being faced again with the same limited choice of unpalatable alternatives which seemed to confront us in West Berlin, we should exert ourselves to the utmost in building up our ground forces and materially strengthening these contingents in Western Europe.

Having thus furnished the lead to our allies, whose survival is as much at stake as our own, we should urge upon them similar efforts. At the same time, as a mere matter of prudent insurance against the unknown, while materially strengthening our conventional forces both in respect to personnel and equipment, we should increase the tempo of that wide range of projects which involve our strategic capabilities. And this immense effort should be supplemented by a program of information designed to place before the bar of public opinion the fullness of our desire and our intention to do all that lies within our power to spare humanity the evil choice between the parallel disasters of atomic warfare or Soviet enslavement.

But even this is not enough. For while, in the light of the Berlin crisis, this memorandum has focused attention primarily on the nature of our military posture, there are other phases of our conflict with Communist imperialism we must not neglect. The Soviet Union is conducting a skillfully orchestrated attack in which the military, the diplomatic, the economic, and the ideological instruments, either alternately or in unison, are played upon to produce the maximum effect. We must strive unceasingly to meet every element of this attack, and wherever possible to seize the initiative ourselves.

This committee welcomes the expressed willingness of our Government to participate in a meeting of the Foreign Ministers and eventually in a Summit Conference. However discouraging the outlook may appear, it is well to bear in mind that we and the Soviet Union do have one common interest—survival. Against this background, it should be the constant role of diplomacy to seek for grounds of compromise which do not sacrifice the legitimate aspirations of either the Soviet Union or of ourselves.

In the economic field, we should be attempting, either alone or preferably in con-junction with our principal allies, to develop a more comprehensive program of economic aid in order, both bilaterally and through the U.N., to meet the recently increased activity of the Soviet Union in this domain-a task made exceedingly difficult because of the present disposition of Congress to hack away at the appropriations requested for mutual security. To the extent that this disposition is based upon justified criticism of the administration of foreign aid in the past, it is to be hoped that it may be materially reduced for the future when the Draper committee, after exhaustive study, makes its final report. Insofar as it is based on considerations of partisan advantage, or possibly upon a mistaken interpretation of facts, a campaign of public enlightenment might prove useful.

Above all, we should seek to recapture that bright vision of the future which inspired the Marshall plan, prompted aid to Greece and Turkey and led to the formation of the North Atlantic Treaty Organization. Whether we can recapture this in time may prove to be the supreme test of our democratic society. Should we fail to do so, when our civilization is threatened as never before, all that we have built of spiritual values, of political institutions and of material goods may be lost to the world as they disappear in the rubble heap of history.

Finns and Oregonians: "Finnogonians"

EXTENSION OF REMARKS

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. PORTER. Mr. Speaker, the Finlandia Pictorial, Finland's only magazine in English, has devoted its May 1959 issue to the Oregon Centennial, emphasizing the ties between Oregon and Finland. Under previous consent, I include the editor's greetings to the Oregon Centennial and the lead article, the "Finnogonians." Also included are cables of welcome to the Finnish exhibit at the Portland International Trade Fair from Oregon's Governor Hatfield and from our distinguished junior Senator, RICHARD L. NEUBERGER:

FINLANDIA PICTORIAL EDITOR COMMEMORATES OREGON'S CENTENNIAL

This is a special issue of Finlandia Pictorial commemorating the 100th anniversary of the Beaver State of Oregon. We are pleased to have the opportunity of devoting our pages to the memories and the lihks that, since 1638, have built a bridge of kind thoughts and good will across the Atlantic between our country and the United States.

A hundred years ago Oregon was promoted to statehood. Now, in 1959, Oregonians are celebrating the event with scores of festivals, shows, and fairs. Finland is one of the more distant countries taking part in the International Trade Fair at Portland in connection with the centennial exposition. Finlandia Pictorial wishes to join the birthday party, and copies of this issue will be distributed to visitors to the fair.

Why is Finland participating? For those who really do not know and for those who do but like to see the answer in print, Finlandia Pictorial gives the reasons. The Finns, like so many other peoples, helped build America. The Americans and Finns are no strangers to each other, even those who have no mutual intimate connections.

We wish to greet especially the Finns of Oregon, the Finnogonians, if a neologism is allowed. In a truly pioneer spirit, with Mr. John O. Virtanen as their enthusiastic leader, they are realizing the project of the Finnish classroom in Portland State College. Every pupil of the Finnish room will learn something of the land of the Finnish forefathers and gather a fact or two about Finland.

This is our reward. It is not only the Finns and Americans of the present generation that learn to know each other. In the future both they and all nations may understand better how to help each other to build the world.

THE EDITOR.

We have pleasure in publishing these two cables received from the United States of America:

The Governor of Oregon: "Oregonians are proud of the many Finnish people who reside here and the role they have played in our century of statehood. We are most grateful, to learn that the publishers of Finlandia Pictorial are dedicating their May issue to Oregon and our centennial exposition and international trade fair which begins June 10th and continues for 100 days. We welcome the world, and especially readers of this publication to Oregon in 1959.

"MARK O. HATFIELD."

The junior Senator from Oregon: "Oregon always has had close ties of friendship and admiration for Finland. Both realms share seacoast grandeur, vast timberlands, and wealth in fisheries. The Finnish colony at Astoria has enriched and improved our State. We welcome the official Finnish Government exhibit at our international centennial trade fair. Warm regards to all.

"RICHARD L. NEUBERGER."

### THE FINNOGONIANS

(By Walter Mattila, Portland, Oreg.)

The first Finn whose name survives in early Oregon history was a colorful Wild West citizen—a gold prospector, Indian fighter, politician, real estate operator, flour mill owner and finally, of course, consul for Russia and the then Grand Duchy of Finland.

Like the other early Finnish settlers of the coastal areas, he was a seaman. After panning but little gold in California, he arrived in Portland—the home of the 1859 centennial of Oregon's statehood—in 1853 when the city was only 3 years old and the State of Oregon was still to be carved out of the vast region between the new State of California and the new Canadian border.

The first Finnogonian was Gustaf Hen-

The first Finnogonian was Gustaf Hennila, but at sea and in the goldfields he was plain Gust Wilson, the name he used in Oregon until he became Consul Gustaf Wilson. Through his first year in Oregon Territory he was Private Wilson of the volunteer militia which took the fight out of the Indians in the Puget Sound area, now Seattle and Tacoma.

Home from the war, he made good in politics in Josephine County. He was first elected coroner, a high office in the gunhappy gold camps, and later county clerk for 4 years. Then he returned to Portland and acquired

considerable property in real estate opera-

### PARMING A BATTLEFIELD

More than 20 years after Wilson was through fighting Indians, the new Finnish settlement in the wheatlands of eastern Oregon became a battlefield in the last Indian war of Far West history. Weapons were rushed to these frontier farmers by TIS soldiers who were amazed how well the simple immigrents could shoot. The Indians swept over the Finnish farms but burned no buildings. Nor is there any record that the Finns ever shot any Indians but their splendid U.S. Army rifles later kept them in deer meat. Among those who watched for Indians on hilltops while father plowed in the valley were Albert Haarala, a retired Portland insurance man, and his brother, Henry, a retired Spanish-American War veteran in California.

It was not until the railroads were built by Swedes, Norwegians, Chinese, Finns and others across America that nonsailor Finns came to the new State of Oregon which had fine land for homesteading, fine timber for slashing and fine fish for kala moijakka fish stew to you. Some of these immigrants arrived direct from Finland but most of them hopped across America from mining camp to mining camp and from mining camp to Dust Bowl.

### LITTLE FINLANDS

They were eager to get started on farms, but most of them also fished in the Columbia and worked in the winter at building in the nearest towns. Besides, they were the migratory workers of the day, picking hops for the breweries, berries for canneries, and prunes for dryers. They created Little Finlands in which they had their own churches, confirmation schools, instruction in the Finnish language, temperance societies and of course their own Saturday night sauna gatherings. The temperance society broadened into a cultural crusade which gave plays, recitals and songfests.

### THE HELSINKI OF THE NORTHWEST

Once Finnish emigrants found that they could make a living at Columbia River fishing alone without having to farm on the bank, they settled in Astoria and other growing communities. Eventually Astoria became the Helsinki of the Northwest with two Finnish newspapers, one church edited and the other published by Socialists. The district attracted outstanding Finnish emigrants, such as the three Kankkonen brothers, Matti, Kalle and Frithlof, who had had building experience in Finland. They established a boatshop which expanded during World War I into wooden shipbuilding. They were for 40 years the leaders of the large Finnish cooperative cannery, Union Fisherman's Cooperative Packing Co. Some of their boatshop employees, such as Kivijarvi and Tolonen, set up their own boatbuilding enterprises and turned out fishing vessels for Oregon, Washington, and Alaska waters. Many early Finnish fishermen built their own boats.

Besides clearing thousands of acres of rugged Oregon wilderness for their own farms, Finnish emigrants were active in logging and sawmilling. Later emigrants from Finnish plywood centers played an important part in developing that industry in the Northwest.

Many of the Finnogonians who are participating in the Oregon centennial, which has a large Finnish exhibition of export goods, are old Americans but new Oregonians. This is not strange for 60 percent of the population of Oregon was born outside the State.

### THE FINNISH-SPEAKING HOUTARIS

The sons of hard-working Finnish pioneers got a good start in machine logging when mechanization came to the northwest forests,

after 1890. Still an operating engineer in Portland, 68-year-old John Henry Simonson (Juhan Hentrik Maattala) at 15 years of age was forcing logs onto railroad flatcars by turning jackscrews, the same principle as raising a house.

Among the many comparatively recent arrivals in Oregon is the clan of Mr. and Mrs. Edwin Houtari. He was born near Hancock, Mich., and after graduating from the eighth grade attended Suomi College in its first year of existence before it had a permanent home. At 16 years of age he went to his uncle's homestead in Hayti, S. Dak., where he was joined later by his parents and the other children. He farmed there for years and married Ida, a Finnish girl who arrived alone at 17 from Oulu.

The Houtaris were active in the Finnish community, supporting its church and various other activities. Assessor of the township, Houtari ran for sheriff on the Noripartisan ticket but lost to a Republican. He moved to Oregon in 1936 and worked as a carpenter and in shipyards until he retired to make toys for his 15 grandchildren and 5 great-grandchildren. Most of them are in Oregon, too, the new home of many Finnishborn.

# Mail by Guided Missile

EXTENSION OF REMARKS

#### OF

### HON, EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent granted me, I am including a statement made by Postmaster General Arthur E. Summerfield concerning an experimental exploration of a new technique in communication. The statement of General Summerfield is most interesting:

### MAIL BY GUIDED MISSILE

The United States today began experimental exploration of a major new technique of communication that is of historic significance to the peoples of the entire world.

A guided missile, on a routine training flight at approximately the speed of sound from an American guided missile submarine at sea, landed successfully on our east coast with a shipment of U.S. missile mail.

This peacetime employment of a guided missile for the important and practical purpose of carrying mail is the first known official use of missiles by any post office department of any nation. An unofficial test flight of a singular Regulus I on the Pacific Coast was made several months ago.

These developments are a reaffirmation by the United States of its humanitarian aims, as eloquently emphasized by President Dwight D. Eisenhower, that the scientific achievements of our people shall be used as a rich legacy of progress for mankind.

Today's shipment of mail by missile has given us extremely valuable information of far-reaching importance to the future of the U.S. mail service, namely:

U.S. mail service, namely:

1. The use of compartments built into missiles to carry considerable shipments of mail appears highly practical.

 Significant quantities of mail can be loaded quickly and efficiently into missiles.
 Missiles can be developed to carry mail

safely and swiftly.

4. The relative lightness of letters and the small space they occupy makes them ideal users of missile technology.

5. Guided missiles may ultimately provide a solution to problems of swifter mail de-

livery for international mails, for isolated areas where other transportation is infrequent, as well as a supplementary high-priority service to big population centers.

The first U.S. Post Office Department official missile mail experiment, delivering approximately 3,000 letters, was loaded aboard the guided missile submarine U.S.S. Barbero (SSG-317) at Norfolk, Va., shortly before departure on a regular training mission. A branch post office was established on the Barbero by my official orders at that time.

This morning the crew of the Barbero, while in the international waters of the Atlantic Ocean, dispatched this historic shipment of U.S. mail on a Regulus I Training Guided Missile, flying the missile successfully to its destination at the Naval Auxiliary Air Station at Mayport, Fla., near Jacksonville, where it landed safely a few minutes ago.

The first missile mail was carried in two metal compartments, painted in the Post Office Department's official mail-box colors of red, white, and blue.

As our studies proceed on the effective utilization of guided missile techniques for mail delivery, we can expect further experiments to develop the feasibility of our plans and add to our store of knowledge of what we informally call our "Pony Express II Missile Mail Project."

The successful missile mail experiment to-day was possible only because of the close cooperation of Secretary of Defense Neil H. McElroy, the fine personnel of the Department of Defense, and the Navy, and our own dedicated Post Office Department people, all working closely together. The Post Office Department is also deeply indebted to Lt. Commander Carlos Dew, USN, commanding officer of the Barbero, and the other officers and members of its capable crew.

The letters which arrived via the Regulus I flight at Mayport, are being processed now in the Jacksonville, Fla., Post Office for regular dispatch to officials and leading citizens who have contributed to, or shown special interest in the postal progress of recent years, including: The President, the Vice President, Members of the Cabinet, other top Federal officials, Members of Congress, Justices of the Supreme Court, Governors of the States, including Alaska and Hawaii, the Smithsonian Institution, the postmasters general of the 99 other member nations of the Universal Postal Union, members of groups associated with the Postal Service, such as the Post Office Department Advisory Board, and the officers and crew of the Barbero.

The envelope used was my official one with a pictorial cachet of the Regulus I bearing the wording "First Official Missile Mail—U.S. Post Office Department" placed to the left. A cancellation reading "USS Barbero" with the date and approximate time of launching of the Regulus I from the submarine was used on the cover. The letters were appropriately franked with the red, white, and blue 4-cent American Flag Commemorative Stamp issue of 1957. On the reverse side of the envelope a backstamp was applied showing the approximate time of the receipt of the mail at the Jacksonville, Fla., Post Office prior to its dispatch throughout the world.

Each missile mail envelope carries a letter from me, as Postmaster General. I would like to emphasize now what I said in the letter: that the great progress being made in guided missilry will be utilized in every practical way by the Post Office Department.

I believe we will see missile mail developed to a significant degree before man has reached the moon.

Today's experiment with missile mail is in line with the finest traditions of the Post Office Department in pioneering with new means of transportation to speed the delivery of the mails.

In colonial days Benjamin Franklin took the mails from horseback and put it on coaches; in 1831 the Post Office Department was the first to use the new fangled trains; in 1858 the Post Office linked the Nation with the famous Overland Mail stage service to be followed in 1860 with the even faster Pony Express. In 1918, when most people still thought the airplane was an unwork-able contraption, the Post Office Department demonstrated its practical peacetime uses with the first regular air mails.

Today's missile mail will go down in history as another saga of progress and achieve-

ment in our national heritage.

# Mote U.S. Army Reserve Training Center, Parma, Ohio

EXTENSION OF REMARKS

OF

# HON. MICHAEL A. FEIGHAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. FEIGHAN. Mr. Speaker, under leave granted, I insert in the RECORD an address I delivered May 24 at the dedication of the Mote U.S. Army Reserve Training Center, at Parma, Ohio:

It is a privilege to participate in the dedication of the Army Reserve Center, in memory of Lt. Kingston H. Mote. His sacrifice and the sacrifice of others who gave their lives in defense of our beloved country serve as a timeless reminder that the chains of human slavery rest infinitely heavier upon the shoulders of freemen than the wearing of a soldier's gear in defense of our priceless liberties and freedoms.

Eternal vigilance is the price of liberty. To maintain that vigilance, we must have officers and men trained and ready to take up arms in defense of our liberty.

The birth of our Nation marked the most significant step in man's long struggle upward toward a system of government which recognizes the dignity of man as the highest value which can be secured for any people under any form of government. History is replete with many dark chapters of man's inhumanity to man and the degradation visited upon whole civilizations by despotic rulers who saw in other men nothing more than the opportunity for exploitation. ambitions of these despots led to military campaigns and great human sacrifice as the empires of their dreams were fulfilled. Since recorded history the common man has struggled against the schemes of the tyrant, sometimes successfully and many times unsuccessfully. But always the struggle of the common man has pressed forward toward the forming of a society in which all men would be equal and in which the Godgiven right to life, liberty, and the pursuit of happiness would be a reality. It was this great ideal, forged upon the anvil of long trial and great sacrifice, which inspired our Founding Fathers to proclaim the Declaration of Independence. Their inspiring charter of high purpose and intent lifted up the hopes of all mankind for a better life, for a better world. That historic document stands today as the only acceptable founda-tion for the forming of both our domestic and foreign policies. It expresses in clear and unmistakable language the basic human rights that must be enjoyed by all our people and our fervent hopes that these same rights be enjoyed by the people of all nations of the world.

National devotion to these timeless principles has made us a peace-loving nation, a nation which has never coveted either the territory or possessions of any other nation or people, a nation which has sought only justice and security for our own people. is to our everlasting credit that if can be said with honesty we have never committed any unprovoked acts against any othe nation and have been drawn into war only as a matter of absolute necessity and in our own self-defense.

It is fitting that in these circumstances. we recall to mind those great ideals and human values for which our men and women of the armed services sacrificed and died in the recent wars. They, of our generation, no less than the heroes and martyrs of generations past, fought for those immutable values of individual liberty and freedom without which life becomes a hopeless drudgery. These same ideals caused our Founding Fathers to set forth the inspiring Declaration of Independence. It is dedi-cation to these same ideals and moral values which have made our beloved land the hope and aspiration of people the world over.

It is the destiny of our country ever to remain the citadel of freedom. Each generation of Americans must keep this rendezvous with destiny. Daniel Webster, in his generation, when faced with tasks no less difficult than ours, inspired his contemporaries with these words: "God grants liberty only to those who love it, and are always ready to guard and defend it." We Americans love liberty and it is our heritage to guard and to

defend it.

# Deterrence and Missiles

EXTENSION OF REMARKS OF

# HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 11, 1959

Mr. O'HARA of Michigan, Mr. Speaker, Gen. Curtis E. LeMay, Commander of the Strategic Air Command and Vice Chief of Staff of the U.S. Air Force, made a speech on April 21 before the Aero Club, of Michigan. The contents of this speech would, I think, be of great interest to the Members of the Congress and I am requesting that it be printed in the Appendix of the RECORD. General LeMay discussed two topicsdeterrence and missiles. He pointed out that the national defense policy as enunciated by President Eisenhower involved two objectives-to deter war and to effectively counter any possible attack. The General pointed out that these objectives are complementary and inseparable. To me the most interesting part of General LeMay's speech was that in which he discussed the role of missiles in this age of weapons' transition. He answered some critics of the Air Force who would reduce substantially our strength in manned aircraft and place greater reliance on missiles. The General de-veloped the idea that it is essential for us to retain proven weapons until such time as science has developed other weapon systems in which we can place more complete confidence.

In his speech General LeMay candidly pointed out that he was reflecting the policy views of the Air Force. He reflected also, I think, the views of the administration. Our national defense

policy is principally intended to protect us from direct armed aggression. While I do not wish to minimize the necessity for such protection, I wish that I could feel that we had more adequate conventional Armed Forces capable of operating effectively in possible theaters of limited engagement. However, as an exponent of the views which he holds, General LeMay has no peer. It is appropriate that his remarks be brought to the attention of as many people as possible. We all can learn a great deal from this most capable officer:

REMARKS BY GEN. CURTIS E. LEMAY, VICE CHIEF OF STAFF, U.S. AIR FORCE, BEFORE THE AERO CLUB OF MICHIGAN, DETROIT, MEH., APRIL 21, 1959

I am glad to be here tonight and to have this opportunity to talk to you. It is always a pleasure to see old friends and a privilege to participate in this 50th annual meeting of one of the oldest, largest, and most active State aviation organizations.

This evening I propose to discuss two subjects-deterrence and missiles. These topics have at least two things in common which make them extremely pertinent at this time—first, they have both been very much in the headlines during these past few months, and second, they fall into the con-troversial category. The case for the loyal opposition has been very adequately presented in public statements, newspapers. and magazines. Tonight, I want to give you the Air Force side of the story.

A great deal has been said or written about absolute deterrence, minimum deterrence, mutual deterrence, deterrence for small wars and deterrence for big ones. At the same time, the size and type of mili-tary forces which are required to provide each of these so-called brands of deterrence has also been given a thorough public air-

However, any discussion of deterrence, if it is to be meaningful, should begin with an examination of our national defense policy. President Eisenhower has stated that our goal is to "deter war and to repel and decisively counter any possible attack." This concise and straightforward statement of policy contains two distinct thoughts—one being "to deter" and the other "to repel and decisively counter any possible attack." These two objectives are inseparable. Each is dependent upon the other, and both make up the whole. It is obvious, then, after examining this statement of defense policy, that deterrence alone is not, and was neve intended to be, our sole means of national defense.

For one thing, there can be no such thing as an absolute and infallible deter-What might serve to deter one nation, will not deter another. An adequate deterrent today may not serve tomorrow. Many factors influence the decision of a nation to take the final step which will inevitably lead to war, and it would be fool-hardy for any one nation to assume an absolute ability to deter another from taking this step.

Moreover, a defense posture comprised of forces which are useful only as a deterrent, but which do not contain the inherent capability to prevail, should that deterrence be unsuccessful, cannot be considered adequate. Our Nation's defense structure must contain weapons and forces which have the undeniable ability to destroy the warmaking capacity and military forces of our potential enemies.

Exclusive dependence on deterrence does not allow for mistakes and miscalculations or for limited situations getting out of hand. It does not take into account that our opponent can apply or turn off pressure at will—pressure which we as a nation may not be willing to accept. If any of these situations should occur and deterrence should fail, then we would have to fight—we would have to win the war that wasn't supposed to happen in the first place. Furthermore, a minimum deterrent of this nature in the hands of our Nation would pose no real problem to a strong enemy, and would completely strip this country of any political, diplomatic, or military initiative, To base our first line of defense, upon this type of philosophy would leave our country at the mercy of an enemy whose ruthless quest for world domination is known to all of us.

If our deterrent posture is to be effective, it must contain three essential elements. First, we must have substantial forces in being and ready and available for immediate use—forces which have the capability to repel and decisively counter any aggression. Second, we must possess the national will to develop and maintain these forces, and the determination to use them if necessary. Third, both the forces and the determination to use them, if required, must be credible in the eyes of any potential enemy. This combination will give us the greatest hope for successful deterrence.

Our military forces must be of such a size at type that they have the unquestionable ability to keep the enemy off our own back here at home, and at the same time, to destroy his military forces and his capability to wage war if this should ever become necessary. Possession of such forces does not mean that we must necessarily match him gun for gun—aircraft for aircraft—or missile for missile. It does mean that we must have balanced forces whose versatility provides us with the means of applying the proper amount and type of firepower accurately and decisively against any target.

But these forces standing alone are not the whole answer. Military strength which is not backed by strong national will, cannot be fully effective. It can, in extreme cases, be completely ineffective. The eyes of the entire world are focused upon our Nation to-day, and our capacity to lead the free world has never been under closer scrutiny. We therefore cannot afford any letdown of our national determination. This Nation must present a strong and united front at all times to friend and foe alike—and convince them that we know where we are going, what we are doing—and that we are confident in the success of our cause.

Finally, the effectiveness of our military forces are of little value as a deterrent if any enemy does not fear the consequences to him of an aggressive move on his part. He must know that he will be beaten, and that his aggression will gain nothing except complete and devastating defeat. There must be no doubt in his mind that what we have is good, that we can and will use it if necessary, and that if we do use it—we will win.

Air Force weapons are designed to carry out this national policy. It is our sincere hope that the knowledge that the United States has the power—and the will—to retallate swifty and decisively will serve to deter any potential enemy from aggression—but we cannot and do not rely on this. We are, in other words, preparing for the worst—and hoping for the best.

Accordingly, the capabilities of Air Force weapons are aimed at the precise and selective destruction of targets which contribute to the warmaking capacity of the enemy. The combat units of the Air Force have been specifically tailored for this job.

Over 90 percent of this country's retaliatory effort—its primary general war force—is contained in the Air Force's Strategic Air Command and our tactical air forces at home and abroad. In addition to this—and another vital segment of our general war

capability—are the Air Defense forces which protect and back up our offensive effort. Approximately 75 percent of all air defense facilities and equipment—the radars, communications, fighter interceptors, missiles, and the control network which comprise the area air defense of this country—are contained in the Air Force's Air Defense Command.

The Air Force's limited war capability is contained within its general war forces. With the exception of our continental Air Defense system, all combat forces of the Air Force are designed to fight any type of war which might occur. Our tactical air forces worldwide have a particular adaptability for limited conflict in addition to their general war capability. These units can, either from in-place overseas bases, or after rapid deployment from bases in the United States, engage rapidly and effectively in limited war situations.

The contributions of the Strategic Air Command to any limited war situation are also substantial. First, it acts as a strong right arm, backing up the employment of free world forces in limited conflict. A good example of its effectiveness in this role occurred during the Lebanon crisis almost a year ago when the Strategic Air Command had well over 1,000 modern jet bombers-with crews and nuclear weapons available and ready for takeoff-quietly poised in the background while the more spectacular developments took place on the immediate scene of action. Under this steel umbrella, ground, naval, marine, and tactical air units can move promptly and openly into trouble areas, firm in the knowledge that their deployments are covered by the invisible but ever present might of strategic power. Furthermore, in addition to this assive backup, strategic units have a substantial inherent limited war capability and can be used effectively in this capacity if such measures ever become necessary.

So far I have discussed only the Air Force contribution to our deterrent force—a contribution which, I might add, has been bought and maintained over the past 10 years for approximately one-third of the Nation's overall defense dollar. However, before I leave this subject, I want to point out that the forces of the Army, Navy, and Marine Corps each make their own singular contribution to this overall defense team, and further that this team is augmented by the substantial power of our allies on land, sea, and in the air. In 1958, allied forces alone consisted of 5 million men, 14,000 jet aircraft, and 1,700 combat vessels.

That is all I am going to say about deterrence this evening. The main point—and one which I would like to repeat—is that deterrence, while a very important goal of our national defense policy, and one which we certainly hope will continue to be achieved, is not inseparable from our capacity to wage war. If deterrence should fail, the capabilities of our forces and weapons will be the decisive factor in whether or not we prevail in the ensuing conflict. If we have placed our money and effort on so-called minimum deterrents, we will find ourselves without adequate means to defend ourselves.

Now a word or two about missiles. It is natural when new and revolutionary pieces of military hardware are developed, that differences of opinion should arise on their use, the numbers needed to do the too, and the rate at which these new weapons should enter the inventories of the defense forces. Missiles have been no exception. For example, the Air Force oftentimes has been accused of lack of imagination and initiative in its approach to missiles, and of clinging to bombers and fighters solely on the basis of emotion and tradition. This is not true. As a matter of fact, past expenditures and those programed for this next fiscal year for the major procurement

and production of missiles, show that the Air Force portion thereof is over 1½ times as much as for the other two services combined.

Missiles are being, and will continue to be, phased into combat units as fast as it is operationally feasible. However, common-sense will not allow us to replace the known and proven capability which we now possess in manned aircraft, with weapons whose reliability, accuracy, and overall effectiveness are still in the process of determination. We are well aware of the distinct and welcome advantages which ICBM's, for example, will afford-but we also recognize that there are certain limitations which apply to our early generation missiles and which detract in various degrees from their operational effectiveness. Moreover, there are still other restrictions which apply to missile operations by the very nature of the beast-such as the inability to recall them once they are launched. All of these things must be taken into account in the establishment of our force structure and in the integration of new weapons into this force.

Our Strategic Air Command, for example, has for the past 10 years been required to maintain a force-in-being which is capable of performing its mission on a year-in-yearout, round-the-clock basis. Primary responsibility over the years for the successful conduct of this Nation's strategic offense has made the Air Force acutely aware of the delicate balance which must be achieved between forces-in-being-those forces which would be used to face the emergencies of today, tomorrow and next month-and forces under development. This balance has to be maintained at all times to guarantee continued modernization of our forces without interruption of their day-to-day readiness. Reliance upon unproven systems, or too rapid acceptance of new systems as replacements for proven weapons—can easily create gaps in this readiness—and in our first line of defense. We cannot tolerate these gaps and still do our job. Therefore, we approach these new weapons with a certain amount of discretion which has absolutely nothing to do with emotion or tradition. It is a matter of commonsense.

The obvious advantages which will accrue to our Strategic Air Command from a well established ICBM capability boil down to these points. First, there is no known defense—at least for the next few years—against ballistic missiles. Once they are launched, they cannot be destroyed or rendered harmless before they reach the target. Within the limitations of the accuracy and reliability of the missile itself, those which are successfully launched will reach their targets.

Next, the high speeds at which these missiles travel allow us to put weapons on designated targets within very short periods of time after the decision to launch has been made.

Third, missiles lend themselves more readily to protective measures against surprise attack. They can be dispersed down to a single missile per site, thereby providing hundreds of extremely small and difficult targets for the enemy. Our newer missiles can be placed underground-and whatever facilities must remain above ground can be readily hardened by steel and concrete shelters. Furthermore, later models lends themselves to the use of mobility and concealment-additional measures which, in combination with dispersal and hardening. will not only afford greater protection, but will also greatly compound the enemy's attack problem. These, in general, are the operational advantages which missiles will give us-and there is no doubt that they are substantial.

Now let us examine the other side of the ledger. Today, and I emphasize the word today, our ballistic missiles have not yet dem-

onstrated the type of reliability or accuracy LAWS AND RULES FOR PUBLICATION OF which is required to insure the most effecthe relatively small yield wartive use of heads which they carry. I said relatively small-actually there is nothing small about the nuclear warhead of an ICBM—until you compare it with the yield of some of the weapons which our manned bombers now

In missile operations, reliability is a major factor of system effectiveness. If a missile is to reach the target, it must be so designed that each one of its thousands of individual components operates perfectly. Missiles do not have the built-in emergency system which is automatically provided by the presence of man in an aircraft, and as a result, once the weapon leaves the launch pad, there is no further opportunity for troubleshooting or correcting malfunctions or com-Donent failures

A final characteristic which is not provided by missiles-and may never be-is the flexibility which the human element adds to the system. For example, aircraft can be launched anytime an attack appears imminent, and recalled if it fails to develop. Aircraft, en route, can divert from one target to another, if necessary—or in some cases attack multiple targets. Aircraft are not expended on a single mission. And finally, aircraft can perform reconnaissance and bomb damage assessment functions along with their other jobs. Missiles do not provide these things-and these are capabilities which are extremely important.

Our intention in the Air Force is to take advantage of the strong points of each system. The balance in favor of any one system over another will change over the years, deover another will change over the years, de-pending upon new developments and in-creased experience with newer systems. These changes will be directly reflected in our force structure. There is no question that missiles will eventually take over a major role in our defense forces. As far as we can see today, however, there always will be a requirement for a mixture of

manned and unmanned systems.

To sum it up-so that I do not leave you With any doubts in your mind on how we feel about missiles—the Air Force is making every effort to obtain a dependable and effective missile force. We recognize fully the tremendous advantages which such a force will bring to our defense capability. We are, however, taking great pains to be sure that We are not stampeded into accepting equipment which, when put to the task, is found wanting. The rate of change over to missiles, and the degree to which we finally convert our units, depend upon future progress in the areas which I have just discussed. Finally, there is no doubt that missiles will eventually comprise a major portion of our retaliatory force. On the other hand, there is no doubt, either, that manned vehicles Will be used to complement this capability for as long as you or I will be around to see it.

Thank you.

### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44. SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take . Il needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional. RECORD semimonthly during the sessions Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME: ILLUS-TRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record.—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered
- Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

  4. Tabular matter.—The manuscript of
- speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following
- 5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks .- If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

printing of the Record,
7. Thirty-day limit.—The Public Printer
shall not publish in the Congressional
Record any speech or extension of remarks
which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided. That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record .- When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, tele-grams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. Official Reporters .- The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

# Appendix

# Henry Hudson's Explorations on the Delaware

EXTENSION OF REMARKS

# HON: HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, June 11, 1959

Mr. WILLIAMS of New Jersey. Mr. President, today the Governors of New Jersey and New York will join with others in the opening of the Hudson celebration. Ninety days of events and ceremonies are about to begin; the entire Nation will be reminded that Henry Hudson explored, 350 years ago, the river which now bears his name.

All residents of New Jersey are justly proud of their portion of the Hudson-River shores. We have picturesque waterfront industry and a particularly beautiful portion of the Palisades along that great river. We join heartly today in this celebration.

But we would also like to point out that New Jersey, and Pennsylvania, too, have another reason for being proud during this tribute to Hudson. I am speaking of his explorations of the Delaware River.

It is true that this visitor from the Old World spent only a short time in this section of the New World, but I think that many tourists have since made up for his haste.

An article in the New York Times of June 7 tells about the explorer of 1609 and the visitors since then. I think the article is a clearcut invitation to those who have not yet seen the tranquil towns and beautiful scenery of the particular part of the Garden State described.

I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Record, as follows:

HENRY HUDSON'S DELAWARE—FAMOUS EX-PLORER SAILED ALONG THIS RIVER AND AD-MIRED IT BEFORE DISCOVERING THE ONE THAT BEARS HIS NAME

### (By Benjamin Eisenstat)

LAMBERTVILLE, N.J.—The Hudson is not the only river entitled to a 350th anniversary this year. The Delaware can claim the same distinction. Henry Hudson investigated its lower reaches on August 28, 1609, about a week before he entered New York Bay and began his explorations of the stream that wears his name.

Hudson sailed up Delaware Bay in the Half Moon to the mouth of the river and then sailed on in, until shallows and rapids ahead suggested to him that he was not on the proper route for the Northwest Passage. Since that was what he was looking for, he went about and sailed out again.

He spent only a few hours in the Delaware River. But that was time enough for him to see and record that it was "one of the finest, best, and pleasantest rivers in the world."

Today, the Delaware still lives up to that description, as any motorist can see for himself by driving along its peaceful banks, particularly along the 100-mile stretch from Trenton up to Port Jervis, where the boundaries of Pennsylvania, New York, and New Jersey converge.

#### RESTFUL SCENERY

Between Trenton and Port Jervis the stream is bordered by restful countryside, and good roads run along the river's edge in both Pennsylvania on the western bank and Jersey on the east. Fifteen bridges join the two States along this length of the valley, and the driver who wants to do some exploring can meander back and forth as the spirit moves him.

In Jersey, the Kittatinny Mountains, and in Pennsylvania, the Poconos provide an impressive rolling backdrop for the river. Man, for once, has made attractive contributions to the scene. Several old canals running paralled to the Delaware provide a sort of scenic counterpoint, while the river bridges of lacelike ironwork and little wooden canal bridges are architectural grace notes.

The land is gentle but the history is violent. It mainly concerns the Lenni-Lenape Indians, who were duped by both the white settlers and by rival tribesmen, and who retallated with force and eventually became refugees of their own land.

The most legendary figure arising from this general animosity was one Tom Quick. Tom's father had been scalped while crossing the Delaware in the vicinity of what is now Milford, Pa. Young Tom vowed he would revenge the slaying by killing exactly 100 Indians.

### NOTCHES ON HIS GUN

As he began to carve notches on his gunstock, two factions came into being. Governmental officials promised that no Indian who killed Tom would be held accountable; Delaware Valley admirers of Tom kept score of his progress.

The ironic windup of Tom Quick's career came when he contracted pneumonia just after killing his 99th Indian. Delirious, he climbed from his bunk and fell to his knees before the doctor, pleading "for humanity's sake" that one more redskin be brought in for the final kill. Luckily for the Indians, early medical protocol did not prescribe the coddling of patients.

Another area character, whose contribution to Delaware River legend was more constructive although equally rugged, was Dan Skinner. Before the Revolution he felled lumber in the western Catskill foothills and rafted it down the Delaware to Easton and eventually to Philadelphia.

When he became too old for this rigorous task he organized a timber monopoly and as skillfully maneuvered his employees as he had guided his rafts. Before running any perllous passage in the river, rum was ladled out in sufficient quantity to make the raftsmen more daring and perhaps less mindful of cold water. The final payoff included a planned debauchery at the point of delivery. After such a spree the men were badly enough in need of funds to make the long trek back to the Catskills, over Indian paths, for another load of timber.

Viewing the doclle river today it is difficult to think of it as the riotous route of those old ironmen, as the steersmen were called. Still, there are stretches which justify the title. There is Wells Falls, for instance, about a mile below Lambertville. This is a boiling rapids, which in logging days was considered the most dangerous passage of the entire river.

At this season, it is also difficult to associate the Delaware with its most famous historical moment, the Christmas night crossing of Washington and his troops, 8 miles above Trenton. However, Washingon Crossing Park is maintained as a memorial to that turning point in the Revolution.

The greatest problem of the motorist on the Delaware's banks will be deciding which roads to travel and which bridges to cross. Although exploratory zeal may be dulled by too specific recommendations, there are locales which contain the essence of the Delaware River area.

Titusville, alongside Jersey State Route 29, is a little one-street village set aside between canal and river, actually, an island in itself. Its tall red-brick Presbyterian church looms over neat, white frame houses.

The entire extent of route 29 from Trenton to Frenchtown has that rustic aspect. In fact, one 3-mile stretch is not hard surfaced, and the slower driving conditions are compensated by the rambling semiprimitive charm of the roadside. Raven Rock, a tiny village along this unpaved length, has never been mentioned in any guidebook, yet its crude beauty is comparable to that found in the Kentucky hills. There are a few rough stone houses and wild, overgrown gardens.

### NARROW STREETS

Lambertville is the largest town on Route 29, and anyone interested in early Americana should probe its narrow streets. Modest gentility prevails. The houses are of painted brick, their entrances flush to the pavement. They have 2-story porches and other early 19th century features.

Again the driver is presented with the problem of choice: the unspoiled loveliness of Route 29 or tourist-conscious New Hope with its art galleries, objects d'art, art celebrities, and arty (but good) restaurants.

New Hope and its art colony brings to mind the many internationally famous American painters who were fascinated by this part of the Delaware River. Asher Durand, sometimes called the "father of American landscape painting," was one of the first to depict the Delaware Water Gap on canvas. But the most important renditions of that focal point of tourism were done by George Inness in the 1860's. His study of the Gap in the Metropolitan Museum includes a delineation of the aforementloned rafting activity.

### RIVER AND CANAL

The Pennsylvania side—State Route 32 and U.S. 611—is especially attractive from Frenchtown to Easton. The combination of wide river and narrow canal is irresistible to photographers and picnickers. Just 1 mile below Raubsville is the ultimate site for canal fanciers. Locks 22 and 23 are here, the last lifts in the 60-mile waterway from Bristol to Easton, and a more delightfully complicated combination of locks, spillways, and little bridges would be hard for the visitor to find.

On a larger scale, similarly complex architectural criss-crossing exists at Easton and Phillipsburg, where the Lehigh flows into the Delaware. A number of large bridges and dams form a semiabstract pattern that artistically and practically ties these two towns and two rivers into a cohesive unit.

Above Easton it is the driver's choice again, except that Belvidere, on the Jersey side, has a Victorian air of distinction, especially appealing to admirers of the ginger-bread era. On the same side of the river, Routes 46 and 611 provide the most comfortable, and perhaps the most scenic approaches to the Delaware Water Gap.

At the gap, the motorist is at the core of one of the principal vacation areas in the country. Yet this commercial phase is not overwhelmingly obvious. At present there is only one really big billboard defacing the green facade that looms over the roadway. Most of the resort advertisements are com-

paratively discreet.

On the Pennsylvania bank the road that extends from U.S. 402 at Minisink Hills through Shawnee is a roller-coaster route that has an advantage over the wider, flattened roads. One moment the rider is level with the river and then suddenly he looks down on it at sharp perspective. Cautious driving is the order and varied scenery is the reward. This particular stretch of road, begun by the first Dutch settlers, is the oldest in Monroe County.

U.S. 209 in Pennsylvania provides easy access to Port Jervis, and also offers tempting diversions from the river itself. This is an area of lakes and waterfalls and a visit to one of the falls provides a cooling break

of the falls provides a cooling break.

Bushkill Falls is typical. Labeled the "Niagara of Pennsylvania" it has not the girth of that waterway, but has its own, less

imposing charms.

U.S. 209 is now one of the best roads along the river, but it was once a trail connecting the Deleware and Susquehanna Rivers, and was used by the Delaware Indians on their long trek to the Wyoming Valley.

TWO FASCINATING MEN

Dingman's Ferry is a handsome village and its fascinating name stems from two early fascinating Dingmans, Andrew, who built a flatboat ferry with his ax in 1750, and David W., who was a judge and frequently held court sessions in his home, in bare feet and nightshirt.

At Port Jervis, U.S. 209 connects with U.S. 6, once part of the Old Mine Road, built before 1664 and leading from Kingston, N.Y., to the Delaware Water Gap, where copper mines were supposedly dug by the New Amsterdam

Dutch.

# Attacks on Mate Baffle Mrs. Strauss

EXTENSION OF REMARKS

# HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, June 11, 1959

Mr. GOLDWATER. Mr. President, yesterday in the New York Journal American there appeared an excellent article by the eminent reporter Ruth Montgomery. This article deals with the life of Admiral Strauss, as explained through the lips of Mrs. Strauss.

Anyone who has any doubts about the fine American, gentlemanly qualities of this individual should read this article, because it presents Mr. Strauss in an entirely different light than he has been presented on the floor of the Senate. Even those of us who are genuinely in support of him have failed to bring out this facet of his life.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATTACKS ON MATE BAFFLE Mrs. STRAUSS

(By Ruth Montgomery)

Washington, June 10.—Mrs. Lewis L. Strauss would undoubtedly find it easier to explain Einstein's theory of relativity than to understand how Senate critics can call her husband arrogant, secretive, or untruthful.

Devoted, talented Alice Hanauer Strauss knows the controversial Secretary of Commerce as a gay, humorous, fun-loving spouse who adores children, loves fishing and riding, and modestly conceals a generosity of magnificent proportions.

Moppets—and particularly his three grandchildren who call him Bop—return the Admiral's adoration. So, also, do a number of doctors who owe their medical education to the man who is now facing virulent, almost unprecedented attack in the U.S. Senate.

Mrs. Strauss, one of the few persons in the world who knows of her husand's unsung penchant for alding worthy, ambitious youngsters, has shared 36 happy, adventure-

some years with him.

They met in New York City shortly after Strauss' return from Belgium, where he had served Food Relief Administrator Herbert Hoover so ably that Kuhn, Loeb & Co. invited the 22-year-old "comer" to work for the banking firm.

Her father, a partner in the firm, brought Strauss home to dinner one night, and it was apparently love at first sight. Strauss even offered to help the pretty school girl with her Latin, but an unromantic teacher the next day found his translations a bit too free.

Tragedy touched their wedded years for the first time, when death claimed their 3year-old son, Jerome. Instead of wallowing in their grief, however, Mr. and Mrs. Strauss used the bank account which had been set up for their infant to help other children develop their talents.

Some of it went to aid high school students who would otherwise have been financially unable to continue their studies.

More of it was used to pay university expenses for bright, ambitious young men who yearned to become doctors. The future Commerce Secretary, in picking up the tab, made only one request of his beneficiaries. He hoped that when able to do so, each would aid some other worthy lad to study medicine.

One of the proudest moments in Strauss' life came a few months ago, when one of the physicians he had aided notified him that he was now ready to "fulfill my part of the bargain." He had already found a candidate who deserved and needed assistance.

During the lengthy Senate hearings on Strauss confirmation, testimony revealed that he had come to the rescue of two high school lads, working in a dingy brownstone basement in New York, who hoped to develop colored film. Strauss visited them there, liked their spark of ambition, arranged to finance their experiments. The result is Kodachrome film.

An artistic, sensitive man, Strauss executes exquisite pencil drawings, produces handsome chests and other fine cabinet work, and loves good music. He studied piano as a boy, and still enjoys playing a medley which

he laughingly calls his "thousand dollar piece."

At their 1,600-acre farm in nearby Virginia, Admiral and Mrs. Strauss share many hobbles:

Horseback riding, swimming, and fishing for big-mouth bass in the lake they built last year.

An ardent Izaak Walton fan who thrives on fly casting for brook trout, Strauss takes his three grandchildren (aged 3 to 7 along to let them trail fishing lines off the boat.

One of the traits which most endears him to his devoted wife is his rare ability to play with young children, and to talk seriously with older ones—without talking down.

He can scarcely wait for the leisure time to take his grandchildren on the kind of camping excursions which he and his wife used to enjoy with their only living son, Lewis Hanauer Strauss. In those nostalgic days, the Secretary developed a sportsman's talent for cleaning and cooking, as well as catching and eating the trout.

A self-taught farmer, his chief relaxation today is directing soil rotation and antierosion projects, and caring for his prize herd

of Black Angus cattle.

At the completion of his term as Chairman of the Atomic Energy Commission last year, the Strausses had hoped to retire to a life of ease on their country estate. Instead, after nearly a lifetime of public service, he again answered President Eisenhower's call to duty.

Mrs. Strauss felt that he had earned his retirement, but like the loving spouse that she is, she left the decision entirely to her husband. She knew that he had superb training for the high post which his hero. Herbert Hoover, had once held when Strauss was his young assistant.

At least, she felt, this appointment could not become controversial. Famous last

words.

# National Wilderness Preservation System

EXTENSION OF REMARKS

# HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, June 11, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "One Thousand Four Hundred and Fifty-Four Square Miles of Utah Wilderness?" which was published in the Salt Lake Tribune of June 5, 1959.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

ONE THOUSAND FOUR HUNDRED AND FIFTY-FOUR SQUARE MILES OF UTAH WILDER-NESS?

The proposed national wilderness preservation system will protect, not damage, Etah's commercial interest, says Dr. Ira N. Gabrielson, chairman of the Citizens Committee on Natural Resources, Washington, D.C.

The committee, one of several lobby groups working for congressional adoption of the controversial bill (S. 1123), is circularizing all States affected by the proposal with similar reassuring statements.

The bill, says Dr. Gabrielson, continues existing grazing privileges in the national forests, it does not affect areas now open to lumbering, permits mining on national

forest lands involved if needed in the national interest and safeguards State water laws.

"Only seven areas in Utah will be involved \* \* \* 1,454 square miles, or about 1.7 percent of the State's 84,916 square miles," says the announcement.

These areas are also vital watersheds.

Five of the areas are already in the national parks system which are already unavailable for commercial use or exploitation. Included in the wilderness system, accord-

ing to Gabrielson's interpretation of the bill, are:

are:	
High Uintas Primitive Area (Na-	Acres
tional Forest)	240, 717
Dinosaur National Monument (also	FO 400
in Colorado)	50, 430
Zion National Park	143, 295
Bryce Canyon National Park	.36, 010
Capitol Reef National Monument	36, 133
Arches National Monument	34, 250
Rainbow Bridge Indian Roadless	01, 200
Area	390,000
Total	930, 835

The Rainbow Bridge Area would be included only if the Indians who own it so decide

The wilderness bill would require further study of the High Uintas Primitive Area before its inclusion in the permanent wilderness system, Dr. Gabrielson says.

Such a study is already underway of planned by the Forest Service and presumably the High Uintas will be changed eventually from a primitive area to a wilderness under a 19-year-old regulation known as U-1. The upgraded regulation permits grazing, fishing and hunting and other uses already underway but prohibits commercial timbering and use of airplanes and motor-boats except in special instances.

It is hoped that the delightfully scenic High Uintas will be fully protected in their

natural grandeur.

Any national park or monument with a contiguous area of at least 5,000 acres without roads would be potential wilderness under S. 1123. Actually, the National Park Service manages roadless areas in parks and monuments as wildernesses and changes are made only after long study and consideration of the public needs.

Declarations that the proposed wilderness system fits into the land use program already established on the public lands are impressive at first flush. However, a study of the bill fails to convince us that the national wilderness system is needed to accomplish the mild changes its backers pretend to seek. The primeval character of the wild areas of national parks and national forests are already being protected in most cases—perhaps better in some respects than they would be under the new wilderness bill.

A special problem keeps most Utahns opposed to the wilderness bill. The wilderness backers are dedicated to preventing any water storage inside Dinosaur National Monument and this, if continued, will deprive Utah of its fair and guaranted share of Yampa River water in the upper Colorado reclamation program. Solemn guarantees from the U.S. Government and its agents were made prior to and at the time the Dinosaur Monument was expanded up the Green and Yampa rivers.

The wilderness bloc is doing everything possible to seal up this source of precious

water from Utah.

Until a satisfactory alternative plan to Echo Park Dam is worked out, or an exception made to the no-water development rule in Dinosaur Monument, Utahns will not be tranquilized by Dr. Gabricken's happiness pills,

#### Increased Funds for Medical Research

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES
Thursday, June 11, 1959

Mr. NEUBERGER. Mr. President, one of the great challenges of our time is to invest enough in medical research generally, and in cancer research in particular, to make a major breakthrough in the realm of critical diseases.

An interesting and informative column on this vital topic was published in the Klamath Falls Herald and News of Klamath Falls, Oreg., of June 7, 1959, by Frank Jenkins, editor and publisher of that daily newspapers in my home State.

Mr. Jenkins has suggested that some of the funds required for medical research be obtained by economies practiced on such projects as the New Senate Office Building and other undertakings. While I myself am not an inhabitant of the New Senate Office Building, I cannot comment conclusively on this recommendation because I am informed by veteran Senators that additional quarters have been required. However, I do know that we are spending huge sums of the taxpayers' money for purposes far less urgent, far less essential, and far less crucial than medical research. In that respect,' Mr. Frank Jenkins has touched on a theme which all of us know to be basically true. Therefore, Mr. President, I ask unanimous consent that the column by Mr. Jenkins from the Klamath Falls Herald and News of June 7 be printed in the Appendix of the

There being no objection, the column was ordered to be printed in the RECORD, as follows:

#### IN THE DAY'S NEWS (By Frank Jenkins)

An interesting proposal was offered the other day by Senator RICHARD NEUBERGER, of Oregon, who urged the Congress to enact a broader program of cancer research as a fiting memorial to John Foster Dulles, America's great Secretary of State who was struck down by cancer at the very moment when his exceptional talents were most needed by his country.

Senator Neuberger—who himself has just emerged from a bout with the dreaded killer—was testifying at a Senate appropriations subcommittee hearing on a money bill for the Federal Department of Health, Education, and Welfare. He told his colleagues that an expansion of cancer research funds from \$75 million to \$109 million could be aimed at vanquishing the disease that took Dulles' life.

He added:

"Can we dare to pinch pennies in the face of a challenge like that?"

He was joined in his proposal by Senator LISTER HILL, of Alabama, chairman of the subcommittee, who pointed out that cancer has robbed the U.S. Senate of some of its greater leaders, including Senator Taft of Ohio, Senator Vandenberg of Michigan and many other distinguished and patriotic leaders.

Here's a thought:

Maybe we can accomplish what Senator Neuberger suggests by pinching some pennies—pennies that are being wasted.

For example:

There is the palatial new Senate Office Building on Capitol Hill. It was originally supposed to cost about \$20 million. Its final cost will be closer to \$30 million. Why?

Well, from all we can read in the papers, the job seems to have been very fuzzliy planned. The floors, it is said, were of a special rubber tiling. After the building was occupied, it was discovered that they were very noisy. The click of the secretaries' heels and the rattle of the electric typewriters made such a clatter that the Senator's couldn't think.

So it was proposed to lay carpets over the tile. But, that would cost \$150,000 extra, And the carpets would have been so thick that it would have been necessary to cut off 2 inches from the bottom of the costly oak doors so they would open. That would cost more more more.

And the new Senate Office Building called for a new subway from the Capitol Building, with cars to carry the Senators, so they wouldn't have to walk. So that was tackled. When it was about finished, it was discovered that it came into the Capitol Building at the wrong place. So the whole end of it had to be done over at a cost of some \$4 million.

And so on.

Here's what I'm getting at.

Things like these mean wasted pennies. In comparison with all the fabulous waste that goes on in our Federal Government, they are no more than pennies—although to us taxpayers out here in the brush they look like real money. Senator Byrn has been telling us for years that our whole Federal Government is shot through with waste like this—waste that could be avoided by the simple practice by our Federal Government of the kind of economy we all have to practice in our own private affairs.

I'm all for Senator Neuberger's proposal. I think it would be wonderful.

But I think it ought to be paid for by pinching pennies—the pennies that are wasted. In the fantastic, sprawling structure that we call our Federal Government there are plenty of wasted pennies to be pinched.

## Amendment of Transportation Act of 1958

EXTENSION OF REMARKS

## HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES
Thursday, June 11, 1959

Mr. CASE of New Jersey. Mr. President, the Senate Surface Transportation Subcommittee, on which I serve, has been conducting hearings recently on bills to amend the Transportation Act of 1958. I ask unanimous consent to have printed in the Appendix of the Record three editorials dealing with the growing crisis in commuter transportation, which I believe are worthy of the attention of my colleagues in the Senate. The editorials are from the Newark Evening News of June 5, 1959, the Newark Star-Ledger of June 6, 1959, and the Philadelphia Inquirer of June 7, 1959

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Newark Evening News, June 5, 1959]

#### BUYING TIME

In 2 days of public hearings in Washington Senators Case and Williams and other spokesmen for New Jersey commuters urged adoption of amendments designed to brake the service abandonment processes of the Transportation Act of 1958.

They had no hope of persuading Congress to withdraw from the Interstate Commerce Commission its new power to approve abandomment of unprofitable intrastate passenger service that becomes a burden on interstate commerce. At most, they were seeking delay, to give State and local governments time to resolve commuter problems.

Meanwhile, back in New Jersey where these problems are at their most critical, Perry M. Shoemaker, president of the Lackawanna, said at a public utilities commission hearing that his railroad would wait a reasonable length of time before pressing its plans to discontinue all commuter service.

The Lackawanna, he said, would wait for the results of the study being made by the newly created State division of transportation and for the special message on rapid transit that Governor Meyner had indicated he would send to the legislature at a special session July 27.

In Mr. Shoemaker's observations, as at the Washington hearings, the emphasis was on allowing time—reasonable time—for public authority to act.

Listen to the railroad presidents and you sometimes get the idea that they think the passenger deficit is an insoluble problem, no matter what State and local officials do about it.

Mr. Shoemaker's let's wait and see suggests that he, at least, still has hope. So between railroad reasonableness and government action, if it comes, maybe the commuters can hope, too.

#### [From the Newark Star-Ledger, June 6, 1959] CHANGES IN ORDER

The railroads have made no secret of their intention to use the Transportation Act of 1958 to try to curtail their commuter operations. The Interstate Commerce Commission is expected to be flooded with abandonment requests. And the flood is expected to be of such proportions that the Transportation Act is now being subjected to a close second look.

Under the act, service could be suspended within 30 days unless the ICC intervened. The act also requires the ICC to complete its investigations within 4 months, and it fails to require any public hearing.

New Jersey's two Senators, Harrison A. Williams, a Democrat, and Clippord Case, a Republican, are argeed that changes in this act should be made—before it is too late to save rail commuter service in the State.

The principal points of attack are on the 4-month limit on ICC investigations and on the failure to provide for a public hearing.

The time limit was set in order to prevent dragging out a case unnecessarily. The railroads are entitled to as prompt as possible a decision on their applications. Where this can be accomplished in less than 4 months, it certainly should be. But the number of applications and the complexity of the problems make it doubtful that many investigations can be satisfactorily completed within the prescribed limit.

If the ICC is to exercise any sound judgment, if it is to act in an informed and intelligent manner in protecting the public interest, it needs enough time to look into the railroads' claims and to investigate each application thoroughly. Otherwise, the ICC

may step in to continue operations in which there is ample justification for abandonment—or may permit abandonment in cases where there is insufficient justification for it.

As far as a public hearing goes, it seems only elemental justice to allow the public's side to be heard. The commuting public has a vital stake in what happens to the railroads, and that stake should entitle the public to present its case.

Suggesting these two changes to the Transportation Act in no way minimizes the seriousness of the rail commuter crisis nor disputes the railroads' need for help. And the suggestions certainly should not be taken as indicating any preference for dawdling or delay in coming to grips with the problem. They are intended, rather, to keep the trains running until adequate assistance to the railroads can be worked out.

If too much time is needed to put through a permanent plan, a temporary program of relief should be instituted so that essential service can be retained without further damaging the financial health of the railroads.

#### [From the Philadelphia (Pa.) Inquirer, June 7, 1959]

## June 7, 1959] Helping Hand for Rail Commuters

A five-story parking space covering all land in New York from the Battery to 52d Street would be required to accommodate New Jersey rail commuters to Manhattan if they should travel by automobile instead of by train.

Senator CLIFFORD P. Case of New Jersey, placed that picture to a Senate subcommittee the other day to dramatize the necessity for Federal action to preyent further disintegration of commuter rail service.

Mr. Case could also have mentioned the disastrous consequences to highways, bridges and tunnels in the New York area if this increased tide of vehicular traffic would be suddenly thrust upon it.

What was said about New York's commutation problems could be said also to a large extent about our own in the Philadelphia metropolitan area. If rail passenger service were to be cut off and users forced to drive to and from the central city every day, our highways and parking spaces would come nowhere near to accommodating them.

Senator Case and a host of other Congressmen, State officials, and suburbanites who appeared before the Senate Surface Transportation Subcommittee, want something done before matters arrive at a serious point. They want commuter rail service preserved, and they want the Federal Government to help preserve it. The railroads are not averse to help, but they differ somewhat on how the aid should be applied.

The New Jersey Senator is pressing for adoption of a bill in Congress that would make it a little more difficult for railroads to curtail passenger service. He was supported before the committee, among others, by Pennsylvania's attorney general, Alpern, representing Governor Lawrence.

resenting Governor Lawrence.

Under the 1958 Transportation Act, rail hervice can be dropped within 30 days after notice is filed with the Interstate Commerce Commission, unless that agency intervenes. An ICC investigation, however, must be completed within 4 months, and a decision is valid only 1 year. Public hearings are not required. The Case bill would eliminate the time limits and place the burden of proof in curtailment cases on the railroads. It would also require that all revenues of a railroad in a given State be considered by the ICC in commuter curtailment cases.

Where hardship is proved in the continuance of unprofitable and little-used service, there seems as little sense as justice in forcing a railroad to maintain passenger lines. But before any commuter line is abandoned, or service on it radically curtailed, efforts

should be made to keep it operable with governmental help.

Local assistance may be afforded in the limited degree now in effect in Philadelphia on the city-subsidized Chestnut Hill branches. Or it may take on more elaborate forms. A city served by a rail line may take over the railroad on a lease arrangement, retaining the management as the operator and fixing its own fare rates.

Federal aid may also be in a variety of forms, and many of these have been suggested in Congress. The Interstate Commerce Commission has suggested relief for the passenger lines from Federal taxes; greater use of trains by the Defense and Post Office Departments; and congressional review of labor relations in the rall industry. Featherbedding practices have been a costly abuse.

Philadelphia and New York are among the big cities urgently in need of improved mass transportation plans.

Railway passenger service is a key part of such systems and can no more be elided from them than adequate approach roads can. But unless commuter rail lines are maintained, indispensable tools to build a mass transport system will be missing.

## An Unholy Alliance at Work

EXTENSION OF REMARKS

## HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, June 11, 1959

Mr. GOLDWATER. Mr. President, appearing in the May 20 issue of the Phoenix (Ariz.) Gazette is an interesting editorial on the rather sordid affair we are going through in the Senate, in which we find Americans doubting the American qualities of one of the best Americans of this generation. The editorial is entitled "An Unholy Alliance at Work." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### AN UNHOLY ALLIANCE AT WORK

One of the dirtiest episodes in Washington history has reached the halfway mark with the Senate Commerce Committee's 9 to 8 vote to recommend confirmation of Lewis L. Strauss's appointment as Secretary of Commerce. A further attempt to "get" Strauss will be made when the nomination goes before the full Senate. What happens will tell a lot about the sources of power in the Senate.

Strauss is thoroughly qualified to be Secretary of Commerce. Neither his sincerity nor his ability has ever been successfully questioned. The opposition to him is the product of a coalition of malice converging from three directions.

The least reprehensible source is partisan politics. Some Democrats have unlimbered against Strauss for no other reason than that they see a chance to embarrass a Republican President. They hope to give the public the idea that Mr. Eisenhower is attempting to pack his Cabinet with undesirable characters. This is politics with the gloves off, but it is still only politics.

The other two fountainheads of opposition are more vicious, more dangerous to the welfare of the country. It is only incidental that they involve mostly persons who call

themselves Democrats, without any real right to the label. They are actually Socialists, or worse. One group has been laying for Strauss ever since Strauss supported withdrawal of security clearance in 1954 from the ideologically unstable Dr. J. Robert Oppenheimer, associate of Communists and darling of the "liberajs." The other group was maddened by Strauss' policy as head of the Atomic Energy Commission to encourage development of private enterprise instead of Federal ownership.

The question now is whether the regular Democrats in the Senate will put politics ahead of principle by supporting the more malodorous factions in a combined assault on a good man's character. If they do, good government will suffer, for when good men form a coalition with bad, some of the good disappears.

#### How Has Inflation Hurt You?

EXTENSION OF REMARKS

## HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, June 11, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "How Has Inflation Hurt You?" which was published in the Deseret News of June 6, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

How Has Inflation Hurt You?

Readers of the Deseret News have been invited to write the editor describing how they have been hurt by inflation, and urging Congress to keep the economy sound. The writer of the best letter will be flown to Washington, expense free, to meet with Members of his State's congressional delegation and with congressional committees responsible for spending policies—as well as, of course, to do some sightseeing.

A few words may be appropriate at this time as to the reason for this project.

As Senator Harry F. Byrd and others who are worried about heavy spending have pointed out, there is no lack of pressure on Congress to spend. The housing, farm, veterans and other such lobbies are/well-organized, skilled, and persistent. They represent—or at least seem to represent—votes in great quantities. Rare is the Member of Congress who can stand firm for long against that kind of pressure.

By contrast, the great masses of Americans who have such a tremendous stake in fiscal integrity are unorganized and voiceless. Few of them take time to sit down and write the letter that might stiffen a Congressman's spine. There is little pressure to hold spending down—and no assurance of votes for the Members of Congress who vote against spending

ing.

It is to bring that kind of pressure into focus that the Desert News urges the writing of anti-inflation letters. All letters will be

passed on to our congressional delegation.
We seek no scholarly economic treaties.
The economics of inflation need no emphasis.

Well-known is the fact that with only two bona fide exceptions, Government has engaged in deficit financing each of the past 29 years.

Well-known are these facts, too: That nearly 40 million people will receive direct payments from the Federal Treasury this year—constituting, together with their families, probably half the entire population; that business, industry, private finance, agriculture, transportation, power, health, education, States, localities, and individuals are all subsidized from Federal funds; that such subsidy programs now total 62, compared to only one—highways—25 years ago.

Most people, and certainly virtually all lawmakers, know already that nondefense spending has jumped an alarming \$12½ billion in the past 5 years, that hidden and direct taxes now take about a third of the average family income, and that, despite heavy taxes, this year's Federal deficit will be about \$12 billion—more than the Federal Government's total expenditures just 20 years ago.

And most people are painfully aware that the result of this gargantuan spending is the loss of more than half of any money they had managed to save 20 years ago.

they had managed to save 20 years ago.

These are economic facts that cannot be explained or excused away. But they don't seem, somehow to impress most lawmakers. The spending lobbyists are too loud, too insistent. So spending goes on, ever higher.

What we want is to hear about the results of these unhappy statistics on individual lives.

We want to hear from the widow whose husband thought he was leaving her well provided for, but who now has to work in her elderly years to eke out a living. We want to hear from the father who

We want to hear from the father who struggled conscientiously to meet insurance payments years ago to protect his family, and who now realizes the amount of protection he bought is no longer nearly enough.

We want to hear from the student whose parents stashed away money for a college education when he was young—and who now can't begin to make ends meet.

We want to hear from the white collar worker and the teacher, whose salary doesn't begin to keep up with inflation.

We want to hear from the professional man who set himself up a handsome retirement program years ago—and who finds that retirement is now but a dream.

We want to hear from all those who have been hurt by that "most cruel of all taxes," creeping inflation. If we hear from enough, and if other newspapers and Members of Congress elsewhere hear from enough, perhaps the beginning of a turn in the trend toward bigger and bigger Government spending can be achieved.

## They Talk a Good Game

EXTENSION OF REMARKS

## HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. DEROUNIAN. Mr. Speaker, I commend to the attention of our colleagues the following excellent editorial which appeared in the June 1 issue of Barron's:

ERRANT DONKEY-THE 86TH CONGRESS HAS LOST ITS WAY

Early in January, after some especially eloquent speechmaking, by Senator Lyndon Johnson, Democrat, of Texas, Barron's was moved to observe that the 86th Congress, whatever else it might do, undoubtedly would set a new record for oratory. In a much-publicized victory address to his colleagues—hailed at the time as his state of the Union message—Senator Johnson scathingly attacked the Elsenhower administration for looking to the past, and failing to "serve the

future." By contrast, he assured the Nation, the Democratic majority, acting upon its overwhelming mandate, would exercise "confident and creative and constructive leadership—beginning now, not 2 years hence," in such realms as distressed areas, unemployment and the rate of U.S. economic growth. Through command of the legislative process, the lawmaker wound up in a burst of rhetoric, "we shall add strength to our Nation, our world, and our times."

Seldom have a politician's words, in so short a span, proved so painfully empty. After 5 months in session, the new Legislature has pitifully little to point to in the way of a record. Indeed, neglect of the commonweal, most notably in agriculture, housing and highways, has grown so marked that the President, in a sharply worded special message last month, felt dutybound to prod the laggard majority. That the 86th Congress should turn out to be a "do-nothing" body is, in the circumstances, fine irony, the significance of which should not be lost on the voters. For its failure to act, as all the foregoing suggests, reflects no lack of will to act. Rather it reflects the utter collapse of the party platform so confidently hammered out a few months ago by the Senator from Texas. In its quest for great national issues, to change the metaphor, the donkey has lost its way. Instead of leading the Na tion forward, it has been trotting off in all the wrong directions.

A glance at the brave speeches made by the Democratic high command last winter underscores the striking contrast between its words and its deeds. Besides the glit-tering generalities cited above, Senator JOHNSON in January outlined a detailed 12point program to his colleagues on the Hill, urging, among other things, a measure to succor distressed areas; a large-scale program of housing and urban renewal; "a bill to protect honest, constructive labor from the selfish schemes of the racketeers"; and a fresh approach to farm policy. quent weeks, at the behest of ranking party spokesmen and their powerful constituents other planks were added. Thus, in recent months the Democrats have taken a strong stand on such burning issues of the day as the persistence of high unemployment and the slow rate of U.S. economic growth. Similarly, their military experts have deplored the failure of the White House meet the challenge of the so-called missile Both at home and abroad, the Nation has been led to believe it needs measures which are "courageous," "bold," and "new,"

Rarely was a call to arms more stirring. Yet somehow, as the months have passed, the summons has gone unheeded, the clarion has died away. To put the matter bluntly, Congress thus far has little to show for its labors. True, measures dealing with depressed areas, airports, and housing have passed both Chambers. In all three cases, however, the House and Senate versions differ widely and both tend to clash with the views of the administration. Hence their fate is, at best, uncertain. To date, moreover, such genuinely pressing matters as revamping the farm program and financing Federal highway construction virtually have gone by default. Indeed, the majority party has shown its vaunted vigor in only one sphere of Government, namely, in harassing appointees of the President. "We shall win respect by our vision, not by our vendettas; by courage, not by carping," said Senator Johnson in a memorable passage last winter. That will be news to Clare Booth Luce and Secretary of Commerce Lewis Strauss.

The great crusade, then, somehow has been long on promises but short on performance. One reason, surely, is the astonishing ineptness shown by the party in choosing its issues. Thus the Democrats have accused the White House of failing to provide an adequate national defense; how-

ever, the widely feared Berlin deadline has come and gone but with no breach of the peace. Leftwing economists have prated long and loud about the lagging rate of U.S. industrial growth; in 1959, however, barring a steel strike, national output of goods and services could rise at a record peacetime rate to an alltime high. At the behest of the AFI-CIO, the majority has raised the specter of an army of permanent jobless, only to find their ranks, under the impact of mounting prosperity, thinning fast. Time and again, it would seem, the knight has donned his shining armor, only to discover a woeful shortage of dragons.

Where courageous action truly has been called for, contrariwise, the Democrats have shirked their duty. Thus, as President Eisenhower pointed out in his message last month, Congress has been dragging its heels financing Federal roadbuilding. Instead of raising the gasoline tax to keep receipts and outlays in balance, as the law requires, the majority desperately is seeking some bold new expedient, such as dodging the issue for another year or raiding the Treasury. Still more flagfant has been its malingering on farm legislation, notably with respect to price supports for wheat. Owing to the refusal of Capitol Hill to face up to its responsibilties, the legal deadline for lowering support levels twice has come and gone. As a consequence, the United States for yet another year will be saddled with a costly, unworkable law which the White House rightly has described as "thoroughly discredited.'

Much the same, in conclusion, might be said of the whole Democratic program. In the fitting words of the Book of Common Prayer, the party has left undone those things which it ought to have done; and it has done those things which it ought not to have done. To judge by the election returns, the donkey knows well enough how to win at the polls. To judge by the record to date of the 86th Congress, the majority has yet to prove that it is fit to govern.

Statement of William McChesney Martin, Jr., Chairman, Board of Governors of the Federal Reserve System, Before the Ways and Means Committee, House of Representatives, June 11, 1959

EXTENSION OF REMARKS

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. ALGER. Mr. Speaker, as a further informational aid to Members of Congress and our citizens, I am submitting for the Record the statement of William McChesney Martin, Jr., Chairman of the Board of Governors of the Federal Reserve System before the Committee on Ways and Means on the subject of debt management proposals. His sound views will be of great interest and help, I am sure, to everyone who is a student of this proposal.

STATEMENT OF WILLIAM MCCHESNEY MARTIN, JR., CHAIRMAN, BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM, BEFORE THE WAYS AND MEANS COMMITTEE, HOUSE OF REPRE-SENTATIVES, JUNE 11, 1959

Mr. Chairman, at the outset, I should like to state that the Board of Governors of the Federal Reserve System agrees that the debt management proposals transmitted to you by the President are necessary and desirable and we urge their favorable consideration.

There are only a few points that I would like to make, but before turning to them, I think it is important that you should understand that I come before you in connection with these proposals not as spokesman for the administration, but as Chairman of the Board of Governors.

We are living today in a country of unprecedented wealth. It is wealthy, in part, because of abundant natural resources; and, in part, because of the energy and initiative of our people. An even more important distinction between the United States and most other countries is the size and quality of the accumulated stock of capital goods in the hands of producers and consumers. Due to past saving, we enjoy the benefits which flow from a reservoir of housing and durable goods in the hands of consumers, of public facilities, such as highways, school buildings, and waterways, and of industrial plant and equipment. The society in which we live has been popularly characterized as affluent, and despite our proper concern for certain depressed areas, both economic and geographic. I am sure that we can all agree with this characterization.

One consequence of affluence is exposure to instability in the pace of general activity and also in interest rates which rise in periods of boom and decline in periods of recession. In a very poor economy, where everyone must work as hard as he can to eke out a bare living, additions to stock of capital are largely made by diverting effort directly to production of capital goods. Such borrowing and lending as does take place, is effected at interest rates which we would regard as fantastically high. In this type of economy, there is little threat of instability except from natural causes. A drought or an unusually good season may produce relative poverty or plenty. But everyone is always fully employed and the range of economic fluctuation will tend to be fairly small.

The greater the accumulation of wealth the greater are the possibilities for economic fluctuation. These may stem from shifts in the peoples' preferences among the wide range of expenditure opportunities open to them, from changing attitudes toward saving and investment, from overspeculation which undermines the solvency of financial institutions, or, perhaps on some occasions, simply from the arrival at a point where even a high rate of technical innovation fails to induce investment decisions adequate to sustain capital expansion.

It is not surprising that, in a free and wealthy economy, we are unable to counterbalance perfectly, through changes in public policy, the wide shifts that can take place. We always have had, and, I think, always will have, changes in the pace of our economic progress. We can and should work to reduce these fluctuations and strive for the goal of stable growth. At the same time, however, we must recognize that it is highly unlikely that we shall ever achieve perfection.

Fluctuations in our economy express themselves in various ways, and we attempt to gage them by various statistical measures. If we look at the movements in any of the broad measures of economic activity and compare then with fluctuations in interest rates, the conclusion is inescapable that interest rates tend generally to move upward in periods of prosperity and downward in times of recession or arrested growth. Hence, concerned as we may be about the impact of rising interest rates on the burden of the public debt or on necessitous borrowers, we must recognize that rising interest rates are, in fact, a symptom of broad prosperity and rapid economic growth.

Since the stabilization of monetary systems in key countries after World War II, interest rates have shown a rising trend throughout the industrial nations of the free world. This has been a period of great economic growth, very active demands for credit, further monetary expansion, and continuing, though perhaps abating, inflationary pressures: Throughout the period, interest rate levels in other industrial countries have been higher than in the United States. This past year's rise in interest rate levels here, accompanying economic recovery, has been in contrast to some decline in interest rate levels in Western European countries, where a modest recession came somewhat later than in the United States and Canada.

In the United States, the rise in interest rates has affected all types and maturities of debt instruments. Yields on long-term securities have generally risen by about 2 percentage points since the low point reached shortly after the end of the war. Yields now range from 4 to 4½ percent on U.S. Government securities of long- and medium-term, over 4½ percent on many outstanding Asa corporate bonds, and average over 5 percent on outstanding Baa corporate bonds. New issues necessarily have to be offered to investors at higher rates.

Despite their recent upward movement, interest rates in the United States are still at levels comparable with those prevailing during much of our history. Long-term rate movements since last summer have been within the range of the period from the early part of this century through 1930. The level is still substantially lower than during- most of the nineteenth century. From a historical viewpoint, the present level of rates can hardly be regarded as "out of line" for a period of wide prosperity and growth.

In comparing present rate levels with those of past periods, one of the important things sometimes overlooked is the effect of our necessarily high tax structure on the effective rate of interest. For example, if both the borrower and lender are subject to the 52 percent tax on corporate profits the borrowers' net cost and the lenders' net return is a little less than half of the expressed rate. Thus, a market rate of say, 4 percent, implies for both parties a net rate of a little less than 2 percent. On its own taxable bonds, the Federal Government, through the income tax, recaptures a substantial share of the interest it pays. When we look at interest rates in long-term perspective, we must bear in mind that net yields after taxes are lower today than a comparison of market rates would suggest, because of the fact that taxes are higher.

Aggressive demands for financing, which, as I have said, are characteristic of prosperous times, represent efforts to attract resources away from current consumption in return for the payment of interest. In a free economy, no matter how affluent, it follows that, when borrowers attempt to attract a larger share of the total product for their purposes, they will have to pay for doing it.

The presence of strong demands on the credit markets from borrowers of all kinds does create a difficult financial problem. Recently credit demands have been pressing on the banking system, and the banks have been accommodating a growing volume of loans. As borrowers have sought accommodation banks have raised their prime rate from 4 to 4½ percent. This is the interest rate that banks charge top-quality customers on short-term mans.

More recently, the discount rate of the Federal Reserve Banks has been raised from 3 to 3½ percent. The discount rate is the interest rate that is charged by a Federal Reserve Bank when a member bank borrows money from it. This money is often called high-powered money. It is high-powered because it is credited directly to the reserve

account of a member bank, and, unless used to finance a payment of currency into public circulation or an outflow of gold or some other development which drains the member bank reserve base, it forms the basis for a multiple expansion of bank credit and money.

For some months, we have been having rapid expansion of bank credit and money, based largely on borrowed reserve funds. The seasonally adjusted money supply-demand deposits at banks plus currency in circulation—has increased by more than \$2 billion in the last 4 months, an annual rate of growth of about 5 percent. In the face of developing high-level prosperity and the potential threat of inflationary boom, the Federal Reserve should not be in the position of encouraging an undue expansion of bank credit and money. Hence, the appropriate discount rate under present cir-cumstances is one that does not encourage member bank borrowing and is generally above current rates on short-term market obligations, such as bills.

It is sometimes asserted that the Federal Reserve System should step in and halt the upward trend of interest rates resulting from active demands for loans by supplying sufficient Federal Reserve credit in one form or another to keep interest rates from rising. This cannot be done without promoting inflation-indeed without converting the Federal Reserve System into an engine of in-

When such a program was adopted during and following the war, it did succeed for a time in actually pegging interest rates on Government obligations. But, at the same time it promoted and facilitated the dangerous bank credit and monetary expansion that developed under the harness of direct price, wage, and material controls. The suppressed inflation that resulted, we are now well aware, burst forth eventually in a very rapid depreciation of the dollar and even threatened to destroy our free econ-

This experience is very recent and the effects are widely and well remembered. It is now very doubtful whether the Federal Reserve System could, in fact, peg interest rates on Government obligations under today's conditions even if we accepted the inflationary costs, which would be high and would eventually lead to severe collapse. It is certain that the Federal Reserve could not extend interest rate stability to all markets.

The trouble is that the world has learned from wartime inflationary experience. It now knows that inflation follows any effort to keep interest rates low through money creation as the night follows the day. Any attempt on the part of the Federal Reserve to peg rates today would be shortly followed by an acceleration of the outflow of gold in response to demands from abroad, by further diversion of savings from investment in bonds and other fixed interest obligations into stocks and other equities, and by a mounting of demnds for borrowed funds in order to speculate in equities and to beat the higher prices and costs anticipated in the future.

Those familiar with the investment markets will confirm to you that such developments would inevitably follow a Federal Reserve attempt to peg interest rates. A simtremendous volume of bank reserves Would have to be thrown into the market through Federal Reserve open market purchases in the attempt to stem the upward pressure on interest rates. As these reserves enhanced inflationary pressures even further,\_ the rush from money and fixed obligations into gold and physical property as well as the mounting demands for credit to reap speculative profits and to hedge against future inflation would overwhelm even the most heroic efforts to hold interest rates

down. Ultimately, if the gold reserve requirements to which the Federal Reserve is now subject were eliminated, the System might acquire a large proportion of publiclyheld Government debt of over \$200 billion in this way. True, the interest rate on Government obligations might be said in some distorted sense to have been stabilized by such an operation. Interest rates generally, however, would spiral upward as they always have in every major inflation.

People who save will be unwilling to lend their money at low interest rates even when they expect the depreciation in the value of their dollars to be limited. This is understandable. Take, for example, a corporate financial institution subject to a 52-percent tax. The after tax income from a bond yielding 41/4-percent interest would amount to just a little over 2 percent with the dollar stable in value. If this potential investor had reason to fear that the value of the dollar would depreciate even 1 percent a year, his real return would be very low. If the investor had reason to expect a price rise of just over 2 percent a year, his real return would become negative. Investors are alert Investors are alert today to this way of figuring interest returns.

It might be added that to suggest that holding interest rates down by supplying the banking system with reserves through Federal Reserve open market purchases of Government securities, on the one hand, and taking them away with higher reserve requirement increases, on the other, represents a fundamental misunderstanding of how the credit system functions. Obviously, if the net effects on the credit base are, in fact, offsetting, they make no net addition to the total supply of bank credit, nor do they reduce the demands of borrowers. If they are not fully offsetting, the net result would be inflationary. We are all acutely aware of the gigantic size of the publicly held debt that is outstanding and available to provide a basis for such monetary inflation. There is no magic formula by which we can eat our cake and have it too.

If the Federal Government should substitute artificially created money for savings in an effort to prevent interest rates from rising, it would have a reverse effect. It would worsen the very situation that the action was intended to relieve. If you really want to encourage rising interest rates, you have only to follow the prescription of those who argue that interest rates on Government or any other obligations can be pegged by inflating

the money supply.

In connection with this discussion, it should be reemphasized that the Federal Reserve System does not like high rates of interest. We are anxious, always, that interest levels be as low as is consistent with sustained high levels of economic activity, with a steady rise in our national well-being. and with reasonable stability for value for the dollar. We cannot, moreover, put interest rates where we would whatever our likes. Federal Reserve policies can, of course, influence interest rates to some extent through their influence on the rate at which the banking system can add to the credit and money supply. The effectiveness of Federal Reserve policies is always subject to the reaction of borrowers and savers as expressed through the market,

In an economy in which people are alert and sensitive to price changes, the only way to bring about a lower level of interest rates is to increase the flow of real savings or to decrease the amount of borrowing. One important way to do this is to reduce substantially the deficit at which the Government is operating. This will not only relieve immediately some of the demand pressures that are pushing interest rates up in credit markets, it will also reassure savers as to the future value of the money they put in bonds and savings institutions and thus increase the flow of savings into interest-bearing obligations.

The proposals before you do not relate to the levels of rates which will prevail in the market, but rather to whether or not the Government shall be able to use savings bonds and marketable bonds effectively as parts of its program of debt management. The forthright management of the public debt is an essential part of any program to, encourage savings and lower interest rates. We should not force the Treasury to resort to undesirable expedients in order to comply with arbitrary ceilings on either the size of the debt or the rate of interest it pars.

International levels of interest rates among industrial countries are now more closely alined than in earlier postwar years. This realinement, together with removal of most restrictions on the movement of capital, reflects progress toward a closer relationship among international money markets. which is the financial counterpart of progress toward sustained growth in output and trade in the free world generally. It also signifies a state of affairs in which capital demands are becoming international in scope and in which they will converge rapidly on the mar-ket that is cheapest and most readily prepared to accommodate them. Under these circumstances, interest rates in this country must increasingly reflect worldwide as well as domestic conditions. We need to remember that today the dollar

the anchor of international financial sta-That anchor must be solid. Realistic financial policies of Government are essential to that end as well as to the end of a wealthy and strong domestic economy. this juncture of world development, the least evidence of an irresponsible attitude on the part of the United States toward its financial obligations or of its unwillingness to face squarely the issues which confront it in meeting greater demand pressures on re-sources and prices, would have very serious repercussions throughout the free world.

## The Cuban Land Reform

EXTENSION OF REMARKS

## HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Thursday, June 11, 1959

Mr. CASE of New Jersey. Mr. President, the new Cuban agrarian reform law has been the subject of a great deal of comment in the press. No one can be certain at this juncture whether the land will be expropriated with payment of fair compensation or confiscated with only token payments made to present landowners.

I ask unanimous consent that the excellent editorial on this subject appearing in yesterday's New York Times be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

[From the New York Times, June 10, 1959] THE CUBAN LAND REFORM

The Cuban agrarian reform law has now been promulgated and consequently must be accepted as substantially definitive. It is a drastic law which expropriates much land, some of it American owned, but Cuban landowners will be the greatest sufferers.

As a measure of social justice land reform is the most obvious of all policies, and it is taking place all over the world. Far from being a communistic measure, it can be the best possible answer to communism by stealing the Red thunder. In Cuba an agrarian reform was long overdue. Cuba's right to expropriate land within her own borders cannot be questioned.

The real question is whether this is a good and just agrarian reform law and whether, in accordance with internationally accepted practice, the Cuban Government is giving prompt and adequate compensation for the property expropriated. That many Cubans are critical, discontented, and frightened by the law is obvious. The chief fear is the great power placed in the hands of the Agrarian Reform Institute, whose leaders will form an autocracy within the Cuban state.

So far as compensation is concerned, it is hard to understand how Premier Castro can believe that payment in 20-year, 4 percent peso bonds whose proceeds must be reinvested in Cuba can be considered prompt or adequate compensation. To use the tax-assessed value of the property, which in every country is less than the true operational and market value, is most unjust. Moreover, nothing is said in the law bout compensation for the installations, railways, roads, firigation works, and the like of the sugar mills and plantations.

Fortunately, the implementation of the law and adjustment of details leave many openings for improvement, both in the realm of legal justice and of practical operation. For Premier Castro and his government a great deal depends on the success of the land reform. As it stands, one must seriously doubt whether it can ever be a success.

#### Rochester, 125 Years a City

EXTENSION OF REMARKS

## HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. OSTERTAG. Mr. Speaker, one of the Nation's finest cities, Rochester, N.Y., is celebrating its 125th anniversary this week. This outstanding city, located on Lake Ontario at the mouth of the Genesee River, is widely renowned for its institutions of education and music, its highly skilled manufacturing, its exceptional public parks, and its wonderful community spirit.

I am proud and honored to represent in Congress a portion of the wonderful city of Rochester and I wish to call attention to this historic event.

Under leave to extend my remarks in the RECORD, I include an editorial on this subject from the Rochester Times-Union, dated June 8, 1959:

[From the Rochester Times-Union, June 8, 1959]

As We See IT—Rochester, 125 Years Young, Sees a Bright Future

The first permanent settlement of Rochester at the Genessee Falls was actually established in 1812, but it did not become a full-fledged city until 1834. This is the event whose 125th anniversary is celebrated this week in a series of historical programs.

An age of 125 years is not particularly old for a city, even in America. Yet it is time enough to discover an urban character accounting for past success and promising an even orighter future.

#### DACT TEPOPE

Rochesterians who face challenges today can find much to inspire them in the record of leaders who brought the tiny settlement to city status in 1834.

These men conquered disease and fire, the competition of other communities, crime and vice, political battles, financial difficulties, unemployment, and a full quota of doubters

They built well on Rochester's physical assets of river and canal and its moral assets of, in the word of the first mayor, Jonathan Child, "economy, industry, and perseverance."

Mayor Child reflected at the first meeting of the new city council, "Well may we indulge an honest pride as we look back upon our history, and let the review elevate our hopes and animate our exertions."

And well may we do the same today, 125 years later.

Since then, the city has grown greatly. Geographical Rochester extends far beyond governmental Rochester in a bustling, industrious, imaginative community of nearly 600,000 souls.

What assets there are to build on to-

A broad industrial base of properous firms where highly-skilled workers push ahead yearly to new peaks of productivity and earning power.

A civic spirit that can produce \$4½ million for a community chest drive almost routinely, which faces and solves social problems with imagination and determination.

. A superb cultural tradition of excellent schools, fine music, and all the arts that brighten civilization.

Leaders who are unafraid to risk career and capital in the rebuilding of a community to overcome urban troubles of the 20th century.

There is much yet to do, and there are hesitations and rivalries and competing interests, of course. But there is also an underlying unity of faith in a dynamic community's brilliant prospects.

#### BEST TO COME

This unity is Rochester's greatest asset, which Mayor Child described 125 years ago in this fashion:

"Surely, in the prosperity of our young city, we have a common interest. Here the fortunes of us all are embarked on a common bottom, and it cannot be too much to expect a union of counsels and exertions to secure their safety."

## Memorial Day Address by Hon. John Fite Robertson at Sarasota, Fla.

EXTENSION OF REMARKS

## HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. HALEY. Mr. Speaker, on Memorial Day, 1959, the American people gathered together at appropriate places in our Nation to reflect upon the blessings of our democratic way of life and to pay tribute to those brave men and women who have defended and protected that way of life. In our communities memorial addresses were heard. No doubt the thoughts set forth in those speeches were similar.

In my hometown of Sarasota, Fla., the memorial address was presented by my good friend the Honorable John Fite Robertson, distinguished citizen and public servant. The gentleman comes from the pioneer stock of Tennessee, and, as those pioneers, he loves his country and serves it well. In addressing the people of Sarasota, Mr. Robertson expressed so well one of our greatest needs today, moral courage, that I wish to place in the Congressional Record and commend to the attention of my colleagues his words. Mr. Robertson's speech follows:

#### MEMORIAL DAY, 1959

Mr. Master of Ceremonies, members of patriotic organizations, ladies, and gentlemen, I appreciate the honor of having been asked to speak here this morning on this occasion. I have met with some of you and others at the foot of this old flagpole on many other, similar occasions.

For the benefit of you who have come here in recent years, I might tell you that this pole was originally erected on a plot of ground at Five Points deeded to the American Legion by the city of Sarasota about 1920. In 1926 it was blown over by the hurricane of that year, but it was soon replaced by a new base and pole.

Some years later, the base was enclosed in marble with the present inscription. Again, several years later the traffic department of the city decided that the flagpole and base were traffic hazards and moved the same to Bayfront Park.

Then, again, with the recent filling and paving here, it became advisable to move the flagpole to its present site, where I hope it can rest for the future.

Many of the 67 Sarasotans who gave all have stood at the base of this old flagpole so it is very fitting that we pay homage here today to the brave men and women who have given their lives that this flag might continue to fly and that this Nation could continue, indivisible, with liberty and justice for all.

We now have about 400 years of recorded history behind us in this country. On a recent visit to Pensacolà to attend the opening of the quadricentennial celebration. I was reminded that the first attempt to colonize in the United States was made by the Spanish near Port Royal, S.C., in 1526. It failed on account of the Indian raids and other adversities. Then came the effort to colonize at Pensacola in 1559. These Spaniards, also, were subjected to Indian raids and a devastating hurricane which killed many of them and destroyed most of their property, and that effort also filled. Then came the colony to St. Augustine and it became the first permanent settlement.

Subsequent years brought colonies to Jamestown, Plymouth, and many other places, until the Thirteen Original Colonies were formed. Years later, after many fierce struggles our forefathers gave us the Declaration of Independence.

Since that time the United States has been engaged in five great struggles for survival. Hundreds of thousands of men have given their lives and more than 2 million casualties have been incurred in preserving this Nation. It is our unqualified duty to preserve this costly and priceless heritage given to us by these fallen heroes.

The men and women of this Nation have always come forth with the necessary physical courage to resist on the battlefield, on the high seas, and in the air. I caution you, however, that there are just as great threats within our border. One of the decisive questions we must face now is "Do we have and are we exhibiting the required moral courage to meet these threats?"

To me, the first place to have and exhibit moral courage is in the home. I am not trying to preach to you, but ask yourself the question: "Am I being entirely on the square with the members of my family, or am I deceiving them?" If a father is not entirely truthful with his son, his son will know it and the chances are that the son will feel at perfect liberty to deceive the father. The father may feel that he is getting by with something until he is called to the juvenile court some day to hear his son charged with some law violation that will shock the whole family. J. Edgar Hoover, who has served this Nation as fearlessly and devotedly as any man, is constantly calling our attention to the juvenile delinquency situation and he urges parents to set the proper example at

Again, we must exhibit moral courage in business life. Every man should so conduct his business affairs with his fellow man that When they meet on the street after a business transaction each can say, "There goes an honest man." It is not necessary to dwell on this because there is no other answer.

Again, there must be moral courage exhibited in public life, and I mean from the smallest public office in a community to the highest in the land. We are all aware of the scandals that have come to light from time to time in both major political parties. We don't expect anything better from the Communists, who would destroy our Nation by boring from within, but we have a right to expect moral courage from all public offi-

There must be more moral courage exhibited by legislators, courts, law enforcement officers, and all individual citizens in curbing the racketeers who are preying upon both employers and employees.

I would like to pause here to say that I consider the late Secretary of State had great moral courage.

I am going to say something with which many of you may not agree. You know and I know that we must have personal friends and that these United States must have friends in other nations. We cannot survive without them.

The world is full of hungry, ignorant people who know little of and care less about political ideologies, but they do know what it means to have empty stomachs and hungry children. It is no use, as long as they are hungry, to try to convince them of the fine things to be derived from living in a democracy. I believe that we should stop subsidizing surplus foods and give food, not so much money, to the hungry people throughout the world. I realize that some in this country would have their incomes cut down and that the markets of the world may be affected, but I believe the good which will be accomplished will far outweigh the harm. It is going to take real moral courage to stop these subsidies and make these gifts, but I firmly believe it will be a forward step in world relations.

If we will use moral courage in all the places I have mentioned, then we will have, at least in part, kept faith with those who have given their lives in order that Old Glory can fly here and elsewhere today.

#### The Good Old U.S.A.

EXTENSION OF REMARKS

## HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Morris Hanan, of Montgomery, Ala., has graduated from Miami University in

written a very beautiful poem dedicated to the people of the United States of America. Mr. Hanan is very proud of his American citizenship and by his exemplary work in his community strives to carry out the expressions noted in the

DEDICATED TO THE PEOPLE OF THE U.S.A. (By Rubin Morris Hanan, Montgomery Ala.) America, America,

Which gives me my freedom and liberty, Now I help to make you good and strong, And from every land they came,

To help all sing the freedom song; Under the flag of liberty we live, On dear old America's land, With prayer always and full of hope, And by her we shall always stand.

America, the home of the homeless, With citizens loving and true, Where love and peace fill the air, Free to work at anything we can do; 'Tis a land of joyful freedom, And you are answered when you call, And fair laws that let us live, There is freedom and room for all.

It's a land of plenty for all, From God's bountiful hand, And we shall rejoice and sing His praise, And by Him we shall always stand; We love your land and your laws,
And all through the years we shall say, We fight and die for you, We love the land of the U.S.A.

We shall stand by you in strength, With all the love we know, And shall sing and tell you praise, Everywhere we may go;
We shall always say good things,
And for you always pray,
And we shall tell the world about, The good old U.S.A.

We love you in every way, Naught have we to dread, Just with your productions, All of us can be fed; Yes, the word "America" is sweet. And we can feel it every day. There is no better place to live, Than the good old U.S.A.

You give us freedom to work, Wherever we are employed, No matter what kind of work, It has always been enjoyed; And you have conditions, To always keep us gay. So we will put our physical trust, In the good old U.S.A.

#### The Vital Decisions We Face

EXTENSION OF REMARKS

#### HON. PAUL F, SCHENCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. SCHENCK. Mr. Speaker, Miami University and Oxford, Ohio, in my congressional district have been signally honored this year on the occasion of the 150th anniversary of the establishment of the university. You will recall that this House of Representatives and the Senate extended felicitations to Miami University in House Concurrent Resolution 185.

The Post Office Department has just issued a new regular 12-cent stamp hon-Mr. GRANT. Mr. Speaker, Mr. Rubin oring President Benjamin Harrison, who

1852. The Honorable Arthur E. Summerfield, Postmaster General of the United States, spoke at Oxford on June 6, 1959, on the first day of issuance of this new stamp at Oxford.

Later that same day he addressed a convocation at Miami University and was awarded an honorary degree. It was a great pleasure and honor to have the Postmaster General in our Third District of Ohio, and I am happy to present the address he made on this occasion:

THE VITAL DECISIONS WE FACE

(Address by the Honorable Arthur E. Summerfield, Postmaster General of the United States, before the convocation of alumni marking the sesquicentennial year of Miami University, Oxford, Ohio, June 6, 1959)

The honor you have given me today is one I shall cherish all my life.

Like all who know Miami University, I deeply admire this institution which has blended liberal interests, intellectual breadth and conservative practices so well in its teachings.

I am happy to be here on the campus of this university where my able special assist-ant, L. Rohe Walter, got his undergraduate

training.

In its century and a half, Miami has played a profoundly important part in our incredible progress. Its original goals of good eduvirtue, religion, and morality, so thoroughly tested by time, enjoy the blessing and respect of all Americans. Backed by a proud record of accomplishment, this uni-versity is dedicated to even greater growth

and service in the years ahead.

The New Miami, since 1885, has given far more than its quota to the enlightened lead-ership of our Nation.

And certainly Old Miami made remarkable contributions to the public weal over the

early years.

Of the 900 men who became Miami alumni during those years, 10 were to be Civil War generals, 7 U.S. Senators, 16 Congressmen, 8 State governors, 7 ministers to foreign governments, 4 college presidents, 4 newspaper editors—and 1 became President of the United States.

As you know, your Post Office has joined today in honoring that Miami alumnus who became our country's 23d President.

It has been my privilege to authorize a 12-cent regular postage stamp, featuring the likeness of Benjamin Harrison, which has been placed on first-day sale here in Oxford this morning. Next Monday this stamp will be available in all our 36,000 post offices throughout the Nation.

In paying tribute to Benjamin Harrison, we have been conscious of his place in history not only as a great President, but also as a devoted citizen. He was a man who clearly believed in pursuing a deep and active interest in his country's welfare.

As a lawyer and officeholder, he spoke out firmly on matters of concern to the people. As a soldier, he served with distinction in

the Civil War.

As U.S. Senator and as President, he took his stand on the issues of his time, and participated fully in bringing about the solutions he believed to be right.

That kind of participation—that belief in the importance of individual opinion which characterized Benjamin Harrison—is more essential today than ever before. It is essential for every one of us here—as for every. American citizen.

We are faced with challenges of great and critical scope. We are faced with crucial decisions.

And, above all, we must remember that not Government alone, or any segment of our society, is responsible for making these decisions. It is rather all the people who must

1

weigh our problems and determine our future.

I should like to discuss these basic problems with you briefly-and then, if I may, I should like to suggest the vital part you can and should play in meeting them.

want to speak, not only as your Postmaster General, but as a member of President Eisenhower's Cabinet and a member of the President's Committee on Price Stability for Economic Growth.

There are three specific challenges that command our attention. They are:

1. The Communist threat to our national safety.

2. Our battle against inflation.

3. The urgent necessity for tax reform. All of these, of course, are interrelated.

Our national defense depends upon a strong economy-and our economy is-acutely responsive to what we do about inflation, about production costs and prices, and about taxation.

The Communist challenge we face is military, political, spiritual, and economic.

We and our allies have steadfastly maintained our military and political strength. We have rebuffed the Communist threats and at every turn, we have given positive demonstrations of our determination to stand firm. I have just returned from Europe, and I can tell you that the strength of purpose of our allies is equal to our own.

At the same time, we continue to explore every avenue for justly solving the issues

that divide the world.

In the battle of spiritual values, we cannot lose so long as we preserve the freedom and moral strength on which our way of life is built.

We are facing up to the all-out economic war the Soviets have declared-but it is here that they are most confident.

They believe they can defeat us in this war without risking their own total destruc-

tion. They acknowledge that we are well in front. But they intend to overtake and sur-

pass us. They believe we have not the system or the will to maintain our economic strength and growth. They expect our economy to explode, while theirs continues to grow.

My friends, I think we must agree that we dare not look lightly on their great expectations.

For here, indeed, is involved one of the great decisions we must take.

We are in the process of building a more powerful economy. But, ironically, the very soundness of this economy is threatened by deadly forces that have wrecked other strong nations in the past.

These are the forces of inflation and onerous taxation-and the truth is, we have not fully united, as a people, to overcome them.

I suggest to you that there is urgent reason for us to do so.

There is pressing reason for us to realize what inflation really is-and to act upon this knowledge.

I am sure we all agree on what inflation does for we have had ample opportunity to see it at work.

To most Americans, inflation means higher costs of living. It means more and more struggle to make ends meet as costs go up and the value of the dollar goes down.

Since 1939, our cost of living has more than doubled. The value of the 100-cent dollar of 1939 dropped by 47 cents over the next 15 years, and it has dropped by 5 cents more since 1952.

Inflation feeds on the income and the savings of every individual, every enterprise in America. It robs us of the real value of the dollars we earn. It destroys the will to work and the desire to save.

It makes education increasingly costly, at a time when America's colleges are facing the greatest demands ever placed upon them. and it causes the serious fiscal problems of our educational institutions to multiply.

Now, what are we doing to meet this deadly force? We are waging a battle, led by the President of the United States, which in the past year has succeeded in bringing the rise in the cost of living under control.

We are fighting for the stable dollar we must have to go forward soundly.

We have quickly surmounted the recession of last year and have resumed our economic growth at a record rate, with its expanding opportunity for every citizen.

But maintaining this sound and sensible progress is extremely difficult. We are faced with tremendous pressures for a resumption of the inflationary process.

These are vast pressures for extravagant Government spending, and for sharp new uptrends in the spiral of wages and prices.

The spending pressures are coming from many sources. Some of the most insistent come from some of the leaders of our Congress, and some State administrations. State and local taxes, for example, have trebled since World War II and the rise isn't over yet for the States, counties and cities now spend \$1.10 for every \$1 they get in income.

These public spenders are practicing government-by-pressure group rather than government for the people. And they will only be dissuaded by public opinion strong enough to impress its will upon them.

Those in our Congress, and out of it, who are committed to excessive spending, and deficit financing, contend that going into heavier debt is no problem, because we can eventually tighten our belt and make it up. But the hard question is simply this:

If we cannot pay our way as we go and reduce our national debt when our economy is running at an alltime high, when and how could we ever expect to accomplish this goal?

The question also arises: Who is to pay these stupendous debts eventually? We must assume that the intention, in large part, is for the students of today, such as you now on this campus, to bear this burden in due time. It is you who would have to pay most dearly for the victories of the pressure groups now.

We must recognize, too, that great pressure for inflation is generated by what has come to be known as the wage-price spiral.

There is no question but what the legitimate function of every labor leader is to ask for-to negotiate for-higher wages.

This is a rightful purpose of union leader-

I myself worked at a factory job as a young man—and I know very well that one of my goals was higher wages. I have always been, and will always be, in favor of a responsible union movement.

But union members, with all other Americans, have every reason to insist that their leaders, as well as the leaders in management, exercise a high order of responsible statesmanship.

It is up to union leadrs to recognize that if they use their vast economic power to force wage increases and employees benefits too high, they bring about fewer jobs and greater unemployment.

By forcing wage increases which far outrun increases in productivity, they can set the sprial of wage-price inflation going again.

The President has repeatedly emphasized that this matter is of deep concern to all 175 million Americans. And he has said that the American people cannot stand idly by and let the destructive forces of inflation be unleashed again.

We know, too, that more inflation will deprive our industries of adequate earnings to plow back into new products, equipment, and plants.

We must look to the expansion of our production capacity to increase job opoprtunities in the future. We must take every step to encourage, not sap, the growth power of industry and business.

In doing so, we need to recognize the burden our taxation is placing on the accumulation of capital for investment.

It is the same burden imposed on the personal incentive and earning power of every citizen.

The tax foundation tells us the average earner of \$4,500 a year works 22 days each

Seven days of this total-nearly one-third of his working time-is taken from his income in taxes

And as he may succeed in building his income, he can look forward to the tax chunk becoming larger.

We need to relieve this stifling tax load carried by the individual citizen and by our business system.

There are over 100,000 taxing authorities in our country. Their weight can literally crush the ability of business to meet its job-creating capital needs

Our present tax structure is seriously out-It is a set of laws reflecting largely the condition of the past, especially World War II, when the goal was the confiscation of war profits; not the building of a sound peacetime economy.

A sensible, equitable, dynamic tax program is needed in its place. Such a program will keep total revenues up, not by taxing away incentive and means of growth, but by steadily increasing the tax base.

I have stated these problems of communism, inflation and taxation to you briefly. What progress are we making toward their

We are, in fact, making uphill but encouraging progress, both within the Government and in the mobilization of public opinion.

Our Federal administration has realistic national budget, and is making a determined effort to keep the costs of Government within this budget.

We are meeting the full needs of our defense program. We are meeting all the legitimate needs of our people.

We are striving to operate the Government on a pay-as-you-go basis, thereby avoiding the fatalistic deficit philosophy so easy to get into but so desperately hard to

And finally, we are taking positive steps to prepare for a program of progressive tax reform.

Because all of these efforts face powerful opposition, they depend of course on public opinion for their ultimate success. Here, too, we have reason for optimism.

In the past 6 months, we have seen a remarkable demonstration of the power of public opinion in this country.

When the 86th Congress convened, the spending philosophy was riding high in its ranks; there was almost no outlook for legislation giving union members and the public the protection they wanted; and there were only a few voices calling for a new look at the problems of taxation.

Today, the growing effects of aroused public opinion are clearly evident. Powerful forces still are bent on excessive Government spending, but strong opposition to them, both in and out of the Congress, is causing some searching reassessments to be made. The likelihood of preserving a balanced budget and holding inflation in check has grown brighter.

Union members throughout the country have made it clear that they are not in ac-cord with the autocratic decisions of the small group of leaders who exercise national

Highly responsible newspaper studies and opinion polls make it clear that most union members do not want wage increases which inevitably will bring greater inflation upon them.

Seventy percent or more of the members of some of our leading unions have children in college—a good and significant fact—and they do not want more inflation to push the cost of higher education for their sons and daughters beyond their reach.

They have made it clear they do not want strikes. They have made it clear they want legislation to protect their rights. And the public in general has made increasingly evident its support of these millions of union members.

From throughout the country, we are hearing reports of taxpayer dissatisfaction with pressure-group budgets which result in constantly rising tax rates. There is a mounting ground swell of support for those public officials who make determined effort to set realistic budgets and to keep Government expenses within those budgets.

All these are trends. But they are still trends. They must be carried forward with firmness and tenacity by the American people if they are to end in real success.

My appeal to you today is to join the battle to meet this challenge.

I am proud of my Midwest heritage, and I know that all of you from this great part of the country feel that same pride.

The Midwest is a cradle of patriotic and progressive action, and of leadership, for the public good. Let us be sure that that heritage is fully upheld in these critical days.

Whether you are student, a faculty member, or an alumnus of Miami, your voice is important. Your help is needed. Your leadership is important.

I urge you to take your place among those who will speak, work, and fight for sound policies and a stronger America in the

Years before us.

There is, unfortunately, a widespread tendency on the part of the public to "let George do it" insofar as our Government is concerned. We ask and expect the President, the Vice President, the Cabinet, the heads of a few agencies, and the responsible Members of the Congress to carry on the overall management of our Government and protect the public welfare. Too many fall to do their share and far too few citizens take an active interest in, and forcibly support, good government.

Only by universal participation can we be sure that the Government will serve all the people—not some special interest—and assure the greatest opportunities for all our citizens.

My friends, this is the banner of true liberalism.

Advancing under it, we shall meet the Communist economic challenge as surely as we shall meet the military and political challenge.

We shall build the better tomorrow for which the leaders and the faculty of this university are preparing our young people—and into which the students of today and tomorrow can proceed with bright hope.

We shall move forward, in full confidence, into the golden era of unlimited opportunity that lies ahead for every American,

## Connecticut's Stake in Area Redevelopment Legislation

EXTENSION OF REMARKS

## HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. BOWLES. Mr. Speaker, Connecticut has an interest in area redevelop-

opment legislation second to no other State. The statistical trends in our chronically depressed communities continue to emphasize the urgency of such action here in the Congress.

All of us are indebted to the area employment expansion committee which is continuing to make available to us upto-date information on this issue. A fact sheet just released by the committee indicates that Connecticut's depressed area problems are increasing, even as the number of our State unemployed drops.

Under leave to extend my remarks, I include the information supplied in this fact sheet. Some of the statistics are from the Connecticut Department of Labor.

CONNECTICUT DISTRESSED AREAS INCREASE IN NUMBER AS STATE'S UNEMPLOYMENT DROPS

The number of distressed labor markets increased from three in January 1959 to eight in May 1959 with the addition of Ansonia, Bridgeport, Meriden, and Torrington in March 1959 and Thompsonville in May

1959. The unemployment rate in these distressed areas in May 1959 was 7.6 percent as compared with the State average of 5.5 percent. The highest unemployment rate was in Thompsonville with 9.3 percent and reporting a substantial labor surplus since November 1957.

Marked improvements in employment conditions occurred in the areas which had substantial labor surpluses. Three labor markets, Danbury, New Haven, and Waterbury saw their rates fall below the 6-percent level.

The structural dislocations in the distressed areas suggests that it is not probable that they will shortly enjoy the benefits of the national economic pickup and must strenuously strive to redevelop their local economies in order to lower their unemployment rates below 6 percent.

Continued high unemployment in New Britain, Middletown, and Willimantic will graduate each of them into the distressed category in June 1959.

The area redevolpment bill before Congress will help these communities undertake redevelopment projects to alleviate their distress.

Table I.—Connecticut—Labor force and unemployment in labor markets, May 1959

Labor market area	Labor force (civilian), total	Unem- ployment, total	Percent of the labor force	Number in excess of 6 percent
A. State, total	1, 054, 900	57, 600	5. 5	
B. Distressed areas 1	307, 800	23, 500	7.6	5, 332
Major: Bridgeport. Smaller.	139, 600 168, 200	10, 600 12, 900	7.6 7.7	2, 224 3, 108
Ansonia Bristol Danielson Meriden Norwich Torrington. Thompsonville.	19, 900 19, 800 15, 900 39, 100 21, 600 25, 000 26, 900	1, 700 1, 600 1, 200 2, 600 1, 500 1, 800 2, 500	8.5 8.1 7.5 6.6 6.9 7.2 9.3	506 412 246 254 201 300 1, 186

## Look Quickly, Agriculture Is Changing

EXTENSION OF REMARKS

OF

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Thursday, June 11, 1959

Mr. WILEY. Mr. President, today, the technological revolution in agriculture is having far-reaching effects upon the economic and social life of the American farm family.

The impact of these developments is felt, not only by the farm family, but by the rural communities, food processing and distribution industry, and the economy of the Nation.

There are, of course, many constructive results from this revolution.

Among other things, the farm family is now provided a great many of the modern conveniences, appliances, tools, equipment, formerly available only to urban dwellers; more and more hand labor is now performed by machinery; rural families are provided more opportunities to share in recreational, cultural, educational, and other opportunities.

ties of the community—and other advantages.

At the same time, we recognize that the changes require difficult adjustments by the American farmer.

Among other things, they include adjustment to the trend toward bigger farm operations which, unfortunately, is "squeezing out" the small family farm; resolving the economic problems; attaining a production-consumption balance; and other problems.

Because of the changes in agricultural patterns, there have been tremendous shifts in farm population. According to estimates, in 1910 there were 32 million people on the farms—representing 35 percent of the total population. In 1940, there were 30 million people on the farms—but representing only 23 percent of our population. Currently, the number of farm folk is estimated to be about 21 million—or only 11 percent of the total population.

We recognize, of course, that we are in real need of improved policies—particularly as these would improve the economic status of the farmer, as well as contribute toward reduction of our national stockpiles of farm commodities.

Economically, the significance of a healthier farm economy reflects far beyond the farmer's fenceline. For example, for every 100 workers on the farm, there are approximately 90 more workers engaged in supplying goods and services used in production; and about 100 additional workers engaged in processing and marketing the food and fiber produced in agriculture. Over all this group comprises approximately 37 percent of the labor force.

My colleagues will recall that I have introduced proposed legislation for establishing a commission to evaluate the significance of these trends in agriculture, as well as to better enable our farm families to adjust to the technological revolution.

Fortunately, hearings have been held in the House. I again respectfully urge action by the Senate committee.

Recently, the Journal of American Insurance published an article by Dr. Earl L. Butz, former Assistant Secretary of Agriculture, entitled "Look Quickly, Agriculture is Changing."

To give Senators an opportunity to review the far-reaching developments in agriculture outlined in the article, I ask unanimous consent to have it printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOOK QUICKLY, AGRICULTURE IS CHANGING (By Dr. Earl L. Butz)

During the next decade, we shall have ringside seats to scientific and technological developments our fathers would have labored over for a whole generation.

That's change at the modern-day pace—the law of progress.

Today the agricultural revolution is advancing with such rapidity that farm families and rural communities often find it hard to make the required economic and sociological adjustments. This is equally true for agricultural business and for the businesses serving agriculture, such as insurance.

Growth is always painful. The present adjustment is no exception. It is not easy for farm families to change their methods of production, their scale of operation, or even to shift vocation. The anguished farm mother says, "We slaved and saved all our lives to own this farm clear for ourselves and our children; it would break our hearts if they had to leave." That's parents-living-their-children's-lives at its worst.

#### 1. CAPITAL REQUIREMENTS GROWING

True, it is more difficult for a farm family to shift vocations than for an individual worker. But farm sons and daughters, as well as farmers themselves, have been shifting to nonfarm vocations for generations. That's how industrial America grew. Only the rapidity of the present shift is new.

The impact of these agricultural developments on farming itself, on community life, on food processing and distribution, and on other business related to agriculture is tremendous.

Take insurance as an example. Today insurance is being called upon to underwrite a new type of agriculture with as much as \$50,000 to \$100,000 invested per worker. Frankly, most of our farmers don't carry sufficient insurance. Their inventory values have gone up so steeply the past 10 or 15 years that they simply haven't kept up with the insurance coverage. This also goes for life insurance.

Therein is the first big impact of these technological changes in American agriculture. Capital requirements for agriculture will grow in total, per farm and per man. This trend has been particularly pronounced during the past two decades. Its continuance is inevitable.

Our agricultural plant now has record high total assets of about \$190 billion. About 89 percent of this represents owners' equities. Total debt is now around \$20 billion, or about 11 percent of total assets. This is a conservative figure, and is probably a healthy minimum, considering the necessity to refinance most farms each generation when ownership changes to younger hands.

Total investment per farm in the United States now averages \$36,000. This includes a lot of small part-time or subsistence farms. Investment per commercial farm is much higher. It is not uncommon for family commercial farms in the Corn Belt, for example, to have a total capital investment in excess of \$100,000—in some cases \$200,000.

Investment per worker is growing rapidly. Only 15 years ago, the average U.S. farm had about \$3,500 invested in land and equipment for each farm worker. Today that figure is more than \$15,000 per worker. On many commercial family farms the investment per worker runs up to \$50,000 or higher. This compares with an average investment per industrial worker of around \$14,000.

This means it takes three or four times as much capital investment to create one agricultural job on many of our family commercial farms as it does to create a typical industrial job in our cities.

As agricultural science continues to advance, it is inevitable that the business units in agriculture will get bigger and bigger with still larger amounts of capital required. This trend cannot be stopped. Nor should it be. We must adjust our farm institutions and our farm programs to it so as to capture such benefits as will flow from it.

Machines will continue to displace men on our farms. We will produce more with fewer farms and with fewer workers than at present.

#### 2. NUMBER OF FARMS IS DECREASING

The second big impact is: The number of farms will decrease.

We now have about 4.6 million farm units in the United States. Slightly less than 2 million of these are what we commonly call commercial family farms. The remainder are, in effect, part time or quasi-subsistence farms. They add relatively little to the commercial flow of food and fiber. Indeed, the top 2 million of our farms produce approximately 90 percent of all food and fiber entering into commercial trade.

The other 2-million-plus farm units, although listed in agriculture, are operated by farm people who really need more opportunity to improve their situation either through enlargement of the individual farm business or through additional employment off the farm. Preservation of these farm units is the political demagogs' monomania. But many of the people on these 2 million or more units are so situated that the solution to their problem must ultimately be found outside of agriculture.

There are some people who simply weren't

There are some people who simply weren't cut out to be farmers, just as other people don't make successful insurance salesmen, machinists, carpenters or whatever.

Low income farmers better off to move out

It is just plain coldblooded procedure to attempt through legislative programs to keep such men tied to farms which every one knows are inadequate to provide a decent living for the men and their families. People in other jobs and in other professions take this kind of healthy competition in stride. And they usually improve their lot in life. Many low income farmers can and will do the same if they are given the opportunity, and if the politicians will stay out of their hair.

Unfortunately, there is no prospect that ambitious politicians in Congress will stop demagoging the emotionally explosive family farm issue, any time in the foreseeable future. Fewer farmers, and particularly fewer farmers in the entrepreneurial sense of the word, inevitably mean decreased political power for agriculture. Indeed, that trend has been apparent in recent years, as farm politicians have faced increasing difficulty in holding the farm bloc together in Congress.

In many areas of the country, there is a job waiting in industry, a job with good pay. for the farmer who finds that farming is not his long suit. And if his children want to go into engineering, into medicine, into teaching, or into the skilled crafts in the city, they can be sure that a position awaits them when they finish school. There is nothing dishonorable about this kind of a vocational shift. It's been taking place ever since the founding of the Nation. Without it, our high level of living would have been impossible. We would have been a Nation of peasants with each family tied to its small acreage of land. We would have advanced little beyond the current status of major agrarian populations in the Near East and the Far East.

In 1910 we had 32 million people on our farms, representing 35 percent of our total population. In 1940 we had 30 million people on farms, but only 23 percent of our population. At the present time the number of people on farms is down to about 21 million. or 11 percent of our total population. It has been predicted that by 1975, farm population may be around 17 million, or about 7.5 percent of the total population of around 228 million.

This will mean that production per worker on our farms two decades hence must be more than twice as high as it is now. And it's now twice as high as it was less than two decades ago. This kind of development must inevitably mean higher living standards for those who man our farms and produce our food and fiber.

Insurance safeguards will be more urgent

These commercial family farms will increasingly take on the characteristics of a business organization. The percentage of

gross receipts consumed by production expenses will rise even higher than it is today. For one thing, more insurance will be required to protect the investment and the business. At the present time about 65 cents of each dollar the farmer receives is spent for goods and services required to run his business. This does not include his wages to himself. In earlier periods, expenses consumed less than 50 cents out of the dollar. A decade or two hence expenses will consume more than 65 cents of the dollar. The farm will operate on a narrower margin per unit of output. This means that volume must increase in order to increase profits.

This trend suggests that farms are becoming more like other businesses in that they acquire more and more of their goods and services, rather than having them produced on the farm or consumed there. In a sense, therefore, the farmer becomes the manager of a manufacturing operation as he puts together packages of technology which have been processed on a custom basis by others. One illustration is the integrated poultry broiler industry.

#### 3. INTEGRATION TREND WILL SPREAD

Thus, the third impact of change in agriculture is: The trend toward integration will spread. Don't be frightened by this; the demagogues in agriculture are using it as one of their most effective hobgoblins.

Political leaders will resist vertical integration in agriculture, through their oratory, in their congressional hearings, and in their legislation. The philosophy of the small, owner-operated family farm is deeply ingrained in our sociological and political mores. The controversy over this issue is often more emotional than economic. Political pressure will continue to be on the side of maintaining the small family farms, even though modern technology dictates strongly that family farms become larger.

Vertical integration is the result of fundamental economic and technological changés occurring in the agricultural industry—it is not the cause of them. It is a manifest effort by individual sectors of the agri-business assembly line to survive in the swift competitive current of our modern dynamic food and fiber industry.

Certainly, it is reshaping the traditional pattern of owner-manager-operator all contained in a single person. This reshaping is the very basis of much of today's social and political unrest in agriculture. But the wave of the future in integration is rolling and swelling. We will need to study the organization of our production units carefully and steer our farm policy course wisely in order both to minimize the adverse impacts and to maximize the favorable aspects of this development. I leave the insurance implications—and there are many—to the farm underwriters.

#### 4. CITY, FARM WILL "RURBANIZE"

Fourth of the impacts: Our countryside will be "rurbanized." A transformation is taking place which is changing the thinking and actions of a vast segment of our population. The "country hick" and the "city slicker" have virtually disappeared as prototypes on the American scene. The line of demarcation between people living in rural areas and those in urban areas is fast becoming obliterated. Modern science and technology have made it possible for the city to move to the country and for the country to move to the city. There is no longer a farm population and an industrial population, especially within 40 or 50 miles driving distance of our big industrial centers, and that includes practically the whole eastern and central sections of the country.

Only in recent years has this "rurbanization" come to the fore as a powerful in-

fluence reflecting a great change taking place in our way of life. A new agriculture in America is emerging with breathtaking rapidity. It is time, indeed, to look quickly. The transformation is taking place so quickly that we are experiencing great difficulty in adjusting to it economically, sociologically, and politically.

For many years in our city communities the doctor has lived beside the lawyer, beside the machine operator, beside the bricklayer, beside the schoolteacher, and each has lost his vocational identity as a member of his community.

So it will be with the commercial farmers in the newly "rurbanized" communities. The farmer-businessman will live beside the urban businessman, the urban industrial worker, and the urban professional man. Ultimately, they will lose their vocational identity as members of the community. At this point, farming will no longer be a way of life, but will be a way of making a living, just the same as other business enterprises.

#### 5. AGRICULTURE EXPANDING SWIFTLY

Here's a fifth and last impact: Agriculture is an expanding industry. It is an expanding industry in every respect except one: the number of people required to run our farms. Only in this single respect can it be said that agriculture is a declining industry.

Our agricultural plant uses each year more capital, more science and more technology, more managerial capacity, more purchased production units, and more science and research than the year before. What's declining about that?

The declining trend in farm population, although demagoged to death by some politicians and rural fundamentalists, is in itself a sign of a strong agriculture. This is the age of science and technology. Brainpower has replaced horsepower and muscle-power as the central ingredient of success on our farms.

Total capital and capital per worker in agriculture, as has been pointed out, greatly exceeds that in American industry. Total capital assets on our farms now exceed \$190 billion. Add to this the investment in agricultural businesses and the total assets in what has commonly come to be called agribusiness exceed the total industrial assets in America.

For every 100 workers on American farms, there are approximately 90 more workers engaged in supplying farmers with goods and services used in production and approximately 100 other workers engaged in processing and marketing the food and fiber produced on our farms. This entire group comprises approximately 37 percent of our labor force.

The farm plant in America purchases approximately \$17 billion worth of goods and services used in farm production. To this it adds a value of about \$18 billion, which means that total farm produce leaves the farm gates at about \$35 billion. Processing and distribution add another \$45 billion to this, which makes a total value of output in agri-business of approximately \$80 billion a year.

In contrast to 40 or 50 years ago, when farmers were producing most of their own fuel, power, materials, fertilizer, and protection, industry is now furnishing farmers each year 291 million premium-dollars' worth of insurance on motor vehicles, machinery and implements; 6½ million tons of finished steel—more than is used for a year's production of passenger automobiles; 45 million tons of chemical materials—nearly five times the amount used in 1935; 17½ billion gallons of crude petroleum—more than is used by any other industry; 285 million pounds of raw rubber—enough to make tires for 6 million automobiles; 22 billion kilowatt-hours of electrical pow-

er—more than enough to serve the cities of Chicago, Detroit, Baltimore, and Houston for a year.

Thus, whatever happens to agriculture has a direct and major impact upon industry.

Plenty will be happening—and swiftly. Be assured of that. Agriculture is right in the middle of the scientific explosion of our times. If we can keep our economy free and preserve an environment in which individual producers and scientists are free to dream a little about new techniques and new ideas, and to enjoy the fruits of their dreams, we shall experience phenomenal progress in the next generation. The watchwords for insurance and for every other copartner of agriculture are, indeed: Look quickly; watch closely.

## Where Is Federal School Aid?

EXTENSION OF REMARKS

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I include a very interesting editorial which appeared in the Christian Science Monitor recently:

WHERE IS FEDERAL SCHOOL 'AID?

The President's Science Advisory Committee, as its name would suggest, is urging in its significant report what should be done to bring American schools up to the standards required by an age of science. How its recommendations bear upon some of the other tasks Americans have long assigned their schools—such as general education of those without the aptitude or interest for "intellectual" subjects—warrants separate discussion. But its admonition that the Nation must double its annual investment in education bears on any index of the Nation's present effort.

The index most readily related to national concern is the interest in Federal aid to education. Last session Congress enacted the National Defense Education Act comprising some excellent features, but did not complete the job of appropriating the funds authorized. Two months ago the House restored all of the \$50 million its Appropriations Committee cut from the authorization.

There are two school bills now receiving serious congressional consideration. One is the administration's bill to take care of the omission from the present act of Federal aid to classroom construction. It would do this by way of helping school districts float and retire construction bonds on a need-and-effort basis. The Federal commitment would be \$2½ billion over 25 years.

The other is the Mansfield-Metcalf bill, patterned after proposals of the National Education Association. This measure frankly rejects financial limitations and approaches the issue on the assumption that the Nation surely can spend as much for education as for cigarettes and beverage alcohol: It would leave to each State whether to spend its allotment on buildings or teachers' salaries. It would begin distribution on a school-age population basis, then move to allotments related to a national effort index, reaching a rate of some §4 billion a year—indefinitely.

Congress, apparently is looking with favor on a somewhat cut-down version of this bill. And if it would encourage local effort—as it seems designed to do—instead of discourage it, the bill sounds a note of determination that might strike the needed spark. The "George Washington," the Nation's First Ballistic Missile Submarine

EXTENSION OF REMARKS

## HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, at 12:40 o'clock on June 9, 1959, history again changed its course with the launching by our Navy of this Nation's first ballistic missile submarine, the George Washington.

By the sheer drama of the mighty power and force it will contain in its bowels, this nuclear-powered submarine heralded to the corners of the earth that here was an awesome instrument dedicated from the moment of its conception to the preservation of the free world and its ideologies.

It sounded the death knell for any aggressor, for it will have the almost unbelievable potential to unleash in one quick and terrible blow more devastation than was created by all the bombs dropped in World War II.

The George Washington will carry in its firing tubes 16 solid-fueled ballistic missiles each tipped with a thermonuclear warhead. It is the forerunner of nine such mobile missile launching platforms that this Nation has already dedicated to the deterrence of major war in our time.

Here is a great scientific achievement. A marriage, if you please, of the ocean depths to outer space for these great submarines will lurk concealed deep below the ocean surface ready instantly to fire their terrible weapons through space to the target. They will bring within range of direct attack from the sea, virtually all important military targets in the world and their weapons can reach these targets in some 15 minutes from the instant of firing. They can patrol the world's oceans for months at a stretch, move submerged for thousands of miles. They will be almost impossible to locate and trace even by the most advanced methods of surveillance.

The George Washington will go to sea with its ominous load of IRBM weapons just next year—in 1960. The very knowledge that this submarine will be at sea ready to launch its missiles of destruction within minutes and that others of its kind will be following shortly in its wake, will exert a strong and constant deterrent influence on any aggressor nation. This is a deterrent that will be effective because of its mobility.

One needs only to glance at a map of the world to see that the majority of the earth's surface is covered by water. This fact, coupled with the mobility of this weapon, means that nearly every spot on the earth is accessible to its destructive power. Equally important is the fact that by this same mobility it acquires a shield of invulnerability. Here is a ship that can launch its weapon of destruction as effectively as any fixed launcher but with the great advantage tive effort safety or Through Carlot are constructional to the construction and the construction as effectively as any fixed launcher but with the great advantage

that it cannot be destroyed in a surprise attack, simply because the enemy will never know where it will be. With its mobility and with the developments of recent years it can operate almost as easily beneath the polar icecap as it can in the warm waters of the Tropics, This ship, now joining our great fleet, spread over the seven seas will be an integral part of the Navy. As a part of our seapower it will play its part, and a very effective one, in making anyone with possible dreams of world conquest think twice before attacking this Nation.

Our Navy, and its industrial team, has accomplished a tremendous task in telescoping time and efficiently managing the many facets involved in presenting to this Nation this tremendous weapons system. Their accomplishments with wartime speed in the light of peacetime activity is astonishing. Their firm and principled methods of management have been recognized as outstanding by educators and industrialists both in and out of the defense field. It is refreshing to find in this day and age, seriousminded, responsible, and devoted citizens who dedicate their every effort to the needs of our great Nation and the free world.

I know that it is their hope as well as my own that these horrible weapons that they have developed will serve as a firm steppingstone to lasting peace and in the face of their vast strength and power they will never have to be fired, because all mankind will recognize the utter futility of war.

Promotion of Greater Traffic Safety

EXTENSION OF REMARKS

#### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
\* Thursday, June 11, 1959

Mr. WILEY. Mr. President, today one of the great tragedies in America is the ever-increasing toll of deaths and destruction of property on the highways of the Nation.

According to figures obtained from the Automotive Safety Foundation, in 1958 the death toll amounted to nearly 37,000; nonfatal injuries occurred to 1.4 million people. The value of property destroyed amounted to over \$1.8 billion. All costs—including medical, wages lost, insurance, and property damage—are estimated to be about \$5.4 billion. This is, indeed, a tragic record.

We recognize, of course, that constructive efforts are being made to promote safety on the American highways. Through our road-building program, we are constructing better and safer roadways. Across the country, too, local and national organizations are conducting campaigns to promote greater safety. Nevertheless, the Nation still suffers from the almost incredibly high record of property damage, personal injury, and—above all—deaths, on the American highways.

Today, I received from Mr. Lawrence R. Larsen, chief clerk of the Senate of Wisconsin State Legislature, a resolution, adopted by the legislature, urging the issuance of a commemorative stamp on the theme of traffic safety. This important proposal had been put forward by the State Medical Society of Wisconsin; and the resolution of the Wisconsin Legislature endorses it.

The issuance of a commemorative stamp would be a constant reminder to the American people of the need for ever greater safety on the American highways, and I believe it would be a constructive accomplishment. I am, therefore, transmitting a copy of the resolution to the Post Office Department, for the consideration of the Citizens Stamp Advisory Committee with the recommendation—made earlier also to the Post Office Department—that a commemorative stamp on traffic safety be issued.

In addition, I request unanimous consent to have printed in the Appendix of the Record, Joint Resolution 42 of the Wisconsin Legislature, and also the resolution adopted by the State Medical Society of Wisconsin, and forwarded to my office by C. H. Crownhart, secretary.

Mr. President, in this connection I may say that a few years ago I was in Helsinki. In Finland, the authorities do not mince words about the matter of driving automobiles while under the influence of intoxicating liquor. Anyone who is found driving an automobile while under the influence of liquor is sentenced to work on the public highways. Just the other day I had a statistic which indicated that the driving of automobiles while under the influence of intoxicating liquors is conducive to a large percentage of the accidents which occur on the highways. I think that matter should be thoroughly gone into; and those who insist on drinking should not be allowed to drive automobiles.

In some States an analysis is made of the blood of those who are involved in automobile accidents; and if a certain percentage of alcohol is found, real fines are imposed, and in some instances jail sentences are imposed.

Mr. President, I, for one, believe we should see to it that the various States have laws which follow the pattern which has been inaugurated in Finland. When I was in Finland, a very prominent citizen was found to have been driving an automobile while he was intoxicated. His prominence did not save him; he was immediately put to work on the highway. The Government took charge of him.

So far as I, personally, am concerned, I believe this matter should receive most serious consideration by the State legislatures.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

SENATE JOINT RESOLUTION 42

Joint resolution relating to the issuance of a series of commemorative stamps on the theme of traffic safety

Whereas the commemorative postage stamp has been used effectively as a device to focus the attention of the American people on great problems in our Nation; and Whereas the tragic loss of life and property resulting from traffic accidents is one of the great problems facing the American people; and

Whereas the State Medical Society of Wisconsin has proposed that the Post Office Department issue a series of annual commemorative postage stamps during the next 5 years in an effort to stimulate in the motorists an awareness of the need for improved driving habits by the American people: Now, therefore, be it

Resolved by the senate (the assembly concurring), That the Legislature of the State of Wisconsin endorse this proposal of the State Medical Society of, Wisconsin; and be it further

Resolved, That copies of this resolution be submitted to the Honorable A. E. Summerfield, Postmaster General of the United States, and to the Members of the Wisconsin delegation in Congress.

President of the Senate.

LAWRENCE R. LARSEN,
Chief Clerk of the Senate.
GEORGE MCLINARO,
Speaker of the Assembly.
NORMAN C. CLENDENAN,
Chief Clerk of the Assembly.

RESOLUTION OF THE STATE MEDICAL SOCIETY OF WISCONSIN

Whereas traffic accidents each year kill more than 37,000 persons and injure another 1,400,000, causing not only tragic suffering and loss of life but costs exceeding \$5 billion in wage loss, property damage and medical services; and

Whereas the attention of the Nation has been effectively directed to some of the great problems and philosophies of human living through the issuance of special commemorative stamp as illustrated by the issues shown here: Now, therefore, be it

Resolved, That the Postmaster General of the United States be petitioned to issue annually, for 5 consecutive years, a special commemorative stamp on the theme of traffic safety, each year's stamp to receive its first day of issue from the capital cities of every State of the United States; and be it further

Resolved, That duplicate originals of this resolution, bearing the seal of the State Medical Society of Wisconsin, be sent to the Governor of Wisconsin, the U.S. Senators and Representatives from Wisconsin, the Postmaster General and the President of the United States, and the president, president-elect, and executive vice president of the American Medical Association; and that facsimiles be sent to the American Medical Association delegates and alternate delegates of each State medical society; the insurance industry, the American Automobile Association, the National Safety Council and others interested in the prevention of traffic accidents—all With the express hope that they will join this hationwide effort to use stamps as a means of delivering a daily reminder to the American people on the necessity of safe driving for longer, healthier living.

Adopted by the Council of the State Medlcal Society of Wisconsin in meeting duly assembled on February 28, 1959.

R. A. ARVENN,

Chairman of the Council.

W. B. HILDEBRANT, M.D.,

President.

Attest:

E. D. CROWNHURT, Secretary.

## An Upper Michigan Movie Production

EXTENSION OF REMARKS

## HON, JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. BENNETT of Michigan. Mr. Speaker, under leave to extend my remarks I desire to call attention to a recent editorial in the Mining Journal of Marquette, Mich., concerning the filming of "Anatomy of a Murder".

This great novel, authored by Justice John Voelker of Ishpeming, Mich., was filmed during the past winter in Marquette County, the setting of the story. The letter in the Mining Journal, which is included herewith, aptly describes the feeling of appreciation on the part of all citizens in Marquette County for having the motion picture industry move into our midst to do this important work.

My congratulations to the author, the producer, and the great actors who made this event possible.

The editorial follows:

AN OPEN LETTER

Mr. Otto Preminger, Carlyle Productions, Inc., Care of Mather Inn, Ishpeming, Mich.

DEAR SIR: It is our understanding that your company, which has been engaged during the past couple of months in filming "Anatomy of a Murder" on location here, will be leaving Marquette County soon to return to Hollywood to complete details involved in the production and distribution of that film. We'd like to take this opportunity to tell you and your company how much we've enjoyed having you around.

We've gained immeasurably from the experience. As Justice John Voelker once put it in his apt and inimitable style, "There's been a gay, carnival atmosphere around here ever since you arrived." Although we citizens of Marquette County have always found this an exciting and sort of special place to live in, we found it even more exciting while your wonderful group of coworkers were in the neighborhood.

Nor can we overlook the great amount of public attention that was turned our way because of your operations here. Seldom, if ever, has this area been spotlighted as it was during your encampment in Ishpeming, Marquette, Big Bay, and Michigamme. We are not so blase as to try to pretend that we didn't relish all this publicity. We did, and so, in fact, did the entire State of Michigan, which stands to benefit considerably from the interest that was focussed on the Upper Peninsula in the past several weeks.

We hesitate to touch on mercenary mat-

We hesitate to touch on mercenary matters at a time like this, but the fact remains that Marquette County certainly appreciated the economic benefits that accrued locally as a consequence of your decision to film "Anatomy" entirely on location here.

Finally, we learned a great deal about a fascinating art by having your company with us. The citizens of Marquette County now have a far greater appreciation of the problems of the motion picture industry than they ever could have acquired under

any other circumstances. They respect your patience, resourcefulness, and tremendous talents to a degree that could be obtained only through firsthand observation of the monumental task of motion picture production.

And we learned a great deal about the generosity of people in the theatrical profession. We cannot conclude this note of appreciation without some mention of the many public appearances made by members of your company in behalf of worthwhile community projects and, charities. These paople gave generously of their limited time to help these worthy causes, and they deserve the gratitude of all our citizens. Your numerous demonstrations of interest in the public welfare were climaxed last Monday night by your announcement that a special world preview of "Anatomy" has been arranged in Ishpeming and Marquette, with all proceeds going to the Bay Cliff Health Camp for Children.

We hope that you also have benefited from your association with us. Mostly, we hope that you found the flavorsome authenticity you sought in your adeptation of Justice Voelker's lively novel. We're a bit blased in this observation, but we're convinced, nevertheless, that "Anatomy" will be an enormously finer film because it was photographed entirely in our incomparable north country.

We wish you every success with "Anatomy of a Murder," and hope the day will come again when we can share the pleasure of your company. Please be sure that the people of Marquette County will forget a lot of things before we forget you and your company and Justice Voelker and the book that brought you here.

Sincerely.

THE MINING, JOURNAL.

#### The Greater Crime

EXTENSION OF REMARKS

#### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. COLMER. Mr. Speaker, for many long months the committee popularly known as the McClellan committee in the Senate has revealed the most shocking corruption in certain fields of organized labor. These disclosures have been appalling. The victims of these atrocities are the rank and file members of organized labor and the citizens of the country generally.

These disclosures in the Senate of abuses of power by corrupt labor leaders have resulted in the enactment of the so-called Kennedy bill. Even though this is a very much watered-down version of Senator McClellan's recommendation, the drive is now on by the top leaders of labor unions to bring out an even weaker bill in the House.

As one who believes that labor unions are necessary for the protection of the laboring man from abuses by industrialists, I find it difficult to believe that the great majority of the Members of the

House will not courageously respond to their duty to the rank and file of the laboring man by supporting legislation that will protect the rights of honest union men from the unscrupulous and corrupt activities of the Becks, Hoffas, and other would-be dictators.

Mr. Speaker, in this connection, I submit herewith an editorial which appeared in the Saturday, May 16, 1959, issue of the Washington Evening Star, "The Greater Crime":

#### THE GREATER CRIME

Senator McClellan has instructed the staff of his committee to prepare special antitrust legislation aimed at criminal racketeering in unions which control vital segments of this Nation's transportation system.

There is not the slightest doubt respecting the need for legislation such as this. Testimony received by the McClellan committee clearly shows that assorted racketeers, many with criminal records, are firmly entrenched in transportation unions, especially the Teamsters, and that they are busily plying their criminal trade behind a false front of unionism. Nor is any new evidence needed to establish the truth of Senator McClellan's statement that it would be calamitous to permit any further strengthening of the crooks and the leftwingers who control these unions.

There is a greater crime, however, than the collective shakedowns and extortions practiced by the union criminal element. And this greater crime consists of the fact that there is almost no chance that Congress will adopt any such legislation as that being urged by the Arkansas Senator.

This is not because Congress does not know the facts or because the legislators are under any illusions concerning the ability of honest union leaders to clean out the thief-infested unions. This cannot be done and will not be done. On the contrary, the crooked unions are likely to become relatively stronger. But the leaders of legitimate unions do not want to see the antitrust laws invoked against even the racketeers in the union family, and a timid Congress can be expected to bow to their wishes.

This, in our opinion, is the greater crime—a crime against the country on the part of people from whom something better should be expected.

#### Demagog at Work

EXTENSION OF REMARKS

## HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. COHELAN. Mr. Speaker, the distinguished commentator, Mr. Walter Lippmann, makes some succinct and timely comments in this mornings Washington Post and Times Herald.

I sincerely hope that my colleagues in the House will give this the most careful thought as we approach the subject of labor reform legislation:

> DEMAGOG AT WORK (By Walter Lippmann)

There is a strong probability that after all the investigations and the big talk this Congress will fail to do anything about the regulation of labor unions. If this happens, the reason will not be the opposition of Hoffa and of John L. Lewis. The reason will be

that the Senate, which was set to enact a very usesful bill, was stampeded by political demagogs who want an issue and not a bill. The result is that unless the mischief can be undone in the House, a brilliant opportunity will have been lost.

The gist of the matter is this. In April, after prolonged hearings and study, the Senate Committee on Labor and Public Welfare reported out a bill which the majority of the committee believed would "drive criminals from the labor movement" and "deal with breaches of trust and other shady transactions" which are incompatible with a strong and honestly run labor movement. The bill was remarkable in that it provided powerful remedies and yet had the support of the AFL-CIO.

One basic principle of the 59-page committee bill, usually referred to as the Kennedy bill, is that a reform of the abuses disclosed by the McClellan committee on racketeering must be founded on comprehensive reporting and disclosure of the financial transactions of the unions. this is of great practical importance is attested by the fact that in the section dealing with reporting and disclosure the Kennedy bill is substantially the same as the bill introduced by Senator GOLDWATER on behalf of the administration. The difference between the two bills lies in the penalties imposed for a violation, although both bills call for criminal penalties if union officials do not make full and accurate reports.

The Kennedy bill provides criminal penalties for at least six other abuses; the embezzlement of union funds, tampering with or destroying union records, bribing employee representatives, corruption in union elections and in the so-called trusteeships.

Quite evidently, the bill reported to the Senate is in no sense a soft and timid affair. Yet it had the support of Mr. George Meany, the president of the AFL-CIO. It is not often that a powerful special interest will be found supporting laws to regulate itself. It is not often that a powerful special interest invites public disclosure of its intimate and internal affairs. When such an extraordinary thing occurs, one might fairly expect Congress to seize the opportunity to get the agreement signed, sealed, and ratified.

But this is not what happened. On the floor of the Senate, without hearings or study in committee, amendments were added containing bits and pieces of a so-called bill of rights. These rights, as Mr. Meany has pointed out, are all of them legitimate rights and are, in fact, included in most union constitutions and bylaws. But what the amendments would do is to make these rights enforceable in the courts. In Mr. Meany's view, this opens up the prospect of endless lawsuits and, therefore, he is now opposing the amended bill.

Whether the amendments are good, bad, or indifferent is not the main point. The bill, before it was amended, was the strongest bill that could count upon real support within the trade union world. No doubt it is not the best conceivable bill. No doubt it is not a panacea. But it compels real reforms and it is the best bill that it is possible to enact.

It would be a great pity if Congress passed up the chance to enact a good bill in order to give itself the pleasure of trying to write an even better one. It would be a great pity if the President and those who support him are so insistent that the Kennedy bill be strengthened that they prevent the very significant labor reform that is now possible.

It is still conceivable that the labor reforms can be saved if the leadership in Congress and if the President in the White House want to save them. But they must reckon with the demagogs who do not want a bill because it would deprive them of an issue to beat their breasts about.

How Sputniks Made America Rethink Education

EXTENSION OF REMARKS

## HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. HERLONG. Mr. Speaker, I should like to call your attention to a report which should have deep interest to every American concerned with educational issues. I refer to the content analysis of 82 consecutive issues of the Wall Street Journal prepared by the Center for Practical Politics, located at Rollins College in Winter Park, Fla. The title of this study is "How Sputniks Made America Rethink Education." The report has permanent interest, and I am sure that the center would be glad to provide copies of the whole text to any and all interested persons.

My reason for mentioning this report is that it illuminates a number of fine ideas, and, as Alfred P. Sloan, Jr., once said, one can sometimes substitute an idea for an expenditure. The surprise ascent of the sputniks, as we all know. created sustained anxiety throughout the American educational system. From studying the Center for Practical Politics report, however, I find the ironical conclusion that it is not so much money that is needed as that our leaders sit still and take time to think,

There has been no shortage of Monday morning quarterbacks in dealing with education, Mr. Speaker, but the analysis of this report to which I refer puts in order of rank the items discussed in the Wall Street Journal: solutions first, Federal aid second, and reasons for our educational failure third. Now, Mr. Speaker, I suggest that this itself is representative of much of our thinking these days which puts the cart before the horse. Perhaps the right order is first, reasons, second, solutions, and third, Federal aid. Nevertheless, when it comes to solutions, the proposals, in order, were to first. revise the curriculum, second, increase administrative ingenuity, and third, experiment with new methods, using present talent and facilities more prudently. First, as might be expected in a financial publication such as the Wall Street Journal, the reasons for our educational distress were laid to excessive taxation.

The report points out that whatever one's position on Federal aid may be. two major approaches to the educational problem are: first, fresh educational thinking, and second, a serious study of taxation in relation to education. The report to which I refer points out that a tax deduction on all tuition fees paid to colleges would be like a new bill of rights for the parents, a point which is of particular interest to me, Mr. Speaker, because I have sponsored legislation with a similar purpose. Likewise, a revision of tax policy would encourage the student working his way through college. It may not be necessary to bring money to Washington and then peddle it back

to the States. This, at least, is an item raised by the center's report.

Mr. Speaker, I mention this subject because of its general interest and because I am proud of the contribution which the Rollins College Center for Practical Politics is making to the thinking of all good citizens and of sound public opinion.

Testimonial for McNamara

EXTENSION OF REMARKS

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include an article which appeared in the Postmasters Gazette for June 1959, concerning the tribute to Ray McNamara, postmaster of Haverhill, Mass., at a testimonial banquet which I attended on April 18, at the Bradford Hotel in Boston:

TESTIMONIAL FOR MCNAMARA

(By William E. Brennan, secretary-treasurer, Massachusetts chapter, National Association of Postmasters of the United States)

The Bradford Hotel ballroom at Boston, Mass, was the scene of a great gathering of friends, fellow postmasters and regional officials on the evening of Saturday, April 18, to pay fitting tribute to the beloved Raymond V. McNamara, postmaster of Haverhill, and past president of the National Association of Postmasters of the United States.

A banquet committee, headed by Chapter President Francis J. O'Neil with Regional Director John B. DeMott and Inspector in Charge Clarence S. Wibel serving as honorary cochairman, performed a remarkable job of Staging the affair with such a short time available to make arrangements and the outstanding tribute to an outstanding individual such as Ray McNamara was result of Strenuous efforts on the part of postmasters serving on the committee from Massachusetts and other New England States.

The esteem in which the guest of honor is held throughout the country in postal circles was evidenced by the presence at the head table of such distinguished guests as Hyde C. Gillette, assistant postmaster general, Jeremiah F. Minihan, auxiliary bishop of Boston who grew up with "Ray" in the Acre section of Haverhill; Edward L. Baker, Detroit, president of National Association of Postmasters of the United States; Charles E. Puskar, Imperial, Pa., executive secretary-treasurer of National Association of Post-masters of the United States; John B. De-Mott, regional director of the Boston region, POD; Clarence S. Wibel, inspector in charge, Boston region; Jack Edelson, executive committeeman of New York region, National Association of Postmasters of the United States; Edward J. Quigley, public relations chairman of National Association of Postmasters of the United States and postmaster at Brooklyn, N.Y., and many others.

TURNOUT FROM NEW ENGLAND

Delegations were present from all New England States under guidance of their committee members, President Violet G. Blake and Secretary Bertha L. Borgerson of the Maine chapter; President Julia S. Thompson and Secretary Wright E. Rives of the Vermont chapter; President Mary E. Hallinan and Secretary Howard K. Ballou of the New Hampshire chapter; and Daniel Coggeshall, president, and LeRoy E. Davis secretary, Rhode Island chapter. Others present from outside New England were John Dawson, Trenton, N.J., executive committee. National Association of Postmasters of the United States; Louis Reilly, Newark, N.J.; and John Hogan, Flushing, N.Y. Boston Postmaster Ephraim Martin was

Boston Postmaster Ephraim Martin was called upon by Toastmaster Frank O'Neil and brought greetings of the city to honored

guests and the entire gathering.

Secretary Puskar gave a review of "Ray's" outstanding service as national president and Mr. Baker also spoke feelingly of his baptism into the higher echelon of the Postmasters' Association under the able tutelage of Mr McNamara

Assistant Postmaster General Gillette brought greetings from Postmaster General Summerfield, spoke of the devotion and high esteem that had developed between Mr. Summerfield and Mr. McNamara and traced relationships of Mr. McNamara with Post Office Department officials over the past several years, interspersing his talk with several humorous incidents that the banqueteers enjoyed immensely.

Another highlight of the evening was an

address by Bishop Minehan.

The guest of honor has had many encomiums heaped upon him during a very full life of many notable accomplishments, it is doubtful if he ever heard any greater number of complimentary remarks directed his way than at the much deserved testimonial. However, he was not rendered speechless and after Chapter Vice President Thomas Wilkinson, Lynn, Mass., presented him with a substantial check from his legion of friends and fellow postal workers, he responded with a ringing expression of gratitude, sparkling with witticisms and humor and denying vehemently that he is going into his shell upon retirement from his postmaster duties but instead is making himself available for many assignments.

In addition to the check of four figures, Master of Ceremonies O'Neil presented the retiring postmaster with numerous gifts. Among them were books, a bound volume of hundreds of well-wishing letters, a bound volume of his "messages" to postmasters printed in the Postmasters Gazette during his tenure as president, a sheaf of telegrams (too many for the Master of Ceremonies to read) and a huge take topped with a carefree postmaster in a chair, baked and decorated by Postmaster Margaret Schreiner of Marshfield Hills, Mass.

## A TRIBUTE TO OUR HONORABLE GUEST: RAY MCNAMARA

On a day early in April 1959, Postmaster Raymond V. McNamara, of Haverhill, Mass., glanced at his calendar and made a mental note that he was now beginning his 71st year of life. Thus, to Ray came the day which, by official decree, begins retirement from active duty \* \* \* the beginning of a period of informal activity, unmarked by clock or calendar, with periods of rest which he so well merits.

Retirement can never be synonymous with inactivity when used in reference to our honored guest. Ray has spent nearly all of his threescore and ten years serving others and in that pursuit he has found the true happiness which is reserved for the few.

We pause in our talks this evening to mark with Ray yet another milestone in a career of unselfish service to his family, his community, his coworkers, his church, and his country.

Most of those who gather here this evening have in a practical and spiritual sense been enriched by knowing Ray as a man. Many of us are the direct beneficiaries of his zeal, for whatever the field which attracted him, Ray

McNamara sought always to improve the lot of those who labored in that vineyard.

May he, with God's help, enjoy his retirement years. (From the printed program at testimonial dinner, Apr. 18, 1959, at Boston, Mass.)

## Physician, Heal Thyself

EXTENSION OF REMARKS

#### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. COLMER. Mr. Speaker, for those who cry out for new and more victous legislation in the name of civil rights, or more appropriately, civil wrongs, it might be well to regard the Biblical phrase, "Physician, heal Thyself."

For example, the editorial below from the Jackson Daily News, dated June 3, 1959, affords insight into the problem from the viewpoint of comparison of the largest city in the State of New York with the largest city in the State of

Mississippi:

New York Paper Shocked by Backyard Discoveries

Jackson, like most other southern cities and towns, is a wonderful place in which to live.

Citizens of this community feel free to travel in any section of the city without fear.

The wonderful churches and schools dotting this entire community attest to the atmosphere of a peaceful society, which is as it should be.

When an individual or group departs from accepted social or political activities in the South it is of such rarity it makes big headlines. Local newspapers freely publish the details without fear or favor.

Too many people elsewhere in the Nation grab these isolated incidents and puff them into overly dramatized acts as if they were everyday occurrences. This is usually accompanied by a wave of pious finger-pointing.

Usually those who do the most eyebrow knitting have much too much to hide. On several occasions this newspaper has invited the South's critics to first take a peek into their own backyard before casting stones toward Dixie. Until these professional faultfinders pay attention to their own troubles, their sensational criticism of this region is as vain as a celluloid dog chasing an asbestos cat through Hades.

Gradually the paper curtain is being parted to give a glimpse into the situation in the national headquarters of Southern

critics and racial agitators.

One New York newspaper has accepted the challenge to send its reporters daringly outside of its house of publication to check into a crime.

What the editor learned prompted him to say:

"We had no idea that felonious assaults had reached a frequency of being numbered 'in the hundreds'," moans the New York Journal American,

It is a strange society when the journalistic resources of the Nation's largest city can be devoted to a single act of violence in the South when mass murder goes unnoticed solely because crimes happen there with clockwork precision.

New York newspapers and its busybody magazines such as Time and Life have a perfect right to come into the South and write until their hearts are overflowing with ecstasy, but it would appear they have more reason to open a bureau right smack in the center of Central Park in New York.

As a result of its bold journalism in its backyard the following editorial appeared in the New York Journal American of May 28, 1959:

"IT MUST BE UNUSUAL

"The Alexander Avenue stationhouse in the Bronx didn't bother notifying police headquarters about an unprovoked attack upon an innocent motorist by a teenagestreet gang because there was nothing unusual about it.

"It was almost a week before news of the

assault became public.

"'This was a felonious assault and we have hundreds of them,' was the explanation of the detective in charge of the station-house's clerical work. 'We don't send anything down to headquarters unless it is an unusual.'

"What constitutes an unusual-must it

be a murder?

"Are we to assume that street assaults have become so commonplace and routine that the outlying precincts are no longer required to report them to headquarters by teletype?

"And, in passing, how many attacks similar to the one in the Bronx have there been which have not been made public through

the press?

"It is no secret that some areas of the city are now classified as high hazard districts because of the incidence of muggings, assaults, robberies, and teenage violence. The parks, especially Central Park, have been the gathering place of terrorists. The section in the Bronx at 143d Street, between Third and Morrow Avenues, where motorist Kenneth Ryan was savagely beaten, has been the scene of much violence committed against innocent people.

"But we had no idea that felonious as-

"But we had no idea that felonious assaults had reached a frequency of being

numbered in the hundreds.

"The situation, we believe, is grave enough to justify the creation of a voluntary citizens' patrol to safeguard the people in areas where the police have found themselves unable to cope with conditions because of insufficient manpower. This force, composed of men and women with service in the Armed Forces, should be deputized and armed with unconcealed weapons. We are certain there will be no shortage of volunteers willing to give of their time to make the streets of New York safe after nightfall.

"We believe also that the full force of the law, through the police and the courts, must be brought to bear on the terrorists preying

the city's streets.

"When felonious assaults are occurring by the hundreds, it is time to get tough."

#### AFL-CIO Opposed to H.R. 3

EXTENSION OF REMARKS

## HON. THOMAS J. LANE

OF MASSACHUSETTS

Thursday Type 11 1050

Thursday, June 11, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the letter which I received from Andrew J. Biemiller, director, department of legislation for the American Federation of Labor and Congress of Industrial Organizations.

AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS,

Washington, D.C., June 10, 1959. The Honorable Thomas J. Lane,

House Office Building, Washington, D.C.

DEAR MR. LANE: During the current session of Congress the House of Representatives will again be called on to vote on H.R. 3, introduced by Representative SMITH of Virginia. This is the same bill dealing generally, indeed very generally, with the subjects of Federal preemption and of conflict between Federal and State laws that has been before the Congress for several years, always with the same bill number on the House side.

The AFL-CIO is strongly opposed to this measure. We do not see how it could possibly lead to any constructive results and are fearful that it might be productive of substantial detriment. In the view we take, the enactment of H.R. 3 would be undesirable

for the following reasons:

1. The principles embodied in H.R. 3 would apply without distinction to such divergent fields as criminal law, the regulation of interstate transportation by rail or trucks, and labor relations legislation. Further, the language of H.R. 3 is vague and even self-contradictory. It is impossible to predict what effects the bill would have in the numerous fields where it would apply. The only thing certain is that it would invite relitigation of innumerable long-settled issues and would produce large-scale confusion.

2. As respects the regulation of labor relations, a subject in which we are particularly interested, the only sure results of H.R. 3 would be confusion and lawsuits. We are not happy about certain recent decisions of the Supreme Court which permit the States to exercise concurrent authority in the labor relations field over matters which we think should be the exclusive concern of the Federal Government. However, a vague and general bill like H.R. 3 is not a sensible way to deal with the complicated problem of the proper division of responsibilities between the Federal Government and the States in the labor relations field. If Congress is disposed to enact legislation to readjust the respective responsibilities of the Federal Government and the States in the labor relations field (and various of the pending bills dealing with labor-management reform do contain provisions on this subject) it should do so by appropriate amendments to the Taft-Hartley Act, or other labor relations legislation. Moreover, the language of H.R. is so cloudy that it is impossible to say whether it would result in greater or less authority for the States in the field of labor

3. It is hardly a secret that the principal motivation behind H.R. 3 is resentment at certain decisions of the Supreme Court against segregation and for civil liberties and that is so even though it is not apparent how H.R. 3 would or could affect most of these decisions. We are not in sympathy with this motivation. We regard the Supreme Court's desegregation decisions as a historic step forward. We likewise believe that the Court has in general properly performed its role as the final vindicator of the civil libertles guarantees of the Constitution. We believe that the independence of the Supreme Court is one of the great bulwarks of democracy and that attacks should not be lightly made upon the Court, or its decisions cavalierly overturned.

Five years ago the AFL-CIO stood virtually alone in its opposition to H.R. 3. With the passage of time, however, there has been growing realization among many and diverse groups as to the undesirable character of this bill. It is now opposed not

only by virtually every organization concerned with the maintenance and strengthening of civil rights and liberties, but by many conservative business groups which have come to realize that its vague provisions might perniciously affect their operations and would at least produce litigation and confusion.

Even so conservative a body as the American Bar Association has come out in opposion to the approach embodied in H.R. 3. A resolution adopted on February 24, 1959, by its house of delegates states:

"Whereas recent decisions of the U.S. Supreme Court, in cases involving National and State security and with particular reference to Communist activities, have been severely criticized and deemed unsound by many responsible authorities; and

"Whereas problems of safeguarding National and State security have been exposed or created thereby which this association feels would be best solved by the careful study of each decision, and the prompt enactment of sound amendments to existing laws within the constitutional powers of the

Congress: Now, therefore, be it

"Resolved, That this association recommend to the Congress the prompt and careful consideration and study of recent decisions of the U.S. Supreme Court and the preparation and passage of separate amendments to the laws involved so as to remove any doubt as to the intent of the Congress, and to remedy any defect in the existing law revealed by the decisions."

We also call your attention to the fact that the Department of Justice has continually opposed enactment of this measure.

We respectfully urge that you oppose HR. 3.

H.R. 3.

Sincerely yours,
ANDREW J. BIEMILLER,
Director, Department of Legislation.

## Annual Memorial Exercises Conducted by Quincy Police

EXTENSION OF REMARKS

## HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to include in the Record a very interesting article that appeared in the Quincy Patriot Ledger, Monday, June 8, 1959. Congressman James A. Burke, representing the 13th Congressional District of Massachusetts made the keynote address at the memorial services. His remarks on peace are most noteworthy. Congressman Burke also in speaking about the role the policeman will have in the case of war is an interesting observation worthy of our attention.

I am proud of my association with Congressman Burke as a colleague here in Congress and also as a former colleague of mine in the General Court of Massachusetts where he served with me for a period of 10 years. During the 4 years that I served as Speaker of the House of Representatives in the Massachusetts Legislature he was a member of the powerful rules committee and also was the assistant majority leader.

Police Chief William Ferrazzi of the Quincy Police Department also spoke on the fine record of the Quincy Police Department.

I feel that this story is of particular interest to other Members of Congress since it is typically representative of the Views of the American people as it relates to our police departments and other related subjects of concern to our people.

Annual Memorial Exercises Conducted by Quincy Police

Police memorial exercises were held yesterday afternoon at the site of the Quincy police memorial monument in the Mount Wollaston Cemetery. Participants were William H. O'Donnell, president of the Quincy Police Relief Association, the presiding officer; Mayor Amelio A. Della Chiesa, Congressman James A. Burke, the principal speaker; Edward T. McDonald, association vice president, who placed the wreath at the monument, and Police Chief William Perrazzi.

"Today the eyes of the entire world are on Geneva and we in America are hoping and praying that the efforts of our Secretary of State, Christian A. Herter, will be fruitful in establishing the groundwork for a lasting peace," Congressman James A. Burke, of Milton, said in his keynote address at the annual memorial exercises of the Quincy Police Relief Association yesterday afternoon at the police memorial monument in the Mount Wollaston Cemetery.

#### GOD'S LOVE NEEDED

"Only men of good will really want peace," Congressman BURKE added. "Peace is a state of friendly cooperation with others in the achievement of goals worthy of the individuals and the society to which they belong. For this there must be leadership. World leadership cannot make an appeal in the name of military or even political obedience, scientific advance, or cultural uniformity.

"The independence of nations and the deep-rooted traditions of diverse cultural patterns make it necessary for world peace to be based on something that can be and should be common to all men of every nation and culture. This can only be in their relation to God. Special appeals are being made that each individual soul love all others. They are asked to treat each individual as they should act toward Him. That would be be heaven on earth. That would be the triumph of charity. Yes, that would establish justice and peace throughout the world."

At the outset of his address, Congressman Burks said "it is fitting that you and I assemble here to pay our tribute to men who dedicated their lives in order that law and order might prevail."

The speaker pointed out that in the years to come the policemen will be called upon to render far more service than that which he is called upon to perform today. With the clouds of war threatening to envelop the entire world, we in the United States must Prepare for any eventuality. The police departments of the Nation will be the guardians of the local populace in case of attack. It will be the police departments that will be assigned to the responsible job of directing the evacuation of our communities. It will be the policemen's job to prevent panic and bring about an orderly handling of the evacues. Yes, the policeman will more than likely be like the captain of a great ship. In case of attack, they will be the last to leave the area.

Mayor Amelio A. Della Chiesa brought the official greetings of the citizens of Quincy and touched briefly on proposed legislation providing for annuities for the widows of Policemen.

PROUD HISTORY CITED

Chief William Ferrazzi said the annual Police Memorial Sunday reflects the paternalistic nature of law enforcement, which has left an indelible mark within our own ranks and has helped develop a willing compliance of law and order throughout the community. We are caretakers of the living as well as of the dead.

"The Quincy police department's proud history can be attributed to the endeavors and achievements of our departed members. They helped build a strong bridge of support from Quincy citizens and this cooperative climate has enabled the police department to carry out sound, progressive programs. Their zeal for law and order is a significant factor in this city today where crime does not flourish, as in other cities of its size throughout the Nation.

"All of this credit cannot be claimed by us without citing other municipal departments that are closely intermeshed with ours in effective police work and with whom we maintain favorable relations.

"Our courageous city government, under the responsible leadership of Mayor Della Chiesa, has supported and encouraged our departmental policies and has never subjected the Quincy police to political pressure and interference.

"A police department has a definite job to do and cannot be diverted from its goal. Its policy must be consistent, forthright, and impartial. Partisan politics does not mix with police administrations. Politics in the force would gradually undermine the character of the rank-and-file policeman, would sap its vitality, and destroy its morale. The paternalism of our mayor and city councilors is gratefully acknowledged by the Quincy police department," Chief Ferrazzi said in conclusion.

William H. O'Donnell, who is serving his third consecutive term as president of the Quincy Police Relief Association, was the presiding officer.

The Rt. Rev. Arthur J. Riley, pastor, Our Lady of Good Counsel Church, offered the opening prayer and the Rev. Chester A. Porteus, rector, Christ Episcopal Church, the closing prayer.

The placing of the "in memoriam" wreath at the flag-bedecked memorial monument was carried out by Edward T. McDonald, association vice president.

The roll of honor was read by Sgt. William D. Daley, association secretary, and taps was sounded by Wilbur Laucaw, Boston Fire Department band bugler.

Selections were played by the band, under the direction of Frank Marr.

After the formal exercises, all the participants went to the guardroom of the Quincy Police Station across the street for a buffet lunch.

Retired policemen at the exercises included Sgt. Carl Seppala, Stephen F. Cullen, William E. Crooker, Thomas F. Kerwin, Kenneth C. Poulin, Patrick J. Quinn, and George L. Wyman.

Other participants included James R, Mc-Intyre, president of the Quincy City Council and State representative; City Councilor John J, Quinn, School Committeeman James F. McCormick, Jr., Fire Chief Thomas F. Gorman and Attorney Francis X. Bellotti. Also the Rev. Thomas J. Tierney, Catholic chapplain of the Quincy Fire Department.

The solemn ceremonies were preceded by a street parade from the Adams Academy Building to the cemetery via Dimmock Street, Hancock Street, Coddington Street, and Sea Street, with the crack Boston Fire Department band as the musical unit. The police motorcycle escorts were Randolph H. Haslett and Daniel McAuliffe.

The police color detail consisted of Anthony R. Pollara, American flag bearer; Louis P. Tupper, police standard bearer, and Leo Antonelli and James J. Mulloy, guards.

Sermon Preached by Doyle William Dodson, Jr., Pastor, Eastern Hills Baptist Church, Montgomery, Ala., Sunday, May 24, 1959

EXTENSION OF REMARKS

## HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. GRANT. Mr. Speaker, recently the Reverend Doyle William Dodson, Jr., pastor, Eastern Hills Baptist Church of Montgomery, Ala., delivered a most interesting sermon which I am pleased to have recorded in the Congressional Record in order that all of the people of our Nation may have an opportunity to learn the feelings of the majority of the Christian people in the South:

SERMON PREACHED BY DOYLE WILLIAM DOD-SON, JR., PASTOR EASTERN HILLS BAPTIST CHURCH, MONTGOMERY, ALA., SUNDAY, MAY 24, 1959

My scripture this morning is found in Matthew 3:1-12. In this present hour of crisis in the world I shall speak frankly because of personal conviction and conscience concerning an issue confronting our Nation. This message is being recorded for my protection. Press representatives and others will govern themselves accordingly.

I attended the Southern Baptist Convention in Louisville, Ky., this past week, and before I state several convictions that are upon my heart, I feel that you have every right to know what happened during the convention sessions.

For a basis for what I shall say, I refer to the third chapter of Matthew when one who came with a fervent hot heart for the Lord, preaching the gospel of repentance, approached the people of his day standing upon his heart-felt convictions, possessing the power of the Lord, and said, "I indeed baptize you with water unto repentance: but He that cometh after me is mightier than I, whose shoes I am not worthy to bear: He shall baptize you with the Holy Ghost, and with fire." I believe that the living and the ministry of every Christian today ought to be on the same example of this man John who preached in his day. This man stood on his God-given convictions and the gospel of the coming King with all the fervency of his heart. John believed that the one who was coming about whom he was preaching was God's answer to the world's need.

Our world faces many problems. We have much strife and unrest, but the Christian who will stand not only upon the Word of God but also upon his God-given heart-felt convictions can stand in the right place without malice in his heart and with purity of his mind and soul.

John's message was from a heart of Godsent conviction, not of prejudice. This caused him to preach a message that attracted sinners. You and I will not attract those about us unless we are willing to stand upon fundamental principles for the Lord.

John's message was not only attractive but was also convictive. The people who heard his message were convicted of their sins and of the knowledge that they needed to know the Lord. John's simple message was—"repent ye, for the kingdom of heaven is at hand." He gave a solemn warning to the people of their need of repentance. In the midst of the dark hours of the world today, there is only one answer that God has that men must do and that is to repent

and believe in Christ as the Son of God and trust Him with all their hearts.

Finally, John's message was true. It was true because Jesus did come into the world as the Man of God and the Lamb of God to take away the sin of the world. Many today deny that Jesus was the Son of God.

In some pulpits of America today there is denial of the virgin birth of Christ and His incarnation as the son of God. When we lay down the incarnation of Jesus and strike this truth from our faith, we throw out every fundamental basis of our belief in Christ as the son of God. If Christ was not the son of God, and born of a virgin, He was a liar and an impostor, and not the son of God. I believe the New Testa-ment truth that He came into the world conceived of God, born of the Holy Spirit, born into the world with an earthly mother but without an earthly father. John's message was true. We need to come back to the basic fundamental principles that God is true, that Jesus is God's atonement for the sins of the world, and that men who believe in Him as God's son and yield their lives to Him can be saved.

With these thoughts in our minds I shall present some facts concerning the convention and my heart-felt convictions as to the present crisis concerning racial integration.

It is not the pastor's intent to embarrass any member of this congregation. I am a Southern Baptist from the top of my head to the bottom of my feet. Let me say that there is nothing whatsoever fundamentally wrong with the Southern Baptist Convention, but there are some among us who are seeking to bring greater strife and turmoil to our convention. In an hour of crisis we must be on guard in decisions that are made.

First, I should like to clear up something which newspaper accounts did not clearly state. The Southern Baptist Convention did not vote to integrate. Let me read a por-tion of the president's address by convention President Brooks Hayes, released on Wednesday, May 20, 1959, by Albert McClellan, press representative. I quote-"Discontent of the minority is the symptom of an illness which affects the Nation and the world. It constitutes the mission field at our doorstep. Studies and conferences leading to a better understanding between white and Negro Baptists should continue. It is a phase of the great commission. On February 24 our Joint Committee on Baptist Work Among Negroes held an important meeting in Nashville, and after a painstaking review of the problem, recommended that a high-level conference of leaders of the two largest Negro Baptist conventions meet with duly designated leaders of our own convention to promote Christian fellowship and conduct a comprehensive examination of the problem. I am happy to add my personal endorsement to this action and to transmit it to the resolutions committee for their consideration." Two days later when the resolutions committee brought their report to the floor of the convention, there was discussion for over 1 hour in which some of the finest leaders of our Alabama Baptist Convention stood, not as agitators, but as strong Christian statesmen and ministers of the gospel, with the best interests of the convention in mind. The resolution for a high-level meeting between the leaders of the two largest Negro conventions and the Southern Baptist Convention was referred to the executive committee of the convention for additional study. It is my personal conviction that this resolution will die in this committee. I do not believe that our convention can gain by further agitation of the problem among us. Also, I do not believe that our convention should be a sounding board for political leaders.

Whenever we have confusion regarding a social question, it is necessary for a Christian interpretation to be made because our faith applies to the whole of life. The integrationists' claim is that theirs is the Christian position. A great number of ministers from all denominations have taken a firm stand in favor of the mixing of the races in public schools. By conviction and conscience I am unequivocally opposed to their position, and I refer to the Bible, in the Book of Galatians, chapter 3 verse 28, "There is neither Jew nor Greek, neither bond nor free, there is neither male, or female; for ye are all one in Christ." Paul's statement is—In Christ there is no difference. But, what does Paul mean?

There are some obvious differences between the Jew and the Greek, between one who is in bondage and those who are freemen. Also, there are differences between sexes: therefore, we draw the conclusion that Paul is speaking concerning the spirit within and not the flesh without. The fruit of the spirit is manifested in love, joy, peace, long suffering, gentleness, goodness, faith, humility, and temperance. Whether we are male or female, white or black, it is the same Lord, the same God, one and the self-same Spirit who produces the fruit. In Romans 8: 9 the Bible says-"Now if any man have not the Spirit of Christ, he is none of His." Without the Spirit we are not in Christ. We are in Christ when we belong to Him and have given ourselves to His obedience.

No matter what his race or sex, every Christian has a spiritual affinity or attraction to other Christians. We love those who love Him best. The world does not understand this kind of love and even misinterprets it. The love of Christ in us has nothing whatsoever to do with physical attraction or repulsion. The phrase spiritual affinity or likeness means the drawing together of persons on the ground of their common spiritual devotion and mutual allegiance to Jesus Christ on a spiritual connotation only.

Yet our spiritual affinity or likeness or attraction does not call for enforced physical proximity, and it is in no way dependent upon it. I say that enforced physical proximity or closeness of the race does promote interbreeding (amalgamation). It is one of my deepest convictions that it is not God's will to mix the races. (Acts' 17: 26—"And He hath made every nation of men to live on the face of the earth, having determined allotted periods and the boundaries of their habitation.")

There are different standards of social behavior generally in the white and Negro races. In North Carolina the rate of illegitimate births is 20 times higher for the Negro than for the white. In Michigan 1.5 percent of the white births are illegitimate while 13 percent of the Negro births are in this category. In 1957 in the State of Alabama 9,207 illegitimate births were recorded, with 8,460 of these being colored and 747 white. In that year 1.4 percent of the total white births were illegitimate, while 26.6 percent of the total colored births were illegitimate.

The 1950 census shows that one-tenth of our population in the United States is Negro. It is on record that this 10 percent Negro population committed more than one-half the total number of murders and manslaughter in the year 1950. In the so-called integrated States, the Negro crime rate is twice that of the Southern States. In one northern city four out of five Negro boys get into some scrape with the law by the age of 18.

The white and Negro races differ in their talents and abilities which are strictly hereditary. In Wilmington, N.C., since the Civil, War Negro citizens have had educational advantages superior to more than 90

percent of the white children of the State. In tests made in 1955 by New Hanover County it was found that 20 percent of the whites in the area tested had IQ's 110 and up; only 1.6 percent of the Negroes were in this high group. Twenty-three percent of the white children tested were in the classification below average; 72 percent of the Negroes were in the below average classifications. In 50 large northern high schools with 30 percent Negro enrollment only a fraction of 1 percent of the Negro enrollment became eligible for college. I do not believe that God intended for us to lower one race to behefit another.

But one of the most important reasons for my stand against social mixing in the schools is the breakdown of racial integrity. This will be done in any degree of the mixing of the faces. About the time that Christopher Columbus was born, Portugal began importing Negro slaves in large numbers from Africa. It is not a known fact how racial integrity was breached, but it is known that the Portuguese interbred generally with the Negroes. During the centuries since Columbus the Negroes have been completely absorbed into the general population of Portugal. Negroid characteristics are widespread among the Portuguese people. Brazil was colonized by the Portuguese. There they interbred with the native Indians and also with the Negroes which they continued to import as slaves from Africa. In spite of its age, since colonization, in spite of its enormous size, and its tremendous natural resources, Brazil is still a backward country, calling upon the United States for aid in many directions. Greater social intimacy resulting from the integration of the young people of our Nation in the schools will promote interbreeding. Furthermore, it has and will continue to create jealousy, envy, coveteousness, and malice, to say nothing of sheer hyprocrisy. While attending the Southern Baptist Convention in Chicago some years ago, I, along with several other Baptist ministers, saw some 75 young people, white and Negro, walk out of a restaurant, arm in arm, white girls with Negro boys and white boys with Negro girls. This is the fruit of integration.

There is a distinct and undeniable difference between racial prejudice and racial awareness. God himself has made us aware of our differences as races and these differences cannot be erased by wishful thinking. There is a sense, namely, that we are all meant to be treated equally before the bar of justice. In many other ways we are unequal. We are unequal to each other economically, intellectually, and by heredity, and yet there are some who will not be satisfled until they have leveled down all society (theoretically and actually) to one common denominator, destroying all incentive to thrift and diligence, taking away all initia-tive and bankrupting our country economically and spiritually. The decision of the Supreme Court of the United States to mix our white and negro pupils was prompted by sociological, psychological, and economical Unadulterated socialism is behind this social leveling. If we do not have the courage or the energy to stop it, we shall lose our freedoms that still prevail.

It is of the utmost urgency that we use our heads as well as our hearts in dealing with a matter so vital as that of integration, especially in our public schools. May God give us light and wisdom to see that we can be one in the spirit of our Lord Jesus Christ, that we can be one without promoting that social intimacy and the breakdown of racial integrity, which will have as its result the interbreeding (amalgamation) and the destruction of the pure strain of each race.

My convictions are based upon racial awareness. I have discussed with our deacons the pastor's position in this matter of integration. They concur with this position.

I do not believe that my stand takes away anything from my missionary heart. We have spiritual affinity with others, but this does not follow by saying that we must have physical proximity. It is my conviction that the races whom God segregated, giving likenesses and unlikenesses, are not intended to be amaignmated.

In an hour when everything has been said (on the other side of the fence, when segregationists are classified as Un-Christian (which is not true, for God gave the races distinct unlikenesses) I cannot but speak out for that which I feel is right morally and spiritually. My stand is out of a heart of love, not of malice. The Christian must love the souls of the world. We do not agree with the men around the world in the realms of socialism and communism, but we can love their souls and pray that God will redeem them by the blood of His precious Son who died on Calvary for the sins of the world.

A lesson which my father taught me when I was a little boy has never left me. The lesson was that my rights ended when they infringed upon another's. The same lesson can be reversed. Another's rights end when they infringe upon mine. Therefore, I believe that the world must reconsider the declaion to plunge into wholesale amalgamation of the races before it is too late. I shall stand upon these truths as long as I have the strength to do so.

## Mrs. Agnes Lenahan Brown of Wilkes-Barre

EXTENSION OF REMARKS

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Wilkes-Barre Times Leader of June 9, 1959, which comments upon the passing of a member of a distinguished and respected Wilkes-Barre family, Mrs. Agnes Lenahan Brown, whose son, a prominent member of the legal profession in Luzerne County, is my law partner:

AGNES LENAHAN BROWN

Although she herself essayed the role of wife and mother by choice, Mrs. Agnes Lenahan Brown, widow of Attorney Frank Brown, city alderman, occupied a position that was unique in the community by virtue of family ties.

Not only was her late husband numbered among the town's best known citizens, but her own household was unusual. She was one of 13 children of the late Patrick and Elizabeth Duffy Lenahan, identified with the law with one exception—the late Dr. Frank Lenahan, a founder of Mercy Hospital.

Attorney John T. Lenahan, a Member of Congress, Attorney James L. Lenahan, a former district attorney and Democratic county chairman, and Attorney Charles Lenahan, a presidential elector, were brothers. But the amazing thing was that all of her sisters married lawyers.

Carrying on the family tradition is a son, Attorney James Lenahan Brown, prominent member of the bar and a Democratic leader.

Few families have had a greater impact on greater Wilkes-Barre than the Lenahans and the Browns. In fact, their influence has been felt far beyond the borders of Pennsylvania. Mrs. Brown, in her own modest way, enhanced their reputation as a good neighbor, respected citizen and teacher.

## The New Benefits of the Railroad Retirement Act, Public Law 86-28

EXTENSION OF REMARKS

## HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. ZELENKO. Mr. Speaker, under leave to extend my remarks and with the unanimous consent of the House, I take this opportunity of expressing satisfaction upon the enactment of Public Law 86–28, known as the Railroad Retirement Act.

This vital legislation was necessary to overcome the economic inequities here-tofore existing for thousands of our American citizens who have given many years of their working lives to the rail-road industry.

The various railroad unions are at present in the process of informing their members of the benefits accruing to the act.

In response to a great number of inquiries which have been directed to many of my colleagues and myself from railroaders, I take this opportunity of presenting in simple form an explanation of the principle new amendments dealing with the benefit features of the law.

#### I. NEW RETIREMENT PROVISIONS

A. All retirement and survivor annuities and pensions are increased by 10 percent effective June 1, 1959. The July 1 payment will reflect this increase. There is no need to apply for the increase; it will be granted automatically by the Railroad Retirement Board. The maximum old-age annuity now is \$204 a month for a retired employee and \$65 for his eligible wife.

B. Beginning June 1, 1959, railroad earnings up to a maximum of \$400 a month will be counted in figuring the amount of any retirement or survivor benefits based on the employee's service. Also, the employee and the employer will pay retirement taxes on the employee's earnings up to a maximum of \$400 a month. Under the old law the monthly limit on creditable and taxable earnings was \$350.

C. Beginning June 1, 1959, the employee and employer retirement tax rate was increased from 6½ percent to 6¾ percent each on earnings up to \$400 a month. In 1962 this rate will rise again to 7½ percent.

D. Women employees with less than 30 years of service, and wives of retired employees, may elect to receive a reduced annuity at age 62. The annuity will be reduced by ½80 for each month they are under age 65. Under the old law they had to wait until age 65 to qualify.

E. An employee under age 65 who is retired on disability may earn up to \$1,200 a year without losing his retirement benefit. If he exceeds \$1,200 a year he loses 1 month's annuity for each \$100 earned over \$1,200. Under the old law the disability annuitant lost 1 month's annuity for any month in which his earnings exceeded \$100.

F. For veterans drawing non-service-connected disability pensions from the Veterans' Administration, the railroad retirement benefits will no longer be counted as earnings under the income limitations of the Veterans' Administration which are \$1,400 a year if the veteran has no dependents and \$2,700 a year if he has one or more dependents.

Under the old law a veteran was permitted to waive all or a portion of his railroad retirement benefits in order to come within the income limitations.

II. NEW UNEMPLOYMENT INSURANCE PROVISIONS

A. Benefits payable to unemployed or sick railroad workers will be, on the average 20 percent higher than under the old law. The new daily benefit rates range from \$4.50 to \$10.20 a day, depending upon the employee's annual compensation in the preceding calendar year. These new benefit rates are retroactive to July 1, 1958.

B. Extended unemployment benefit periods beyond the maximum of 130 compensable days provided under the old law will be provided as follows:

First. Those with less than 10 years of railroad service who have exhausted their unemployment benefit rights after June 30, 1957, and before April 1, 1959, can receive benefits for an additional 65 days in the period June 19, 1958 through June 30, 1959. This extension is the same as the Congress provided for all other unemployment insurance systems covered under State laws.

Second. Those who have 10 but less than 15 years of railroad service and have exhausted their rights to normal unemployment benefits can draw benefits for as many as 65 additional days in the 3 months following the exhaustion of their benefit rights.

Third. Those who have 15 or more years of railroad service and have exhausted their rights to normal unemployment benefits can draw benefits for as much as 130 additional days in the 6 months following the exhaustion of their benefit rights.

Fourth. Those who have 10 or more years of railroad service and are not currently qualified for unemployment benefits, but will be qualified employees in the next benefit year, can start the next benefit year early, at the beginning of the month in which they were unemployed 14 or more consecutive days.

C. Sundays and holidays could be compensable days of unemployment, just as any other day, whether or not such Sundays and holidays are preceded and succeeded by a day of unemployment. Under the old law Sundays and holidays could not be counted unless they were preceded and succeeded by a day of unemployment.

D. Unemployment benefits are now payable for all days in excess of 4 in the

first registration period—consisting of 14 days—in a new benefit year. The old law provided for payments for all days in excess of 7 in the first registration period in a new benefit year.

E. Beginning July 1, 1959, those who become unemployed or sick will need wages of \$500 or more—instead of \$400 under the old law—in the preceding calendar year in order to qualify for bene-

F. Beginning June 1, 1959, earnings up to \$400 a month will count toward the base year earnings of an employee and the payroll tax—paid by the employer only—will be paid on earnings up to that amount.

G. Beginning June 1, 1959, the payroll tax on railroad employers was increased from 3 percent to 3¾ percent, the new maximum rate provided by the new law.

The increase in the retirement tax rates and the taxable base are now considered to be adequate to pay for the 10-percent increase in benefits and also to eliminate the deficit in the railroad retirement account which amounted to over \$200 million annually. There is assurance that the railroad retirement system is now actuarially sound.

It is my sincere hope and prayer that the benefits of Public Law 86-28 will afford adequate security for the railroaders and their families for some time to come.

## Westinghouse To Build Defensive System for Air Force B-70 in Baltimore

EXTENSION OF REMARKS

#### HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. FRIEDEL. Mr. Speaker, I am pleased to report that the air arm division of the Westinghouse Electric Corp. will develop and build a defensive system for the Air Force B-70 Valkyrie that will act as an electronic shield to protect the intercontinental bomber from enemy attack.

This matter is not only of great importance to our national security, but is of special significance to the people of greater Baltimore, because this multimillion-dollar contract will be performed by the Westinghouse plant located near Baltimore's Friendship International Airport. Employment will be increased and the whole economic climate improved.

Westinghouse was selected to develop the defensive system after an exhaustive evaluation covering almost 200 technical criteria. This great corporation is an example of genuine accomplishment in industry's role of so complex a struggle for better and better means of national protection and the maintenance of the integrity of the free world.

As one of the Representatives in the Congress of the United States from the State of Maryland, I take justifiable pride that the environs of our city will be the

scene for such an outstanding contribution in the interest of national defense and security.

The release announcing the award of the contract follows:

Los Angeles.—The air arm division of the Westinghouse Electric Corp., Baltimore, Md., will develop and build a defensive system for the Air Force B-70 Valkyrie that will act as an electronic shield to protect the intercontinental bomber from enemy attack.

Award of the multimillion dollar contract was announced by Raymond H. Rice, vice president and general manager of the Los Angeles division of North American Aviation, Inc., B-70 weapon system contractor.

"The defensive system will make use of electromagnetic and other techniques to make it difficult if not impossible for enemy aircraft or missiles to successfully attack the B-70." Rice said. "This system with its advanced technical developments will greatly increase the manned air vehicle's capability of self defense."

He pointed out that the new intercontinental bomber with its 2,000 mile-per-hour cruising speed can fly faster than a high-velocity rifle bullet. "The defensive system provides the Strategic Air Command bomber crew with a bag of tricks to further confuse the enemy," the aircraft executive stated.

The electronic equipment is packaged in drawer-like containers which plug into racks inside the B-70. This permits in-flight maintenance by crewmen while en route to a target.

Westinghouse was selected to develop the defensive system after an exhaustive evaluation covering almost 200 technical criteria.

Dr. Patrick Conley, manager of the air arm division, said, "The mission requirements of the B-70 call for electronic equipment of highly advanced design—unlike any in use today—to provide counter-measures against enemy missiles needed to assure the safe return of this manned bomber. We consider this to be one of the most important programs in the military history of the United States."

North American estimated that more than 20,000 companies throughout the United States, including thousands of small firms, will be working on the B-70. Last year the west coast aviation firm dealt directly with more than 8,500 small businesses.

"The number and scope of technical problems involved in the defensive system dictated its development by a company such as Westinghouse," Rice said. "However, Westinghouse has indicated it will in turn establish a substantial small business subcontracting program."

Westinghouse experience in radar systems and associated equipment dates back to before World War II. The company pioneered in this work in the United States as early as 1938 and has been conducting a continuing development program on radar and other detection systems ever since.

## John Foster Dulles

EXTENSION OF REMARKS

## HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. FORD. Mr. Speaker, the illness, resignation, and death of John Foster Dulles have resulted in a grave loss to our country and to the free world.

Secretary Dulles carved for himself a secure niche in U.S. history as an outstanding protagonist in the cold war against the atheistic Communist conspirators of the Kremlin. He proved over and over again his competence, integrity, patriotism, and his superb sense of duty. His service will be missed, but the policies which he formulated and spirit which he exemplified will go on.

Editors in my congressional district in Michigan shared this sense of loss and commented upon it more than once in recent weeks. Under leave to extend my remarks, I would like to include three editorials from the Grand Rapids Press: "The Prospect Before Us," February 16, 1959; "With Deepest Regrets," April 16, 1959; "Mission Accomplished," May 26, 1959:

[From the Grand Rapids Press, Feb. 16, 1959]

#### THE PROSPECT BEFORE US

There can be no mistaking the meaning of President Eisenhower's grave word and look after visiting Secretary of State Dulles in Walter Reed Hospital. The President obviously fears that Dulles may not again return to his work. The Secretary soon will be 71. The cancer for which he was operated in 1956 has returned. Physicians say that it cannot be easily cured.

It was only last week, at his news conference, that Mr. Eisenhower said of Dulles: "America needs him." Dulles has been more than the coarchitect of American foreign policy for the last 6 years; he has been the symbol of unyleiding opposition to communism and Soviet aggression.

Other men are available to assume the duties of Secretary of State. The administration is fortunate in having placed in strategically important State Department posts such highly qualified men as C. Douglas Dillon, Christian Herter, Henry Cabot Lodge, and others. All of these are thoroughly versed in diplomacy. All are minutely familiar with present American policy, how it evolved and what its intended objectives are. They know Dulles' thoughts and the reasoning behind them. It is conceivable that any one of them could take over his responsibilities without causing even a slight hitch in the functioning of the State Department.

Yet the loss of John Foster Dulles would be a heavy one. The man as well as his policy has been depended upon to keep the Western defense line intact. Because it is known that Mr. Eisenhower trusts him completely, Dulles' words have carried all the authority of the President himself. No other man, no matter how skilled or trusted, could expect to command the same prestige and confidence until he had had time in which to erect his own foundations.

If Chancellor Adenauer of West Germany fears that the removal of Dulles from public life may jeopardize his own policies, it is not because he fears betrayal or violent changes in American policy; it is because he knows that it will take time in which to get to know a new Secretary of State as he has known Dulles. It will take time for a new Secretary to get to know all of the world's leaders—Macmillan, De Gaulle, Khrushchev, among others—as Dulles has known them.

It still is too early to say whether Dulles will be able to resume his duties, although at best he is not expected back for many weeks. Hope and pray as fervently as we may that his recovery will be swift and complete, we must face the possibility that he will have to be replaced. It is vital to the welfare of the United States and the continuing strength of the Western Alliance

that any successor be a man who will carry forward Dulles' policies without faltering.

[From the Grand Rapids Press, Apr. 16, 1959] WITH DEEPEST REGRETS

President Eisenhower's sorrow over having to accept the resignation of John Foster Dulles as Secretary of State is shared by the Nation. Only a particularly disheartening diagnosis of the malignancy that has attacked him would have persuaded Dulles to leave his post at this crucial point in world affairs. There no longer is any doubt that he is gravely ill and that he is fully aware of the seriousness of his condition.

As Secretary of State, Dulles has had a hand in fashioning more policies and programs of sweeping importance than any other Secretary in this Nation's history. With the exception of Cordell Hull (1933-44) and Hamilton Fish (1869-77), he has served longer as Secretary of State than any other person in more than a hundred years. In all our history only five others, including Hull and Fish, have served as long or longer. Since he was active in State affairs under President Truman, Dulles has wielded an important influence on American foreign policy for much longer than the 6 years he has served as Secretary under Mr. Eisenhower.

The years in which he has served have been the most critical in the Nation's history so far as foreign affairs are concerned. Crisis has piled on crisis as the result of the Communists' efforts to extend control. Many a jesting comment has been made about Dulles' fiying trips to all corners of the world, but no one has minimized the importance or necessity of his travels. One of the most astonishing things about Dulles has been the strength he has been able to summon to carry on his far-flung duties despite bad health and the inevitable toil of

It is not belittling Cordell Hull in any way to say that the burden Dulles has carried for 6 years has been greater than Hull's. Dulles has borne almost the entire responsibility for formulating American foreign policy these last 6 years, whereas much of the policy in Hull's years was of Franklin D. Roosevelt's making. Mr. Eisenhower deferred to Dulles' judgment most of the time for the obvious reason that Dulles had the special knowledge and experience necessary for developing and carrying out a sound foreign policy.

There is no use denying that his loss will be felt, especially since he has been able to speak with a voice of authority at all international gatherings. But Dulles has been a good organizer as well as negotiator. He has surrounded himself with excellent men in the State Department. All of them are capable of carrying on their duties without faitering.

Who Dulles' successor will be is something that Mr. Elsenhower apparently has not yet decided. But the President has Mnted that he is considering several possible candidates and has made it clear that there is no lack of talent available. Whoever the choice may prove to be, it is clear that he will have to be as forceful and as alert to the shifting winds of diplomacy as John Foster Dulles has been, and men with those characteristics never are plentiful.

[From the Grand Rapids Press, May 26, 1959]
Mission Accomplished

John Foster Dulles filled his first diplomatic assignment, for Theodore Roosevelt, when he was 19. Thereafter, until Dwight D. Eisenhower was elected President, he frequently was intrusted with important diplomatic missions. The best known of these, and the most brilliantly successful, was his negotiating of the World War II Japanese peace treaty, a responsibility he undertook at the behest of President Truman.

It was not, however, until President Eisenhower made Mr. Dulles Secretary of State in 1953 that he had full opportunity to demonstrate his remarkable talents in dealing with other nations. More than any other Secretary of State in the last quarter century. Mr. Dulles set policy and pattern. So greatly did Mr. Eisenhower respect Mr. Dulles' ability that he gave him virtually free rein.

Never in the history of the country did a Secretary of State give himself over more completely to his duties than did Mr. Dulles. His many airplane jaunts to every corner of the world often were the subject of jest, but no one really minimized the importance of his diplomatic travels. In the 6 years he was active as Secretary, he traveled almost 600,000 miles. He was known and respected in almost every capital of the world. His presence on the scene usually indicated that trouble was brewing. But invariably he could enter in his journal on his return home, "Mission accomplished."

History's great call on Mr. Dulles was to expose the true character of communism and to rally the free forces of the world to defend against it. He knew that the stakes in this struggle were nothing less than control of the entire world. He realized fully that, as in the hottest kipd of war, risks had to be taken in the cold war. He took them—and history records that he was right in taking them, for Communist aggression was halted.

He was a man who believed in taking a calculated risk. But the emphasis was on the "calculated" rather than on the "risk." Mr. Dulles never was one to improvise a policy on the spur of the moment. He calculated shrewdly on the basis of known Communist behavior and objectives. He weighed everything carefully and then set his course. Words might seem carelessly to spill from him, but always behind the words were days and perhaps years of study and contemplation.

As diplomats go, Mr. Dulles was a relatively uncomplicated man. He lived by the old-fashioned virtues—honesty and frankness. He said what he meant, and he always meant what he said.

Above all else, he was a man of courage. That quality was evident in his public role as in the last weeks of his life, when he lay dying of cancer. His devotion to his country did not wane despite his fateful illness.

The final measure of John Foster Dulles will not be written for many years, possibly not for decades. For the struggle to prevent the spread of communism goes on and no man will predict that the end is in sight. But whatever may be history's ultimate verdict, Mr. Dulles will stand as the man who, from 1953 to 1959, gave all of his great energy, talent and wisdom to protecting the free peoples of the world. Those people, here and abroad, must forever be in his debt.

## Physicians Warn Arlington Students of Cancer Menace in Smoking

EXTENSION OF REMARKS

## HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. KING of Utah. Mr. Speaker, the students of Wakefield High School, in Arlington, Va., have been clearly warned by two physicians that they run the risk of contracting lung cancer when they acquire the habit of cigarette smoking.

These physicians, Dr. John Nolan, thoracic surgeon, and Dr. William Dolan, pathologist, set an example which I hope other physicians through the Nation will follow. I comment Dr. Nolan and Dr. Dolan for their effort.

The terrible lung-cancer menace which the smoking habit has cast over the American people could be appreciably reduced, I believe, if doctors in every community would do as the two Arlington doctors have done, and offer some of their valuable time to the public schools to lecture the pupils about this menace.

I commend to the attention of the Congress and the American medical profession the article from the Arlington School News which reports the physicians' visits to Wakefield High School, and I stress the words of Dr. Dolan, who, in discussing the evidence which cancer research has produced, said:

In the light of this recent knowledge, it is foolhardy for young people to acquire the habit of smoking.

The article follows:

ARLINGTON DOCTORS TELL STUDENTS THAT CIGARETTES ARE DANGEROUS

Two physicians warned Ariington high school students of the health hazards of cigarette smoking in a series of lectures given in recent weeks at Wakefield High School.

Dr. John Nolan, thoracic surgeon, spoke to a group of students on "Lung Diseases

Which Might Lead to Surgery."

"Before you take on the habit of cigarette smoking, I believe you ought to stop and consider the probable effect," Dr. Nolan told his young audience. "The tissues of the lung are delicate and I believe they can be harmed by the hydrocarbons in cigarette smoke. I have operated on many people with cancer of the lungs. In my opinion, cigarette smoking is a probable causative factor in this serious disease."

Dr. William Dolan, pathologist at Arlington Hospital, told the Wakefield boys and girls in a lecture on "Basic Concepts of

Cancer":

"Medical evidence points to a definite relationship between cigarette smoking and cancer of the lungs. In the light of this recent knowledge, it is foolhardy for young people to acquire the habit of smoking."

Dr. Nolan and Dr. Dolan were among five Arlington doctors who spoke to the Wakefield students in the lecture series. The talks were arranged by Miss Anne E. Nolte, head of the girls' physical education and health department at the school, and Dr. Marjorie F. Hughes, director of the Arlington School Health Department. The lectures were given during a study hall, and were open to any students free to attend at that time.

"I believe our students should know about the many changing concepts in health education today," Miss Nolte said in discussing the lectures. "We may arrange a similar series of talks next year."

## The State of the Nation's Economy

EXTENSION OF REMARKS

OF

## HON. JESSICA McC. WEIS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mrs. WEIS. Mr. Speaker, the morning papers are full of the good news that

this country is now on the very threshold of a period of unparalleled economic

prosperity.

Reporting on yesterday's new releases by the Departments of Commerce and Labor, the New York Times this morning indicates that employment is at an alltime record high for May, that unemployment has dropped by over a quarter of a million during the past month, and that the average factory worker's earnings are now the highest in the Nation's history. Certainly it is wonderful to learn that our country is prospering to such a degree, and that our dynamic economy is once again operating at full speed. It is even more encouraging to me to note that the average working man and woman is sharing so fully in this prosperity. I trust, Mr. Speaker, that those who campaigned so vigorously last fall on a platform of gloom-who attempted to frighten the American people with their ominous predictions of economic chaos unless their grandiose schemes for massive Federal spending were adopted—are now reappraising their economic thinking. For this spectacular upturn in the Nation's economy is, in my opinion, a direct result of President Eisenhower's courageous stand against these irresponsible spending programs. Our free enterprise system is once again vindicating itself, and in the process it is reducing to a whisper the voices of those advocates of large-scale Federal intervention in the economy who only a few months ago were so loudly shouting the praises of the "big spending" philosophy.

I should like to insert in the RECORD at this point a portion of the article from the June 11 issue of the New York Times to which I referred earlier in my re-

marks.

SIXTY-SIX MILLION AND SIXTEEN THOUSAND ON JOB, RECORD FOR MAY—IDLE ROLLS DROP—UNITED STATES NOTES RISE OF 1 MIL-LION IN EMPLOYMENT—FACTORY WAGES AVERAGE 890.32

Washington, June 10.—A rise of 1 million jobs increased employment to a record of 66,016,000 for May, the Government reported today.

today.
The record for any month was 67,221,000 in July 1957. The previous May record was 65,-178,000 in 1957.

The increase from mid-April to mid-May, in terms of total figures, was little more than expected for seasonal reasons, but significantly the main thrust came in the nonfarm sector, particularly in the manufacturing of hard goods.

Unemployment, which normally does not change much at this time of year, dropped by

238,000 to 3,389,000.

The rise in jobs and the drop in unemployment are seldom of the same magnitude. In this case is it apparent that many persons who found jobs had previously been outside the labor force; that is, they had not been counted before either as unemployed or employed.

A REAL, SHARP DROP

There were other significant findings in the reports of the Departments of Commerce and Labor:

The unemployment rate, at 4.9 percent, dropped below 5 percent for the first time since November 1957. The rate at that time also was 4.9 percent. These are seasonally adjusted rates.

The number of long-term unemployed (15 weeks or more) fell by 280,000—a "real sharp drop," as it was characterized by Seymour L. Wolfbein, Deputy Assistant Secretary of Labor.

Unemployment was lower than it was in May of the two previous postwar recessions (3,700,000 in 1954 and 3,600,000 in 1949). Factory employment usually drops in May,

Factory employment usually drops in May, but this year there was an increase of 100,000 jobs, to 16,100,000.

The average factory worker's earnings passed \$90 a week for the first time. The figure was \$90.32. In durable goods the average was \$98.23.

The factory workweek continued upward, rising 0.2 hour to 40.5 hours per week.

Factory employment, after discounting seasonal influences, increased by 146,000.

The drop in unemployed to 3,389,000 recalled the statement by James P. Mitchell, Secretary of Labor, on April 8. Mr. Mitchell told a conference of the unemployed that he would eat his hat if unemployment was not down to 3 million or less next October.

## Resolution of Hat Workers Union, Local No. 60

EXTENSION OF REMARKS

#### HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. TOLL. Mr. Speaker, Local No. 60, of the United Hatters, Cap, and Millinery Workers International Union, has many members living in my congressional district in Philadelphia. This organization recently adopted a resolution urging Congress to act favorably on S. 1046 and H.R. 4488, the Fair Labor Standards Amendments of 1959. I commend the resolution, which is set forth below, to the attention of my colleagues: RESOLUTION CALLING UPON THE 86TH CON-

desolution Calling Upon the 86th Con gress To Enact S, 1046 and H.R. 4488

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

Whereas the present Federal minimum wage of \$1 an hour is inadequate to provide a bare subsistence in the United States to-day; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal minitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator John F. Kennedy and Representative James Roosevelt and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to \$1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore be it

Resolved by United Hatters Cap and Millinery Workers International Union Local No. 60, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

Yours truly,

HARRY PLATT, President, Local No. 60.

#### Change and Obsolescence

EXTENSION OF REMARKS

#### HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. HARRIS. Mr. Speaker, I had the privilege of attending the graduating exercises at the University of Arkansas on the occasion of the 85th spring commencement on May 30, this year. It was another most impressive and inspiring occasion. With the more than 700 graduates was our own daughter, Carolyn Marie Harris, who graduated with honors.

On this occasion the president of the University of Arkansas, Dr. John T. Caldwell, gave a most appropriate and challenging address on the subject "Change and Obsolescence." In that it is so appropriate to the problems of today and a challenge to the future, I include it in the Record:

#### CHANGE AND OBSOLESCENCE

My subject today is "Change and Obsolescence." I shall deal with it at such length as will satisfy the program designation of an "address" and yet at least enable you to observe approvingly at the end of these exercises that "the president didn't talk very long, did he."

I must bore you with a truism to say that change produces obsolescence and that the more rapid and widespread change is, the more extensive is obsolescence. And then I must make the very stale observation that observable change in the present world seems to take place at an accelerating rate and that right now appears to be the period of very rapid change. One would have to conclude that there is a great deal of obsolescence in this world. Indeed, there is.

Change and obsolescence occur in the realm of things, in the realm of social arrangements, and in the realm of ideas. They are most observable in things and in social arrangements.

Obsolescence in things results from technical advances, from changes in style, and from aging. People buy the better mouse-trap if one exists, and they know about it and can afford it and need one. Technical obsolescence results, therefore, from invention, competition, and human desire. Sometimes it is even planned.

Obsolescence of style results, I suppose, from human desire for variety, for something new, and from human individuality. I have a very elderly cousin in Richmond, Va. I shall never forget her saying to me: "I'd rather be dead than out of style."

Technical and style obsolescence are simple enough to illustrate. When tractors and other machinery replaced mules for logging. roadbuilding, and farming, it put my father and many others out of the mule business. The Paris stylists play seasonal havoc with milady's wardrobe

milady's wardrobe.

One unplanned but predictable kind of obsolescence in things occurs purely and simply on account of aging. A house or a hoe or a calculating machine can wear out, and thus become useless.

Forgive me for these banalities. They merely lead me on to a consideration of another kind of obsolescence, a kind which is vastly more disadvantageous to mankind and vastly more difficult to overcome: that is, obsolescence in social arrangements and processes. The sociologists call it cultural lag.

In the realm of government men had sooner or later to throw off the tyrannies of absolute rulers, replacing them with various forms of limited authorities. Inefficient forms of city government yielded, as recently in Little Rock, to the more efficient form of city management. Wherever the New England town meeting became no longer practicable, forms that were workable replaced it.

In the economic area one system has yielded to another down through the ages. And where the economic arrangements plus the political arrangements yielded too slowly to needed change, the obsolescence produced violent change, as in the French Revolution, or the Russian revolution, or the Chinese revolution. Where the ancient arrangements known as feudalism still persist, as they do in much of the Middle Eastern area, violent change or continuing instability threaten the welfare of the people. One great virtue of our own American political and economic system is its inherent capacity for continuous adaptation to new facts, new circumstances, and new requirements.

The processes of imperialism and colonialism should be mentioned. Colonial arrangements must not overstay their constructive usefulness, and if they do, destructive thinking and destructive solutions take over. Examples today are numerous of where the planning and timing were excellent, as U.S. relinquishment of the Philippines, and where it was not good—as in Indonesia. An obsolete colonial arrangement is anywhere a sad circumstance today.

Now the really important thing about all

Now the really important thing about all this business of change and obsolescence is that ideas are at the root of it, whether the ideas are technical as for producing a better mousetrap or a more powerful weapon, or social as for distributing food more efficiently or for solving racial conflicts, or what. Ideas are basic. So we need to ask: what about obsolescence of ideas?

This brings me to the main point and thesis of these remarks: the most dangerous kind of obsolescence in the world today is that of ideas. Men may require food, clothing, shelter and bodily care in order to stay alive. Men also live by ideas. Some of the ideas men live by are merely illusions. In many cases, these illusions are derived from obsolescence of what was once true or somehow thought to be true.

To the extent that a person makes up his mind on the basis of rational processes, he does so in terms of what he thinks is true, not necessarily on the basis of what actually is true. It is what I think is true that determines my conclusions. Leaving out the element of what is called purely emotional thinking, if such exists, when people act in terms of what they think is true, it becomes important indeed for them to know correct facts and therefore to have the opportunity to find them out.

Despite all the facts which might be marshalled to the contrary, many of our fellow countrymen still cling to what D. W. Brogan has called the illusion of American omnipotence. Closely allied to this is the illusion

of American self-sufficiency. Derived from these illusions are many errors in dealing with allies, with competing systems, even with ourselves.

We do ourselves a grave disservice when we think our allies are unimportant, when we think that making friends of the people of India and Egypt is unimportant, when we think that helping the people of Africa is unimportant, or think that the darker skinned people of Asia and Africa are inherently inferior in capacities and aspirations, or think that mediocre schools which keep their doors open for 9 months are good enough.

Some of these ideas never had any validity to begin with and in the world today they are not only hopelessly obsolete, but extremely dangerous.

Why do men cling to obsolete ideas? For many reasons. We are lazy. We all like the easy way out. We all look at the past with some rosy tints in the glass. We all like to feel comfortable and secure about ourselves and our country. Some of us exploit obsolete ideas for selfish ends. We all are quite capable of kidding ourselves in order to put our minds at ease; it often is less expensive that way. And when our comfortable illusions are disputed, we are often like the man of whom Thurman Arnold wrote: "There is no rage to compare with the rage of a righteous man who meets an idea in the market place he thinks belongs in the pulpit." We do not want the market place disturbed.

But there are other understandable reasons for the obsolescence of ideas which dogs the human society. It is a simple matter to demonstrate the superiority of a steel-pointed plow over a wooden plow. It should not be difficult to demonstrate the visible, discernible, evident advantages of a modern hard top automobile over a Stanley steamer. (I am told, however, that on a lovely spring night a horse and buggy had certain advantages over any make or vintage of automobile.) Furthermore, someone is always trying to sell us a better thing, and we present no conscious suspicion of their right to sell it or of their patriotism for trying to sell it. We do not feel offended nor do our passions get into the picture. In other words, we are usually quite objective about the obsolescence factor in the case of things.

Not so in the realm of social and political

Not so in the realm of social and political affairs. For the evidence of obsolescence is obscure; the possibility of failure of a new idea is unavoidably present; our own cherished assumptions are too difficult to relinquish; the present arrangements may have been quite good to us; and advocacy of the unfamiliar is a poor substitute for evidence of the familiar. Even in the field of education we indulge in endless discussions and polemics largely because proof of obsolescence is so hard to come by and change is more difficult than not changing. How do we know what is the best thing to do in countless problems?

You who are being graduated this evening may have been taught some already obsolete facts and ideas here. The chances are better, I hope, that you have been exposed to the leading edge of thinking in your many fields of study. What you must not do now is to allow the facts you have learned to make of your mind a warehouse of obsolescence. Will you now let the ideas you have absorbed here go unchallenged from this day forward? What seems true today by the best of evidence adduced to prove it may become false knowledge and obsolete as knowledge is expanded. Not all—but some. Ideas you possess from your living and learning up to this point will every one be subjected to critical examination sooner or later by someone somewhere.

Time at least will judge what you think you know. Wrote Lowell: "Time makes ancient creeds uncouth."

As a partially educated man or woman, aided by your learning in this wonderful University of Arkansas, you must now fulfill a duty to yourself and others by keeping your own thinking critical and unfettred, and by making certain that at all times and all places where your influence can count that the right to know and learn and criticize is held as the most precious of human rights.

A true university is dedicated to conserving this right, the right to know and to all that knowing requires. Thus the university will be in fact conservative on behalf of the greatest principle. It is also conservative in passing on to each generation the heritage of the past, thus again conserving

Yet even while performing this great conservative role, the universities will as a normal function of their existence continue to serve the most radical of all ends: the discovery, formulation, and sepaking of whatever lays claim to being true. They will do this understanding that tomorrow its specifics may be marked and shelved as obsolete.

At this special moment in your lives your alma mater, on behalf of itself and its own self-esteem, can perhaps indulge in the deep hope that you are not only contemporary in the special knowledge you have acquired here, but that you will also carry away something of the spirit of thinking and searching which is a special duty of the educated.

You can defend yourself and your country against obsolescence of ideas. This defense must be made in your own consciousness. It requires the energetic and honest effort of your mind to advance its frontiers continually.

So instead of the usual wish of "good luck to you all" let me say this time, "Good thinking to you all, from this day forward." The world needs it.

Thank you for listening.

#### Closing of Fort Polk

EXTENSION OF REMARKS

## HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, our people of Louisiana continue to be disturbed over the closing of Fort Polk, located in Sabine and Vernon Parishes. I wish to call attention to the State of Louisiana Senate Concurrent Resolution 1 which sets forth the injustice and economic catastrophe which will result if the Department of the Army fails to act to reinstate Fort Polk:

#### SENATE CONCURRENT RESOLUTION 1

Whereas the Federal Government made a binding agreement with the people of this State and particularly with the people of the manuever area of Louisiana that Fort Polk would be used as a permanent army installation for at least 15 years if the State would obtain approximately 7,000,000 acres of land for manuever purposes by the Army; and

Whereas the people of the manuever area cooperated wholeheartedly in obtaining this acreage and the parishes and municipalities constructed additional schools, recreational facilities, housing and the like and floated large bond issues to carry out these

purposes in order to better serve the increased population resulting therefrom, and local merchants, landlords, and industries made expensive expansions to meet the new needs which involved many millions of dollars, all based on the binding agreement made with the Federal Government; and

Whereas the closing of Fort Polk will result in an economic catastrophe for the area and will break faith with the people thereof and will leave them burdened with excessive taxes and expensive expansions

and development: therefore be it

Resolved by the Senate of the Legislature of Louisiana, the House of Representatives concurring therein, That the Louisiana Legislature hereby protests the closing of Fort Polk and urges the President of the United States and the Secretary of Defense to maintain the vital defense post in compliance with the binding agreement made by the Federal Government; be it further

Resolved, That in the event the Federal Government does not continue Fort Polk in accord with its agreement then the people of the area and the parishes and municipalities should be reimbursed for the heavy expenses entailed by all; be it further

Resolved, That copies of this resolution be sent to the President of the United States, the U.S. Secretary of Defense, and to each member of the Louisiana delegation in the U.S. Congress.

LETHER E. FRAZAR,

LETHER E. FRAZAR, Lieutenant Governor-and President of the Senate.

ROBERT ANGELLE, Speaker of the House of Representatives.

## Another Insult From International Olympic Committee

EXTENSION OF REMARKS

## HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. DORN of New York, Mr. Speaker, I want to congratulate the Washington Daily News for its excellent editorial on the current controversy engendered by the action of the International Olympic Committee in unseating the delegates from the Republic of China and recognizing the delegates from Red China. So that all of my colleagues may be informed, I quote the editorial from the issue of June 10, 1959:

Another Insult From International Olympic Committee

Once more the International Olympic Committee has thumbed its nose at Nationalist China and the majority of free world nations which recognizes it as the legitimate Government of China.

The International Olympic Committee has autocratically decided—with even less reason or logic than before—that Nationalist China can't enter the games under the name of "Republic of China Olympic Committee." Readmission had been sought under that name after the International Olympic Committee on May 28 ousted the Nationalists on the grounds that they did not represent all of China. As the International Olympic Committee sees it, Red China does.

Obviously this expulsion was a discriminatory political decision by the International Olympic Committee, bowing to Russian pressures. And, instead of being "almost unanimous," as Chairman Avery Brundage

was quoted as saying, the vote is open to question. Douglas Roby, one of the U.S. delegates, says it was only by a show of hands and as he saw it, 28 were for Nationalist expulsion and 24 against. This certainly contradicts the Brundage version.

The International Olympic Committee professes to have no objection to athletes from Formosa entering the games but it arbitrarily bans use of the word "China" in its official name. This is not only an insult, but is intrusion in a political question already decided—since 45 free world nations recognize the Nationalists as against only 22 dealing with the Pelping regime.

Our State Department properly takes the stand that the new name proposed by the Nationalists "is entirely appropriate" and it brands the International Olympic Committee's latest decision as "repugnant and ab-

To emphasize our feeling about it—if the International Olympic Committee continues its hard-nosed line—there is one conclusive thing we could do: withdraw from the 1960 games. Improbable and regrettable as that may be, growing American indignation may well warrant such a warning to the International Olympic Committee, and we would not be alone in taking that step.

#### We Need More Modern Aircraft Carriers

EXTENSION OF REMARKS

## HON. PORTER HARDY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. HARDY. Mr. Speaker, the recent action of the House in failing to provide the funds in the fiscal 1960 defense appropriation for an additional modern aircraft carrier causes me both regret and concern. I cannot believe that this matter has received the consideration which it justly deserves.

The weapons with which our Navy would conduct warfare have increased in both complexity and performance in a degree equal to or greater than the weapons of the Navy's sister services. But for some strange reason the funds to continue the modern aircraft carrier program, which is absolutely vital to the full utilization of Naval airpower, have been denied.

As the Army has developed new missiles for battlefield deployment, we have acquired the additional land required to increase the ranges which are required to fire them. As the Air Force has developed bombers of increasing complexity and performance, we have provided the funds to lengthen the runways from 7,000 or 8,000 feet to lengths varying from 10,000 to 14,000 feet.

In each case I have supported those actions because I knew that such support was vital to the full utilization of these improved weapons.

But this same logical support of Naval airpower has been denied, at least temporarily, and it is this situation which causes me so much concern.

In spite of my concern, I believe there is still reason to hope that logic will ultimately prevail. During the recent debate on the defense appropriation, I

recall that a number of able and respected Members on both sides of the aisle rose in support of an additional modern carrier and expressed the hope that the other body would include the necessary-funds during its consideration of the bill. So I believe that the climate for ultimate approval of these additional funds, if added in the other body, is good. Needless to say, I hope the House will have the opportunity to reconsider and reverse its recent decision.

Mr. James Elliott, military writer for the Norfolk Ledger-Star, has recently written a thoughtful and persuasive article in support of additional modern carriers for the Navy. I wish to insert into the Record this article, and I commend it to the thoughtful consideration of my colleagues:

NAVY BACKS PLAN FOR BIG CARRIER (By James Elliott)

Norfolk.—The Navy does not plan to alter its course in its quest of a Forrestal-class carrier.

A top-ranking naval officer in the Pentagon emphasized this point to the Ledger-Star today. His statement followed a setback for the Navy through action of the House Defense Appropriations Subcommittee slashing the requested \$260 million for the carrier and reports that the Navy might fall back toward seeking smaller-carriers because of the cheaper cost. One report indicated that the rebuilt carrier Oriskany was a bold experiment and that the pendulum is swinging back toward a smaller, more maneuverable flattop.

"You can't do it," admonished the Pentagon spokesman. "It is no easier to reduce the size of a carrier now than it is to reduce the length of runways being built for these modern, high performance aircraft."

The size and equipment of an aircraft carrier are dictated by the aircraft it must operate. And the size and angle of landing area and the ship's powerplant dictate the size of the carrier hull. Landing areas for the high performance aircraft must be 700 feet, and the carrier must have catapults. The Navy feels that present operations demand four catapults, such as are on the Forrestal-class carriers. The Midway class has only three catapults.

If nothing but flying safety itself were considered, the Navy could not step back to a smaller carrier. The increased landing area and angled deck have reduced carrier accidents 50 percent. The larger carrier can carry twice as much ammunition, missiles, and special weapons as, say, the Essex class.

Forrestal carriers can operate aircraft in sea conditions which would curtail them on smaller carriers. The Forrestal carriers can operate naval aircraft programed through the 1965 era, while the Essex class cannot safely and effectively operate the aircraft scheduled for fleet introduction in 1962.

For a carrier to be effective, its planes must have performance characteristics equivalent to the planes they might have to combat. The Soviet have given Mig 15 and Mig 17 aircraft to the satellite nations which means that the carriers must have planes capable of flying at high mach numbers.

Top speeds of carrier-based aircraft have jumped from 400 knots in 1950 to approximately 1,500 now. By 1965 or sooner, they will be around 1,800 knots. While landing approach speeds have been increasing from approximately 100 knots in 1950 to 145 knots now, the curve is leveling off through new design concepts so that maximum performance can be improved without seriously increasing the approach speeds.

The Navy—and the Nation—need the carrier. Anyone with any knowledge of the carrier task force must realize that the Navy cannot fulfill its function without it. And if the Navy is to fight the full spectrum of war-from limited to all-out nuclear exchange, over, on, and under the sea-it must have the instruments with which to do it.

It is popular to say "let's build something But the Forrestal-class carrier is cheaper." not a supercarrier. It is rather a modern carrier, necessary for modern aircraft and modern warfare.

## High School Commencement at West, Tex.

EXTENSION OF REMARKS OF

## HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. POAGE. Mr. Speaker, this is the season of the year when high school students are completing their work. It is generally known as commencement season. All over this land high school graduates are receiving their diplomas and are commencing their active contribution to the life of their communi-

On May 28, 1959, the graduates of West High School, at West, Tex., presented a typically American commencement program. This program was, in my opinion, worthy of consideration as being typical of our American way of life. It was, however, more than that. It included a splendid discussion of the subject "What Are America's 10 Greatest Contributions to Civilization?" Pive of the students. Olivia Dvoracek, Linda Moseley, Bernard Lednicky, Ollie Helm, and Nell Ruth Kostohryz, presented papers. I wish it were possible to pre-sent all of these papers to the Congress but obviously there is no opportunity to include all of these documents. I do, however, want to pay tribute to their authors and to the 55 graduates, and to the high school staff headed by Mr. M. F. Kruse, superintendent; Dr. Albert L. Ford, principal of West High School; and Miss Olga Pazdral, assistant principal. The graduates were:

Jeanette Charlene Adamcik, Lillian Annie Bajer, Wesley Eugene Bankston, Doris Ann Bettge, Doris Jean Bohannan, Elmer Alfred Brem, Thomas Charles Brennan, Rose Marie Cepak, Lillie Marie Chudej, Barbara Doris Davidson, Albina Eleanor Dulak, Olivia June Dvoracek, Barbara Ann Gerik, Lawrence Ludvik Gerik, James Alton Grellhesl, Clara Nell Grier, John Larry Hardwick, Ollie Lee Helm, Clarita Catherine Hennig, Barbara Jean Hessel, Betty Anne Hodde, James Raymond Holacka, Jeannette Josephine Hruska, Julius Joseph Hubik, Jerry Wendell Janek, George Charles Jezek, Roman Anton Kapczynski, James Clement Kolacek, Nell Ruth Kostohryz, Dorothy Kotrla Kucera, Bernard Louis Lednicky, Gordon Otto Leuschner, Katheryn Faye Macha, Betty Carol Mashek, Anita Myrl Melasky, Linda Ann Moseley, Marvin Gene Owens, Rex Bennett Padgett, Milton Nelson Peterson, Betty Jean Pinter, Albina M. Picacek, Dwain Roy Pomykal, Gary Eugene Popp, Jimmie Ray Powell, Millie Ann Pustejovsky. Virgil George Schuetz, Connie Mae Sealey, Barbara Jean Silaff, Edward Joe Soukup, Mildred Regina Soukup, Shirley Elaine Sutton, Henry F. Svrcek, Shirley Ann Webb, Charles Raymond Wedeking, Donald Wayne Wedeking.

I congratulate and greet each one of them and each one of the thousands of high school graduates throughout America. On them depends the future of this country.

## The Beginning of the End

EXTENSION OF REMARKS

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following translated copy of an eloquent letter of resignation submitted on June 8 to the President of Nicaragua by Agustin Torres Lazo, First Secretary of the Nicaraguan Embassy here in Washington, D.C. I expect this is the first of a number of such resignations we can expect to hear about and that this is one more indication of the imminent downfall of the dictatorial Somoza regime in Nicaragua:

WASHINGTON, D.C., June 8, 1959. President Luis Somoza DeBayle,

Managua, Nicaragua.

Mr. President: Conscious of my citizen responsibilities and before the transcendental political, civic, and military attitude assumed by the people of Nicaragua in their struggle to restore democratic institutions to their fatherland, I have decided to submit to you my irrevocable resignation from the post of First Secretary of the Nicaraguan Embassy in Washington and to withdraw from the armed forces of the nation, of which I have been a member since my admission to the Nicaraguan Military Academy in 1947.

I owe it to the 2 years of my stay in Washington that my democratic spirit has been fortified. In analyzing the development of everyday life in the great American Nation, observing the always courteous attitude of the distinguished officers of the Department of State, I have not been able to abandon the eternal concepts of freedom proclaimed by Thomas Jefferson which today, more than ever, have a profound universal meaning. Precisely because I believe in them, and in the understanding of the Government and people of the United States. I today begin my life as a political refugee which I am certain will bring me peace and tranquillity.

The destiny of nations is determined and decided by the will of their peoples and when those peoples, tired of oppression and torture, of imprisonment and hunger, head toward the mountain to fulfill the duty the fatherland demands, no Nicaraguan may be aloof removed from its tragedy and fight for freedom. It is for this reason that, inspired in the eloquent call to the national conscience, translated in the noble manifest subscribed by the National Opposition Union (UNO) under the leadership of Dr. Enrique Lacayo Farfan, I have taken this solemn determination.

The unanimous pronouncement of the live forces and representatives of all social tendencies, political and religious segments of the nation, against the Government, is a reality that indisputably characterizes the revolutionary movement as a resistance of authentic national determination toward recovery of their most sacred civic rights. And it is regrettable, Mr. President, that in that struggle in which all Nicaraguans equally participate, you and your brother, Gen. Anastasio Somoza, insist in forcing the armed forces, which you pretend to continue eploiting, to a fraticidal fighting which will only serve to create increased hatred, with no justification whatsoever, and a greater number of deaths, prisoners, and exiles. I hope that my honest rectification will be for many members of the armed forces, of whose good faith I am a witness, an edifying example and that their spirits will be filled with the happiness of arousing a free Nicaragua, a fatherland dignified and enlightened by her sons, where the blood and the spirit of our heroes will be as a hymnal of peace which will recall to us continually that we are all brothers living together under the same sky and led by only one fate.

My decision, dictated solely by my con-

science, I deliver with reverence to history. She, with her supreme sentence, will judge us all, those who carry the banner of freedom and justice, those who sojourn in exile under the protection of the nobility of sister nations, and those who sow through the paths of the fatherland grief and death without reason and without conviction.

And may God protect us all, Mr. President. Respectfully,

AUGUSTIN TORRES LAZO.

## Judge Irwin Davidson's Book "The Jury Is Still Out"

EXTENSION OF REMARKS OF

## HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. ANFUSO. Mr. Speaker, many of us in the House will recall Judge Irwin D. Davidson, of New York, who served with us here in the 84th Congress. He is now a judge of the Court of General Sessions, New York County, where he is serving with great distinction.

Judge Davidson is the author of a book "The Jury Is Still Out," which has recently been published and has aroused a considerable amount of interest. As an eminent jurist, Judge Davidson is well qualified to write this book and I commend it to all my colleagues. Those who are especially interested in problems of juvenile delinquency will find it very profitable reading.

I have known Judge Davidson for many years and am happy to count him among my dearest friends. He is a native of New York and received his bachelor of laws degree at New York University Law School. He began the practice of law in 1929 and during the 1930's served as counsel to the legislative bill drafting commission and the New York State Mortgage Commission. In 1936 he was elected to the New York State Legislature, where he served for a period of 12 years and at one time was acting Democratic leader of the assembly.

In 1948 he resigned from the State legislature to become a justice of the Court of Special Sessions in New York. During the 6 years he was on the bench he made a distinguished name for himself as a great and fairminded jurist. He then resigned voluntarily to run for Congress in the 20th Congressional District of Manhattan and was elected in November 1954. It was during the ensuing 2 years, 1955 and 1956, that many of us here came to know him personally and to work with him. He is a great storyteller and many of us will surely recall his clean, wholesome humor.

Judge Davidson came to Congress shortly after his own family was struck by tragedy. His oldest son, Jonnie, had died after contracting a bone disease as the result of a football injury. Both Judge Davidson and his wife have since then taken an active interest in various charitable and philanthropic causes, particularly those seeking to aid crippled and destitute children. He has always been a wonderful family man, a devoted husband and a good father to his children. In fact, he is truly a man possessed of a warm heart and a keen sense of understanding of human problems. Now he is back on the bench, and these qualities undoubtedly are of great benefit not only to him personally but to all who come in direct contact with him.

As for his book "The Jury Is Still Out," it deals with a trial in a murder case which originally involved a gang of 18 boys, from the ages of 14 to 18 years. It was a famous case which happened some years ago when this gang, known as "Egyptian Dragons," was accused of murdering a polio victim, Michael Farmer, who had been ambushed and killed at Highbridge Park in New York. The cases of 11 boys were disposed of in children's court because of the tender age of the accused. The other seven boys were tried for murder.

In the story as depicted by Judge Davidson we have a situation which shows juvenile delinquency at its worst. Yet, it should be noted that this situation could have happened anywhere else in the United States where children become the unfortunate victims of broken homes, where they are exposed to the influences of a bad environment, extreme poverty, lack of interest on the part of parents or the community, and other factors contributing to delinquency. Perhaps society is more to blame for all this. When youngsters who live in bad neighborhoods and under a poor environment find the need for organizing themselves into gangs for their protection, then we know that society has failed these children to an extent where it shapes their whole life in a manner which causes them to act contrary to the accepted ways of society.

Judge Davidson's book deals with these influences in the home, the neighborhoods, the gangs, and also how certain nationality groups are exploited and drawn into these situations. Evidently this case must have weighed heavily on Judge Davidson's mind as he wrote his book and sought to convey the message to the American people—the message of

saving our youth from the pitfalls of crime and delinquency.

In the 85th Congress I had introduced a bill to establish a Bureau of Crime Prevention in the Department of Justice and to provide for assistance and cooperation with States in strengthening and improving State and local programs for the diminution, control, and treatment of juvenile delinquency. I am now planning to make some revisions and to re-introduce this bill at the earliest opportunity.

In the meantime, I strongly urge all my colleagues to read Judge Davidson's well-written book which is an excellent study of the subject.

## "Clean Mail" Campaign by Congress Moves Forward

EXTENSION OF REMARKS -

## HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. REES of Kansas. Mr. Speaker, the growing problem of obscenity sent through the mails is most timely. At no time in our history has there been more urgent need for strong and informed leadership by the Congress of the United States in our efforts to curtail dissemination of filth and smut that should not even be printed, much less transported through the U.S. mails largely at public expense.

I have devoted a large part of my time and attention to the problem of illegal use of the mails during my entire tenure as either chairman or ranking minority member of the Post Office and Civil Service Committee since it was created in 1947., Based on my personal studies in the 80th Congress, I introduced legislation in the 81st Congress to close gaps in the laws which require the Postmaster General to exclude obscenity and pornography from the mails. As the ranking minority member of the Select Committee on Curernt Pornographic Materials in the 82d Congress, I took a very active part in the development of evidence showing that the selling of vile literature, pictures, and other unat materials is big business. I cosponsored legislation which became law in the 84th Congress, authorizing the Postmaster General to impound incoming mail of persons found to be sending this material through the mails.

The Congress supplemented this impounding authority by enactment of a stronger venue law, Public Law 85-796, authorizing prosecution at point of delivery of obscene matter, as well as at point of mailing. These two statutes represent major legislative steps to strengthen the hands of the Postmaster General and the Department of Justice in their efforts to prevent illegal use of the mails. Yet even these laws have not served fully to protect the public.

Our committee this year obtained approval of House Resolution 78, including authority to conduct further investigations of use of the U.S. mails for the distribution of salacious matter and other illegal articles. We have found that this revolting traffic has grown to unbelievable proportions.

This committee investigation has one purpose and one purpose only. That purpose is to protect the American public. The Postmaster, General testified that the American people are being bilked of nearly a half billion dollars yearly through illegal mail order traffic

in obscenity.

I do not mean to imply that the mails represent the only means for distribution of this vicious material. There are, of course, many other avenues but the postal service is the Government instrumentality involved. For this reason, the Postmaster General, almost since the inception of the postal service, have been charged with the duty of preventing use of the mails for illegal or immoral purposes. There is no provision of law which has been enforced to better purpose for all of our people than this legal duty.

When the Postmaster General finds that the mails are being used illegally, he may order mail addressed to the offender to be returned. This cuts off the fruits of the illegal venture. This system has developed into an exact but equitable science. During the past 50 years, out of the many thousands of unlawful orders issued, only five or six have been found in error.

No matter how carefully the laws are drafted, however, and however firm the legislative purpose, we often find that their administration may be quite another thing. Thus it is that, in our continuing committee studies, we find there is need of still further vigorous attack on the age-old problem of protecting the public against dealers in filth. I believe that two vital points for successful attack have been disclosed by our committee studies this year. The first relates to strengthening of the criminal laws. The second relates to public participation.

It is crystal clear to me that the incidence of criminal offenses in use of the mails for immoral purposes is directly related to the moral climate of the particular segment of the public concerned. For example, we find that the bulk of salacious matter moving through the mails originates in a certain few localized sections of the country. Certainly, it is no coincidence that prosecutions in these same localities have resulted in extraordinary light sentences where a conviction is obtained. condition bids fair to be corrected, to some extent at least, by the venue law I mentioned. Already, in one case, a court sitting in the jurisdiction where certain obscene matter was delivered through the mails has sentenced the offenders to 10 years' imprisonment. This is the kind of penalty that will make purveyors of filth think twice before starting their business. This sentence points up the absurdity of a recent slapon-the-wrist penalty handed down by another court-sitting in a jurisdiction from which a great deal of obscene mail flows-which sentenced the offender to only 6 months' imprisonment for mailing matter described by the Postmaster General as "some of the vilest material ever coming to the attention of postal inspectors."

It seems to me, therefore, that we should strive for reasonable uniformity in severity of sentences for criminal uses of the U.S. mails which are equally serious. Legislation to require heavier minimum penalties will have my sup-

The second and perhaps most necessary point of attack on the dissemination of filth requires the concentrated and coordinated assistance and cooperation of State and local governments and of the public itself. We have received thousands of letters protesting advertised and solicitation for obscene mailings. These protests come from fathers, mothers, ministers, and priests, teachers, civic association, and other public-interest organizations. These individuals and organizations are keenly aware of the seriousness of the problem and, I am sure, stand ready and willing to do all in their power. It may be that what they need most is a central point of guidance and leadership to make their efforts more effective. I believe that this guidance and leadership well could be provided by the Congress of the United States. I can assure you that our committee will explore thoroughly into this possibility. It may be that a voluntary, national campaign for decency is the answer.

Remarks of E. K. Morris, President-elect, Washington Board of Trade, Before the Junior Chamber of Commerce, June 4, 1959

EXTENSION OF REMARKS

## HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. DAVIS of Georgia. Mr. Speaker, Mr. E. K. Morris, president-elect of the Washington Board of Trade, made a rather interesting talk to the Washington Junior Chamber of Commerce on

I think his remarks are worth reading, and under unanimous consent granted by the House, I insert the remarks herewith. Following the remarks I insert also an editorial which appeared in the Washington Evening Star for June 9, entitled "Debunking Home Rule":

REMARKS OF E. K. MORRIS, PRESIDENT ELECT, WASHINGTON BOARD OF TRADE, BEFORE THE JUNIOR CHAMBER OF COMMERCE, JUNE 4, 1959

Mr. President, my associates in the board trade, and members of the junior chamber of commerce, it is always a pleasure for we superannuated citizens and board of trade members to sit down and

break bread with the youthful, energetic Jaycees. I assure you we appreciate this opportunity offered annually to come here and talk a little about the board of trade and the fine relationship which has existed between it and the junior chamber since

I have heard from a number of our directors who, because of previous engagements, find it impossible to be here. Quite a few of them were required to be out of the city on the very urgent, pressing, and de-manding business associated with the District of Columbia bankers convention at the Homestead in Hot Springs, Va. But for all of them and those of us who are here today, let me express our sincere appreciation to you for inviting us and giving us this opportunity to sound off.

Let me also begin by complimenting the junior chamber for the fine things it has done for this community and for the excellent opportunity it affords young men to train themselves for community leadership. Witness the growing number of your graduates who serve as committee chairmen, directors, and officers of the board of

I thought it might be appropriate today to spend a few moments talking about one of the most hotly debated and discussed basic subjects affecting our city-which is the best form of government for this very unusual

To get a true picture of Washington and its problems, it is necessary to turn back the pages of history to the early 1780's and trace the city's development through the Section 8, article I of the Constitution of the United States provides that Congress shall exercise exclusive legislation over such district (not exceeding 10 miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States.

An act of Congress of July 16, 1790, accepted the 10-square miles of land lying on both sides of the Potomac River which the States of Maryland and Virginia had ceded for this purpose in 1788 and 1789 respectively. The act further directed the President to appoint three commissioners to survey, define, limit, and locate the city and, prior to the first Monday in December 1800, provide suitable buildings for the accommodation of Congress and the President, and for public offices of the Government of the United States.

An act of Congress approved April 24, 1800, authorized the President of the United States to direct the removal of various executive departments to the city of Washington from Philadelphia. The first meeting of the Congress in the new capital was held on November 21, 1800, by which time President John Adams had moved to the White House. By June 16, 1801, all personnel and records had been moved to the new seat of government.

The first government of the city of Washington was established after its incorporation by an act of Congress in 1802. The government consisted of a mayor appointed by the President and a 12-member city council elected by the people of the city. The council, by vote of its mem-bers, was divided into an upper house of seven members and a lower house of five. The original board of commissioners was abolished and although we had home rule. the right to vote for national officers ceased in December 1800.

In 1812, Congress amended the charter of Washington by providing for an elected board of aldermen of 8 members and an elected board of common council of 12 members. The mayor was elected by joint vote of the two boards.

Eight years later in 1820, the charter was changed again. This time it provided for the same board of aldermen and board of common council but with a mayor elected by the people for a term of 2 years. This form of city government continued for 50 years. One of its biggest mistakes was to allow that part of the District lying across the river in Virginia to be ceded back to that State on June 9, 1846.

By an act of Congress of February 21, 1871, a territorial form of government was provided for the District, consisting of a governor, a board of public works, a board of health, and a legisaltive assembly consisting of an 11-member council and a 22-member house of delegates. The board of public works consisted of the governor and four persons, one of whom was a civil engineer. The governor, the council members, and the board of public works were appointed by the President. The members of the house of delegates were elected by the people. There was also an elected Delegate to the House of Representatives of the United States with a right to speak but not to vote.

This form of government which we frequently hear advocated again today, lasted only 3 years. On June 20, 1874, it was abolished by an act of Congress which established a temporary form of commissioner government, and appointed a committee of two Senators and two Representatives to draft "a sultable frame of government for the District of Columbia" Following a report by trict of Columbia." Following a report by this committee, the temporary government was abolished by an act of June 11, 1878, which created the present three-commissioner form of government with the Engineer Commissioner to be appointed from the Corps of Engineers of the U.S. Army. Our present government, which has survived for 85 years, can be said to have been arrived at by trial and error method since it evolved after rejection by the Congress of the 1802, 1812, 1820, 1871, and 1874 types of government.

So much for history and so much for experience. There are those who will say that things are different now, that this fabulous electronic and space age has created a whole new set of circumstances which make it impossible to measure the present and the future by the past. So, let's take just a minute and enumerate a few of the unique situations in this Federal city which, I believe, discredit the contention that it should have the same form of government as other cities.

1. It is the first city ever to be conceived, born, and raised as the capital city of a major

2. At the time of its birth, it was divorced from local political pressures by being located on land ceded from the adjoining States.

3. At the time of its birth, it was divorced from national politics by the withdrawal of voting privileges from its residents.

4. The Constitution of the United States

reserves to the Congress the right to legislate for the "City of the Nation." Regardless of the type of government enjoyed by the local people, its governing officials, whether they be commissioners or a governor or a mayor, can only regulate under the overriding legislative control of the Congress.

5. The Federal Government owns 42.8 percent of the taxable land in the District of Columbia.

6. Foreign embassies and tax free organizations (declared tax free by the Congress) occupy another 6.3 percent.

7. Since the District governmental activities occupy 3.8 percent of the taxable land, the total of these exemptions is 52.9 percent.

8. Our major business-the Federal Government-pays no income tax, sales tax, personal property tax, or real estate tax. other cities, big business does pay these taxes.

9. Our parks are administered under the National Park Service.

10. Our Board of Education, appointed by the U.S. District Court for the District of Columbia, is an independent agency reporting to the Commissioners only on budgetary mottere

11. Our judges are appointed by the President and confirmed by the Senate.

12. Our Zoning Commission has two ex officio Federal officers on it-the Director of the National Park Service and the Architect of the Capitol.

13. The National Capital Planning Commission with the Engineer Commissioner as an ex officio member is appointed by the President and reports not to our city fathers

but to the White House

14 Our Public Utilities Commission, ap pointed by the President and confirmed by the Senate, except the Engineer Commissioner who serves ex officio, is an independent agency reporting to the Commissioners only on budgeting matters.

15. The Board of Commissioners is charged with preparing an annual balanced budget. The only taxes which can be raised or lowered by the Commissioners are the real estate and

tangible personal property taxes.

16. The D.C. Budget, after review by the Federal Bureau of the Budget, is presented to the Congress by the President in his annual

budget message.

17 The District of Columbia Government performs all the functions of the city, county, and State. Insofar as the Federal Aid Highway and other Federal aid programs are concerned, it is classified as a State and receives its share of interstate money.

18. Its income is deposited in the U.S. Treasury and can be withdrawn only for payment of budget items approved by the Congress.

19. The Corps of Engineers of the Army is responsible for water supply and purification but the distribution is the responsibility of the District Government:

20. The District of Columbia National Guard reports directly to the President who is the Commander-in-Chief. The Federal Government appoints the commanding general and exercises control over the guard in a manner similar to a State government.

21. The Federal Civil Service Commission rules, regulations, and eligible lists apply

equally to District employees.

22. The District furnishes the Federal Government certain basic municipal services such as fire and police protection, and water, sewer and sanitation services.

These 22 items all add up to a complicated Federal city relationship. It calls for honest, efficient administration, free from unwarranted pressures from special groups seeking special favors.

This thought was best expressed to me not long ago by a distinguished American, who will be nameless, when he buttonholed me and very earnestly poured words sub-stantially like these into my ears: "I have seen government intimately at every level from the town-county-State to the Federal Government. I have served as a mayor, Governor, Member of Congress, and in high positions in the executive branch. I know what I am talking about. No city in the world has a finer government than the District of Columbia. It is the only city where a citizen can get what he is entitled to without first "seeing a man," It is the only city where contractors and suppliers expect to deliver in accordance with the terms of their contract. It is the only city where decisions can be made in the interest of the community rather than in response to the pressures of a few. The people of Washington don't know how fortunate they are. If you don't do anything else while carrying out your civic assignment, work for the retention of the commissioner form of government."

I can assure you that there is nothing wrong with Washington's form of govern-

ment that a more realistic fiscal approach by Congress would not fix. When the vote for local officials was taken away in 1874, Congress recognized that the Federal interest here was so great that the Federal Government should pay 50 percent of the cost, which it did until 1921. Since that time, it has been going down. It reached a low of 8 percent at one time and now is at a level of 10 to 12 percent.

No firmer support for our conclusion that the transfer of revenue and budget funds to the proposed locally elected council will be accompanied by the shrinkage of the present inadequate Federal payment has been made than in the debate on the floor of the House of Representatives when the District of Columbia 1960 budget was being considered Members of the House Appropriations Committee, in response to questions from the floor, made no bones of their belief that if the District got home rule like other cities it would be on the same basis fiscally as other cities

In conclusion, I want to emphasize that there are two fundamental rights denied citizens of the District of Columbia, creating an untenable situation, which should be remedied by whatever action is required under the Constitution of the United States.

1. All citizens in this great country of ours, including those who make their home in the District of Columbia, should have a voice in the selection of the President and Vice President of the United States.

2. The citizens of the District of Columbia by free election should have proper representation in the Congress of the United States which has, and quite properly should have, final legislative authority in the government of the Federal City.

#### DEBUNKING HOME RILE

E. K. Morris, president-elect of the Washington Board of Trade, chose an appropriate audience—the junior chamber of com-merce—for his discussion last week of some of the problems involved in home rule. Much of the tall talk about home rule (if you are for it, you believe in democracy; if you are agin' it, you do not believe in deyou are agin it, you do not believe in de-mocracy) needs periodic debunking, and Mr. Morris did a very good job in explaining to the younger men of the junior chamber some of the realities.

He listed 22 unique situations in the Federal City which discredit the comparisons of home rule in Washington with the selfgovernment practiced in other American cities. The chief flaw in that comparison is that the people who practice self-government in their local affairs also participate fully in their State and national affairs. Here in Washington, founded, laid out, and developed as the seat of government under the exclusive legislative control of Congress, any elected local government would be merely another agency of the dominant Na-tional Government in which Washingto-nians have no representation. Mr. Morris' citation of the number and authority of Federal and semi-Federal agencies in Washington all with their fingers in the pie of local government but responsible only to Congress or the executive branch, emphasizes the futility of seeking self-government through the pretense of home rule.

We agree with Mr. Morris that home rule would conflict with the concept of Washington as the Federal City, and undoubtedly would place a financial burden on the local community which it could not possibly discharge, with injurious results both to the local community and the U.S. Capital. Mr. Morris and the board of trade want a real vote in the Government which, as it should, controls this Federal City not in some phony local government envi-sioned under so-called home rule. For Both Korea and the United States. Resolute Anticommunism Is Not a Policy of Choice, but the Price of Sur-

> EXTENSION OF REMARKS OF

## HON WALTER H. JUDD

OF MINNESCRA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the Rec-ORD. I include the following address given by Dr. You Chan Yang, Korean Ambassador to the United States, before the Lions Club of Washington, June 10: TEXT OF ADDRESS GIVEN BY DR. YOU CHAN

YANG, KOREAN AMBASSADOR TO THE UNITED STATES, BEFORE THE LIONS CLUB AT THE MAYFLOWER HOTEL, WASHINGTON, D.C., June 10, 1959

Mr. Chairman, distinguished guests, this is a time, of course, when your attention to international affairs is being focused by all news media upon the meeting of the foreeign ministers in Geneva. Daily, almost hourly, the news dispatches speculate cause some hopes to rise, plunge prospects, and generate confusion about our chances for peace at Geneva. This is because you all hope for the best; you all speculate that perhaps—this time--just this once-the Communists will yield a little, making an agreement on a reunited Germany possible. This is because basically you are men of great good will, governed by humanitarian motivations and directed by logical minds.

But, frankly speaking, this is only wishful thinking. The Soviet Union will not yield at Geneva. Indeed, while you are in the very process of honest negotiations and hopeful glances toward the future, the Reds will unveil their latest piece of treachery. Perhaps it will be the absorption of all East European satellites, including East Germany. Perhaps it will turn out to be the attempted coup of an oil-rich Middle Eastern nation. Perhaps it will be the renewal aggression in the Far East. Mark this well, gentlemen: The Communists negotiate only to provide a convenient mask for their next international act of aggression and duplicity.

Do I sound dogmatic, pessimistic, and even a little bitter to you? I think that my complete disenchantment with the Geneva talks is understandable. First of all, the very term "Geneva talks," has all the wrong connections for me-and for all of free Asia. Do you recall the last diplomatic negotiations in Geneva, in 1954? The West You went there with high hopes then, too. thought there was a possibility that the Communists would negotiate the Indochina crisis and provide—as the Korean armistice actually had stipulated-a political settlement of the Korean war and unification for my country.

What happened instead? . While the Communist negotiators were tantalizing you at the conference table, they were rebuilding their potential for aggression again in the northern part of Korea and they were sell-ing out the Vietnamese people. You came ing out the Vietnamese people. away from Geneva with my country not only not reunited but with another Asian country divided, ruined, and with its northern portion also traduced by the Communists. Will history be repeated? I pray not, but I personally fear so.

The very least of possible negative results evolving out of the Geneva Conference would be the achievement of the long-range aims of the Communists. Why are they eager to hold international conferences if they have predetermined to end them in failure? Aside from military considerations, one of their goals is to impress their slaves behind the Iron Curtain that the world leaders rec-Ognize the Soviet Union and are willing to negotiate with them. That helps the Com-munists build their own prestige internally. Another basic reason lies in their desire to have constantly a propaganda platform by Which they can impress neutral and waver ing nations outside the Iron Curtain with their growing importance. So the Communists are eager for more and more conferences in order to achieve their ulterior motives and to prepare for renewed aggression.

In sharpest contrast, on the other side of the globe, in my own capital city of Seoul, another international conference has just concluded. Practically unnoticed and unheralded here, the Asian People's Anti-Communist League has been conducting its fifth annual conference. These sessions Were attended by 47 delegates and observers from 14 member countries and regions and 11 nonmember nations. The purpose of this summit conference, in the words of its chairman, Dr. George Paik (who is also president of one of our largest Christian-sponsored universities) was "\* \* \* to find ways and means of exerting our utmost to exterminate the menace and tyranny of communism and to usher in a new era of liberty and peace in which each of us can live his life with security and dignity."

Again in sharp contrast to the fuzzy goals many commentators on the Geneva debacle, my great president Syngman Rhee was clear and forthright in his analysis of true world conditions, when he told the delegates in Seoul: "We must realize that there can be no coexistence between us and the Communists. Ony one side can survive-our side or the Communist side. We must have confidence and trust in ourselves. Only then can we be united and march forward. In direct contrast to communism, the greatest characteristic of the organization (the Asian People's Anti-Communist League) is that it is of the people, by the people, and for the people."

I feel safe in predicting that that recently concluded conference in Seoul will turn out to be far more productive in terms of world Deace and the freedom and democracy of Asians particularly than the vitiating Geneva talks.

We are realistic. We are openly anti-Communst. We do not equivocate. We do not wish to negotiate with barbarians. I should like you to understand the foreign policy of the Republic of Korea. It is essential to realize that the cornerstone of our basic policy is anticommunism.

This is not because we prefer what some call a negative concept, but because there is no choice. It is a question of survival, and in that sense our anticommunism is entirely positive. Without stanch anticommunism, we would have perished long ago.

The tendency here in the United States and much of the rest of the world is to conclude that the Korean war ended the Communist threat to my country and that in due time Korea will be unified. In other words, the supposition is that the Korean war dealt with the problem of communism as far as the southern half of Korea is concerned.

Unfortunately, our problem is not that simple. From the moment of the liberation from Japan, the Communists began a vast program of infiltration, of boring from within, of fifth column activities, and even guerrilla warfare.

These tactics failed because of the firm anti-Communist leadership of President Syngman Rhee, and the establishment of

the Republic of Korea in 1948. From that time forward, the Communists decided upon a policy of aggressive attack, and this was launched on June 25, 1950.

Because of the help of the United States and 15 other members of the United Nations, armed aggression also failed. However, the war was not won, but stalemated, and we have today the longest lived armistice in world history. We do not have peace, and the only security is that provided by the massive army standing guard along the 150 miles of the battleline.

After 3 years of hot war, the Communists were close to collapse. Their first task was to rebuild their shattered armed forces, and they have done so all too successfully. fact, our defense forces became so dangerously obsolescent that the United Nations command was compelled to denounce the weapons clause of the armistice agreement and to initiate a policy of modernization on a high priority basis. Even so, the Communists have dangerously strong striking power. especially in the air. Meanwhile, the enemy has renewed his campaign of infiltration and attempted subversion. Apprehension Communist agents has more than doubled in the last year, and more and more are coming all the time.

Late this month, the Communist naval officer in charge of espionage transport vessels on the east coast of Korea surrendered to our authorities. He said that he had 30 high-speed craft in his command, and that at least 700 trips are made in the course of a year. Each of the vessels, which are disguised as innocent fishing boats, carries 1 or 2 Red agents. This means that more than 1,000 agents are coming by the eastern sea routes alone, and the same officer said that infiltration was even heavier along the west coast. Additionally, many operatives cross the demilitarized zone in rugged mountain areas along the front.

These Communists seek to infiltrate our political, economic, social, and cultural organizations, and to discredit the Government. Recently, some of them also have had assassination assignments, and captured agents tell us that such attempts will be increased. The subsequent objective is guerrilla warfare and coup d'etat—with the organized military forces of the north constantly poised for direct assault at an opportune moment.

You can understand, then, why we must pin our hopes on anti-communism, not only in our domestic vigilance, but in our foreign policy. We know that Korea is only one country, and that it can never safeguard freedom and democracy in a Communist world. Korea has also learned, from bitter experience, that communism's ambition is total; that it strives for complete global power. This means that the enemy is dedicated to the destruction of the free world system and the enslavement of its peoples.

It seems to us that in failing to take strong measures now, the statesmen of the democracies are inviting the very disaster that they want to avert. The Communists are becoming stronger, not weaker. We are losing ground. Yet we know that when communism is strong enough, it will strike. To wait may be suicide. At the very best, it will still bring the horrors of nuclear war, because the Communists will not hesitate to destroy half the world in their bid for mastery. They themselves have said so, over and over again, but too many of us have not listened.

Some say that Korea's foreign policy is based upon what has been called preventive war. That is not so. We want to avoid war. But we believe implicitly that it cannot be avoided through fear of it, through appeasements, compromises, and surrenders designed to hold it off a little longer. Com-

munism understands just one countermeasure, and that is strength—firmly and resolutely applied. That was proved in the Korean war and on other occasions when aggression was resisted strongly.

An exercise of free world strength would mean no more retreats in the face of Communist threats. But it would also have the positive aspect of implementing a policy of liberation whenever opportunity presented, as in Hungary and Tibet. Our only task, then, is to drive out the hard core of communism from the northern part of Korea, and this can be done at any time when the proper opportunity arises and when our friends and allies come to see the realities of the situation.

In time to come, our democratic unification will give us opportunity for prosperity and self-sufficiency. Meanwhile, we must do all that we can for ourselves and depend upon your generosity and understanding to fill out the essential requirements of survival. This is not of choice but of necessity, and we are deeply appreciative that America has recognized the distinction.

As a proud and free people, we can at least say that you need have no doubts about either our free world loyalty or our willingness to give our lives in the democratic cause.

Together, I am confident that we and the other determined members of the free world can go forward together in amity and cooperation. With rededication to the beliefs and practices which have made America the strongest and most principled nation on earth, we also can create an order of security in which aggression is outlawed for all time to come.

## Record of House and Senate Appropriations Committees

EXTENSION OF REMARKS

## HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. BOW. Mr. Speaker, there appears on page A4921 of the Record of June 9, 1959, the remarks of a distinguished Member of the other body which are critical of the House Appropriations Committee.

Mr. Speaker, I am proud of this House and of its Appropriations Committee, of which I am a member.

The critic of the House claims to be, and perhaps he is, a great advocate of economy in Government. I am sure that if the distinguished Member of the other body checks the record, he will find plenty of room for correction on his own side of the Capitol, before he goes so far afield as to attempt to police both Chambers.

Let us look at the record of economy between the two Houses:

First. For the entire 2d session of the 85th Congress, the appropriations bills as passed by the House totaled \$70,127,-464,022; the same bills passed by the Senate totaled \$74,079,765,550; and the conference settlement was \$72,653,476,-248

Second. So far in the 86th Congress, only five bills have passed the Senate, with figures as follows:

	House	Senate
District of Columbia Treasury-Post Office Agriculture Interior	\$27, 218, 000 4, 628, 097, 000 3, 939, 165, 498 472, 198, 000 2, 657, 402, 994	\$29, 351, 000 4, 664, 027, 600 3, 975, 774, 848 487, 211, 025 2, 843, 902, 805

Third. At the same time, the Senate has initiated and passed bills tapping the Treasury through the back door so far this year as follows:

Airport Grants \$465,000,000
Housing Act 2,675,000,000
Bretton Woods Agreement 4,550,000,000
Depressed Areas 300,000,000

It will take some doing to hide these billions under the new carpets, however thick they may be.

## No Lasting Peace Until Enslaved Nations Are Freed

EXTENSION OF REMARKS

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following syndicated article by Most Rt. Rev. Fulton J. Sheen, auxiliary bishop of the Catholic Archdiocese of New York, and noted writer and philosopher:

BISHOP FULTON J. SHEEN ADVOCATES LIBERA-TION OF ENSLAVED NATIONS

(EDITOR'S NOTE.—The following appeared in several U.S. newspapers throughout the country as a syndicated column of Most Rt. Rev. Fulton J. Sheen, auxiliary bishop of the Archdiocese of New York, and noted American Catholic writer and philosopher.)

If a neighbor-across the street where you live had knowingly and certainly robbed every other house on your side of the street save your own; if he had murdered some of the homeowners or else sent a few of them into exile; if he had stripped many rooms of furniture and brought them into his own house, and then began accusing you of being a robber and a thief and a murderer, even writing articles to the papers to that effect, what would you do?

Would you merely say that you were not a robber, or would you write to the newspapers and merely state that you are not a thief? Or if he made charges in court, would you be silent about the plundering of the houses and the enslavement of some of the children?

Then why is it that when the United States and the Western World are accused of being oppressors of people, wanting to start a nuclear war and enslave people, of being imperialistic and an enemy of peace, do we merely make denials at the United Nations instead of giving a list of the countries that they have robbed, pillaged, raped and confiscated. Why do we not name names and remind the Soviet Union of some of the countries they have confiscated, such as Ukraine, Rumania, Hungary, East Germany, Estonia, Latvia, the Karelian Isthmus of Finland, Poland, Lithuania, Bulgaria, Armenia, Albania, Outer Mongolla, Azerbaijah, Kirghisistan, Uzbekistan and others?

Why do we not bring up before the United Nations, day after day, the problem of the liberation of each of these countries? When they were taken over Molotov said, "The carrying into effect of the present pact must

in no way affect the sovereign rights of the contracting parties." Within a short time, the contracting parties were deprived of all rights.

Instead of being on the defensive, would not our strength lie less in constantly dealing with the Soviets than in pleading for the liberty and independence of the submerged populations of eastern Europe?

#### Justice Is Done

EXTENSION OF REMARKS

## HON, FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. BOW. Mr. Speaker, I have previously discussed in this House some of the aspects of the judicial system of Japan. Further material on this subject is contained in an article by Mr. John Robb in the English edition of the Japanese newspaper Yomiuri which I include with my remarks:

JUSTICE IS DONE (By John Robb)

There are, no doubt, many very good arguments which can be produced to show that systems and concepts of justice other than those common to the Anglo-Saxon world have just as much claim to fairness, incorruptibility and respect for human rights.

I remember trying to put forward some of them during the Girard case (which seemed so earth-shaking at the time and has

now sunk into oblivion).

Legalities apart (the finer points of law are what keep lawyers in their lucrative business), however, it has seemed to me over the past few weeks that there is something sadly lacking in the sheer, commonsense fairness of Japanese law.

By fairness, I mean the principle perhaps best summed up in that old saw to the effect that "justice must not only be done, but must

be seen to be done."

I mean the kind of fairness which shows that the law has a heart; that it is not a dead set of rules and regulations presided over by some musty gentleman in a black cape and designed to be observed to the letter with no recourse to logic or understanding.

The thing which originally set off these musings was the now notorious case of Mr. Crowley who is alleged to have accidentally killed his brother-in-law during a drunken brawl in the Imperial Hotel.

#### SERIAL STORY

This case has now assumed some of the aspects of a long-run serial story. It goes on and on, its origins receding farther and farther into the past; its witnesses progressively becoming more and more vague about what actually happened on that fateful night and its protagonists living under a perpetual cloud.

I certainly do not presume to discuss the legal aspects of the matter, but I do say that the announcement last week that a verdict would be handed down on June 22 is none

too soon.

There seems to be no conceivable excuse for the period of more than a year which has been required to try a relatively simple case involving an accidental killing.

Mr. Crowley, one presumes, is fairly wealthy. But what would have been the case if he had been a poor man, unable to pay for a team of lawyers or his interminable hotel bills? Presumably he would have had to stay in jail, waiting the pleasure of the court.

If this is fair, I will willingly eat my typewriter. Now we have the case of the Belgian priest questioned in connection with the murder of a BOAC stewardess. He has been hounded publicly by the police for weeks on end, driven to hospital, subjected to all sorts of innuendoes.

Again, it is not a question of whether he is guilty or not that worries me. It is the fact that after all this publicity, all these police efforts, he is apparently being left alone.

He has had no recourse to law, because he has never been charged with anything. But to the newspaper-reading public, his name must already be smeared. The police have issued no statements one way or another.

What does this mean? That the police have decided he is innocent? That they have been unable to gather sufficient evidence? That they are biding their time? The matter is bithely left in the air; a man's career and reputation may well be shattered, but there is no recourse to any form of legal redress.

In both these cases, justice is being administered, as far as one can make out, for the convenience of the police or legal authorities. To my mind, this is no form of justice at all.

Even worse is the fact that not only have the local newspapers made no effort to complain about the leisurely way in which justice is allegedly being administered, but frequently seem to have gone out of their way to make things more difficult for the unfortunate victim.

We have the case of a local newspaper the other day referring to the "murder trial" of Mr. Crowley. What vicious poppycock. Mr. Crowley is not on trial for murder and never has been.

The articles that have been written about the Belgian priest have cast all kinds of innuendos at him, none of them substantlated by any solid facts.

If the Japanese-language press employs the same careless tactics as its English-language counterpart, those accused in trials are convicted before they even face their judges.

The recent case of the Negro who was lynched from his cell is sufficient proof of this. Although the man was only awaiting trial on a charge of raping a white woman, he was consistently described by every local English-language paper as a "Negro rapist."

This, in my view, is more than carelessness. It displays an attitude of mind which is most disturbing—and which almost precludes the possibility of justice either being done or seeming to be done.

Many things in a modern society can be done according to previously laid down rules and done quite efficiently and effectively. Elections are a good example of this—since I don't presume many people would care to describe last week's upper house election as a truly democratic proceeding.

But one thing that really suffers from being done according to rules is the carrying on of a trial. Good judges throughout the world have always tempered the law with their own wisdom—indeed, in most countries, it is the legal precedent which really make up the body of the law.

To make a man charged with a serious crime remain in a foreign country for well over a year while judges and police and procurators dilly and dally for no obvious reason is far from being just.

I know that the legal calendar in Japan is jampacked and that even the Government has had to wait several months before its case on the validity of the Constitution is

But the idea that everyone must wait his turn reglardless of circumstances is surely a complete negation of fair play. And if a nation's juridical system is not concerned with fair play, then justice has already flown out the window.

There are instances when the injustices inflicted on the person awaiting trial may be

almost as serious as the crime with which he is charged.

The Crowley case seems to me to be one of these.

## Flight From Tibet

EXTENSION OF REMARKS

TATEED II II

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Rec-ord, I include the following text of a report by Lowell Thomas in the New York Times of June 3, 1953, by the American Emergency Committee for Tibetan Refugees which I had the privilege of helping to organize in April, and which has already raised nearly a million dollars in money and contributions of drugs and other needed supplies for Tibetans who have escaped to India from the cruel Communist blow at their peaceful homeland. Americans have plenty of shortcomings, and no one is more critical of us than we ourselves, but it is a never-ending source of wonder and admiration to see the way Americans of all walks of life and all colors of the political spectrum will respond with spontaneous generosity to help human beings in need, wherever they are or whatever the cause of their

In ultimate terms the character and quality of a civilization are demonstrated by what it does for people. Nothing so dramatically discloses the difference between free societies and communism. Free societies try to build, communism destroys, human values. Free societies help, communism oppresses, human beings.

The report follows:

FLIGHT FROM TIBET
(By Lowell Thomas)

What does Tibet mean to the American people? I had occasion to ask this question during the past month when I unexpectedly found myself at the head of the American Emergency Committee for Tibetan Refugees. The answer tells something of our Nation—it tells a great deal more about our people. It is of enough interest, I believe, to war-

rant recording here.

When the Chinese Communists began their bombardment of the Dalai Lama's palace at Lhasa, my son and I followed the daily news with a quickening interest. We had spent some time in that golden-domed Shangri-La, and so long as we live we will remember Tibet and the Tibetans with gratitude, even affection. A peaceful Buddhist people with the view of ages from their lofty Himalaya heights, they had treated us with almost overwhelming hospitality. As the Dalai Lama fled from Lhasa we understood, perhaps better than most, the agony of this youthful leader who was forced to flee across the towering Himalayas to India and exile.

My passive interest became active when Dr. Magnus I. Gregersen of the Columbia University College of Physicians and Surgeons called to urge that I join him and others in a nationwide appeal for aid of Tibetan refugees. Newspaper reports then had hundreds (later thousands) fleeing through the lower passes into Sikkim, Bhutan, and Assam. Dr. Gregersen pointed out that I

was one of the few westerners who had traveled in inner Tibet and knew its people.

After consulting with a few friends, I agreed, and we set to work. Within a week a representative group of Americans were organized as the American Emergency Committee for Tibetan Refugees. Notable among them were C. Suydam Cutting, distinguished naturalist and explorer, my predecessor in Tibet and author of "The Fire Ox and Other Years," and Associate Supreme Court Justice William O. Douglas, like myself a lover of the Himalayas and its people.

The first question our group had to answer concerned the magnitude of the refugee problem. How many were coming out? What were their needs? How many ill and wounded among them? We sought the answer through American press representatives in India, as well as by direct inquiry of the Indian Government through Ambassador Chagla in Washington. Cables were sent off in these first tragic days but few replies were received; there was such chaos along that Himalayan border. In all this, Walter H. Judd, one of the earliest of our early group, was particularly active.

#### REPORT FROM THE BORDER

We felt we should send our own mission. Overnight a few friends supplied us with enough funds so we could cable Travis Fletcher, an experienced relief executive then working in Hong Kong to fly to West Bengal and Assam in order to give us an on the spot report. On April 10th he left Hong Kong, and on May 4th, we received the following cable from Travis Fletcher:

"Have just returned trip India where 10,000 newly arrived Tibetan refugees including many wounded from recent fighting joined additional 8,000 who have escaped since November. Sickness widespread due sudden change altitude and climate and local resources inadequate to provide relief Stop Medical aid desperately needed particularly sulfa drugs, vitamins, antibiotics all kinds relief supplies also food, clothing Stop Beg you do everything your power to mobilize American aid behalf Tibetan friends Stop This is human crisis and money urgently needed purchase supplies immediately."

"TRAVIS FLETCHER."

Now we knew that there were at least 18,000 Tibetan refugees and more coming over those lofty passes and down into the plains of India.

In all these preliminary inquiries the Indian Government gave us immediate cooperation. Earlier we had cabled Prime Minister Nehru, asking in what ways we could help. In response, we received the following cable from the Prime Minister through Mr. M. Gopala Menon, Consul General of India in New York:

"I would like to thank you very much for your telegram. Reception camps are being prepared for the Tibetan refugees by the Government of India. Mr. J. B. Kriplani, Member of Parliament, is the chairman of the Central Relief Committee, which has been set up for this purpose. It has its been set up for this purpose. office at 25, Ferozshah Road, New Delhi. One of the top men of this committee is now in Assam for the purpose of assessing the needs of the refugees and for the purpose of using and coordinating the efforts of the nonofficials in India and outside to supplement the efforts made by the Government of India. The Central Committee is being requested to get in touch with you as early as possible, and advise you the best way in which your committee can render help. The requirements for medicines are essential and immediate.

"JAWAHARLAL NEHRU."

On the basis of these advices we prepared an emergency appeal addressed particularly to members of the American business community, with no idea as to what the response would be. Tibet is just about the most remote and isolated country on this

planet, for centuries shut off by its mountains and deserts. News of the refugees streaming over the frontiers had virtually disappeared from the press with the knowledge that the Dalai Lama had taken refuge in India. Yet we felt it was worth while making the attempt.

#### AMERICA RESPONDS

On Monday evening, May 4, we called on our friends for support, and by the following morning came a warm response. The great pharmaceutical firm of Chas, Pfizer & Co., Inc., pledged a major contribution of antibiotics and other vital drugs. A few hours later Bristol Laboratories, Inc., offered a similarly generous gift.

Pan American World Airways responded with an immediate offer to transport all drugs on a priority basis. By Thursday, May 7, the first shipment of the Pfizer medicines went off from Idlewild, an enthusiastic indication of the way the American pharmaceutical industry was eager to meet this dramatic and tragic emergency. All in all this has been one of the most heartening experiences of my life.

#### THE NEED FOR FURTHER ASSISTANCE

Aside from medical needs, further reports indicated a need for clothing, blankets, and the many other things required to take care of the growing stream of refugees. The Tibetan plateau is at an altitude loftier than the tops of our tallest mountains, and it was clear that the transition from the high to the lower climates would mean sickness, possibly an epidemic. To meet these needs within the very first days more than \$100,000 was subscribed, coming from all sections of the country and coming, literally, by return mail.

Following Prime Minister Nehru's suggestion, we are now in touch with the Central Relief Committee for Tibetan Refugees, a parallel citizen's movement in India. Mr. Asoka Mehta, a member of that committee and a distinguished Indian political leader, now in this country, confirms the word that we had, that through our Indian friends we can reach and help every Tibetan refugee so long as the funds are made available.

Why did our people respond? Apparently it is not merely that the peace-loving Tibetan people are the latest victims of Chinese Communist imperialism. It goes deeper into our tradition and our national soul. Alien as the Tibetans are to us— a people speaking an obscure language, isolated for centuries from our world—yet they are human beings who, like us, believe "in the brotherhood of man and the fatherhood of God." We hold a common concept of freedom and independence, and it was obvious our people wanted to help.

Our Tibetan friends have fallen on evil times. They are refugees in a land not their own. They are in desperate need. It is as simple as that.

The members of our Committee feel sure that the American people will continue to help these courageous men and women now gathered together in hastily constructed refugee camps at the foot of the world's tallest mountains. We will help them through the appropriate Indian agencies and in cooperation with the Indian Government until these pitiful refugees are once again able to resettle in their own land in freedom and in human dignity. They are Buddhists, and although we follow different paths we are one in our belief in the worth of the human personality.

Those of you who read these words may wish to join other Americans in this work of brotherhood. If so, please send your contribution at once. It is urgently needed, and it will be used to help some one or more Tibetan refugees among the many thousands now in India. Together we will enable the Tibetan refugees to rest a little easier, hope a little more, and gain the strength and courage that they will need for the future.

# Daily Digest

## HIGHLIGHTS

Senate debated nomination of Secretary of Commerce Strauss. House worked on bill fixing wheat program for 1960 and 1961.

## Senate

## Chamber Action

Routine Proceedings, pages 9441-9482

Bills Introduced: 5 bills were introduced, as follows: S. 2156-2160.

Bill Reported: Report was made as follows: S. 2094, AEC authorizations for fiscal year 1960, with amendments (S. Rept. 386).

Page 9442

President's Message—Atomic Energy: Message was received from President relating to the introduction of modern weapons into NATO defenses, accompanied by Agreement for Cooperation on Uses of Atomic Energy for Mutual Defense Purposes between U.S. and Greece, signed in Athens on May 6, 1959—referred to Joint Committee on Atomic Energy.

Pages 9466—9467

Calendar Call: Order was entered that on Friday, June 12, at conclusion of routine morning business, calendar will be called for unobjected-to bills, beginning with Order No. 265 (S. 292, authorizing the sale of certain lands to State of Missouri).

Page 9480

Secretary of Commerce Strauss: Senate continued debate of nomination of Lewis L. Strauss, of New York, to be Secretary of Commerce. Pages 9482-9490

Legislative Program: Majority leader announced that on Monday or Tuesday, June 15 or 16, unanimous-consent agreement will be proposed to set a time to vote on confirmation of Lewis L. Strauss, to be Secretary of Commerce.

He also announced that Senate will take up, some time next week, AEC authorizations for fiscal year 1960 (S. 2094 or H.R. 7537).

Pages 9482, 9483

Confirmations: 16 nominations in the Coast and Geodetic Survey were confirmed.

Page 9495

Nominations: 86 postmaster nominations, and 4 nominations in the Public Health Service, were received.

Pages 9494-9495

Program for Friday: Senate met at noon today and adjourned at 6:02 p.m. until noon Friday, June 12, when, after morning hour, calendar will be called, beginning with Order No. 265 (public lands in Missouri), to be

followed by further consideration of nomination of Lewis L. Strauss, to be Secretary of Commerce.

Pages 9480, 9490, 9494

## Committee Meetings

(Committees not listed did not meet)

## APPROPRIATIONS—COMMERCE

Committee on Appropriations: Subcommittee concluded its hearings on H.R. 7349, fiscal 1960 appropriations for the Department of Commerce and related agencies, after receiving testimony from numerous public witnesses on various items in the bill.

## APPROPRIATIONS—DEFENSE

Committee on Appropriations: Subcommittee continued its hearings on H.R. 7454, fiscal 1960 appropriations for the Department of Defense, receiving the testimony of Rear Adm. W. F. Raborn, Director of Special Projects, Bureau of Ordnance; Rear Adm. J. T. Hayward, Assistant Chief of Naval Operations (Research and Development); Rear Adm. Rawson Bennett, Office of Naval Research; Gen. Robert S. Moore, Office of the Secretary of Defense (Comptroller); and John A. Wylie, Office of the Secretary of Defense.

Hearings continue tomorrow.

## APPROPRIATIONS-JUSTICE, AND USIA

Committee on Appropriations: Subcommittee continued its hearings on H.R. 7343, fiscal 1960 appropriations for the Departments of State and Justice, and the Judiciary, with testimony in a morning session from Attorney General William P. Rogers, who was accompanied by his associates.

In an afternoon session further testimony was received from George V. Allen, Director, U.S. Information Agency, who was also accompanied by his associates.

Hearings continue tomorrow.

## APPROPRIATIONS—MILITARY CONSTRUCTION

Committee on Appropriations: Subcommittee held hearings on fiscal 1960 budget estimates for military construction.

#### Tribute to Roy Bedichek

EXTENSION OF REMARKS

## HON, LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Friday June 12, 1959

Mr. JOHNSON of Texas. Mr. President, a few days ago one of the best-known citizens of Texas passed away. He was Roy Bedichek, of Falls County.

Roy Bedichek was a man who knew every nook and cranny of Texas. He had a deep love for the countryside and for the animals, the birds, the flowers, and the plants of which it is made.

He was a kindly man and a gentle man—a man who was held by his fellow

Texans in deep affection.

The New York Herald Tribune today has published a beautiful tribute to Roy Bedichek, written by the distinguished author and my fellow Texan, Stanley Walker. I ask unanimous consent that Mr. Walker's article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record,

as follows:

[From the New York Herald Tribune, June 12, 1959]

MOST CIVILIZED MAN IN TEXAS
(By Stanley Walker)

Marlin, Tex.—The other day while a light rain was falling, a small motorcade from Austin followed a hearse more than 80 miles up one of Texas' busiest highways. It finally stopped at an old cemetery at Eddy, a small town near here, and the journey was over for Roy Bedichek (Bedi, the Bird Man), who had been called "the most civillized man in Texas."

Bedichek, who was 81 when he died, was brought from Illinois at the age of 5 to Falla County, where he began his long and fruitful association with the flora and fauna of this area. He was familiar with the county seat, Marlin, once famed for its springs which gushed forth waters of varying temperatures and of supposedly marvelous therapeutic properties. In the great days John McGraw's Giants did their spring training at Marlin, The truculent McGraw liked this part of the country very much, and so did the scholarly, thoughtful Bedichek. By and large, things are pretty dull around here these days. The glory is gone, but Falls County claims Bedichek as its own.

Bedichek was by all odds the best known Texas naturalists, though he insisted on keeping his amateur standing. His few Works, written when he was past 70, and in particular his "Adventures With a Texas Naturalist" were quite as much respected in England as in the United States. He early recognized that Texas was a bird paradise, an enormous flyway for many migrants, and he never tired of his bird studies. Indeed, he was preparing to take a walk near his home in Austin, armed with his usual stick

and binoculars, when he suffered his fatal heart attack

As a young man, Bedichek tramped over the English French and German countrysides; he explored the rivers of West Virgina; he worked for a time in a packing plant at Chicago (the most revolting experience of his life); he ran a little newspaper in New Mexico, and worked for a time as a city editor in San Antonio: he taught school, and he was a good teacher. How-ever he became best known through his association with the University of Texas, beginning in 1914, for from that date until his semiretirement a few years ago, he was director of the interscholastic league. which ran statewide competitions in athletics, spelling, debating, speech and so on. When traveling over the State for the league, Bedichek preferred to avoid towns at night, camping instead out in the country and cooking his own meals (he spoke highly of an unexciting concoction known as Bedichek's shepherd's pie).

J. Frank Dobie, the old folklorist who was one of Bedichek's closest friends, said that Bedichek had the most richly stored mind of any man he had ever known. He could discourse on the strange vegetation he had found in out-of-the-way graveyards, on the observations of Herodiotus, on the true nature of the music of the mockingbird, on the virtues of competition among human beings, upon various dietary theories, on the work of just about any good poet one cared to mention—all in a soft, clear, diffident tone. He was a born charmer. Tall, erect, handsome, he looked to be less than 60—not 81.

The rich storehouse of his mind was by no means the only thing that set him apart from the general run of Texans—or other people, for that matter. He never sought to build up an estate. He kept fairly busy, in his fashion, but he avoided hard work with a studied, consummate cleverness. His friends virtually had to lock him up for a whole year on a little ranch in Hays County, near Austin, so he could write his first book. In the afternoons he usually could be found swimming at Barton Springs, a beautiful spot on the edge of Austin. He seemed to like the company of idlers, dreamers, misfits who in the eyes of the world were never going to amount to anything, but who for some reason he found stimulating.

Although he disclaimed any direct responsibility for it, some observers think that Bedichek's greatest accomplishment (forgetting for a moment his contribution to the appreciation of birds) was in the revolution of the speechmaking technique of Texans. He helped show the youngsters that the old-time fustian, the roaring demagoguery, the bogus eloquence, was not nearly so effective as the clear, concise, calm statement of facts.

He was proud of his powers of observation. Once, while on a walking trip with him in a rough area in Hays County, I spotted a rattlesnake coiled on a big rock. He reluctantly agreed we should kill it. Then he brooded for hours, and stopped speaking to me. Finally, that night, I found out why. He burst out: "You. You saw that snake before I did. Incredible. I just can't understand it."

He liked to be thought of as a sort of natural man, attuned to the vast and intricate symphony of nature, but there was one embarrassing defect which I discovered last year when we were visiting the 17,000-acre ranch (a wondferful wildlife preserve) of Charles Pettit in Bosque County. When bedtime came Bedichek insisted that he be put off to himself in a small room, as far away from other sleepers as could be arranged. "I am," he explained, "the loudest and most horribly raucous snorer ever heard of. Yes, I know, it's unnatural. I'm not attuned after all. Something, somewhere, is wrong."

#### Necessity for Adequate Medical Research

EXTENSION OF REMARKS

OF

## HON, RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Friday, June 12, 1959

Mr. YARBOROUGH. Mr. President, the statistics showing deaths caused by various kinds of diseases are sometimes cold and impersonal. However, there is nothing impersonal about disease. It strikes anyone, anywhere, at any time.

Therefore, I feel all of us have a lifeor-death stake in the fight against disease. The weapons used in this allout war against disease are scientists with their microscopes and test tubes.

The money to support these scientists as they discover the secret weaknesses of the tiny but deadly germs is, I feel, one of the best investments mankind can make. It was for this reason that I joined in sponsoring the bill for international cooperation in health research.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a constructive editorial from the Washington Post and Times Herald for Friday, May 29, 1959, telling of the need for the research and, particularly, mentioning the fine work of the able, distinguished and respected senior Senator from Alabama [Mr. Hill], long known for his outstanding work in the field of public health. The editorial is entitled "What Money Can Do."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### WHAT MONEY CAN DO

Money is no cure-all for mankind's many unsolved medical problems, but the case which scientists made before a Senate sub-committee for more funds for the National Institutes of Health surely is compelling. The most dramatic testimony probably was the statement by Dr. Sidney Farber of Harvard that the death rate among cancer patients has declined from 1 in 3 to 1 in 4 in large part because of research conducted with Government funds. A niggardly approach by either the administration or Congress toward the legitimate needs of medical research thus amounts almost to a planned slowdown of medical progress.

During 3 days of hearings before the Appropriations Subcommittee for Health. Education, and Welfare, headed by Senator LISTER HILL, Democrat of Alabama, 16 of the Nation's leading medical scientists docu-mented the need for a total of \$134 million more in NIH research funds than the \$344 million voted by the House. The administration had asked for only \$294 million. When the additional money that was requested by the scientists is measured in terms of lives it does not seem to be an impossible burden for the American people to bear. In fact, most voters undoubtedly are prepared to pay the cost of an adequate medical research program.

Oregon Educators Win Acclaim for Role in Strengthening Education in Nepal

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. NEUBERGER. Mr. President, on several occasions I have brought to the attention of the Senate the work of a team of University of Oregon educators in carrying out an International Cooperation Administration project designed to strengthen the teaching profession in Nepal and assist in the development of an expanded program of higher education in that country.

Recently I received a letter from Paul B. Jacobson, dean of the School of Education at the University of Oregon, informing me that this group will end its

activities in Nepal in the fall.

I am proud of the record of achievement which this Oregon group compiled in carrying out the assignment given them by ICA. I believe that their efforts represent a significant part of our worldwide effort to aid less developed countries to realize a higher standard of living. My opinion in this regard is shared by ICA. Mr. Guilford Jameson, ICA Deputy Director for Congressional Relations, wrote me earlier this week that "Oregon has left an excellent, worthwhile and permanent impact" on Nepal.

Mr. President, I ask unanimous consent that the text of the letters written by Dr. Jacobson and Mr. Jameson be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

UNIVERSITY OF OREGON. SCHOOL OF EDUCATION, Eugene, Oreg., May 29, 1959. Hon. RICHARD NEUBERGER,

U.S. Senate Office Building,

Washington, D.C.

DEAR DICK: We have just signed the third amendment to our contract for work in Nepal and will close out our activities on September 30, 1959. Our primary purpose in setting up the teacher training institution has been carried out. Our second hope of building the university cannot be real-ized at this time, because of the inadequate financing in Nepal. The preparation of adult literacy materials is well underway.

We have enjoyed our experience with ICA, and we believe we have left a permanent impact on Nepal. Should our services be needed in another area, we will, of course, be glad to serve. As you know, Dean Victor Morris and a group of five economists will leave for a 2-year tour of duty in South Korea probably in July.

With kindest personal regards, I am, Cordially yours,

Paul, P. B. JACOBSON. Dean.

INTERNATIONAL COOPERATION ADMINISTRATION. Washington, D.C., June 9, 1959.

Hon. RICHARD NEUBERGER, U.S. Senate, Washington, D.C.

DEAR SENATOR NEUBERGER: A copy of the letter of May 29 sent to you by Dean Paul Jacobson of the University of Oregon School of Education has just been received by ICA.

From conversations with those in charge of the Nepal program, I have learned that there is high praise for the contribution made by the representatives of the University of Oregon. In Dean Jacobson's words, the Oregon party has left "a permament impact on Nepal." We would also add two words to make the sentence read "Oregon has left an excellent, worthwhile, and permanent impact."

It can be said with candor that the education program has been one of the most successful of our American-supported technical cooperation projects in Nepal. Its success is due in great measure to the excellent contributions made by the highly qualified personnel supplied by the University of Oregon.

That Oregon was not able to fulfill the second of its objectives, namely, the estab-lishment of a national university in Nepal, was in nowise the faulty of the Oregon party. The Nepalese were not ready at this time to take the necessary steps to develop a university. We will have to wait a number of years before the Nepalese have created the will and marshaled the resources for such an endeavor.

On the record of its successful service in Nepal, the university will be considered again when the need develops for contract services in the educational field in our worldwide program.

Not only have we appreciated the services in Nepal of the University of Oregon but we have also appreciated your interest in what its personnel has been doing there. We hope your interest may continue beyond the time of expiration of our contract with the university.
Sincerely yours,
Gu

GUILFORD JAMESON, Deputy Director for Congressional Relations.

Address by Samuel F. Pryor Before Graduating Class of St. Bonaventure University, New York

EXTENSION OF REMARKS

## HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. KEATING. Mr. President, one of the fine educational institutions in my State, St. Benaventure University, recently conferred an honorary degree upon Samuel F. Pryor. Not only did this great Franciscan college salute Mr. Pryor; it also had the added satisfaction of hearing an interesting address from him.

An inveterate world traveler and eloquent spokesman of aviation philosophy. Mr. Pryor speaks from experience, when he reviews the future vistas of travel and time.

It is particularly appropriate that his remarks should be delivered at a college and before a faculty which has gained justly merited fame for its dedication to spiritual strength, academic endeavor, and thoughtful progress. By combining respect for the moral and intellectual life with belief in America and the cause of the free world, St. Bonaventure University has made an indelible mark.

In the context of the proud record of this great seat of academic learning, I ask unanimous consent to have Mr. Pryor's address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TIME PAST, TIME FUTURE

(Address by Samuel F. Pryor, vice president of Pan American World Airways, before the graduating class of St. Bonaventure University, St. Bonaventure, N.Y., June 7, 1959)

My first contact with St. Bonaventure was when I had the pleasure of bringing back from Germany Father Thomas Plassmann because he wanted to spend the rest of his days on this campus which he loved so well.

Young men and women of St. Bonaven-ture's class of 1959—you have been privi-leged in studying in an institution which has just recently finished its first 100 years. You have been even more privileged in studying under the Franciscan Friars and their associated dedicated lay professors. Now that I am one of your classmates, may I say to you my business is air transportation-or air travel. In this age in which we live, we in this business must always be looking into the future and always with time in mind.

Tomorrow you start a new life. May one who had the same experience just 38 years ago say that the first thing you must realize is: from now on you must face facts. If you go on to run a business, you will quickly discover that difficult problems can be put aside but can never be dismissed. Facts must be faced and so often the unpleasant facts of life lie close to home.

Travel abroad brings facts into sharper focus. Travel abroad opens our eyes to new horizons, to new understandings, to pleasure. to trade, to exchange of ideas. But travel abroad also often opens our eyes to dangers which lie at our very feet.

In May 1950, I had the honor of talking to a group of young women on the side of a beautiful valley in Idaho. I had just re-turned from traveling in Europe and the Pacific. I wanted to bring them good news. But I had to report the truth and said, "We are very close to a shooting war-much closer than you realize." One month later, in June, 1950, came Korea.

On returning from Germany in 1954 I had the honor of talking in Washington, D.C., before the Women's Forum on National Security. I said that we had learned when we captured scientific material after World War II that German scientists had brilliantly carried out the technical details for a manmade satellite. The Germans conceived this satellite originally for peaceful purposes as a way station for the interplanetary travel of the distant future. This satellite would revolve around the earth in an orbit 600 miles away; its most outstanding feature was to be a giant mirror with an arrangement for changing its focal length so that

the sun's rays could be either concentrated on a small area of the earth, resulting in immense heat, or spread over a large area controlling weather. But such a mirror focused on any major city in the world—our own Buffalo, New York, Chicago, or Washington-might be able to burn to a crisp in a matter of minutes every man, animal, plant, tree, or shrub.

That, unfortunatey, we had definite reason to believe that the Russians not only shared with us paper knowledge of such an earth satellite but that they had also in their control some of the German scientists

who worked on this project.

In 1957 came the Russian satellite sputnik. In the few minutes I have to talk to you here today, I bring no prophecies of war. If I did, I am morally certain that what I would have to prophesy would be the end of civilization. In nuclear war no one will get rich. Once this kind of war has started we won't have to give statistics on casual-, ties as we have done in past wars because unfortunately human life, muscles and brains, will be useless against nuclear power. The next war, which cannot and must not take place, will have no parades, no bands, no flags, and no romance. Today-your graduation day-humanity itself must face facts.

What I would like to talk to you about can be embodied in one word, "time." Time past, time future. All that I have to say in these very few minutes relates in one way or another to the concept of time in the relation to the world today and the respon-sibility for the use of that time.

Time does not stand still. As Shakespeare had one of his characters say, "I waste time, and now doth time waste me." Time recognizes neither the clock nor the calendar and the fateful words of the Bible concerning the arrival of the time of death-"You no not the day or the hour"-have come suddenly to have as much meaning to us as a nation as they always have had for us as individuals.

Time is a currency which, if used well, can purchase success in a material way. But, by the same token, it is also very important to keep in mind that time, if wisely used, can also purchase success in that which is the most important way—the spiritual way.

I have had the privilege of visiting many of the ancient cities which are now either in ruins or buried underneath desert sandsamong them the ancient pre-Christian Kingdoms of Qataban, Hadhramaut and Saba, the home of the Queen of Sheba. I have Visited Sheba's capital, Marib; Timna, the capital of Qataban; the great lost city of Shabwa; the ancient frankincense city of Sumhuram; on our own continent, Chichen-Itza. Some of these civilizations have been buried now over 2,000 years. Each of these cities, in its proper time, stood at the peak of achievement and accomplishments. Each asserted its influence throughout the then-known world. Each was the leader of its time.

Pondering over these ruins caused me to Wonder about ourselves. How much time do we have and how wisely will we use itthese are questions to which you young men and young women will have to provide the answer.

As a matter of fact, we have so little time. We must maintain our material strength which, unfortunately, is the only kind of strength our adversary in the cold war respects, so that we may ultimately achieve our long-term aim which is a genuine peace for mankind. We are blessed with a strength not possessed by our adversary, atheistic communism-that is spiritual strength.

The late great Secretary of State, John Poster Dulles, stalwart advocate for a genuine peace and spiritual values, said we must as a Nation wage peace and make the same sacrifices nations do in waging war. In that

way we must bend all our efforts to achieving a just peace—not a propaganda peace.
In this era when cold war tensions can be

instantaneously resolved into a world split into minute particles, predictions about the future are almost meaningless. The present tensions over Berlin, the Middle East, Quemoy, Matsu, and the dozens of other potential trouble spots all over the globe, should neither be exaggerated nor ignored.

In my lifetime, I have lived to see every great development in inventive productivity, whether it be in transportation, farming, atomic uses-changing almost hour to hourthe first automobile; the first movie; the first radio and television: the first submarine; the first assembly line; the first miracle drug; the first airplane; the first guided missile; and, I am sorry to say, the futile sequences of two world wars.

We have faced time past. Now let us look at time future. Here may I narrow my predictions to a field related to my businessair transportation. You will see wonders surpassed by wonders in the next years before you return here for your 15th or 20th annual reunion, or about the time your sons and daughters are attending their own col-

legiate commencements.

You know that now we can take 111 passengers from coast to coast in less than 5 hours or across the Atlantic in less than 7. But this time will be obsolete within 10 years. By then American air carriers will be flying jets or ramjets that move at speeds of mach 3-about 2.000 miles an hour. It will take only about 90 minutes to fly from New York to Los Angeles and about 2 hours from New York to Paris or Rome. Spending the weekend in the Eternal City will become as commonplace as commercials on television. And, even more dramatic, after thatand not too long after that-flights to the Moon and to Mars and Venus will be possible. Flights to the Moon at speeds of 25,000 miles an hour will take less than 9 hours because the Moon is only 221,000 or so miles away. Those of you who might consider going to Mars or Venus would be wise to get enough reading material for a long trip. Venus is 26 million miles away, or 43 days at 20,000mile-an-hour speeds. Mars is even more distant—34½ million miles, or 58 days away. Remember—this is the time it took to go from London to Boston by sail at the time of the Pilgrims.

These pilgrimages into space will come. The rocket engines to make voyages of this sort possible are already under construction. The same is true of the space capsules which will be forerunners of large passenger-carrying space ships.

While on this subject of travel to outer space may I have your kind indulgence for a monetary speculative digression. I am sure that the good friars who have taught you will find no problem of explanation if and when man will reach the moon and the outer spaces. They know that not only the. earth on which we live but the entire universe, as St. Paul put it centuries ago, was made by God in the image of his eternal son, Jesus Christ. These friars, I am sure, could also tell you, and probably have told you, that the theological teachings of their own Franciscan school have been that Christ would have come into the world even though man had never sinned. However, His coming would have been in the role of a king rather than as a redeemer. Now you might pose the question to them, "When we reach the planets of Mars and Venus (scientists tell us that they believe that human life will be found there) what kind of people will they be?" The good friars will tell you that these people will be either like unto ourselves-that is, weighted down with the weaknesses of human nature consequent upon original sin and therefore redeemed by Christ, or they will possibly be a superior people not weighted down with the weak-

nesses of human nature, never having been touched by original sin. If so, they will know Christ as a king rather than as a redeemer. We on earth might be very em-barrassed indeed if we found somewhere in space faultless people.

Once again may I remind you that you are especially privileged because the good friars who have taught you have been very cognizant of these changes that have taken place in the world in which they are living. find these time-saving means of transportation very important in accomplishing their own work. Their fellow friars, too, have been able to carry the Gospel teachings to all parts of the world through these means, and will continue to do so through greatly accelerated aviation advancement.

I could go into many more scientific advances that you will see and experience. But all this is dependent upon your helping to bring about a lasting, just peace in the world-again, not a peace for propaganda purposes. And now, young men and women of the graduating class of 1959, to a large extent it is up to you to play this important role in shaping America's future. From now on time is yours to use and you will be

judged on how you use it.

Mrs. Pryor and I have had the privilege of seeing almost every nook and corner of this world. On one of our trips we decided to close our eyes to everything political, sociological, and war threatening, and to see only the beauty of the world. After this trip we concluded we truly do live in a very beautiful world. In fact, many times we have have said to each other we have heaven on earth here except for one thingpeople. People are responsible for confusion. for trouble, for unhappiness.

When you leave here today you be the kind of person always looking to help—not to be helped-and in so doing you will find

unlimited rewards.

You, as undergraduates, have found on your campus someone who has offered you a wonderful friendship. Multiply your campus many times over and you have our free world as it is today. But, the world is being reshaped by this new concept of time, for this kind of time brings nations into contact with each other. That being so, we would like to live in the hope that all nations, not just the free nations, will come to want a real peace with justice in the world.

And, finally, there is one big unanswered question which each of us must ponderthat is, whether our minds and our hearts have it within them to match the speed of sound, and understanding in love for our fellow man-not just in our back yard, not just in our county, or our State or countrybut across the earth. This is the kind of program the Sovietized nations fear most, It is long and hard and fraught with danger and difficulty, but being able to meet danger and difficulty is what has made our country great.

It is our solemn obligation to walk this path in friendship and peace in fulfillment of our mission on earth because then, and then only, can all of us join together and truthfully say, "Thy kingdom come, Thy will be done, on earth as it is in heaven."

## Let Congress Face It

EXTENSION OF REMARKS OF

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. LANE. Mr. Speaker, I wish to extend my remarks and to include a very June 10 edition of the Christian Science Monitor:

LET CONGRESS FACE IT

The failure of Congress to do something effective about American farm surpluses amounts to a shocking breakdown of representative government. The vast majority of citizens want action. Farmers themselves decry the waste in surpluses for which the Government paid \$9 billion. Both parties have promised solutions. Neither has pro-

Indeed, current measures being pushed in Congress-directed at the most ridiculous surplus-are mere excuses. Supposed to hold down wheat production, they could end by increasing it. For they embody two Alice-in-Wonderland theories Congress uses

in farm legislation.

One is the belief that crop surpluses can be reduced by offering farmers incentives to The second is that increase production. The second is that acreage restrictions will hold down production at a time when yields per acre are being doubled by improved seed, fertilizers, and cultivation. These two theories are illogical on their faces and have been exploded in practice. But Congress still clings to them.

Let's be fair to Congress. Crop surpluses are only half the problem. The harder half is the surplus of farmers. Hardships of the displaced evoke our compassion. But the husks-off fact is that the industrial revolution on the farm makes it possible for several million fewer farmers to meet American

needs for foods and fibers.

This change is not unlike that experienced in the original industrial revolution when introduction of machinery made the labor of millions of hand workers unnecessary. Would it have made sense to keep those people employed by having the Government buy and store the surplus goods produced? As much sense as what Congress is doing.

For in seeking to help farmers without machines to stay on the land it has only partially succeeded-about 5 million have quit farming since the war. And in trying to keep up prices for them it has offered terrific incentives for overproduction to farmers with machines. For instance, price supports for wheat at \$1.90 a bushel are three times the production costs of some big wheat farmers. About 10 percent of the growers get most of the price supports.

A wiser basic policy would be to work with rather than against the forces of economic change. Men no longer needed on the land could be more truly aided by helping them find other jobs which need them than by trying to keep them working in unequal competition with new machines and methods on

the farm.

Many Congressmen attempt to shift the blame to Secretary of Agriculture Benson. He has made mistakes, and he has offered no complete answer. But he has courageously sought lower price supports. And he only administers laws Congress has adopted. It must assume responsibility for basic policy failures. Congress should be required to face that fact and to take more effective action.

#### Full Employment and the Good Life

EXTENSION OF REMARKS OF

## HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. MURRAY. Mr. President, farmers and workers in the United States

timely editorial that appeared in the have a common interest in a high level economy. Although there are constant efforts to keep working people on the land and in factories divided, and thereby neutralize their effectiveness, their basic interests are parallel.

A splendid exposition of their common interest in a full employment economy is contained in an address delivered at the recent National Farmers Union convention in Springfield, Ill., by Clay L. Cochran, of the industrial union department of the AFL-CIO.

I ask unanimous consent to have Mr. Cochran's address printed in the Ap-

pendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FULL EMPLOYMENT AND THE GOOD LIFE (By Clay L. Cochran, legislation consultant, industrial union department, AFL-CIO)

At any meeting of your people, the first thought that strikes me is that your organization first enunciated the idea which became the Full Employment Act of 1946, one of the most promising strides we have ever made in the task of creating a functional economy and the good life. I want to pay tribute to you for that great creative contribution to human society, to your president, Jim Patton, who first proposed such an act, and to many others in the farmers union, organized labor, religious groups, and others who came together and stayed together until, under the leadership of Senator James E. Murray, of Montana, the bill was enacted into law.

The lesson we learned then is the lesson we must remember—that it takes a liberal coalition to win against the perennial

coalition of reaction.

Under the terms of the act, the President is specifically required to prepare an annual economic report setting forth the levels of maximum employment, production and purchasing power needed to provide jobs for those able, willing, and seeking to work; and recommend the economic policies necessary to achieve these goals. This approach to our economy is the exact reverse of the Little Bo-Peepism of Hoover and Eisenhower.

President Eisenhower has simply refused to abide by the provisions of the act. His latest report virtually ignores the mandate in the act to maintain full employment. He is obviously a convert to that school of thought that stability can be bought only at the price of bankrupt farmers and unemployed workers.

#### THE FRUITS OF REACTION

The fruits of this policy of reaction and inaction are all about us. America has lost more than \$200 million in the last 6 years and with it the Nation's unchallenged world leadership.

Farmers are being ground between the millstones of falling prices and rising costs. Six percent of our labor force is unem-

ployed and 20 percent of our industrial capacity is standing idle.

Yet almost a fourth of U.S. families live on \$3,000 a year or less and 6.5 million familles live on \$2,000 a year or less. These families include 8 million children.

For full employment and prosperity our economy should grow at a rate of 5 percent a year, but from 1953 through 1958 the annual rate of growth was closer to 1.5 percent.

The total production of goods and services in the United States may still seem far ahead of that of the Soviet Union; we are probably still producing a little more than twice as much as they are. But economic growth in the Soviet Union is advancing 4 or 5 times as fast as our lagging economy has grown in recent years. If both economies continue simply to grow at the same pace as since 1950, it will be a mere 17 or 18 years until Soviet production can match and surpass ours in volume, and from that point forward it is they who would threaten to take a commanding lead.

#### ACCELERATION OF PRODUCTIVITY

In a world full of poverty the level of unemployment of men and facilities in this country is criminal, but under present administration policies there is little ground for hope of improvement.

In the factories and on the farms, technology forges ahead-apparently at an everaccelerating rate. A recent study indicates that in 1910 the annual growth in productivity was 0.9 percent a year-by 1956 it was rising at a rate of 3.9 percent a year.

The steady decrease in the number of farmers marks the pace of change in agri-

In industry production has recovered 85 percent from the recession low, but jobs have

recovered by only 30 percent.

We are going to have to live with economic progress, with accelerating economic progress and like it. Most of us would like it, provided we do not end up at a sheriff's foreclosure sale, an eviction, or at the end of a soup line while the parade of leisure, security and plenty passes us by.

#### THE TWIN SCARECROWS OF SOCIALISM AND INFLATION

The administration, big business and finance contend that any attempt to adjust to abundance will lead to socialism, inflation, or both. We believe that adjustment to abundance is the surest insurance that free enterprise, independent business and family farm operators can find.

The kind of economic program essential to full employment and national security is not

a program of inflation.

The proper approach to a stable dollar, so the vested interests say, is a balanced budget. deflated farm prices, large scale unemployment of men and resources, lower taxes on the rich and their big corporations and a tight-money, high-interest-rate policy.

We are offered a choice between stagnation and inflation. This is no program for America-no program for the free world. It is economic nonsense.

The vested interests who rent out money and fix prices have a weakness for so-called stability, for high interest rates, for as little for the farmer as appears politically tolerable, and for enough unemployment to keep workers humble and obedient.

#### WHAT CAUSES INFLATION

The causes of inflation are not always the same. Inflation in time of war or revolution is one thing, but no such causes are available to alibi the inflation which President Eisenhower and his aids are using to defeat needed domestic, defense and international economic aid programs. The real origins of the current inflation are in monopoly administered prices and a crazy-quilt of Federal, State, and local taxes which press on consumption coupled with the stagnation of our economy which results inevitably from economic superstition and inaction.

Recently, an outstanding economist, Gardiner Means, pointed out that in the years 1953-58 if it had not been for the price increases by the great corporations dominant in steel, machinery, automobiles, rubber, mining and paper, there would have been no increase in the wholesale price index.

We have another recent example of the way in which prices can be administered by corporations who want the farmers to enjoy free competition. After taking competitive bids, the Tennessee Valley Authority awarded a contract to an English company for some generating equipment. General Electric and Westinghouse set up a howl about unfair foreign competition and high wages—the usual line of propaganda.

Investigation reveals that the lowest American bid, by Westinghouse, was 49 percent above the bid of the English company, in spite of the fact that the English company has to pay about \$1.7 million for import duty, freight and insurance costs.

Despite all the talk about jobs for American workers and high wages, the truth is that if American workers had been willing to work for nothing on this deal, Westinghouse would still have lost the contract by almost \$4 million. This is a good example of the way in which big corporations in this country play with prices that no longer make sense. They jeopardize consumption and economic development at home and abroad, but when faced with the final fruits of their price juggling and collaboration, the cor-porations try to hide behind the alleged high cost of labor.

PLANNING AND DEVELOPING PUBLIC RESOURCES AND SERVICES IS VITAL TO THE PUBLIC WEL-

In the back of the heads of the gentlemen of the administration there is the idea which in a nutshell holds that schools, roads, medical care, hospitals, parks for kids to play in, urban redevelopment, rural development, soil conservation, antiwater pollution, natural resources development and such public pro-

grams are luxury goods.

Some people are innocent victims of this kind of view. Recently a Senator said that he used to prove to foreign visitors that their prejudices against American capitalism were unfounded by challenging them to find a parking space for a car in New York's worst slums. I think the Senator is dead wrong. It is not enough that we should produce bigger, fancier, higher-finned gasoline eaters in spurts and jumps. We are going to have to learn to do enough social planning to provide parking space for them and we must produce the roads, bridges, homes, schools, parks and recreational facilities to go with them. The production of these things requires planning, a sense of public responsibility, and the levying and paying of taxes. But in the process of doing these things together we shall have larger and more reliable markets for all our output, industrial and agricultural.

A FEDERAL FARM PROGRAM FOR FARMERS

"The toad beneath the harrow knows exactly where each sharp tooth goes."

Labor believes that farmers know more

about their problems than the puffers, fiakers, and fakers, who have found their way into the high councils of the Department of Agriculture in recent years, like so many foxes guarding the henhouse.

The old agricultural program is in pretty sad shape after over 6 years of Mr. Benson's polishing it up with sludge and tuning the motor up with a sledge hammer. There is

much to be done.

Between the technological revolution that is hitting agriculture with ever-increasing force and the philosophy and program of the present administration, the doing is not going to be easy. Nor is the solution sim-ply a farm price program. It must be a broad program based on increased consumption of food by our own people who need more and better food and increased use of our surpluses to build a peaceful one world.

We need a carefully worked out system of

production payments.

We need a system of direct food distribution and/or a food-stamp program to in-crease purchasing power of the lower income

In the face of the waves of propaganda pouring out against a farm program, we must see that city people, particularly the poor who live crowded in the decayed centers of our cities, are not turned against a decent farm program. The key to such a program is along the lines suggested recently by Senators Douglas and Kerauver and some time ago by a fellow named Brannan.

Whatever program we adopt must be a program for abundance, to get away from the concept of the economic Neanderthals, those modern cave men who live in penthouses, who try to tell us that by some magical Madison Avenue abracadabra slogan all of us in town and country can learn to live better on less.

To achieve such a program we need and must have more cooperation between pro-gressive farmers and workers. We need clearing houses where representatives of farmers and workers and consumers can sit down together and discuss their problems to achieve mutual understanding and an end to divide and rule. We need such clearing houses up and down the line from Washington, D.C., to Springfield and Des Moines.

THE FAMILY FARM AND LABOR EXPLOITATION

I urge you most strongly to continue to lend your support to the idea of improving the wages and working conditions of hired farm workers. I know of nothing which would do more for the security of the family farmer than legal protection against the exploited labor of his big competitor.

Since 1942, the number of foreign workers on our farms has risen from zero to almost a half million—to the point where they make up more than half of all migratory farm-

workers. In 1910 hired farmworkers earned two-thirds as much as industrial workers per hour; today they earn only one-third as

I believe that the decline in the relative economic status of hired farm labor has a direct relationship to the status of the family farmer. Assuming a reasonable return for his investment and skill as an operator, sooner or later the family farmer will end up working for an hourly wage somewhere around that paid to hired farmworkers.

Family farmers cannot support their families on a 50- or 60-cent-per-hour return for their labor. In the present intense competition for survival in agriculture under Benson, only the big farms which employ foreign and migrant workers at such low wage levels can operate. Ending the ex-ploitation of hired farmworkers will give the family farmer a better chance to survive in competition with factory farms.

ABUNDANCE, FREEDOM, AND NATIONAL SECURITY

We cannot separate the task of operating a decent economy here at home from foreign problems. We cannot be stagnant at home and virile abroad. We have got to stop kidding ourselves that the great upheaval of the common people the world over can be stopped by monopolies or missiles.

It is 20 years since I first heard Jim Patton say: "The common people all over the world are marching, marching, marching and no

force on earth can stop them."

They are still marching, or stumbling or groping, but however you put it, they are on the move and we can either help them or stay comfortable and get run over. The propaganda of communism is spread most effectively with propaganda taught through a kind of universal braille system, the reading technique for the blind. There are many hundreds of millions of people who cannot read a word of Russian or Chinese or any other language, but they can read the message of communism by fingering the wrinkles on their own empty bellies or feeling the tightly stretched skin over the bellies of their starving children.

What do human dignity and freedom mean to the man whose belly aches with hunger or whose heart aches at the sound of his children crying for food?

Human freedom and human dignity and democracy are not the children of starvation or degradation. A man does not lift his eyes up to the stars when his feet drag with hunger or disease.

WORDS AND SLOGANS WON'T DO THE JOB

We play games with words, but in timeif we survive-we will learn that words alone will not do the job. Man does not seek abstractions like socialism, or capitalism, or communism, or corporate statism in any form. He gropes in the direction of a functional society of freemen where' he and the greatest possible number of people live in reasonable comfort and dignity and feel like whistling or singing when they arise in the morning, instead of looking forward to the day with dread and fear.

The creation of that kind of world is the

task before us.

# Higher Interest Rates and New Debt Limit To Pay Them

EXTENSION OF REMARKS

# HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent that a "Dutch Uncle" editorial from the Capital Times. of Madison, Wis., protesting indignantly the President's high interest rate request, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the RECORD, as follows:

From the Madison (Wis.) Capital Times, June 10, 1959]

HIGHER INTEREST RATES AND NEW DEBT LIMIT TO PAY THEM

Wisconsin Republicans, who went to their Green Bay convention last weekend to howl against "taxing and spending" and to praise President Eisenhower, have something to howl about.

The man they praised has asked Congress to adopt some measures that will mean more taxing and spending than is being done even now under the biggest peacetime budget in history. Here is what he requested Monday:

1. Removal of the 3¼ percent interest

celling on savings bonds.

2. Removal of the 4¼ percent interest limit on marketable bonds of more than 5 years maturity.

3. Lift the permanent ceiling on the national debt from \$283 billion to \$288 billion and increase the temporary limit from \$288 to \$295 billion.

The President's request will open the way for the Treasury to offer bonds at higher interest rates, meaning that interest rates will be increased throughout the entire economy. This is the "hard money" policy, the benefits of which go principally to the big moneylenders.

It not only means higher interest rates, it also means higher taxes. The higher in-terest rates mean a higher national debt, as the President indicates when he asks for a

boost in the debt limitation.
It means that additional billions will be needed to pay the increased interest on the

As matters stand today, the cost of financing the national debt takes more than 10 cents out of every tax dollar. Bond interest since 1952 has increased 46 percent. On short-term borrowing it has increased by 60 percent. If the President gets his way there will be further increases.

The result has been that the money lenders have had a windfall, the ordinary citizen is paying higher interest rates and higher debt costs. The tightening of credit has dis-couraged new business enterprises and contributed to unemployment.

If these manipulations had improved the market for Government bonds there would at least be one valid argument to excuse them. But in February of this year the Treasury increased interest rates as high as 4 percent to encourage acceptance of new bonds as replacements. Better than \$2 billion were unwanted.

In addition to playing havor with the economy, the tight money policy is ruining the market for Government bonds.

There is need here for a searching investigation by Congress.

# Cause of Inflation

EXTENSION OF REMARKS OF

# HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. YARBOROUGH. Mr. President, lately there has been much talk about inflation. Various groups warn of price risis on commodities and there has been much speculation as to the causes of inflation.

Mr. H. M. Baggarly, editor and publisher of the Tulia (Tex.) Herald, discusses this subject in an editorial. I believe his discussion brings out some points which should be taken into consideration in viewing this Nation's economic picture.

Mr. President, I ask unanimous consent to have prnted in the Appendix of the RECORD the editorial, entitled "Who's Responsible for Inflation," Which appeared in the Tulia Herald for June 4, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO'S RESPONSIBLE FOR INFLATION

Come the next few weeks and we will be reading much about negotiations between reading much about negotiations between the steel industry and labor. There will be talk of strikes—there may be strikes. Daily and weekly newspapers will accuse labor of being responsible for inflation and higher prices. Meanwhile, leaders in the automotive industry and the Farm Bureau will warn of higher prices for 1960 model automobiles if labor is grant a pay boost.

And smalltown folk will bemoan the fact that "labor is ruining the country."

And the vicious hate campaign will rage, aided and abetted by the steel oligopoly, the daily press, and those who want to be ruled over by big business.

We would not defend even the slightest labor abuse, corruption within some labor unions, greedy and arrogant labor officials who want much more than mere economic justice Labor in too many instances is just as arrogant, just as dishonest, just as hypocritical as those who produce Lifeline antilabor editorials, those who hide behind the cloaks of Christianity in order to coneeal their unholy greed and selfishness.

But we would look behind the half truths and falsehoods which are fed to us by the brainwashers and propagandists.

What is the underlying difficulty between stelworkers and the steel industry? Why are the steelworkers periodically wanting more

No doubt some have an insatiable desire for money-just like the big boys. They will never be satisfied with any wage. Some would kill the goose that laid the golden egg. But the vast majority of these men are honest, ordinary men who merely want to get along, who want to be able to feed, clothe, and provide the simple needs of their fami-Like all of us, they have been caught in inflation's squeeze. Their income's buying power has been shrinking-so they want more pay.

Rather than being the villains they are painted, they are men who know that while wages have gone up in the industry, profits have so far outdistanced them that you can hardly mention the two items in the same breath.

They know that fewer men are making more steel with the result that total labor costs have remained almost the same from 1952 to 1958. Of each sales dollar, labor cost the companies 42.1 cents in 1952 and 42.8 cents in 1958-virtually no material increase.

On the other hand, net profits have gone up 100 percent. The steel companies' own reports reveal a profit of \$143,678,740 in 1952, and a profit of \$301,558,231 in 1958-and the latter was a recession year.

By consistently raising prices all out of proportion to the wage increases granted to the steelworkers, the steel companies have benefited much more than the steelworkers when pay boosts were granted and the price of steel hiked.

Since 1946, for every dollar of wage increase, the steel industry has boosted prices

\$3.

More responsible for the inflationary spiral than the steelworkers have been the steel companies and their desire for exorbitant profits.

Swisher County farmers should have discovered these tricks long ago. They know how the farmer has been blamed for high food costs when, in reality, if the farmer donated his wheat and cotton to the manufacturers, the retail price would be only slightly lower than it is now.

"Inflation is immoral," shouts the daily

"If it is, why don't you condemn those primarily responsible for inflation?" we ask.

How many editorials have you read in daily papers which pointed out that exhorbitant profits of industry have even contributed to inflation?

You know the answer.

Little if any publicity is even given the announcement that Corporation A "last year rang up its largest net profit in the history of the company.

Such an announcement is usually justified with the retort, "There is nothing wrong with making a profit in our system of free enter-

On the other hand, how many editorials have been written blaming labor and the farmer for our high cost of living, for inflation?

## Tourist Attractions of Wisconsin

EXTENSION OF REMARKS OF

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. WILEY. Mr. President, from time to time I welcome the opportunity to point out the wide variety of attractions which Wisconsin's vacationland offers to tourists.

Annually, millions of people visit the scenic, historical cities, towns, and countrysides of our colorful Badger State.

Periodically, new attractions loom on the Wisconsin horizon for the tourist.

Recently, the Christian Monitor carried a detailed article entitled "Wisconsin Spotlights Historic Sites."

The article enumerates a number of the attractions in our Badgerland of particular interest to history-minded va-

In addition, a recent issue of the Chicago Daily Tribune carried an item entitled "Nature Ready for Wisconsin Tourist Rush." by Hal Foust, containing a brief résumé of a tour through a portion of our Wisconsin wonderland.

The expansion of tourism is not only in keeping with the need of our citizens to get better acquainted with America; but, also, it is becoming of greater economic importance to our States and the Nation.

I ask unanimous consent to have printed in the Appendix of the RECORD the articles I have mentioned.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor] WISCONSIN SPOTLIGHTS HISTORIC SITES

Madison, Wis .- New attractions loom on the Wisconsin horizon this season for the history-minded tourist, the State Historical Society of Wisconsin announces. The society operates Wisconsin's big three historic sites and July 1 will open a fourth attraction, the new Circus World Museum at Baraboo.

At Prairie du Chien, the picturesque Mississippi River town, the great oak doors of Villa Louis have swung open again to welcome historic sightseers. The villa is an elegant Victorian mansion built in 1843 by a famed fur trader Hercules Dousman.

New this season is the Brisbois House, & fine old residence which opened in conjunction with Villa Louis. Brisbois House, one of the oldest stone homes in Wisconsin was the family residence of Michael Brisbois, fur trader and general merchant, and one of Prairie du Chien's first permanent settlers.

One of Brisbois House's unusual features is a subcellar, dug out beneath the regular basement, which Brisbois used as a storage area for the beaver pelts and furs of his business.

Combined tours of the famed Villa Louis and its grounds and Brisbois House will be offered at reduced rates. Tours are conducted by guards in colorful period costume.

Less than 35 miles from Prairie du Chien the traveler will find another historic site in beautiful Nelson Dewey State Park. The Stonefield Farm and Craft Museum are a center of pioneer and agricultural history. with hundreds of fascinating exhibits telling the story of middle western settlement and progress.

The museum is housed in a great stone barn and in addition to its displays of implements, coaches, and tools, offers full-scale model shops of early craftsmen.

Tours of the Stonefield site include a visit to the red brick home of Nelson Dewey. Wisconsin's first Governor. Picnic facilities are available on the bluffs which overlook this popular State park and museum in southwestern Wisconsin.

Old Wade House, a charming 19th century stagecoach inn, will attract tourists heading for Wisconsin's Door County Pen-insula and the Lake Michigan shore parks and resorts. Located halfway between Fond du Lac and Sheboygan, at Greenbush, Old Wade House is an increasingly popular stop for the history-minded traveler.

[From the Chicago Daily Tribune]
Nature Ready for Wisconsin Tourist Rush—
And the Resort Owners Aren't Napping

(By Hal Foust)

A moist spring has dressed Wisconsin resort areas in lush greenery. Nature has done its share in readying the wooded lakelands for the swarm of summer vacationists when Chicago schools close June 26.

Food and lodging establishments are being cleaned and painted. Roadside attractions are being refurbished. Tourist entertainment is a major Wisconsin industry, variously estimated at \$250 to \$500 million

year.

We drove to Wisconsin Dells this week. Winnebago Indians in blue jeans, were repairing the stage of their amphitheater in the sandstone bluffs of the Wisconsin River where they will stage ceremonials nightly, beginning June 20.

THREE-HUNDRED AND FIFTY THOUSAND-DOLLAR PROJECT RISING

Nearby, two log blockhouses were rising on an 11-acre site as part of a \$350,000 tourist attraction with the Wisconsin Alumni Research Foundation owning 51 percent of the stock.

The Wisconsin Dells, population 1,957, has been a resort since before the Civil War. The chamber of commerce estimates that the motels, hotels, and lodges can sleep 10,000 visitors.

The sheer bluffs along the Wisconsin River are majestic. They were carved by glacier waters in the sandstone of a preglacier sea.

USE TWO TYPES OF ROADS

In driving to the Dells, we took Illinois tollways to a point near Beloit. The return trip was on conventional roads, an alternative route recommended by the Chicago Motor Club—U.S. Highways 16 to Portage, 51 to Madison, and 12 to Chicago.

The toll route costing \$1.35, was 12 miles farther and about 1 hour and 15 minutes faster. Not counting side trips and stops, we drove the 211 miles, including 76 miles of tollway, in 4 hours and 10 minutes. The return, 199 miles, took 5 hours and 25 minutes, not including several stops.

utes, not including several stops.

North of Beloit, on Wisconsin Highway 13, the change of pace was a pleasant change. We returned to the countryside, on a road winding through gentle hills of a dairy coun-

try. This road bypasses Madison.

#### SEE OLD BATTLEGROUND

Approaching Sauk City, we turned off the roadway to read a historical marker. A forested hill a mile to the southwest was identified as the heights where Black Hawk, with 50 warriors, held off 1,000 troops under Gen. J. D. Henry in a rainstorm on July 2, 1832, while the retreating Sauk and Fox, including their old men, women, and children, forded the Wisconsin River.

Jefferson Davis, then a lieutenant, later wrote of Black Hawk's feat: "Had it been performed by white men, it would have been immortalized as one of the most splendid achievements in military history." Twelve days later, the troops slaughtered the Indians as they tried to cross the Mississippi River.

All this is told on a signboard. These Wisconsin historical signs, improved in the last couple of years with parking space for their reading, contribute much to the pleasure touring.

### CIRCUS HISTORY UNFOLDS

At Baraboo we read of the Ringling brothers starting a circus menagerie there in 1876 with a hyena billed as "The hideous hyena, striata gigantia, the mammoth midnight marauding man-eating monstrosity." The circus museum in Baraboo reopens July 1.

On the return drive, we found that a marble monument near Portage lacks a turn-

out for those who would read that Marquette and Jollet entered the Wisconsin River there on June 14, 1673, en route to discovering the Mississippi.

Southbound on U.S. Highway 51 we drove through more rolling meadows and wooded hills with big barns and silos. Bypassing Madison again, we headed home on narrow, meandering U.S. Highway 12 which serves many tree-shaded old communities—Fort Atkinson, Whitewater, and Elkhorn—and then traverses the resort areas of Lake Geneva and Fox Lake.

### Poison in Your Water-No. 113

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in the Baton Rouge (La.) Advocate of April 23, 1959, entitled "Sewer Program Holds Solution to City-Parish Health Problem":

THROUGH BEITER SANITATION—SEWER PRO-GRAM HOLDS SOLUTION TO CITY-PARISH HEALTH PROBLEM

#### (By Jim Hughes)

The most urgent problem that city-parish officials say can be solved with the proposed \$21 million sanitary sewerage program is one of public health.

Briefly, the problem arises from the fact that almost half, 47 percent in exact terms, of the present city is without sanitary sewerage and the vast bulk of the heavily populated suburban area is as bad off or worse.

The local government's proposed solution to this problem will be submitted to a vote of the taxpayers on May 19 in the form of a system of trunklines which will make sanitary sewerage available to 85 percent of the total parish population inhabiting about 27 percent of the total parish area.

The public health problem is one or urgency, officials say, because it is not confined to any one area. Almost every part of the city and the suburban area is exposed to only partially treated sewer effluent. That is the case in the city, for example, because the sewage from unsewered areas is emptied into open ditches and canals which in turn run through almost every part of the city. Sewage from septic tanks (which are considered only 75 percent effective) and in some instances untreated sewage is emptied in Monte Sano Bayou, the Knox Canal and the Corporation Canal, to name a few of the larger ones. Countless small roadside ditches and larger drainage ditches carry effluent from individual septic tanks and from entire subdivisions.

#### CITY, PARISH ALIKE

In the suburban area the problem is no less urgent. Although many of the new subdivisions have sewer collection lines, these dump into roadside ditches and creeks and bayous which carry the bacteria-laden material the length of the parish.

Even if this sewage were confined to the ditches and canals at all times, the problem would still be bad. But, the fact is that during heavy rains when water rises—as it often does in Baton Rouge—the ditches and canals overflow and the sewage is spread over wide areas, many of them residential.

A health unit study of certain areas in which most of the sewage is in open ditches revealed that 41 percent of the school children have parasites or worms \* \* \* possibly as a result of conditions arising from the open ditches. More specifically, flies, mosquitoes and other insect carriers thrive in areas in which the sewage is in open ditches.

#### OTHER PROBLEMS

Other than the health problem and the pure unpleasantness which acompany sewage in open ditches, officials say, are problems which are directly related to this lack of sanitary sewers.

Among them is the fact that the sewage promotes growth of weeds and thus prevents drainage facilities from operating at peak performance. Aside from this, the constant growth in the ditches increases greatly the cost of maintaining the storm drainage facilities.

Officials contend that before either local or major drainage problems can be properly solved, the sewage must be separated from storm drainage.

And, in addition to all of this, it is simply not good that out-houses or privies are visible along parts of Acadian Thruway, one of the few good streets in the city.

According to the master plan for sanitary sewage, on which the proposed \$21 million program is based, there is a point in the population density of a community at which sanitary sewage facilities are warranted or

even mandatory.

"As a general rule," the report states, "when the average density of population in an area reaches 2½ persons per acre, a public sewer system is warranted; when the density reaches five persons per acre, a sewer system is necessary: and when the density reaches 10 persons per acre, a sewer system is mandatory. It is not advisable to wait until these densities are reached before putting in the system of public sewers, because the development of roads, structures and public utilities will make is increasingly difficult and costly to provide the sewers at a later date. Consequently, it is common good practice to install the public sewer system in advance of, or concurrent with development.

"In some parts of the area under study

"In some parts of the area under study (the consolidated district) the installation of sanitary sewers has already been delayed much too long, and a certain amount of extra expense must be anticipated. However, a great deal of the area ripe for development has not progressed so far as to hinder the installation of this sewer system. The installation of sewage facilities should encourage the development of the closer in undeveloped area."

# Waste of Water

EXTENSION OF REMARKS

# HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Friday, June 12, 1959

Mr. YARBOROUGH. Mr. President, it is a well-known fact that wasting abundance can quickly create a shortage. That can well be the case with this Nation's water supply.

The supply of water is already becoming short in many areas, notably in parts of my native Southwest.

Congressional committees are considering requests from a number of citizens' groups throughout the country for assistance in projects which would help in

flood control and also provide more water conservation.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial from the Saturday Evening Post for June 6, 1959, entitled "Waste of Water Can Lead to Real Trouble for United States of America."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WASTE OF WATER CAN LEAD TO REAL TROUBLE FOR UNITED STATES OF AMERICA

Every day the volume of water required by the American standard of living is climbing.

Yet water continues to be our most wasted product—through preventable floods, stream pollution, and failure to level out the periods of surplus and shortage by intelligent storage. The latest warning comes from Maj. Gen. E. C. Itschner, Chief of the U.S. Army Corps of Engineers. He told the Mississippi Valley Association that "We must overhaul our entire concept of water-resources programs and the way we go about carrying them out. If we do not we shall find unnecessarily low ceilings on our growth caused by a lack of water."

A sound and up-to-date water-resources development program for each river basin was described by the general as a prerequisite. These would be based on comprehensive surveys by the Federal agencies concerned, in cooperation with the States and local governments.

One angle of General Itschner's warning particularly stands out. "Reservoirs," he said, "are the key to the future adequacy of water supply for all purposes. As an example, our preliminary studies indicate that by 1980 we shall need almost double the storage now available or under construction for the Mississippi and its tributaries, for flood control, low flow regulation and water supply.

"But we face a critical problem of reservoir sites. Good locations for major impoundments are already being lost at an alarming rate as improvements of one kind or another—industrial plants, housing projects, highways, public utilities and other facilities—are built in the very places reservoirs should be located."

Some foresighted action to save necessary reservoir sites would seem to be in order, not to mention reforestation programs designed to protect the natural reservoir for water—the earth itself.

Cars, Cows, and Highways

EXTENSION OF REMARKS

# HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. CASE of South Dakota. Mr. President, I wish to make an insertion in the Appendix of the Record; and I desire to submit it in connection with the following remarks.

It is a great tonic to rub shoulders with the self-reliant men and women who comprise the South Dakota Stock Growers Association. I had that privilege last week.

Their annual convention was marked by many useful sessions devoted to round-table discussions, as well as some great addresses. One of those was given by our distinguished colleague from Arizona, [Mr. Goldwater]. It was given from notes, and it was partly extemporaneous, A copy is not available.

Another was given by Ellis L. Armstrong, Commissioner of the Bureau of Public Roads. I am pleased to offer it for the Record; and I ask unanimous consent to have it printed in the Appendix.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

### CARS, COWS, AND HIGHWAYS

(Address by Ellis L. Armstrong, Commissioner, Eureau of Public Roads, U.S. Department of Commerce, at the 68th annual convention of the South Dakota Stock Growers Association, Rapid City, S. Dak., June 4, 1959)

Nowhere in this wonderful country of ours will you find firmer faith in personal liberty than in the Great Plains. And among these hearty, freedomloving people no group upholds that tradition more strongly than our ranchers and stock raisers.

Down through history transportation and civilization have moved together. From our early colonial days when roads were mere tracks through the wilderness, the Nation's most famous pioneers were trail blazers—men and women with the vision and courage to strike out into the unknown and conquer a continent.

This western region wrote its share of rugged transportation history, including the great boom period that followed the discovery of gold in 1874. Railroads had reached the Missouri River by 1880, but commerce to the West was still carried on by stagecoach and ox train.

To the east, road mileage had increased tremendously but these were chiefly dirt roads. In the entire country less than 100,000 miles of highway had all-weather surfaces by 1890.

It was the coming of the horseless carriage in 1893 that gave roads and streets a new meaning. First regarded as a freak or rich man's plaything, motor vehicles have become the most dynamic ingredient in what we like to call our "Miracle of America."

Because this region has contributed so much to our way of life, I welcome the opportunity to talk with South Dakota's stockgrowers about cars, cows, and high-

#### TWO APPROACHES SEEN

Two approaches suggest themselves, State and national. Let's take the national scene first. Broad strokes are needed but the general picture is clear, quite clear. In recent months I have seen it at firsthand, driving across this fabulous land of ours. Highway transportation has become one of the dominant elements of American life.

Whether we are talking the dollars and cents of economic opportunity or the transportation needs of national defense, whether we are discussing improved facilities for education and recreation or the cares and joys of day-to-day living, motor vehicles and highway transport are all important.

That is why the vast new road program, with its long-range plan for the National System of Interstate and Defense Highways is both the largest and the most significant peacetime public works program ever undertaken. Ours has always been a land of opportunity, but this new measure bids fair to open more doors for business, industrial and agricultural development than any event in our recent history—it is pioneering on the grand scale.

#### LOOKING AHEAD

This 13- to 16-year program for a 41,000-mile Interstate System launched by the

Federal-Aid Highway Act of 1956, and further strengthened by the 1958 act, authorized some \$25.6 billion of Federal aid on a 90-10 matching basis with the States.

Moreover, this nationwide network is designed to provide a highway system that is fully in line with present day demands and also reckons with future traffic needs. We are looking ahead to 1975 when over 100 million cars, trucks, and buses are anticipated, compared with 68 million in use today.

Measured in distance the Interstate System includes only 1.2 percent of our total road and street mileage but we expect it to carry 20 percent of all traffic and pass through 37 percent of the counties in the Nation. Over half of the U.S. population lives in these same counties and they market nearly half of all farm products sold.

Design standards and other features of the great trunk lines are in keeping with the long-range functions of the system:

 To interconnect commercial and industrial centers from coast to coast.

 To serve the multiple needs of highway users in thousands of communities adjacent to these highways—many of them entirely dependent upon motor vehicles for their basic transport.

3. To facilitate cheaper, swifter, more efficient movement of agricultural products. 4. Through interconnections and inter-

 Through interconnections and interchanges to bring town and country closer together.

Still keeping the national picture in mind, well over half of our total tonnage of agricultural products now moves by highway- for animals and animal products the figure is about 75 percent. Today our farmers—and ranchers, drive more than 4½ million cars and nearly 3 million trucks. This free-dom of movement, this constantly improving access to markets, has helped to increase the overall efficiency of farm and ranch production and that process will accelerate under the new highway program.

#### SOUTH DAKOTA ON MAIN LINE

The Interstate System routes in the Great Plains put both South Dakota and this West River country on the main line, so to say, of an ever-growing transcontinental traffic stream. You cannot be sidetracked as you were to some extent by the railroads. Surely people with the vision and the ploneering spirit which discovered and developed this region will be quick to grasp the tremendous significance of the interstate network.

I do not hesitate to compare it with the possibilities that were opened up in another era when the great cattle drives swung north from Texas along the Chisholm Trail. Those were thrilling and romantic days, they still beckon to us, but aside from the gunplay and tall tales, the cow towns and the necktie parties, millions of cattle and horses were moved northward over this same trail. By 1888 some 950,000 Texas longhorns were grazing in this territory. Stockmen were in search of better markets for their cattle and distance did not stop them. Driven by pointers, flankers, and trailers, the herds varied from a few hundred to several thousand head and made perhaps 8 to 12 miles in a day's drive between watering places.

The great days of the trail herds were over before South Dakota became a State in 1889, but this means of transportation persisted for a long time.

In fact, as a youngster on a ranch in southern Utah, the high points of each year were the drive in the spring of our cattle to the high mountain summer range, and the roundup in the fall and moving the cattle back to the valley. Those were great days.

I have no figure on the losses that those oldtime cattle drives involved, but I do know what better highway transportation

can mean to present day stockmen and ranchers. Generally speaking, before Fed-eral aid, which began in 1916, roads in the cattle country were mostly trails, difficult to haul over in many localities. Truck movement was slow and often uncertain, heavy loads were difficult or impossible to handle. Driving cattle to distaint rail heads involved considerable loss of time and

#### PRIMARY, SECONDARY PROGRAMS

Apart from the interstate, the regular Federal-aid programs for primary and secondary roads are changing that picture by providing improved access to markets and to sources of ranch supplies and services.

I intend to discuss the situation in the West River country, but first let me remind you again that the interstate network will tie this whole Nation's economy closer together. South Dakota's wheat, its "corn on the hoof," will find new and wider markets as better highways and expressways are

A basic feature of the Federal-Aid Highway Act of 1956 deals with planned, controlled access on this vital interstate network. Many competent observers call the controlled access throughway the greatest advance in highway building since the all-Weather suface replaced the dirt road. The Bureau of Public Roads strongly supports controlled access on main traveled routes, but I also want to remind you that this feature and other design standards for the Interstate System were developed, approved, and adopted by the American Association of State Highway Officials after careful and prolonged study.

#### IMPROVED SAFETY

Again for the record, let me say that controlled access, which is so essential to preserve the long-time capacity of our great trunk-line routes, means that vehicles may enter or leave the expressway only at care fully planned interchanges. There will be no random, haphazard movements, no cars cutting in and out of the traffic-stream from side roads, businesses, homes, and driveways. Traffic flow will be safer, faster, more efficient, and more economical. Experience has shown that these planned access highways cut death and accident rates at least in half. On rural roads alone the death toll is reduced by two-thirds—and on some of the new routes reductions of five-sixths have been established.

Since the cost of highway accidents, including property damage, wage loss, and medical expense, may average up to 1 cent per mile traveled, equivalent to 12½ cents for each gallon of gasoline consumed on the highways, it is obvious that access control is a paying proposition.

The safety factor alone should be decisive, but there are other economic factors as well. Studies have shown that well designed, freeflowing expressways will save the average motorist up to 4 cents a mile traveled as compared to regular city streets. For trucks, of course, the mileage cost differential would be even more favorable, depending upon the vehicle size and weight.

#### EXPANDED MARKETS

Because better highways do contribute so much to the overall growth of our economy, we are assured that the new program will bring large and lasting returns, north and south, from coast to coast. By making the entire country a bigger market, your own market is increased as well.

Against this broad and very favorable background, let's look directly at the highway situation in South Dakota and here

in the West River country.

As of January 1, 1958, Federal-aid highways in South Dakota totaled 17,953 miles.

The Interstate System numbered 679 miles, the primary (including the interstate) 6,069 and the secondary system 11,884 miles. For the fiscal year 1957 through 1960 Federal-aid authorizations for all streets and highways exceeded \$116.5 million. The approximate breakdown by systems is:

Primary	\$26, 400, 000
Secondary	18, 900, 000
Urban	1,870,000
Interstate	69, 400, 000

The spectacular nature of the Interstate program has caught public attention, but it is obvious from these figures that the new program is well balanced indeed.

#### BALANCE IS ESSENTIAL

This is essential, of course, for the traffic which uses our main highways is largely generated on local and State roads. Apart from long-distance through traffic, the cars and trucks which travel on South Dakota's Interstate System will be moving to and from farms and ranches, small communities and towns near and far. The planning and improvements that go into these interconnecting and feeder roads are vitally important. In a very real sense these roads and the interchanges that connect or link them with the Interstate System will have a longtime influence on your commerce, your industy, and your agriculture. Vision and cooperation will be needed on the part of highway engineers, and other officials, as well as businessmen, farmers, and ranchers.

I understand that the West River country now supports more than 1,200,000 head of cattle, 116,000 hogs, and 768,000 sheep. Obviously you need improved roads and highways to move your livestock to market, shift them from range to range, and finally to seek more distant markets.

Though it is probable that better roads will lead ranchers to do more finishing off on the ranch, a heavy volume of your livestock from this area is going to end up in feeding lots in eastern South Dakota and Iowa. Since most of this transportation will be by truck, it is obvious that at least a part of the several dollars saved per trip will show up in better prices paid for your cattle.

### CATTLE-PASS PROBLEM

Like all great undertakings the new program has presented its own special problems—here in the West, cattle-pass construc-tion is one of them. This is not a new problem but the interstate program with its emphasis on access control has put this matter in a new light.

In reconciling the legitimate need for cattle-pass structures with the congressional mandate to provide planned access on all Interstate System routes, two fundamental considerations face both the Bureau of Public Roads and our State highway depart-

1. What circumstances of land severance, ownership and use, warrant building a stock pass or combination machinery stock pass? 2. What size structure is required?

Generally speaking, a pass is warranted where the highway so divides a property that the cost of an adequate structure does not exceed the severance damages which would be assessed if the structure were not built. Structures also may be varranted in places

where custom has created a legal obligation to keep a stock-drive corridor open for public use. And in open range country in the public domain structures may be warranted as a matter of public policy where neither severance damages nor other direct justification can be established.

Structure size will present problems but is certainly an obligation of our State highway departments to keep cattle or machinery passes down to the minimum which

will serve the purpose. For most small herds a 5- by 7-foot opening will do the trick. The 14-foot AASHO vehicle clearances, vertical lateral, can serve as useful limits in many cases involving machinery or combination

#### SEVERENCE DAMAGES

Now a word about the Bureau's position on severance damages. Practically all of the issues here turn upon some question of value. Actually, as the courts have pointed out re-peatedly, we are involved with the concept of fair market value. And the courts have left no doubt that they mean what a willing buyer will pay a willing seller, neither party acting under duress or pressure and having a reasonable time to make a trade.

In this situation, the Bureau's role is to make a before-and-after appraisal to determine the fair market value of:

- 1. The land before right-of-way or other taking.
- 2. The property left after the taking.
  3. The strip of land taken for right-ofway or other purpose.

In each instance it is the fair market value as determined by the above court concept—willing buyer, willing seller—which governs the estimate of damages.

And I might say that this value concept will and must take into account the effect of cutting through a farm or ranch, just as the appraisal must reckon with such items as interference with cattle drifting to a more favorable range.

The Bureau of Public Roads is in accord with this fair market value approach, but let me emphasize that it is the courts which laid down this policy.

#### PROGRAM ON SCHEDULE

And now suppose we turn to the national scene again, for a progress report. Nearly 3 years after passage of the 1956 act, the whole broad program of Federal aid is on schedule.

For the entire period from July 1, 1956, to the present, construction has been completed on over 73,000 miles of Federal-aid highways—interstate, primary, farm-to-market roads and urban extensions. Con-struction work included some 14,500 new bridges and the total cost exceeded \$5

Today across America our highway contractors, nearly 6,000 strong, are at work on some 20,000 Federal-aid contracts. They are building or improving over 32,000 miles of roadway and 10,000 bridges having a total cost of nearly \$7.2 billion.

For the Interstate System since July 1, 1956, projects costing more than \$1.1 billion were completed. This work involved improvements on 3,700 miles of superhighways. Constructi on was underway or advertised on an additional 5,100 miles.

#### SOUTH DAKOTA PROGRESS

Construction has been completed on over 100 miles of the Interstate System in South Dakota, and construction is underway on another 60 miles. For the regular ABC program-primary, secondary, and urban extensions-some 625 miles had been completed under the new program, and construction is going forward on over 550 miles.

A few moments ago I pointed out that South Dakota is on the main line of a transcontinental traffic stream that is destined to increase tremendously in the years ahead. Actually South Dakota has two such Interstate routes-Route 90 east and west from Rapid City to Sioux Falls and points beyond, and Route 29 north and south from the Canadian border through Fargo, Sloux Falls, and Sioux City to Kansas City.

Thus as the Interstate program moves ahead, South Dakota and the West River country will be linked closer and closer to the rest of the Nation-its markets and business and industrial centers. Your famous Black Hills and other renowned tourist and recreational areas will be brought nearer to sil America. Your people will share in-creasingly in the better, fuller life that is the manifest destiny of this great country. Cars and cows and highways will continue to be most important to all of us across America.

The Parker Lynching Case

EXTENSION OF REMARKS OF

# HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. LAUSCHE. Mr. President, I have received a copy of a letter from Perry B. Jackson, judge, Cleveland municipal court, addressed to the Attorney General of the United States, in which is raised the subject of jurisdictional authority relative to the Parker lynching case.

As a result of this interchange of correspondence. I have written to the Honorable William P. Rogers, the Attorney General, and quoted from the letter of Judge Jackson.

Mr. President, I ask unanimous consent to have my letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD,

JUNE 11, 1959.

The Honorable William P. Rogeas, Attorney General of the United States Department of Justice, Washington, D.C.
DEAR Mr. ROGERS: On June 6 there came

to my office a copy of a letter dated June 4 addressed to you by Perry B. Jackson, a judge of the Cleveland Municipal Court. The subject of the letter is the Parker lynching case in Mississippi.

Judge Jackson discusses an article which appeared in the February 1943 issue of the washington University Law Quarterly, under the title: "The Federal Civil Right 'Not To Be Lynched." He states that the author of the article was Victor W. Rothnam, who, in February 1943, was the Chief of the Justice Department's Civil Rights Section.

Judge Jackson obviously is of the opinion, based upon the Rothnam article, that the Federal Government does have criminal jurisdiction in the Parker lynching case under section 19 of the United States Criminal Code, which reads as follows:

"If two or more persons conspire to infure, oppress, threaten, or intimidate any citizen in the free exercise or enjoyment of any right or privilege secured to him by the Constitution or laws of the United States, or because of his having exercised the same, or if two or more persons go in disguise upon the highway, or on the premises of another, with intent to prevent or hinder his free exercise or enjoyment of any right or privilege so secured, they shall be fined not more than \$5,000 and imprisoned not more than 10 years, and shall moreover be thereafter ineligible to any office or place of honor, profit, or trust created by the Constitution or laws of the United States."

Applying my knowledge, without the aid of interpretations which might have been made by the Federal courts on the meaning of section 19, my opinion is that there is merit to the suggestion made by Judge Jackson.

It does seem to me that for the good of the Nation, and primarily in furtherance of justice, regardless of what is done by the criminal law-enforcement agencies and by the courts of Mississippi with the perpetrators of Parker's death, there rests with the Department of Justice the solemn responsibility to set into operation the machinery for the enforcement of criminal justice, providing, of course, that the evidence discovered by the Federal Bureau of Investigation establishes the probable identity and guilt of the persons who, in a lynching, took the life of Mr. Parker,

Sincerely yours, FRANK J. LAUSCHE.

Honor the Flag

EXTENSION OF REMARKS OF

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very appropriate, most timely, and highly interesting editorial which appeared in the National Tribune-Stars and Stripes:

#### HONOR THE FLAG

June 14, next Sunday, is Flag Day. that day veterans and civic organizations join with other patriotic groups throughout the land to pay homage to Old Glory which, since its adoption as the standard of our Nation in 1777 has been a symbol of independence not only to our own citizens but to all the freedom-loving people of the world.

The story of the development of our national emblem is an interesting one. By the mid-1700's the colonists were beginning to chafe under the oppressive and tyrannous

rule of their masters in Britain.

This spirit of rebellion was evidenced by banners displayed in many of the colonies expressing repugnance to anything which denied the freedom which they had come to the new land to seek.

By the time of the Declaration of Independence standards had sprung up in various parts of the country including the famous "Don't Tread on Me" banner, the "Appeal to Reason" and the Moultrie "Lib-" flag which rallied the defenders of Charleston, S.C.

The Bunker Hill flag was a blue banner with a white canton filled with a red cross and a small green pine. Rhode Island's banner bore a blue anchor under the word "Hope" and the Green Mountain Boys of Vermont carried a flag similar to the Stars and Stripes at the Battle of Bennington in

When Washington took command of the Continental Army at Cambridge, Mass., in 1776 he stood under "The Grand Union Flag" which still bore the crosses of St. George for England and St. Andrew for Scot-

The Continental Congress created the first Stars and Stripes on June 14, 1777 with its 13 stripes and 13 stars indicating the colonies which had joined together in their battle for freedom. This was a wise choice as it signified the unity of the colonies and its development from that time on with the addition of a new star for every new State of the Union continues to signify that same unity to all the land and all the world.

Since the creation of the Star Spangled Banner it has found its way to all portions of the globe. The North and South Poles know Old Glory and the nations of the world know it, too, in war and in peace.

It has always stood for freedom and a warning to any aggressors that the people of our country are ready to detend it at all times. It also stands as a beacon to guide the oppressed in other parts of the world toward peace and independence-a token of goodwill to all who have looked upon it.

At this very moment the United States is beset with many difficult problems, involving even the threat of a terrible war, but through all these difficulties and threats our standard waves on bravely, the outward sign of the inward devotion which exists deep in the

hearts of every true citizen of our Nation. This flag of our is very dear to us and it is quite fitting that a certain day should be set apart for its display and honor. This feeling for the flag is evidenced not only on Flag Day but on all other patroltic occasions when the householders of our land, by the hundreds of thousands raise it in front of their homes to show their devotion to the principles for which it stands.

While it is true that as individuals we have a certain diffidence in displaying emotions which might smack of patriotism for fear of being criticized, the fact remains that all honest citizens of our Republic do feel a thrill at sight of Old Glory as it passes by in a parade and in a quiet way salute it both outwardly and inwardly.

It has a deep meaning to most of us and we trust that this devotion will ever remain with us. We are certain that it will and that the realization of the lives of brave men and women which have been sacrificed to defend the flag will increase our patriotic affection for all the flag means.

The cartoon which appears at the head of this editorial shows all branches of the armed services standing at attention before our flag. These men know the true meaning of the national emblem and should serve as an example of the deep respect and honor which should be inherent in all of us and that we should be ever willing to show the respect and honor which is due such a symbol of our country's desire to maintain our own freedom and our willingness to share with all the world the wish for peace which is upper-most in the hearts of all mankind.

As George M. Cohan, a truly American composer and playwright, himself born on the Fourth of July, once wrote:

It's a grand old flag, it's a high-flying flag, And forever in peace may it wave,"

but whether it waves in peace or war may it always be respected and honored by every citizen as the outward sign of the spirit of independence and peace which marked its birth so many years ago.

As a symbol of the United States, standing for our heritage of liberty and justice, the flag is naturally held in honor and esteem.

If we here today can only be imbued with the same feelings which filled the hearts of our Founding Fathers then we shall always be certain that Old Glory will never lose its meaning and will continue to be an inspiration to all of us and a guide to all that we, as a nation, hold dear.

Public Works Appropriations Act of 1950

EXTENSION OF REMARKS

# HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. OSMERS. Mr. Speaker, under unanimous consent, I wish to have a letter to me from the Office of the Legislative Counsel, dated June 8, 1959,

printed in full in the Appendix of the RECORD.

House of Representatives, U.S., Office of the Legislative Counsel, Washington, D.C., June 8, 1959.

Hon. Frank C. Osmens, Jr., House of Representatives, Washington, D.C.

DEAR MR. OSMERS: I wish to apologize to you for having drafted in such form as to be subject to a point of order an amend-ment which, on June 4, 1959, you requested be prepared as soon as possible (and if possible by the afternoon of June 4) to H.R. 7509, the Public Works Appropriation Act, The amendment was designed to provide \$50,000 for the authorized survey of the New Jersey meadowlands. The amendment was delivered to your staff on June 4; however, as a result of its being drafted as an amendment to the wrong paragraph of the bill, a point of order made against it was sustained, and no vote was had on the amendment. I regret that my error contributed to your amendment not being con-Sidered.

Respectfully submitted.

JAMES M. MENGER, Jr., Assistant Counsel.

# Functioning of Our Courts-Address by Ross L. Malone

EXTENSION OF REMARKS

### HON, FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. CARLSON. Mr. President, Mr. Ross L. Malone, president of the American Bar Association, spoke at the annual meeting of the Bar Association of the State of Kansas, on the second celebration of Law Day, which was held at Hutchinson, Kans., on May 8, and delivered an excellent address on the functioning of our courts.

I ask unanimous consent that the address be made a part of these remarks and be printed in the Appendix of the Record

There being no objection, the address. Was ordered to be printed in the RECORD, as follows:

# FUNCTIONING OF OUR COURTS (By Ross L. Malone)

The second celebration of Law Day, U.S.A., which occurred one week ago today was a tremendous success and exceeded all of our expectations. The 1,400 State and local bar associations throughout the United States Joined in what undoubtedly was the greatest single coordinated effort of the legal profession in the history of the country in making possible the success of the observance.

The participation of the press, radio, television and other media of public information was a major factor in the success of the celebration, as was the cooperation of our schools and educational institutions, I am happy to acknowledge the debt of gratitude owed by the American Bar Association to all of them.

The observances ranged from a message from the President of the United States, a national broadcast by Judge Learned Hand and speeches by Justices of the Supreme Court of the United States, to the dedica-

tion of a plaque to commemorate the location of Mark Twain's father's law office in Hannibal, Mo. It included literally thousands of addresses by lawyers to school assemblies and civic clubs, special courtroom ceremonies, and every other type of observance which the ingenuity of our profession could provide. In Dallas, Tex., I learned of a unique plan whereby lawyers taught the classes in civics and government in the high schools on Law Day.

All of these ceremonies were directed to an increased appreciation and understanding on the part of the public of the place of law in our lives and the importance of our system of justice as an institution of government. Indications are that no less than 30,000 individual events occurred throughout the United States in celebration of Law Day. I doubt that there is any other such day, commemorated nationally, which has had a greater impact upon the American people.

During the last 8 months I have talked to many, many people, ranging from the President of the United States, the presidents of mational television networks, and national publishers, down to men on the street, about Law Day and the appropriate celebration of it. I have been impressed by the enthusiasm of all of these people for the basic philosophy of Law Day and their very real interest in contributing to effective observance of the occasion.

None of the people to whom I refer was a lawyer. It would not have been surprising if some of them had been under the misconception that on May I were were celebrating "Lawyers' Day" rather than Law Day. I encountered no such misapprehension. It is a great tribute to the legal profession that the perversion which might result in such misapprehension has not occurred. Should the profession ever undertake to appropriate Law Day to its own use and benefit, it will have become "Lawyers' Day" and will have lost its significance so far as the country at large is concerned. I am confident that will not occur.

As Law Day, it is significant, not only to lawyers but to all of the people of our great Nation. Why is that so? What is it about the place of law in our lives that commands the respect and interest of the public generally? The answer seems clear to me. There is a personal relationship between every citizen of the United States and the law. Whether or not he has ever had to have recourse to it, he consciously or subconsciously recognizes the law, and the courts which administer it, as his final hope for the vindication of his individual rights as a citizen.

He may have the utmost confidence in the President and the executive branch of the Government. He may feel that the legislative branch should be paramount because it reflects the views and wishes of the majority of our citizens and is responsive to them through the elective process. Nonetheless, he realizes that it is to the judicial branch of the Government he will turn, in the final analysis, for the protection of his rights, whoever may threaten them.

He realizes also that his standing in the courts is not going to be dependent upon whether he is in the majority or in the minority in the assertion of his rights. Whether the opposing party be the Government of the United States, a large corporation, or everyone else in his neighborhood, he knows that his opponent or opponents must meet him on equal terms at the courthouse.

As a result, I believe that the average citizen of this country today regards the courts as in a special category so far as his respect and confidence is concerned. It is of vital importance that he continue to do so.

One of the most important aspects of

Law Day is the opportunity which it provides to increase confidence in the courts through increasing understanding of the people of this country as to their functioning and their vital place in our governmental framework.

mental framework.

One aspect of the functioning of the courts, concerning which understanding needs to be increased today, is the necessity that in a government composed of three equal and coordinate branches, the judicial branch of the Government must be independent. Most lawyers understand that fact. They realize that so long as courts are presided over by human beings, there is great danger that judges will become subservient to any agency or instrumentality on which they are dependent to any extent whatever.

Only through the existence of independent courts will the rights of our citizens be protected. To accomplish that protection, the courts must be independent of both Government and private influence. In a democracy, public appreciation of this requirement is essential to the maintenance of their independence.

If the celebration of Law Day has contributed to public appreciation of the necessity for independent courts in this country, as I hope that it has, it will have made a vital contribution to the strength of this Nation even though its objectives are far broader than that.

May I offer an example of what happens when courts are not independent? Last summer I had occasion to be in the U.S.S.R where a small group of officials of the American Bar Association spent 2 weeks talking to judges and lawyers of that country. We were particularly interested in their system of justice, the functioning of their courts, and in learning the status of lawyers in the Russian society.

We found to our surprise that there are in Russia today some 16,000 lawyers who make their living in the private practice of the law. Two thousand of them are located in Moscow, a city of 5 million people. These private practitioners are not working for the government, as is everyone else in Russia, but are employed by their clients and are dependent upon the fees paid by them for their livelihood. The system of Peoples Court, with appellate courts leading finally to the Supreme Court of the U.S.S.R., was a more complete judicial system than we had anticipated finding. The trials which we observed were conducted reasonably well and the judges to whom we talked appeared to be conscientious in their desire to administer justice fairly.

While in Russia I purchased a copy of the Constitution of the U.S.S.R. Interestingly enough, it is for sale in all of the cities in Russia, not only in the Russian language, but in English and just about every other language that can be found in that country. A person reading that constitution, who had no knowledge of life in the U.S.S.R. today, might well conclude that the rights of Russian citizens are recognized and protected fully—even to a greater extent than anywhere else in the world. The Russian Constitution so provides. It spells out in detail the rights of their citizens and the protection to be afforded to them. It reads beautifully. Yet the world knows today that no one has fewer rights or less protection against the power of the government of his country than a citizen of the U.S.S.R.

Why is this true? What makes the difference between a country where citizens' rights guaranteed by their constitution are protected, and a country where citizens' rights guaranteed by their constitution are nonexistent? Not the existence of courts. Courts exist in Russia. Lawyers represent clients in Russia. Cases are decided by courts in Russia.

But in the U.S.S.R. the courts and judges are under the complete domination of the Communist Party, which controls the Government of Russia, as is every other facet of Russian life. The army is controlled by the political commissar assigned to its units. Industry is controlled by the plant repre-sentatives of the Communist Party who sit at the elbows of the plant managers and second-guess them in the operation of the The manager of a plan is responsible for its operation and for its meeting the quotas assigned to it, yet he is constantly under the surveillance and domination of the party representative who has the final word on any question.

The situation in the courts is comparable. True, we did not discover a political commissar assigned to the staff of a court, though I should not be surprised if some exist. We did find adequate evidence that if a person is charged with a crime in which the party is interested, the party chairman may call up the judge before whom the case is pending and instruct him to dismiss the charge, particularly if it is against a party member, or to convict him and throw the book at the accused. Whatever the instruction may be, there is no question that it will be followed by the court, just as the orders of the Communist Party bosses are followed in everything that occurs in Russian life today.

A citizen seeking to protect himself, his family, or his property against the abuse of his constitutional rights in the U.S.S.R. receives only the protection which the Government, by sufferance, elects to grant him.

I can think of no more graphic illustration of the necessity for complete independence of our courts if liberty under law, as established in our Constitution and Bill of Rights, is to continue to exist in this country.

As a corollary of the necessity for public appreciation and support of our independent courts, it is vitally important that we have good judges. It is important that we have judges who appreciate the reason for the independence of our courts. It is important that we have judges who realize that there is a difference between independent courts and independent judges. It is important that we have judges who do not abuse the independence of the courts on which they sit.

The legal profession of the United States has a great responsibility both for the quality of judges and for public support of the courts. Lawyers are the handmaidens of justice-the high priests of its temple. The effectiveness of the functioning of our courts depends upon lawyers. The public looks to us for leadership in all matters relating to the courts and gives great weight to our judgment as to the performance of courts and judges. That fact must be taken into account in all that we say or do which may affect public confidence in the courts. Day afforded the profession an opportunity to examine its performance in this and other respects while the general public was considering its relationship to the law.

May we consider now what might be called Law Day's fourth dimension. In his proclamation establishing Law Day this year, President Eisenhower said "in paying tribute to the rule of law between men, we contribute to the elevation of the rule of law and its application to the solution of controversies between nations." The hope that law provides for the peaceful solution of controversies between nations has captured the imagination of an increasing number of people in public and private life throughout the United States. It has met an equally responsive reception in many places throughout the world.

The threat of nuclear warfare in the space age has given to this hope an urgency far greater than it has ever known. As unthinkable as a nuclear war today would be, we find ourselves on the brink of armed conflict with increasing frequency as diplomacy encounters problems which it cannot settle. More and more often, the people of the United States are asking the question: Why cannot these problems be submitted to, and settled by, independent courts just as they would be litigated and disposed of between States of the United States today? More and more people are asking why the Berlin controversy, the Matsu and Quemoy problems and others which threaten the peace of the world cannot be submitted to

courts for adjudication.

Everyone knows that the removal of a subject of disagreement from the street corners and newspaper headlines to the relative calm and ordered processes of the courtroom inevitably results in a cooling off period which in itself contributes to a peaceful solution of any problem. More and more people are coming to realize that the adjudication of controversies by an independent court provides a face-saving means of withdrawal from an untenable position which frequently is an important aspect of the peaceful solution of an international problem. Finally, and most important, they know that the adjudication of controversies by an independent court in the light of established principles of law and morality is a fair means of resolving them, whatever the ultimate decision may be.

The legal profession has a special responsibility of leadership in the elevation of the rule of law and its application to world problems. Increasing recognition of this responsibility on the part of the profession is apparent. The inspired crusade led by my distinguished predecessor, Charles S. Rhyne of Washington, D.C., was a major factor in awakening the public and the profession to the potentialities of the application of law, by courts, to the solution of world problems

Upon assuming office as president last August, I recommended to the board of governors the creation of a special committee on world peace through law, and obtained the agreement of Mr. Rhyne to act as its chairman. I announced as one of our objectives for the current year, the holding of a series of regional conferences throughout the United States through which we could bring to bear the ability of the legal profession upon the difficult problems of what our objectives shall be and how we shall proceed in seeking to further the use of law, instead of force, in solving world problems.

During the month of April, five such regional conferences were held—in Boston, Charlotte, Chicago, San Francisco, and Dallas. More than 250 of the leading lawyers of the United States participated in these conferences.

The conferences, which were held under the direction of the Committee, were most successful. The diversity of opinion, which is inevitable in such a group dealing with a problem of such scope, contributed to full discussion after which, in the words of Mr. Rhyne's report, "Lawyers who have come in a little doubtful have gone out as evangelists for the cause of world peace through law."

One of the conclusions reached by all the groups was that these regional conferences should also be held in various parts of the world, preparatory to a world conference of the legal profession to be devoted to means of furthering the rule of law between na-

No one has any illusions concerning the magnitude of the task which we have undertaken, or that our objective will be reached overnight. But equally, no one has any doubt as to the urgent necessity that law be

substituted for force on the world scene in this nuclear space age, if civilization is to survive it. Neither have we any doubt as to the tremendous body of opinion of the people of the world which will support any effort which holds promise of progress toward the elimination of force in world politics.

Not only does the legal profession have responsibilities of leadership in this effort, but the United States of America as well. It is in our country that the rule of law has achieved its highest development. In our country the legal profession has greater influence upon public opinion than in any other. Ours is the responsibility of world leadership.

When officials of this country take positions designed to provide the world leadership which is needed, they deserve the support of the public-and most certainly of the lawyers of the country. Such support has no partisan implications. Foreign affairs in this country should always be nonpartisan.

Recently, public statements of the type which I have in mind have been made by several of our national officials.

President Eisenhower has said on several occasions that there can be no peace without law. A portion of his state of the Union message to the current session of the Congress was devoted to the consideration of the means for promotion of the rule of law between nations.

In his last public apearance, our "fallen giant" and great Secretary of State, John Foster Dulles, said, "We in the United States have, from the very beginning of our history, insisted that there is a rule of law which is above the rule of man. That concept we derived from our English forebears, but, we, as well as they, played a part in its acceptance. \* \* \* We now carry these concepts into the international field."

In a significant address delivered to the Academy of Political Science in New York on April 13, Vice President Nixon said:

"I am now convinced and in this I reflect the steadfast purpose of the President and the wholehearted support of the Secretary of State and the Attorney General, that the time has now come to take the initiative in the right direction of establishment of the rule of law in the world to replace the rule of force."

He then proposed, as one tangible means by which this Nation might provide leadership in elevating the rule of law in the world, that this country modify the so-called Connally reservation to our adherence to the charter of the International Court of Justice. By that reservation, we reserved the right to make a unilateral decision as to the domestic character of any question submitted to that Court and, in effect, reserved a veto power over the adjudication of any dispute affecting the United States. Elimination of the Connally amendment would constitute tangible evidence of the good faith of this country in its determination to elevate the rule of law and apply it to the solution of problems between nations.

The Vice President further proposed that in future international agreements, entered into by the United States, a provision be included that any disputes that may arise as to the interpretation of the agreement should be submitted to the International Court of Justice and that the nations signing the agreement would agree to be bound by the decision of the Court in such cases.

These two steps would constitute real progress on the road to world peace through Their espousal by the United States would constitute the type of leadership

which we owe to the world.

Public officials in a democracy cannot be expected to take a position too far ahead of public opinion. In the area which we are considering, lawyers can have a major impact upon public opinion. Lacking necessary public support for these and other proposals which may be made for the application of law to world problems, the progress which We are making toward our objective could be

The members of the legal profession of the United States have a real opportunity to contribute to the ultimate achievement of world peace through law by giving strong support to these proposals and to every other effort made in this direction. Only with such support can effective progress be made toward our objective. Only with public leadership by our profession, in this area in which we have a special competence, can our Nation Provide the world leadership required to achieve our goal of peace through law.

Of the many facts of Law Day and its observance throughout the country, none seem to me to be of more importance or greater urgency than these I have mentioned. importance and urgency obviously continues during the days and months ahead. I hope that you will join in the discharge of the public responsibility of our profession in both of these important areas.

### Hill Hunger

EXTENSION OF REMARKS

### HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. BYRD of West Virginia. Mr. President, amid our continual preoccu-Dation with technical governmental issues, I feel that we should not forget the wonderful human values and feelings to be found in poetry, and that occasionally we should take time to reflect upon the warmth and wisdom of a piece

Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD a very poignant and perceptive little poem which I believe reveals a truth about each of us who comes from mountainous country. The poem is titled "Hill Hunger." It was written by Lillian Mayfield Roberts, and was published in the West Virginia Review in

There being no objection, the poem Was ordered to be printed in the RECORD, as follows:

### HILL HUNGER

(By Lillian Mayfield Roberts)

I think that something in the hill child dies When he is taken to the level lands. The man bred by an ocean understands, And he will tell you that his sick heart sighs For hiss of surf-and all his being cries For roar of waves, and spray upon his hands; Ever beneath his weary feet the sands-Ever before his searching eyes a sail-

And so I think the hill child always sees That broken line inked against the skies, Where saffron sunset drops to meet the trees Upon the hilltops-and the nighthawk flies-And when his mind cannot recapture these I think that something in the hill child dies. Uncle Sam and His Workers

EXTENSION OF REMARKS

### HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. FOLEY. Mr. Speaker, the Government of the United States as the employer of the largest number of persons has a great responsibility to provide the highest and best employment standards for its employees. That the Federal Government should be our country's model employer is a goal accepted by all persons who have thought about this important matter. That the Government is not a model employer is likewise accepted by this same group of persons. The reasons for the Government's failure to achieve this necessary and worthwhile goal are many and com-Some of the facts which prove that the Government has not attained this goal were set forth clearly and vigorously recently by our colleague, the Honorable George M. Rhodes, U.S. Representative from the 14th District of Pennsylvania. The article appeared in the April 1959 issue of the American Federationist. Because the article is revealing, forceful, and fairminded, I insert it in the CONGRESSIONAL RECORD:

UNCLE SAM AND HIS WORKERS

(By George M. RHODES, U.S. Representative from Pennsylvania)

Shocking conditions reminiscent of a bygone era in American labor history are the day-to-day experience of thousands of employees of the Federal Government. Labormanagement policies and practices which workers in industry now take for granted are still unattained goals of Government employees.

Here are some typical comments on present employee-management relations by Federal employees:

An Army employee: "Coercion and threats

are the order of the day."

A postal clerk: "Employees feel they have no rights whatsoever and are merely puppets subject to anyone's whim and fancy."

A public health employee: "Anyone foolish enough to take a grievance to the employee relations office is placed on the blacklist as a troublemaker."

A letter carrier: "Employee morale is floundering."

A poetic Navy empolyee: "Management plots the course and mans the helm. Employees are the galley slaves."

A departmental employee: "Union members who become effective in presenting grievances and complaints for their fellow workers are either transferred or their jobs are abolished."

A general complaint is that "my agency does not follow established rules and regulations in employee-management matters, but no one dares to speak out because of the fear of reprisal."

I could go on to list hundreds of such statements from Government employees at hearings before congressional committees, in letters to Members of Congress and in personal interviews.

It is easy for those in positions of respon-

sibility to dismiss these statements as those of misfits, cranks, troublemakers or malcontents. My 10 years of study and growing concern over this problem have convinced me, however, that in the main these men and women are the unfortunate victims of harsh and outmoded personnel policies which have seriously undermined their morale and their ability to operate at peak

efficiency But they are not the only victims. Grave damage is also being done to our career civil service by repeated instances of job injustices. Actually, the complaints from individual Government employees are danger signals, warning us that something basic is wrong with our entire Federal personnel system.

This analysis is confirmed by reports and findings of many Government and non-Government groups which have studied various aspects of the problem.

The civil service system was established by Congress in 1883. The assassination of President Garfield by a disappointed job-seeker dramatically highlighted the evils of the spoils system which had dominated Gov-

ernment hiring practices for generations.

Public demands on Congress for reform of the old system produced the Civil Service Act, which brought into being the competitive merit system in Government employ-

In January of this year there were 2,337,-823 civilian Federal employees on the payroll. They work in every State of the Union, every city and county, every Army post, naval and airbase, post office, every veterans' hospital, Federal prison, overseas installation, every regional office, weather bureau, executive department and agency in Washington. Their activities touch directly or indirectly upon the life of each of their fellow citizens.

General speaking, Federal Government employees may be placed in three major categories—the white collar or classified em-ployees, the blue collar or wage board employees, and the employees of the postal service All are chosen from civil service registers, which contain the names of those applicants who have passed examinations in each of the many thousands of classified positions.

The pay scales of classified and postal employees are established by acts of Congress. The pay of blue-collar or wage board employees is based on a determination of the prevailing area wage being paid in private industry for each of the various types of job classifications.

An individual who embarks upon a career in the Federal civil service automatically surrenders certain basic rights and freedoms enjoyed by other American citizens,

The Federal employee is prohibited by law from engaging in a strike against the Gov-ernment. In this regard an American Bar Association committee stated in a 1955 re-

"Government which denies to its employees the right to strike against the people, no matter how just might be the grievances, owes to the public servants an obligation to provide working conditions and standards of management-employee relationships which would make unnecessary and unwarranted any need for such employees to resort to stoppage of public business."

The Federal employee surrenders certain rights to engage in political activity under restrictions imposed by the Hatch Act. Federal employees can take no part in a local, State, or national political campaign, hold no office in a political club, nor otherwise engage in any partisan political activity.

Upon entry into the Federal service a citizen becomes, in effect, a political eunuch who must depend largely on relatives, friends, and neighbors outside civil service for effective political action to see to it that responsible officials are chosen to represent him at every level of government.

What do civil servants have a right to expect in exchange for their surrender of

these basic American rights? Stating the case in its broadest terms, I feel that employees of the Federal Government are at the least entitled to conditions of employment equal in all respects to those accorded

to employees in private industry.

The special obligation of Government to guarantee equality in the treatment of its own employees has been recognized by many eminent authorities in the field of personnel management and labor-management rela-

Here is what the American Bar Associa-

tion committee said:

"A government which imposes upon other employers certain obligations in dealing with their employees may not in good faith refuse to deal with its own public servants on a reasonably similar favorable basis, modified, of course, to meet the exigencies of the public service. It should set the example for industry by being perhaps more considerate than the law requires of private enterprise."

The National Civil Service League, an organization supported by top industrialists and businessmen interested in strengthening the merit system stated in its publica-

tion:

"All groups interested in public administration, including the unions themselves, recognize that public employment is different from private employment and that all aspects of collective bargaining cannot be utilized in government. However, a full examination of employee representation and communication policies and techniques is long overdue.

"A constructive program would not only provide democratic assistance to the employee but would also develop a means for management responsibility which industry has long since learned to utilize but which

government still lacks."

Similar views have been officially expressed by the Hoover Commission and the House and Senate Post Office and Civil Service Committees, which in past years have favorably reported legislation to establish a uniform system of handling Government employee grievances in the promotion of enlightened employee-management relations in the Federal service. However, these bills have never reached the floor for debate and vote.

The need for formal action to require all Government agencies to recognize employee unions and to establish uniform grievance machinery has also been the subject of discussion by the President's Cabinet. A proposed Executive order to accomplish these modest objectives was actually drafted several years ago, but it was never issued.

In view of this widespread concern over employee-management relationships in the Federal Government, why is it that such shocking conditions continue to exist? This is a question often asked by persons genuinely interested in this important problem.

During the administrations of Theodore Roosevelt and William Howard Taft, Executive orders were issued prohibiting direct communication between Federal employees and Members of Congress, thus denying these citizens the fundamental constitutional right to petition for redress of grievances. As a result of these abuses, Congress in 1912 enacted the Lloyd-La Follette Act.

Considering the violently antilabor sentiment which then existed among private employers, the widespread use of professional strikebreakers, the virtually unrestricted use of injunctions in labor disputes, the "yellow dog" contracts and other antilabor devices, the Lloyd-La Follette Act of 1912 was a reasonable, forward-looking effort to inject justice and sanity into employee-management relations in the Federal service.

It gave recognition to the rights of Federal

employees in three main respects.

It provided that no person in the classified civil service could be removed except for cause.

It authorized employees of the Federal Government to organize to improve conditions of employment, wages and hours of work. The right to strike was specifically prohibited.

The right of Federal employees to petition Congress or any Members of Congress was guaranteed. The right to furnish information to either House of Congress or a congressional committee or member thereof was also guaranteed.

Now, 47 years later, this is still the basic law affecting the rights of Federal employees. But in this interim period significant advancements have been made in Federal laws affecting employee-management relations in private industry. These laws are well known—the Railway Labor Act, the Norris-LaGuardia Act, the Davis-Bacon Act, the Wagner Act (amended by Taft-Hartley), the Walsh-Healey Act and the Fair Labor Standards Act.

It is obvious that the Federal Government has lagged far behind in the establishment of enlightened employee-management policies for its own employees. I am convinced that only Congress can furnish the necessary leadership to bring about a long-needed overhaul of the Government's antiquated personnel practices.

There are many aspects to this complex problem, including the lack of uniform grievance procedures throughout the Government, employee morale factors, salary inequities and the threat of transfers or reductions in force because of automation, particularly in the Postal Establishment.

There are also matters of promotion policies, lack of adequate communication between employees and supervisory personnel, poor and unsafe working conditions, autocratic behavior by management officials and the lack of understanding of the techniques of modern employee-management relations.

Experts point out that many of the current problems have resulted from the fallure of the Civil Service Commission to carry out its legal responsibilities in administering civil service laws, rules, and regulations. The increasingly large number of Federal employees bringing cases in the courts to test their rights is an indication of its lack of overall effectiveness.

If we are to have an efficient, enlightened personnel structure in the Federal service, Congress must insist that the Commission exert strong leadership to protect the merit system against the continuing pressure of political spoils. At the same time the Commission must adopt enlightened personnel management techniques which have proved successful in private industry in the promotion of efficient, economic and harmonious employee-management relationships.

Political appointments to the Commission have undoubtedly weekened its determination to force executive departments and agencies to comply with existing regulations or to initiate modern personnel practices. There are recent signs which indicate possible improvement in the present chaotic situation. The appointment of Roger W. Jones, a career civil servant in the Bureau of the Budget, to the chairmanship of the Commission is generally viewed as a step in the right direction.

The naming of Rocco Siciliano to the newly created position of special assistant to the President for personnel management has produced efforts to fill the void caused

by the lack of Civil Service Commission leadership in this area.

Last June, Siciliano sent a memorandum to the heads of all executive departments and agencies. It called attention to previously established personnel management standards on such matters as grievances, consultations between management and employees, and the protection of employee's right to join a union. Department and agency heads were asked to evaluate their own employee-management policies to make them more in keeping with established standards.

There are indications that the Siciliano memorandum did some good. The Department of the Interior issued a new consolidated labor policy restating the collective bargaining rights of wage board (blue collar) employees and stressing the value of close cooperation with employee organizations. The Civil Service Commission has been officially assigned the task of checking on how well agencies comply with employee-management standards.

The Commerce Department issued an order which "encouraged" its employees to join unions and gave union members the opportunity to collect dues on Government time. However, protests from other agencies forced amendments to the order which toned it

down considerably.

In January of this year the American Federation of Government Employees, an AFL-CIO affiliate, sent questionnaires to each of its lodges throughout the country. The object was to get a frank appraisal of employee-management conditions at each installation. Final returns of the survey are still being tabulated, but initial reports released by the union reveal that there is much to be done before personnel relationships in the Federal Government can be brought up to a decent level.

Queried specifically about any improvements noted since the Siciliano memorandum was issued, 38 percent of the AFGE lodges in defense establishment which reported employee-management relations as "poor" or "fair" said that there were signs of improvement. Only 16 percent of non-defense establishments reporting poor or fair relations noted any change.

A great number of respondents used such terms as "lipservice" and "window dressing" when commenting on the effect of the White House memorandum in their own agency. Others pointed to the gap between front office "toleration of employee unions and "antagonistic" relationships with supervisory personnel at the day-to-day working levels.

While a wide range of comments on present labor relations was received, the overwhelming number of the AFGE lodge spokesmen felt that congressional enactment of employee-management legislation was the key to overall improvement in this area.

The Johnston-Rhodes bill now before Congress offers the best hope for the establishment of modern, sound employee-management relations policies in the Federal service.

The measure would not give Government employees the right to strike or to encourage in activities detrimental to their agency or the public interest. It is in harmony with policies previously established by Congress for employees in private industry.

gress for employees in private industry.

This bill would legally establish several important principles. It would guarantee representatives of employee organizations the right to present grievances in behalf of their members without restraint, coercion, interference, intimidation, or reprisal.

While this right already exists in some U.S. agencies, it is only granted by sufferance, not as a matter of legal right. Moreover, the frequent turnover of personnel in an agency or installation often makes it only of fleeting duration.

The bill would give representatives of employee organizations the opportunity to present views on matters of policy affecting working conditions, safety, inservice training, labor-management cooperation, methods of adjusting grievances, transfers, appeals, granting of leave, promotions, demotions, rates of pay and reductions in force.

In addition, the Johnston-Rhodes bill would establish by law a uniform and workable system of handling unresolved grievances in these specified areas by the use of impartial boards of arbitration.

Various executive departments and agencies and the U.S. Civil Service Commission have repeatedly expressed their vigorous opposition to this legislation. They have generally taken the position that establishment of these rights of Federal employees by statute was unnecessary because adequate machinery already existed in Government agencies to handle grievances, appeals, and other problems in the employee-management field.

Despite these assurances, however, the public record is filled with abundant evidence showing that present employee-management relations in the Federal service are in too many instances the product of 19th century antilabor philosophy and similarly outmoded personnel-management concepts. The antilabor bias of Cabinet members of the Eisenhower administration was shown most recently when Postmaster General Summerfield attacked unions at the convention of the National Association of Manufacturers in New York.

Enactment of the Johnston-Rhodes bill is urgently needed. This measure would prod narrow, bureaucratic minds into recognition and adoption of 20th century employee-management policies. It is only by this type of shock treatment that we can ever hope to achieve the necessary degree of enlightenment in the Federal civil service to bring about these needed reforms.

The resulting benefits of increased efficiency, more economical administration of Government, improved morale, better working standards and conditions, recruitment of better qualified civil servants and the extension of truly fair and democratic treatment to our loyal and devoted Government employees are well worth the tremendous efforts needed to enact the Johnston-Rhodes employee-management bill.

### Military Communications

EXTENSION OF REMARKS

# HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks I include in the Appendix of the RECORD a speech delivered by Gen. Curtis E. LeMay before the 1959 convention of the Armed Forces Communications and Electronics Association. General LeMay points up the significant communications problems and programs facing our Air Force today. He particularly stressses the importance of communications that will give us the 15 or 20 minutes warning which could spell the very difference between the life or death of this Nation. Members will find much of interest in these remarks by a man whose wisdom

and foresight were a major factor in developing the Strategic Air Command into the great deterrent force that it is:

REMARKS BY GEN, CURTIS E. LEMAY, VICE CHIEF OF STAFF, U.S. AIR FORCE, BEFORE THE 1959 CONVENTION OF THE ARMED FORCES COMMUNICATIONS AND ELECTRONICS ASSO-CIATION, WASHINGTON, D.C., JUNE 3, 1959

Ladies and gentlemen, I am glad to be here today. It is a pleasure to address you at the start of your 1959 convention. I welcome this occasion to discuss a subject of extreme mutual interest and critical national precedence—the subject of military communications.

As many of you know, I am a firm beliver in the key role of communications in the defense of our Nation—and so, I imagine, are all of you, or you wouldn't be here today. Therefore, I will not take up time this afternoon trying to convince anyone in this room of the importance of communications to the security of this country. I assume that we are a hundred percent in agreement on this. Instead, I would like to spend the next few minutes talking about some of our defense problems—and their dependence upon the most efficient and effective communication systems possible. Since the Air Force is my business, I will confine my discussion today to its problems and its programs.

The world as man once knew it is shrinking at an alarming rate. Of course, I am speaking figuratively—but nonetheless, accurately. It took the Pilgrims 54 days from the time they left England to sight Cape Cod. Modern ships make the same journey in 5 or 6 days; jet aircraft do it in a matter of a few hours; missiles could do it within minutes. Relatively speaking then, if one were to consider the earth in Pilgrim days as the size of a basketball—now, it is the size of a pea.

Many factors have contributed to this phenomenon, but the two areas which have had the greatest impact—are communications and transportation. Improved speed, range and load capabilities in each of these very vital fields have contributed, and are contributing today, to the continuous compression of the globe. This remarkable progress has brought many new benefits to civilization—and at the same time, has presented us with many new problems.

The problems to which I refer have their origin in the application of these new developments to military capabilities. For example, I think we all agree that a means to transport cargo and personnel from one part of the world to another in a few short hours would certainly be considered beneficial progress. On the other hand, when the same development is used to transport lethal weapons of tremendous destructive power at supersonic—or even hypersonic—speeds, our accrued benefits quickly revert to ominous military threats.

The United States was at one time considered relatively immune to surprise attack by any major power in the world. However, as the Soviets have developed, in rapid succession, first long range bombers, then atomic weapons and finally intercontinental ballistic missiles, we have found that we no longer possess this immunity. Furthermore, as individual weapons grow in destructive power, the great advantages which we originally possessed in our atomic superiority have come to mean less. I do not mean that we have been overtaken in our capabilities to design, produce and operate better machines or weapons. However, I am firmly convinced that as each new development appears on the scene-as weapons become more powerful and their means of delivery more rapid and with greater range—the lead which we do possess guarantees us less and less advantage.

In the face of this growing threat, the defense policy of this country has been—and is today—to deter war, if possible, and if that deterrence should fail, to repel and decisively counter any attack against us. If we are to be successful in our deterrent efforts, we must be able to meet any military situation which might confront us—including surprise attack by the most powerful weapons—and still maintain the necessary residual strength for a decisive retaliatory blow. We earnestly hope that we will be successful in deterring an attack upon our country—or upon the free world forces—but we certainly cannot be positive that we will.

Let us look closely, then, at the requirement to repei and effectively counter any attack. As I said before, the biggest problem which faces us today—and which will increase as Soviet ballistic missiles become operational—is that of protecting our forces from a devastating surprise attack. In order to be prepared for the werst, we must always think in terms of having to absorb the initial blow. If we can do this, we will then continue to possess the dominant military ca-

pability.

To do this, we must provide the necessary protection for our weapons which will insure that, regardless of the power, size or speed of any attack against us, our forces will be available and usable. We are taking advantage of every measure available to us-warning, alert, dispersal, hardening, and mobility—to name a few. Maximum warning in combination with maximum alert measures guarantees the greatest number of forces launched in the shortest length of time. Furthermore, wide dispersal through a large number of bases not only complicates the enemy's attack problem, but allows us to attain a faster launch rate for our own forces. The advantages of hardening and mobility are, I am certain, evident to all of you. The key to the whole reaction capability is, however, warning-and warning and communications are synonymous.

The two types of warning with which we are primarily concerned are strategic and tactical. As you know, strategic warning consists primarily of intelligence information of enemy activities which might indicate the imminence of an attack. Its sources are worldwide. To be useful, this information must be up to the minute and accurate. Therefore, the success of our intelligence efforts depends to a great degree upon rapid and reliable communications.

We have already established an elaborate network to provide tactical warning-which would ordinarily be notification of an in-coming attack. Our warning network against manned jet aircraft and air-breathing missiles is practically complete at this time. It consists of our distant early warning (DEW) line, which runs across the northern fringe of the North American Continent-with extensions continuing on to join the NATO system in the east and as far as Midway Island on the Pacific sideplus the mid-Canada line and the pine tree line. Other North American radars, early warning picket ships, airborne early warning and control aircraft and Texas warning and towers complete this system-a vast and intricate network whose optimum effectiveness depends upon rapid and reliable communications.

The coming of intercontinental ballistic missiles makes our warning and defense problems even more complex. The most obvious impact is the drastically reduced warning which will be available to us in case of a missile attack. Theree ballistic missile early warning sites (BMEWS) are presently programed, and one is already under construction. The purpose of these sites is to give this country as much warning as possible of a missile attack. This warning will

be 15 or 20 minutes at best. When minutes spell the difference between the life or death of a nation, every second—in fact, every microsecond—counts. Again, communications is the key, and again, it must be accurate, rapid and reliable—there is absolutely no margin for error.

Within minutes of warning of an attack both our defensive and offensive forces will react. Our manned interceptors and surface-to-air missiles will be launched to intercept and attact incoming enemy forces as far away from their destination as possible. At the same time substantial numbers of our strategic striking force will be on their way to the target. Control is the key to the success of this operation and control is only as good as the communications system through which it operates. Control of the air battle—that is the protection of our own outgoing forces and the direction of our defensive weapons against incoming targets—is mandatory for successful results.

This warning must also be transmitted immediately to all of our commands and bases worldwide so our oversea and "Reflex" forces can-be launched toward their targets with no delay. It must be flashed to the various headquarters, and then sent to operational commands who in turn must relay it down to the many dispersed units under their control. Speed is essential—and there must be no errors. If communications break down—or are inadequate to begin with—irreparable damage could result.

Our day-to-day peacetime communication requirements for operating a supersonic, long-range, widely dispersed Air Force who have reached a new and unbelievable high. For example, all of Air Materiel Command's air materiel areas, depots, and logistic control groups are linked together in a high-speed communication network for the purpose of providing the most rapid service available in supplying our operational units. Up-to-theminute operational reporting is also accomplished through a worldwide communication net. Control and surveillance of our daily flying operations require the most modern type of communication equipment between aircraft and ground facilities.

Many other examples of the vital day-to-day applications of communications could be cited, but I am certain that most of you here are as familiar with, them as I am. The implications are obvious. The drastic compression of time and distance has emphasized above all the critical need for centralized control of our operations. This control must be based upon the most accurate information available, rapidly transmitted, and properly collated and displayed. Only an elaborate and complex system of the most modern communications facilities will meet these requirements.

We are making progress in all of these areas, but we have not by any means reached the point where we can say that our communications are adequate. It would be more accurate to state that our communications are continually lagging behind the needs of our rapidly expanding operational requirements. There is a very vital need for increased effort, for new and radical thinking in this area, and for rapid development of new equipment which can meet our growing demands. I would like to mention just a few examples of the type of improvements which are required to match our communications to the needs and tempo of our defense systems:

Range extension of our tropospheric scatter systems, and more extensive channelization of these systems;

Improved reliability and security in our cryptographic devices for voice, data and pictures;

Increased speed for record-type communications—our teletypes must operate at rates

of pages per minute rather than words per minute:

Last, but certainly one of the more critical requirements, a reliable worldwide voice capability.

The communications satellite is an encouraging possibility, and other new transmission media show promise of helping us overcome some of our present deficiencies. There are still other areas where breakthroughs are taking place—or will take place in the near future. It is up to us to capitalize on these breakthroughs and to convert them rapidly into useful communications systems.

From what I have said this afternoon, it is obvious that communications in today's defense activities can no longer be considered merely a service. Communication is an integral part of the weapon systems which we develop and employ, and an essential element in the proper functioning of the command structure that controls and launches these systems. The communications equipment which we develop must be tailored to meet the exact requirements of our specific tasks. Common items-those which satisfy some of the needs of all of the services, but do not meet the full requirements of any service-are not the answer. Requirements for Air Force communication equipmentand I am sure that this is equally true with the Army and the Navy-must be met with no compromises. Our equipment must meet the full demands of our military systems and must be completely responsive to the needs of the men who control and operate these systems.

I am certain that most of you remember that timeworn saying, "There is always somebody who doesn't get the word." Fallure to get the word, until very recently, has seldom been completely disastrous. Today, our whole defense—our national security—depends upon our ability to get the word—and to get it in time to act. The only sure way of getting the word is an up-to-theminute system of rapid, reliable and secure communications. In this day and age, communications could prove to be the Achilies heel of our Nation's defenses. It is up to all of us to make sure this does not happen.

# An Annual Summer Festival Proposed for Delaware

EXTENSION OF REMARKS

# HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES Friday. June 12, 1959

Mr. McDOWELL. Mr. Speaker, among the most important contributions to the cultural growth and development of our country are the many historical pageant dramas which are being produced today.

Plays such as "The Lost Colony" in North Carolina and "The Common Glory" in Virginia have done much for the culture and prestige of the individual State and for the communication of the State's history and ideals to its citizens, especially to its young people, and to the visitors from other States. There is the additional factor, that the visitors to these plays spend large sums of money with local merchants which certainly accounts in part for the widespread support given to these productions by businessmen and their organizations such as

chambers of commerce and boards of trade.

I recall with special pleasure a play produced in 1953 by Robert L. Hilliard over Delaware's major broadcasting station WDEL. This play was titled "The Delaware Story," and later it was to form the basis for a pageant drama written by Mr. Hilliard and published under the title of "Blue Rock Land."

This play would make a major contribution to the cultural growth and the economic development of Delaware if it were produced and developed as an annual summer festival.

I would hope that the newspapers, broadcasting stations, and business organizations in Delaware would explore the possibilities of a combined effort on the part of business, industry, and the State government, to develop an outdoor theater and produce "Blue Rock Land" as an annual summer festival.

The author, Mr. Hilliard, is well known in Delaware, having graduated from the University of Delaware and lived and worked in Wilmington for several years.

Mr. Hilliard says in his preface to "Blue Rock Land":

Delaware is a small State, in both area and population, but its history is large. It was the first State to ratify the Constitution, and its contributions to the early colonizing of the New World and to the establishment of a government of united states hold important places in the annals of our Nation's development. Delaware's founding was marked with the same tribulations, the same successes and failures that marked the struggles to establish settlements in all parts of the continent. Yet, like all the rest, Delaware's trials have been peculiarly her own. Rock Land" is a historical pageant drama depicting some of the early vicissitudes of settling the land along the South River, or Delaware River, land that was to become the State of Delaware.

I am pleased to include here for the information of my colleagues a letter which I have received from Professor Hilliard, together with the preface from the play "Blue Rock Land":

ADELPHI COLLEGE,
Garden City, N.Y., June 5, 1959.
The Honorable Harris B. McDowell, Jr.,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN McDowell: I was not flattered and pleased recently that you found use for my article, "Television and Education," but I have been very gratified to note, even in the New York newspapers, your actions on behalf of the cultural growth of our country in several areas. Perhaps it is considered trite in some places to say so, but I believe that the most important unifying force in peacetime of a growing nation must be a strong and progressing cultural affinity. (Apropos of this, I was sorry to learn that the House Commerce Committee has temporarily shelved educational television proposals.)

For some time I have thought that some of the most important contributions to the Nation's cultural growth have been the dozens of historical pageant-dramas produced in many of our States. Plays such as "The Lost Colony" in North Carolina and "The Common Glory" in Virginia have done much for the culture and prestige of the individual State and for the communication of the State's history and ideals to the visitors from other States, not to mention the excellent

business brought into the State communities by the tens of thousands of tourists who come over the summer to see a given play.

Some years ago I felt that Delaware should have such a play, and while living and working in Wilmington I developed, out of an historical series I wrote and directed for WDEL, such a play, "Blue Rock Land." (It was subsequently published by a division of Washington's Public Affairs Press.)

I am taking the liberty of enclosing for you a copy of "Blue Rock Land," in the hope that you may find interest and enjoyment in it. I have thought of trying to make contact with civic-minded people in Delaware to explore the possibilities of a combined effort on the part of business and industry, and the State government, to develop an outdoor theater and produce "Blue Rock Land" as an annual summer festival, similar to what is being done in the other States—perhaps beginning with the summer of 1960.

I would greatly appreciate any comments or suggestions you may have in relation to the possible values of establishing an annual summer historical pageant-drama festival in Delaware.

Sincerely,

ROBERT L. HILLIARD.

"BLUE ROCK LAND"—A HISTORICAL PAGEANT-DRAMA ABOUT THE FOUNDING OF DELA-WARE

(By Robert L. Hilliard)

For a number of years now the idea of the regional theater has been growing in Through the efforts of pioneers, like Paul Green and Frederick H. Koch, and other playwrights, directors, producers, and educators, theater has to some degree expanded from the restrictive narrow commercialism of large city concentration and moved to the many and varied regions of the United States. This form of theater is exactly what its name implies: regional. The play deals with the area in which it is being performed, reflecting for the audiences some aspect of the history of their region, dramatically bringing alive the past or present that has most meaning for them. Since history is like a pageant, concerning itself with long periods of time, geographical areas, and multitudes of people, so must this kind of historical play be, in effect, a pageant. The name given to this form of regional drama is, then, the historical pageant-drama.

This kind of drama has provided an increasing number of people of our States with a new kind of entertainment and stimulation that can only be had through the living theater. In addition, it has served to develop and unify the culture of our country by giving more and more of the American people a glimpse of the personalities and events that helped forge what was once a wilderness into great States and a great country.

Delaware is a small State, in both area and population, but its history is large. It was the first State to ratify the Constitution, and its contributions to the early colonizing of the New World and to the establish ment of a Government of United States hold important places in the annals of our Nation's development. Delaware's founding was marked with the same tribulations, the same successes and failures that marked the struggles to establish settlements in all parts of the continent. Yet, like all the rest, Delaware's trials have been peculiarly her own. "Blue Rock Land" is a historical pageantdrama depicting some of the early vicissitudes of settling the land along the South River, or Delaware River-land that was to become the State of Delaware.

The historical pageant-drama is ideally suited for the large outdoor theater, esthetically uniting the content of the play with its natural background, The outdoor thea-

ter, in addition, permits a larger audience to view the play and provides the stage and backstage area needed for the large casts. However, the outdoor theater is not a necessity, for the scenery and stage areas may be proportionately reduced and the actor in the pageant-drama usually portrays several roles, thus permitting fewer cast members than

parts in the play.

The author has, in writing this play, kept faith with the facts of history, but has expanded on some, synthesized and condensed others, and used his imagination in creating personalities and situations that would best present dramatically the events, actions, and characters involved in the founding of Delaware. I wish to express my appreciation to Dr. John A. Munroe of the University of Delaware for his suggestions concerning historical sources and research materials. I am grateful to my wife, Mary Ellen, whose constructive critical assistance with the many revisions of the manuscript made the completion of "Blue Rock Land" possible.

Vital Role of World Health Organization in International Battle Against Disease—Address by Assistant Secretary of State Francis O. Wilcox

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Friday, June 12, 1959

Mr. NEUBERGER. Mr. President, in the June 8, 1959, issue of the Department of State Bulletin there was published the text of a thoughtful and stimulating address entitled "The World Health Organization and World Peace," delivered by Francis O. Wilcox, Assistant Secretary for International Organization Affairs, before the National Citizens Committee for the World Health Organization.

As one who has urged an increase in U.S. effort to further the international fight against disease. I found Secretary Wilcox's comments of special interest. I am in complete accord with his endorsement of full support of the activities of WHO by our Government.

Secretary Wilcox's views are of particular importance at this time in connection with Senate Resolution 129, submitted on June 5, 1959, by the distinguished Senator from Minnesota IMr. Humphreyl. I am happy to be a cosponsor of this resolution, which would stimulate planning by governmental and private groups aimed at the carrying out of an International Health Year through the machinery of the World Health Organization.

Mr. President, on June 26 Francis Wilcox will address a dinner in Portland, Oreg., marking United Nations Charter Day. I know that this address by a distinguished career diplomat and internationally known scholar in the field of foreign affairs will be one of the high points in Oregon's centennial celebration. Residents of Oregon look forward to the opportunity to hear and talk with Secretary Wilcox, whose awareness of the humanitarian goals

which should dominate American foreign policy is well indicated in his comments before the National Citizens Committee for WHO.

Mr. President, I ask unanimous consent that excerpts from Secretary Wilcox's address be printed in the Appendix of the Record.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

THE WORLD HEALTH ORGANIZATION AND WORLD PEACE

(By Francis O. Wilcox, assistant secretary for International Organization Affairs )

Strong support for the United Nations and its various specialized agencies, such as the World Health Organization, represents a fundamental part of American foreign policy. The American people firmly believe in the United Nations and the purposes and principles of the charter. They believe in the solid work the specialized agencies are doing to help lay the foundations of a just and lasting peace.

For peace, if it is to have real meaning for the common man, must be far more than the mere absence of armed conflict. It must reflect, in a constructive way, man's universal desire to build a more abundant life.

In the WHO Constitution the nations have declared that: "The health of all peoples is fundamental to the attainment of peace and security and is dependent upon the fullest cooperation of individuals and States."

These are not empty words. There is ample evidence already that the World Health Organization, along with the other agencies of the United Nations system, is making real progress in developing firmer foundations for world peace.

WHO AND THE UNITED NATIONS SYSTEM

The achievements of the World Health Organization as a force for peace can best be reviewed against a background of the dual and complementary nature of the entire United Nations system.

Most of us who attended the San Francisco conference in 1945 had two main objectives in mind.

The first of these objectives was to give real substance to the concept of collective security so that world peace could be maintained. To this end the Security Council was given the authority to move quickly and decisively in order to put down aggression. And the General Assembly was created to serve as the organized conscience of mankind.

Our other major objective at San Francisco was to devise means for closer international cooperation in advancing the social and economic well-being of mankind-better education, better food, better health. Most of the delegates there were of course vividly aware of the devastations of World War II, then not ended. But beyond that, and even more profoundly, they were aware of the stark contrast which has existed since the days of the industrial revolution, a contrast between conditions of life for a minority of mankind and those of the majority. I refer to the ever-widening gap between the living standards of the more fortunate peoples of the United States and Europe, and the subsistence or even starvation level of two-thirds of mankind in what we now term the underdeveloped countries. They knew that there would be no chance for stable peace unless all peoples had the opportunity to advance in human, social, and economic terms.

Address made before the National Citizens Committee for the World Health Organization at Washington, D.C., on May 7 (press release 312).

In reporting on the work done by the San Francisco conference, the U.S. delegation said:

"The battle of peace has to be fought on two fronts. The first is the security front where victory spells freedom from fear. The second is the economic and social front where victory means freedom from want. Only victory on both fronts can assure the world of an enduring peace."

Thus the United Nations pledged themselves to cooperate to solve economic, social, educational, health, and related problems. They also agreed that the various specialized agencies, established by intergovernmental agreement and having wide international responsibilities regarding these problems, should be tied in with the United Nations through the Economic and Social Council. The United Nations system represents an effort to prevent the application, through conflict, of our grim technology of destruction; it also represents an effort to further the application, through cooperation, of our potentially boundless technology of human welfare.

# ACHIEVEMENTS OF THE WORLD HEALTH

Some critics complain that the United Nations is a one-way street through which American support is given and little or nothing is received in return. I know of no more convincing evidence of the falsity of this assertion than the record of the World Health Organization. Let us consider this record for a moment.

The fact is that the WHO prorgams benefit the health of all Americans in many The direct benefits are important, because they mean that WHO is effectively expressing a central principle of international organization, namely, that the members should work together to achieve their common goals. In practical terms this means that each nation makes financial and technical contributions to the extent that it is able to do so, and also that each nation in return receives real benefits. This principle of mutual effort and mutual returns is at the heart of international cooperation. Its successful observance is assurance to Americans, as to others, that the cooperation is valuable and the organization worth while. The direct benefits which a people derive from membership in an organization give them a vested interest in it and its patterns of cooperation, the fruits of which they can see in an immediate and tangible way.

First, the World Health Organization makes possible the rapid reporting of disease outbreaks almost anywhere in the world. Radio stations in many countries cooperate in broadcasting WHO epidemiological bulletins—a most concrete example of interna-tional cooperation. The Public Health Service makes constant use of the information so obtained and in doing so helps to protect the American people against disease which might spread to our shores. As disease outbreaks are reported, almost universal application of quarantine measures protects Americans at home and abroad against infection. In this jet age germs can travel faster than sound. These measures combine maximum protection against spread of disease with minimum interference with travel and trade.

Second, the World Health Organization promotes the exchange of ideas and makes available to the United States up-to-date information on health and medical advances in other parts of the world. Free international exchange of experience and ideas is of course close to the heart of progress in health, as in other fields. WHO does this through publications, expert seminars and conferences, and a series of 36 expert advisory panels, with a total membership of

over 1,400 health experts, including 300 in the United States.

As part of this effort WHO helps to organize cooperation between laboratories in different countries including the United States, for exchange of information and samples and for coordinated research projects. International laboratory networks now cooperate under the aegis of WHO in influenza, pollomyelitis, other virus diseases, intestinal parasites, brucellosis and other fields.

Third, through recommended common names for drugs, recommended specifications, and preparation of biological standards WHO helps assure ready identification of commonly used drugs throughout the world and comparable standards of purity and potency for drugs and biologicals. The value to the growing numbers of Americans traveling or living in other countries, as well as to our pharmaceutical profession and industry, is obvious.

Fourth, the fundamental way to protect Americans against contracting infectious disease is to control or eradicate it at its source, anywhere in the world. Through its technical assistance programs WHO is greatly helping countries to accomplish this

Each of these services which I have listed benefits the health of Americans in a variety of ways. Most of these programs by their very nature are international in scope. They cannot possibly be carried on by only one or two countries. They are among the basic reasons for international cooperation in health and for the existence of a World Health Organization through which nations pool resources and work together.

Even if there were no other reasons for U.S. membership these services would repay many times our contributions to WHO. After serving on the U.S. delegation to the 10th World Health Assembly in 1957, Congressman CHARLES A. WOLVERTON of New Jersey stated:

"I know of no money that is being spent with greater effect than the small resources of the WHO. Truly, it is changing the world for the better, building a strong and more resourceful human race."

#### WHO AND THE COMPLEX OF MISERY

This statement highlights for us the fact that WHO programs also benefit the health of all other peoples. The majority of man-kind is still victim of the age-old complex of misery-a complex composed of illiteracy, starvation, disease, apathy, poverty. Therefore disease should be high on the list of our targets of attack. The attainment of health as a normal condition of life for all men, and as a basis for human advance, does not in itself guarantee conditions of peace. How ever, without attacknig disease and other factors of the complex of misery, there can be no hope of stable peace. It is clear, therefore, that the United States has a vital and a direct interest in the benefits which other countires receive from membership in the World Health Organization.

When the World Health Organization was founded 11 years ago it assigned first priority to an effective control of major communicable diseases, the age-old scourges of mankind. The economically advanced countries of the Western World had already demonstrated that we have the technical means to curb these diseases. Now the underdeveloped nations also, with essential aid and guidance from WHO, have made a magnificent attack on them. Malaria has been reduced by 50 percent, from 300 million to 150 million cases WHO and UNICEF have tested over 200 million persons and vaccinated 80 million against tuberculosis. Today this dread disease is on the decline. Real progress has been made toward the elimination of yaws. Approximately 55 million people have been examined and 16 million successfully treated.

Substantial progress also has been made in combating other scourges—yellow fever, leprosy, trachoma, smallpox.

This steady advance in the war against disease does not make headlines. But when the historian of the future assesses the events of our era, he will surely credit these concerted campaigns for the total elimination of diseases as among the most remarkable and important achievements of mankind. Their significance for the future is, in my opinion, greater than many of the highly publicized political debates in the Security Council and the General Assembly.

This progress means that men are able at last to use their energies for their own betterment, not for feeding the parasites of disease. This new releasing of men's energies for their rightful uses is an event of the utmost human and economic importance.

But many other things are necessary for good public health besides the campaigns against mass infectious diseases. Attacking these is like attacking the worst symptoms. of ill health. It is necessary, but it is also necessary to go further and build the enduring bases of good health. Consequently, as a result of agreement on the part of the member countries the World Health Organization now gives priority to helping countries organize adequate national and local health services. This it does through assistance in public health administration, maternal and child health, public health nursing, environmental sanitation, and, perhaps most basic of all, in training.

In its first 10 years WHO awarded almost 8,000 training fellowships to medical and health personnel. The need for well-trained personnel remains great, but this is a tangible start. It represents an average of almost 100 health workers, per member country, who have received better training. Many countries have previously had almost none at all. The worldwide services of WHO—disease reporting, quarantine, mobilization, and exchange of knowledge and the rest—are constantly increasing in value to the underdeveloped areas.

This is an unparalleled record of world-wide achievement for health. It provides clear proof of what cooperative action can achieve. The health problems which remain are still tremendous. But they are not disheartening. We have confidence that they can be surmounted. The World Health Organization and other programs which complement it, such as the International Cooperation Administration, have already demonstrated that these problems are not insoluble.

It is proving its worth to the United States through direct benefits to our health. It is providing similar benefits to other member countries. It is a vital element in the growing pattern of international cooperation for the advancement of peoples everywhere. It is fostering the habit among nations of working together. In this way the WHO is working as a real force for world peace.

#### THE CHALLENGE TO WHO

This, however, is not enough. The World Health Organization must continue its advance into this challenging frontier. Like all live and growing human agencies it faces many difficult problems. Most urgent of these is a more effective use by member nations of the World Health Organization for the improvement of health conditions. Only by this increased use will the organization grow stronger and more effective. But there are other pressing needs as well.

First, we believe that the World Health Organization must consolidate its major programs in disease eradication, environmental sanitation, and building health services while simultaneously moving to meet new health needs. Malaria eradication still needs special priority. The worldwide campaign

has made sufficient progress so that difficulties are becoming apparent in techniques, administration, and the allocation of resources. But I am confident that the nations involved, with the help of WHO, will over-come these obstacles. Malaria will disappear from the face of the earth.

At the same time WHO, with United States support, is preparing to meet newer health needs. As more knowledge is gained about the chronic diseases—cancer, heart disease, diabetes—it becomes evident that more international cooperation is required to probe their causes, cure, and prevention. This applies also to mental illness, for in developing our material comforts we have also vastly increased the mental stresses and strains to which our organism is exposed. The plan which WHO has drawn up with our aid, providing for expansion of WHO's unique means of stimulating and coordinating re-

Search activities, will be considered by the 12th World Health Assembly.

Mankind's "population explosion," as it is often called, is also part of the dynamic challeng to WHO. In 1798 Malthus wrote with some conviction that population pressures would always tend to keep man at Subsistence level. He observed pessimistically that for this reason Jenner's proposals for vaccination against smallpox, published the same year, were a waste of time. Now it is again clear that health measures add to Population pressures. President Eisenhower in his message to Congress on the mutual security program and the realities of 1959 referred to the new and striking "revolution in medicine, nutrition, and sanitation \* increasing the energies and lengthening the lives of people in the most remote areas. As a result of lowered infant mortality, longer lives, and the accelerating conquest of famine, there is underway a population explosion so incredibly great that in little more than another generation the population of the world is expected to double."

This means that in our lifetime the earth's Population may reach the astounding total of 5 or 6 billion people. In the same message the President again pledged that the United States would continue "to support and promote the accelerating international fight against disease" and estimated that the total international health expenditures of the U.S. Government in the next fiscal year will approach \$100 million. There are compelling reasons for our contribution.

Some people, like Malthus, may argue that WHO, by improving health standards, is making the world's population problem worse rather than better. Why should we make an all-out effort to increase man's life span, the argument runs, when there are already more people on this earth than we can maintain at a satisfactory standard of living?

To me this argument is just about as convincing as the sound of a lead dollar. It is unthinkable that we who have the means of health would attempt to withhold it from others. We have always believed in the dignity and worth of the human being and the full development of his potentialities. This includes good health.

But, in addition to the moral arguments, health would seem to be an absolutely essential prerequisite for any sound economic development program. Where people are disease-ridden and debiliated they obviously cannot make any substantial contributions to their country's economic progress. WHO is thus giving people in many nations strength to build and grow the things they need for a more abundant life.

There is, then, a satisfactory solution to the dilemma we face. The answer, the only answer, lies in moving forward on all fronts . of social and economic development. Our

technology is progressing at a prodigious rate, and men are now committed to that rate of advance throughout the world. In-deed, there are encouraging indications that the production of food, while still not suffi-cient, is beginning to keep pace with—and perhaps even exceed-population growth for the first time in modern history.

This is indeed a heartening development. It presages the time when the Malthusian doctrine will be completely discredited by man's technical ingenuity and his determination to win out over the forces of nature.

For us to admit that mankind cannot sufficiently apply the technology of human welfare is to admit fearful defeat. We can apply it, in peace and progress, for the ultimate fulfillment of human potentialities. Agencies such as the World Health Organization are at the forefront of this great struggle to better man's lot in life.

# The Present Argentine Situation: London Versus Washington

EXTENSION OF REMARKS

# HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. FASCELL. Mr. Speaker, I have read with interest the following editorial which recently appeared in the Diario Las Americas, and I hereby commend it to my colleagues' attention. It presents in a penetrating way Argentinian views on a problem of concern to them:

THE PRESENT ARGENTINE SITUATION: LONDON VERSUS WASHINGTON

Although at first it might seem illogical, the reality being lived in Argentina pro-foundly affects the inter-American relations, if one takes into account the fact that this great Latin American country is facing a crisis, which in substance will have great repercussions in other regions of the Western Hemisphere that are in a position to grasp details that cannot be perceived at sight.

On January 1 of this year the Argentinian Government got rid of what could well be called the traditional yoke of British colonialism, when it proclaimed the freedom of exchange. That step severed for good the preferential treatment obtained by England in Argentina which, among other things, gave the British access to a dollar costing 18 Argentinian pesos, while the other competitor countries in the commercial exchange, including, of course, the United States, had to obtain their dollars in the black market. The answer was obvious. England brought meat to Argentina and sold her products under the protection of that bilateral agreement. Then came the free currency exchange, commencing then the very importhat chapter of competition that placed the United States in an equal exchange level with England. Argentina thus entered the free world of supply and demand.

The development and austerity plan proclaimed by President Frondizi had the backing of a powerful movement obeying to what could be classified as the central left. This advocates for the thesis of absolute understanding between Argentina and the United States.

Now, then, a recent measure adopted by the Government of the United States gravely imperils the thesis of the friends of this country. In the possibility that aphthous contamination may be present in the cured meat exported by Argentina, the United States cancel its importation, and the result is that Argentina's trade balance is affected by approximately \$30 million. Naturally, the cattlemen affected by this economic setback turn their eyes to London and condemn the measures canceling the bilateral agreement between Argentina and the United States.

If the relative possibility of aphthous contamination exists, the necessary scientific measures can be adopted through the appropriate institutes, either to confirm the disease or to purify the meat as much as possible. That would be less costly than to abandon a market like Argentina's, that is eager to trade with the United States. Couldn't the Development Loan Fund of this country invest some dollars to improve the system of scientific research on Argentinian meat, so as to avoid its elimination just because of existing doubts regarding the possibility of contamination?

Besides the economic reasons, the United States cannot afford the luxury of turning their back to the friends of this country who are in Latin American trying to fight anti-American currents that are now the trend in the hemisphere. To ban, without just cause, the importation of Argentinian meat would mean to give encouragement to the enemies of the economic and political solidarity with the United States, that up to now have failed in Argentina.

### Massachusetts, a State With a Hard Core of Distressed Labor Markets

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an area redevelopment fact sheet on Massachuetts which has been issued by the Area Employment Expansion Committee in New York:

[Area Redevelopment Fact Sheet No. 54A] MASSACHUSETTS, A STATE WITH A HARD CORE OF DISTRESSED LABOR MARKETS

This fact sheet supplements Fact Sheet

No. 54, issued January 1959. Unemployment has dropped for the State but the number of chronically distressed labor markets have increased from 12 in January 1959, to 14 in April 1959. The total labor force in these areas was approximately 410,000 or 19.6 percent of the State total in April 1959, while the unemployment rate was 8.6 percent.

The four major distressed labor markets, Fall River, Lawrence, Lowell, and New Bed-ford, had an average rate of unemployment of 8.8 percent. As compared with January 1959, four new labor markets, Haverhill, Newburyport, Gloucester, and Plymouth, are now classified as distressed, whereas Marlboro and Taunton have dropped out.

The total unemployment in distressed and substantial labor surplus areas in excess of

6 percent is 15,866.

There were 21 labor markets with more than 6 percent unemployment. They had a civilian labor force of 829,000 or 39.5 percent of the State's workforce. Five labor markets have reduced their unemployment since January 1959, so that the percentage of unem-ployed in April 1959 was below 6 percent in Athol, Fitchburg, Gardner, Marlboro, and

<sup>\*</sup>Bulletin of March 30, 1959, p. 427.

Table I.—Massachusetts—Labor force and unemployment in labor markets, April 1959

Labor market area	Labor force (civilian) total	Unem- ployment total	Unemployment as percent of the labor force	Number in excess of 6 percent
A. State, total	2, 097, 740	123, 767	5. 9	
B. Distressed areas 1	410, 260	35, 399	8.6	10, 784
Major	235, 350	20, 703	8.8	6, 582
Fall River, Mass.—R.I. Lawrence: Lowell. New Bedford.	5, 720 56, 340 52, 850 68, 910	4, 637 4, 113 5, 338 6, 615	8. 1 7. 3 10. 1 9. 6	1, 202 733 2, 167 2, 480
Smaller	152, 220	12, 128	8.0	2, 995

 Eligible for assistance under the House Banking Committee Recommendation, i.e., unemployment of 6 percent in at least 18 of the previous 24 months, 9 percent in 15 of the provious 18 months, 12 percent in the previous 12 months or 15 percent in the previous 6-month period.

2 January 1959.

3 March 1959.

4 The following communities have not been included in any labor market area:

Western Massachusetts:

Beckett
Cheshire
Hanoock
Otis
Edgartown

Chilmark
Edgartown Edgartown Gayhead Gosnold Otis Peru Richmond Sandisfield Nantucket Oak Bluffs Tyringham Washington Tisbury West Tisbury Windsor

Source: Division of Employment Security, Commonwealth of Massachusetts.

#### [Area Redevelopment Fact Sheet No. 54] MASSACHUSETTS

Massachusetts is one of the States most seriously beset by distressed areas problems. Four major labor markets, seven smaller, and one very small labor market are chronically distressed communities. In addition, two labor markets are affected by high seasonal unemployment and therefore require technical aid in developing supplementary offseason employments. Under the administration bill, S. 1064, the four distressed major labor markets, only one smaller, and one very small labor market, would be eligible for benefits. Under the Senate committee bill, S. 722, the same four major labor markets, one smaller, and two very small labor markets would be entitled to benefits.

Of the 12 labor markets which now have a substantial labor surplus but are not eligible for benefits under S. 722, 1 would be eligible in April, 2 in May, 3 in June, and 7 in July. Under the administration bill in addition to the curernt six eligible labor markets there would be one more in 1960, three in 1961, and four in 1962. Under committee S. 722, in addition to the seven currently eligible there would be three in 1960, and four in 1961 benefiting under the act (table I)

In January 1959, the total unemployment in the State was 160,320, of whom 42,350 were in the distressed labor markets (under S. 722), and 51,050 were in substantial labor surplus areas (table II). The only considerable labor market without a substantial labor surplus is Boston. \*Outside of Boston, only 2 percent of the State's labor force is in areas without a substantial labor surplus. Forty-four percent of the State's labor force is in areas suffering from unemployment of 6 percent or more.

The total number of jobs which would have to be created in the currently distressed labor markets (under S. 722) to reduce unemployment in these areas below the 6-percent level would be 18.365.

In table III, we report for each distressed area qualifying under S. 722, the unemployment rates by months for 1957, 1958, and

January 1959.
In table IV, we report for each substantial labor surplus area, the unemployment rates by months for 1957, 1958, and January 1959.

In table V, we report for each distressed area, the unemployment rates for the years 1955, 1956, 1957, and 1958.

In table VI, we report for each labor surplus area, the unemployment rates for the years 1955, 1956, 1957, and 1958.

In table VII, we report unemployment rates for two seasonally afflicted areas of high un-employment for the months of 1957, 1958. and January 1959.

The State of Massachusetts has faced serious unemployment problems. The major difficulties stem from the contraction of the textile industry. Many efforts have been made to bring in new industries and some success has been achieved but the volume of new employment has not been sufficient to offset the losses. The communities face the need of developing new factory space if new industries are to come. In some cases, older mill buildings have to be leveled. New industrial patterns have to be promoted.

There is considerable evidence that the large centers of advanced technology in several communities have and can become the nucleus of new economic expansion. However, the rate of growth has not been sufficient and the size of present projects has been inadequate. Many of the obstacles to growth have not been removed. Local efforts are not sufficient for this purpose. Because these undertakings exceed the resources of the local areas, a Federal program of technical assistance grants for public facilities and loans for public facilities and industrial and commercial structures

Many areas are rapidly becoming dis-tressed because of the accelerated contraction of the local textile industry, the movement of even newer industries such as electrical manufacturing, contractors of military products and Federal establishments. These would be shortly eligible under S. 722 but not under the other two bills.

Two labor markets, Hyannis and Nantucket, need technical assistance in helping them develop complementary industries to provide employment during the off-season months.

Table I.—Massachusetts—Major areas of "substantial labor surplus", March 1959, by status of current eligibility and earliest date of future cligibility under S. 1064, S. 722, and committee S. 723

# One Solution to the Educational Problem

EXTENSION OF REMARKS

# HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. FASCELL. Mr. Speaker, our educational system underwent during the last Congress probably what was the most extensive overall appraisal in our history. The reasons for and results of the studies made were unsettling and of Vital importance to all Americans. They were essential to the question of our national survival. The President's conclusions on the subject were that improvement of our system was a problem above all other immediate tasks—we needed scientists by the thousands more than We at the time expected to have.

Since the war, America experienced a period of educational advance. We had produced well under the stress of war and were continuing to do so. We had all reached a certain amount of complacency, however, which was suddenly shattered by the advent of the Russian sputnik. We realized that we were in great danger-and that in this age our fate depended on the man of science. There was no doubt that Russian scientists were ahead of ours in many fields and that further emphasis on and encouragement of education was needed. We could not mass-produce sputniks Without properly trained scientific minds

able to use the imagination and foresight necessary to carry out our space

Congress plunged into the problem. The hearings that were held brought out very clearly that the Nation must take steps to more effectively discover and encourage its potential intellectual talent, create wider opportunities for advanced training for young people and provide better teachers and teaching equipment to develop the scholastic resources of American youth. A way had to be found to dispel the public notion of a scientist as being an individual of separate ways and one set aside from

The National Defense Education Act was enacted as a vehicle by which our goals might be sought. Many earlier attempts at enacting legislation to supply Federal assistance to education had been defeated.

All means of providing emphasis on educational achievement must continue to be explored fully. In this connection, I want to call to my colleagues' attention a unique program of rewarding brilliance which has been initiated by a local newspaper in my district—the Miami Herald, a Knight newspaper. In an inspiring ceremony, the 10 top high school seniors in the fields of art, literature, and journalism, music, social science, mathematics, science, speech and drama, sportsmanship, citizenship, and scholarship recently were presented coveted silver trophies-Silver Knight Awardsand a \$200 grant to be used for further education. The 2,000 applauding adults and teenagers in the audience emphasized the popular appeal and importance

of these intellectual awards. The Silver Knight Awards are on a par with muchproclaimed citywide athletic achievements; and educational accomplishments have been placed in a proper perspective with all fields of endeavor. A total of \$3,500 in grants went to 40 seniors in the program-\$200 to winners and \$50 each to honorable mentions. The plans for further achievement and learning on the part of the winners and the interest and excitement generated among other students are fine and tangible results of this newspaper's initiative, and are indeed an outstanding example of leadership and community spirit which could well be implemented throughout the country. I feel sure the results would be amazing and increasingly evident in the years to come. And it would cost the taxpayers nothing.

I take pride in submitting the following article on the program from the Miami Herald and the sincere and thoughtful editorial which followed the selection of the winners:

Greater Miamians will get a chance to honor their most brilliant teenagers in a precedent-shattering ceremony tonight.

The public has been invited to come to the Dade County Auditorium at 8 p.m. to cheer for the county's 10 top high school seniors.

Designed to prove that life in Miami isn't all frills and frolic, the ceremony will bestow on the students accolades of a sort which have been reserved for athletes.

Each of the 10 top seniors will receive a Silver Knight Award: a shining trophy accompanied by a \$200 educational grant. addition, 30 runners-up will be named. Each will get a plaque and \$50. The awards are sponsored by the Miami Herald with the cooperation of Dade County schools.

Source: Calculated from Division of Employment Security, Commonwealth of Massachusetts and Bureau of Employment Security, U.S. Department of Labor data.

Source: Calculated from Division of Employment Security, Commonwealth of Massachusetts and Bureau of Employment Security, U.S. Department of Labor data.

People who attend the ceremony—admission is free—will also get to hear one of the Nation's top speakers, Dr. William H. Alexander, of Oklahoma City.

Dr. Alexander, the punchlining pastor of the First Christian Church of Oklahoma, said the title of his address will be "You Are

the Answer."

Names of the top teenagers will remain a secret until they are called from the audience to receive their trophies. The presentation will be by James L. Knight, general manager of the Miami Herald.

The 10 have been selected by a panel of 30 top judges, all Miami leaders in business, government, education, and the arts. They were chosen from 104 candidates represent-

ing 13 local high schools.

Each of the 104 nominees has already been given a medal and a certificate of achieve-

Each winner represents a particular category: scholarship, science, mathematics, social science, music, literature, speech, art, sportsmanship, or citizenship. From 8 to 13 nominees competed in each.

Winners were chosen on the basis of grades, talent, leadership, and the extent to which they have used their special abilities to serve their schools and the community.

#### THE SILVER KNIGHTS: OUR PRIDE

Anyone who thinks the younger generation is going to the dogs should have been in the Dade County Auditorium last night. There sat 104 high school seniors from 13 local high schools.

They had been chosen as their schools' most outstanding exemplars of excellence in 10 categories: art, literature and journalism, music, social science, mathematics, science, speech and drama, sportsmanship, citizenship, and general scholarship.

They assembled to learn which of their number had won the Silver Knight Awards as Dade County's best in each category.

Today, the 10 winners have their gleaming trophies and education grants of \$200 each. Thirty runners-up have plaques and \$50 each. The prizes were awarded for the first time here by the Miami Herald in cooperation with the public school system.

We congratulate the winners. Their awards testify to their achievements.

We also congratulate all the contestants.

We also congratulate all the contestants. They represent the many high school students here who excel in their studies and in the good characteristics drawn out by education. These qualities fairly shone from the demeanor and bearing of the 104 candidates gathered in the auditorium last night.

No one who saw them could fail to reach the obvious conclusion: these are the kind of young people we can be proud of.

We hope the honors accorded the winners of the Silver Knight Awards will encourage other high school students to emulate their example. They exalt scholarship. This is the purpose of education.

### 4-H Youth Visit Capitol

EXTENSION OF REMARKS

### HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. EDMONDSON. Mr. Speaker, I should like to call attention to the fact that the 29th National 4-H Conference gets underway here in Washington tomorrow, and by giving some background information on a delegate from the con-

gressional district I represent, provide an example of the outstanding young Americans who represent their States at this conference.

One of the four delegates from Oklahoma is Miss Suzanne Crawford, daughter of Mr. and Mrs. Tom Crawford, of Grove, Okla., and the granddaughter of Mr. W. D. Gibson, who is in charge of the Prayer Room here in the Capitol, and Mrs. Gibson, also of Grove. Other delegates from Oklahoma include Miss Sue Dyson, of Hendrix, George Tarr, of Bennington, and Michael George Lucas, of Roff—all of whom have wonderful records in 4-H work.

This National 4-H Conference, which is supervised by the Cooperative Extension Service of the Department of Agriculture and the State land-grant colleges, will last through next Friday and has as its theme "Your Tomorrow." Its purpose is to help club members learn more about how the Federal Government operates, hear outstanding speakers, take part in educational tours and share ideas in group discussions on plans for careers and adjustments to living in the space age.

Delegates to this conference are 4 high-ranking club members from each of 49 States and Puerto Rico who were chosen because of their exceptional records in leadership, citizenship, and community service, and for special achievement in farming, homemaking, and other projects.

Oklahoma's own Miss Suzanne Crawford is a beautiful and excellent example of the type of American youth who will be attending this conference. Last month she graduated from Grove High School as valedictorian of her class, just as her sister, Linda, did 2 years earlier. She has been awarded a scholarship to Oklahoma State University. She is a member of the eight-girl song and dance group, organized as a 4-H activity and called "The Okies," which participated in the inauguration ceremonies of the Governor of Oklahoma this year.

Her outstanding record in 4-H activities is well described in an article appearing in the Tulsa Daily World for Friday, December 5, 1958, at the time she was named national 4-H winner in recreation. I should like to insert this article at this point:

[From the Tulsa Daily World, Dec. 5, 1958] GROVE GIRL IS NAMED NATIONAL 4-H WINNER IN REGREATION

CHICAGO, December 4.—Suzanne Crawford, 17-year-old Grove, Okla., high school senior, Thursday was named national award winner in recreation on the final day of the 4-H Congress here.

She was the 10th Oklahoman to receive national 4-H honors during this year's congress, which attracted more than 1,300 farm youth from the United States and several foreign countries.

Only California with 13 national winners, and New York with 12, had more top awards than Oklahoma.

#### ARDMORE YOUTH WINS

Oklahoma youngsters named earlier this week were James McKown, Ardmore, boys' agriculture; Ruth Ann Wilson, Jones, canning; Karen Bassett, Guthrie, dairy; Ruth Niemann, Kingfisher, dairy foods; George Tarr, Bennington, gardening; Margaret Ann Starks, Meridian, home economics; Carolyn

Robinett, Douglas, home improvement; Andrea Suiter, Tipton, safety; and Bob York, Hitchcock, soil and water conservation.

Oklahoma State University placed third among 21 teams in poultry judging. Kansas State University was first, Texas A. & M. College, second; Arkansas University, fourth, and Missouri University, fifth. OSU's Bob Squires, Seminole, was third high man, and Raymond Sharp, Pawnee, fifth.

Comely Miss Crawford, who won a trip to the 4-H congress for her recreation accomplishments, has had her own school of dance for the past 3 years. She is presently State secretary of the Oklahoma 4-H clubs, and is chairman of State 4-H congress recreation-

#### PRODUCES SHOW

Using her talent to good advantage, Suzanne produced and directed the entire variety show given for the benefit of a county polio fund drive; is a member of choreographer of the Okies, a singing and dancing group from her Grove 4-H Club, which entertained at the National 4-H Congress here in 1956 and since has made 120 appearances before 75,000 people in 6 States.

She is a member of the State honor society and national Beta club, was State champion in girls' electrical demonstrations, among the top 10 in dress revue, and managed to complete 45 projects in 8 years of 4-H club work.

Her parents are Mr. and Mrs. Tom Crawford, Grove. Suzanne wants to be a 4-H club leader after she finishes college. Her 4-H leaders are Mrs. Dean Barrett and H. E. Wilson, and her 4-H agent is Mae K. Bell.

Mr. Speaker, I should like to pay tribute at this point to all the fine delegates and leaders who will be attending this national 4-H conference, for I know that Miss Suzanne Crawford is typical of the high quality of leadership and citizenship represented at this conference.

### Michigan Trip Pays Off

EXTENSION OF REMARKS

# HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial appearing in the Nashville (Tenn.) Banner of a few days ago. In poignant fashion, it calls attention to the rapid progress being made in Tennessee in its efforts to obtain industry. More and more the advantages of this great State are being brought to the attention of the Nation. The region as noted in the editorial, has an able and industrious supply of workers; the salubrious business climate is inviting when compared with the older industrial areas.

Our distinguished Governor, the Honorable Buford Ellington, is in the vanguard in this forward march of progress in our State. 'The editorial follows:

#### MICHIGAN TRIP PAYS OFF

Nearly 100 years ago—back in the days of rebel yells, pounding hooves, and gray ghosts—southern raiders used to give the Yankees fits.

The North didn't take too kindly to these swashbuckling riders whose escapades have now become legend. But that was war and

the raiders of yore had a mission—harass the advancing army.

There's a new brand of "raider" riding out of the South today. If he wears gray, it's a gray fiannel suit, his aims are peaceful but he also has a definite mission—acquisition of new industry for his State and region.

He is the bearer of invitations, pointing to regional opportunities; the ambassador of sectional progress, and intersectional goodwill

And the Tennesee Brigade—Gov. Buford Ellington's "raiders" has been mighty successful in its recent sally into Michigan.

Actually, the term "raider" was hung on the Tennesseans by Detroit Mayor Louis Miriani who has alternately lambasted and belittled the efforts of our industry seekers.

When it was reported that 23 immediate prospects had been turned up by the Ellington "raiders," Miriani says "baloney." But it wasn't baloney at all; the Tennesseans brought home the bacon in the form of a \$1.5 million branch of a major furniture manufacturing firm to be located in John-Bon City

son City.

The circumstances that have made the Wolverine State the happy hunting grounds for industry seekers were homegrown. And you can bet your last bar of soap that Governor Ellington will never have to come a-beggin' to newly acquired firms to get Tennessee out of a fiscal fiasco similar to that created by Gov. G. Mennen (Soapy) Williams and his Lieutenant Governor without portfolio, UAW chief, Walter Reuther.

Despite the Detroit mayor's protestations, the facts are that industry is seeking growing room not only for the location of branch plants but for primary installations as well. The South—particularly Tennessee—fills the bill

This region has an able, intelligent, and industrious supply of workers; the salubrious business climate is inviting when compared with the older industrial areas. And in this era of industrial growth, there is plenty of room for expansion.

As the mayor of Detroit has probably gathered "raiders" have always been held in considerable esteem in these parts, especially when they hit hard and fast and accomplish their mission.

### Global Objective Springs Leak

EXTENSION OF REMARKS

### HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include the following editorial from the Lancaster News, Lancaster, S.C., of June 6, 1959:

GLOBAL OBJECTIVE SPRINGS LEAK

The U.S. State Department has spent years and X millions of dollars to rehabilitate Japanese economy. A reluctant Congress has been chivvied into supporting this program through constant warnings that if Japan were left to her own resources she would begin trading with the enemy and thus be drawn into the Communist orbit. In the process, the American textile industry has been progressively sacrificed to keep Japan happy and cooperative.

American markets have been held open for cheap Jap textiles. American cotton is sold to Jap manufacturers at 10 cents per pound less than the same cotton can be purchased by American mills. Every effort to establish legal quotas and compensating tariffs has been resisted by the State Department. Faced with spontaneous boycott of her textiles in the United States, Japan instituted voluntary limitations on her exports 2 years ago but is constantly seeking to increase and evade them.

Has the United States accomplished its objective in this or have we been a patsy for Jap Industrialists? A dispatch out of Tokyo last week would seem to indicate the latter. Japan has contracted to buy 6,000 bales of raw cotton from Russia under an agreement between five leading Japanese trading firms and the Soviet Textile Goods Export Corporation

Although this is relatively a small amount of cotton, it is a beginning, and it is not inconceivable that products woven from Russian cotton will find their way into Jap exports to the United States. Thus, our efforts to keep Japan out of the Communist orbit may have opened a market in the United States for the Communists themselves.

### The Wheat Program

EXTENSION OF REMARKS

# HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the Record, I wish to insert the attached reprint of a radio broadcast recently released by my good friends, the Farmers Union Grain Terminal Association, St. Paul, Minn.:

What's going on at the White House these days is a mighty puzzle—but maybe farmers ought to talk to the bankers who seem to have the situation well in hand. At least, the President went to Congress Monday to demand higher interest rates for bankers and moneylenders who already get \$8 billion a year from the Treasury. But farmers remember that only 9 days ago the President was up on the Hill demanding less pay for wheat farmers. Why the President should want more pay for bankers and less for farmers is an enigma that would defy the deduction powers of the great Houdini.

But—that's the story. The Secretary of Agriculture has very bluntly told Congressmen that the President will veto any measure that would raise farm prices. On June 1, when the farm Secretary announced the July 23 date for the wheat referendum, the President followed up with a personal blast at the wheat program. "Disastrous and discredited legislation," he called it. And that apparently was step No. 1 in the administration's master plan to defeat marketing quotas on July 23. Now, according to wire service reports from Washington, step No. 2 has been announced.

The United Press reports that the administration is throwing all its considerable weight behind a trick wheat deal introduced by Congressman Belchers of Okiahoma. "High administration officials," reports United Press International, "believe the Belcher bill would persuade farmers to vote the wheat program down for the 1960 crop."

That is right in line, of course, with the administration's announced aim of doing away with the wheat program just as it has

done with the corn program.

/ What's in the Belcher bill? It's innocent on the surface until you get to the gimmick. It would not change present wheat allot-

ments or price supports. The gimmick is that it would do away with the 15-acre qualification for voting. Hundreds of thousands of eastern farmers who grow a few acres of wheat for chicken feed would be able to vote for the first time. That would let the farm Secretary bait his referendum hook with the unspoken promise of cheap grain to make cheap feed—and the poultry farmers are in plenty of trouble because their prices are at disaster levels.

But while all this maneuvering goes on in Congress and the administration is working allout to bust the wheat program, it looks more and more like there won't be any new legislation to put on the wheat ballot this year. That means the choice that wheat farmers will have will be between the present program or no program at all. A "Yes" vote will mean present acreage allotments with 75 percent of parity price supports in 1960. A "No" vote will mean no program at all—a production free-for-all—with many market analysts saying the wheat price could go as low as 50 cents a bushel on the free market.

So for wheat farmers it's a choice between staying in business with a "Yes" vote or going bankrupt with a "No" vote. GTA, the Farmers Union, and other leading farm organizations will be campaigning strongly for a big "Yes" vote because they believe that intelligent planning is as necessary in agriculture as it is in any other business.

# The Meaning of Able and Baker

EXTENSION OF REMARKS

# HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. ROUSH. Mr. Speaker, under leave to extend my remarks I am placing in the Record an excellent article that appeared in the Kokomo Tribune, Kokomo, Ind., June 1, 1959. This article concerning the Able and Baker flight experiment into space gives a graphic description of this spectacular and significant event and its impact on our scientific development. I am sure my colleagues will find it interesting reading:

### THE MEANING OF ABLE AND BAKER

Not the least of those who were interested in the way Able and Baker, the now famous little monkeys withstood their flight 300 miles into space, were those several Americans known as the Astronauts. These are the men who have been selected to make the first human ascents into space, and they must have been heartened by the successful manner in which the two monkeys endured the experiment of a few days ago.

For doctors have found that Able and Baker experienced "extraordinarily small" physical charges in their long thrust into space. The monkeys survived a gravity pull 38 times normal, and for a fraction of a second—while she was subject to this intense pull—Able's heart beat went up to 222. The beat was 140 at takeoff, jumped to 170 during the first stage of the flight when Able was subjected to a force of 15 g.'s—15 times the force of gravity, but as the Jupiter rocket went into free flight—zero g.'s—the heart beat fell to 135. On impact, when for less than a second the monkeys were subjected to 38 g.'s, the beat hit the 222 mark.

Able's respiration was 20 a minute before takeoff, rose to 30 as the rocket lifted off. returned to 20 during free flight and rose to 66 briefly during the impact period. Baker, a smaller animal than Able, had a similar experience, and the medical men who studied the findings said this is a good indication of the small stress on the systems of living creatures during such a flight.

The monkeys rocketed through space at speeds up to 10,000 miles an hour and landed safely. In their air-conditioned nose cone, they survived the intense heat of the reentry into the atmosphere as they had withstood the terrific shock of blastoff and the eerie phenomenon of weightlessness which is a concomitant of space flight.

Valuable lessons thus were learned from this remarkable experiment. Moreover, American scientific genius scored heavily again, for the rocket apparently worked faultlessly, as did the guidance system which brought Able and Baker down close to the waiting rescue vessels. The nose cone survived tremendous heat and pressure and evidently almost all of the telemetering devices attached to the monkeys' bodies also functioned properly.

The whole thing was a feat that has again raised the quality of American science to the finest in the world.

# John W. Mahan, Commander in Chief, Veterans of Foreign Wars

EXTENSION OF REMARKS

# HON. J. T. RUTHERFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. RUTHERFORD. Mr. Speaker, for many years, throughout the history of our country, veterans, through their veterans' organizations, have made great contributions to the formulation of our national policies. In so doing our veterans have materially enhanced the greatness of our Nation.

It is indeed a tremendous honor for any veteran to be chosen by his comrades to head one of our great veterans' organizations. The responsibility of serving as the acknowledged leader and spokesman for a large national veterans organization is a heavy responsibility in every sense of the word.

At this time I rise to invite the attention of the Members of the House to the truly outstanding services to veterans and to our Nation which have been performed by Mr. John W. Mahan, the present commander in chief of the VFW. During his tenure as national commander in chief of the VFW, the membership of that organization, composed entirely of oversea veterans, has been steadfly, month by month, breaking previous records. Commander in Chief Mahan, through his tireless and vigorous program of visiting VFW and governmental leaders throughout the country, has created in every part of our Nation a new awareness of the indispensable role that the VFW is performing in furthering the interests of our national security and helping shape other vital governmental policies.

Here in Washington the VFW, under Jack Mahan's leadership, has achieved even greater stature and influence. I know, from conversations with other Members of this House, that they share my views with respect to the assistance, advice and understanding which has been accorded to us by this unusually able and sincere VFW commander in chief. Very appropriately, there is never any question but what he has forcefully, astutely and intelligently fought for the interests of the veterans. One of the reasons he has been so influential is that he possesses an amazing knowledge of veterans problems and their legislative aspects. He meets with us as a fellow citizen, a keen student of veterans affairs, and a man of great objectivity and wisdom.

Undoubtedly one of the reasons why the influence and stature of the VFW is so great at this time is that Commander in Chief Mahan has, during his tenure as commander in chief of the VFW, moved to Washington and temporarily set up residence here at the seat of Government. Consequently, he is available for consultation and advice to members of the House and Senate on short notice whenever a matter concerning veterans legislation or subjects in which they are interested arises. He is probably, as a result of his residency in Washington, better known personally to Members of Congress than any person previously occupying a similar position. Members of Congress and veterans, both individually and as members of their organizations, are indebted to Jack Mahamfor the thoroughly conscientious and extremely able manner in which he has represented the VFW in Washington during this session of Congress.

The VFW influence has been marked, not only in matters of vital interest to veterans, but in problems connected with national defense policy, housing, education and practically every major aspect of legislation. There is no doubt in my mind but what the work of Jack Mahan. which was so effective by reason of his actual residency, was largely responsible for the action of the House of Representatives when it recently increased veterans' appropriations above that recommended by the administration.

Seldom has the influence of one person made such a great contribution to such vital legislation. The VFW has long been noted as an organization interested in the Nation's defense and security; it has a heritage of freedom and Commander Mahan will, I know, continue the VFW tradition in this respect.

As a member of the VFW-in which I have held the profound privilege of being the commander of the department of Texas-I share the feeling of my colleagues in Congress who are proud that a great veterans' organization has produced such a patriotic, sincere, and able leader as John W. Mahan.

### The Bored Generation

EXTENSION OF REMARKS

### HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. ROUSH. Mr. Speaker, in this day when everyone is discussing and concentrating on economic growth very little is said about moral and intellectual growth. The following editorial, which appeared in the Frankfort Morning Times, Frankfort, Ind., June 6, 1959, makes some penetrating and philosophical comments concerning the youth of, our country and is worthy of the attention of my colleagues:

#### THE BORED GENERATION

Ages pass, and cannot be recalled. Two that we should all be reluctant to see go. which may be on the wane, are the age of enthusiasm.

Enthusiasm is a driving force of immense power. The person who has it can ride rough over many obstacles, satisfying ambition, satisfying curiosity, ranging wide through life.

With enthusiasm, you find your days an endless round of rewards, whether your interests be broad or narrow. What counts is that the things you like in life you pursue hard, to the finish, to the point of mastery and understanding and full apprecia-

We seem, unfortunately, to have less and less of that as the years roll by. Too many are content to play the game of "getting through the day." They scratch the surface of their interests, but never plumb the depths. They have no heart for finishing things.

They do not seem to appreciate that the unquenchable zest we call enthusiasm can make the difference between living and merely existing.

As for our innocence, a lot of that, too, appears to be going by the board.

Of course, we cannot recapture all the simplicities of a former time. Our civiliza-tion is gadget heavy. We are hedged about by devices which signal us, guide us, shout at us, entertain us, and now and then instruct us.

As these things close in around us, a good many appear no longer to have the innocence to enjoy the simpler pleasures. Millions, of course, still do, but millions also do not. The warmth of the family, the beauty of the sky, of trees, these evidently have lost much of their deep appeal for some people.

A National Education Association report on juvenile delinquency has many interesting and some shocking things to say. One shocker is the suggestion that most of the delinquents are not "sick" by any definition you care to use, but simply are indulging in "nasty sport."

In other words, their savagery, their brutality, is not a lashing out from deep inner cause but in countless instances is just "fun and games," 1959 style. Should this view have any merit, it suggests a terrible perversion of the youthful urge to find exciting play.

Arguments rage that though these signs of fading enthusiasm and innocence exist, they are not yet gravely serious for our future. Still, they multiply. When will they be

serious, if not now?

### Poison in Your Water-No. 114

EXTENSION OF REMARKS

### HON, JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in the Cambridge (Md.) Banner of April 24, 1959, entitled "Property Owners Cut Ditches To Relieve Flood of Sewage": A Health Hazard Grows—Property Owners

CUT DITCHES TO RELIEVE FLOOD OF SEWAGE

(By Maurice Rimpo)

With talk about suburban sewers dying out, how are local suburbanites faring with their sewage disposal problems?

"We would never have moved to this town if we had known about it," comments the wife of a business executive who recently built a house in one of Cambridge's more expensive developments.

Not far away a neighbor with one septic system installed in his backyard has found it necessary to sink a second seepage pit in the middle of his front lawn.

Another suburban homemaker denies having much trouble with waste water but admits "Once in a while it gurgles and we go easy on the water. But it isn't good. I don't suppose there is anything worse."

Fears for the health of the area's children

Fears for the health of the area's children are expressed by a third young woman who lives in the critical Bay Heights-Bay View area.

Eighty-seven homes here tax the soil's drainage capacity so severely that septic tank water collects in backyards and stagnates in roadside ditches.

Many homeowners have gotten rid of this water by cutting small ditches across their yards and into the county ditches.

yards and into the county ditches.

Health Officer J. William Robbins says frankly that while a serious health problem is building up, there seems to be no solution short of a sanitary sewer system.

Absolving developers and contractors of blame, the sanitarian recalls that soil tests made in the suburban areas before building started were, "satisfactory then but we couldn't anticipate the water use."

Some residents have solved their individual sewage disposal problem at least for the present, by installing oversized seepage pits' or a series of pits. In other cases no satisfactory solution has been found.

Acknowledging that the public has lost confidence in the health department's ability to develop a workable system, Sanitarian Robbins says his department can require a man to sink \$400 into a new seepage system but can offer no guarantee that it will work.

Beside the unauthorized drains which property owners have dug, Robbins suspects that other residents may be piping their sewage overflow into nearby waterways.

Surveying the Bay View area recently, the sanitarian called it "a dangerous situation now. It has definitely turned into a public health hazard."

And he indicates that the health department plans to screen building permits closely to keep the situation from growing worse. "We will not issue any permits unless it can be proved beyond reasonable doubt by all necessary tests that there is no chance of a septic system's failing," he adds.

Along with many residents of the suburban areas, Robbins says he is convinced that a restudy is needed to determine whether sewers can be put in at a price the average taxpayer can afford.

A recent Whitman Requardt study concluded that it might cost each homeowner from \$100 to \$170 a year for 30 years to provide and maintain a sewer system.

# Congress Alone Responsible for Agricultural Dilemma

EXTENSION OF REMARKS

OF

### HON, PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 12, 1959

Mr. DAGUE. Mr. Speaker, as a 12year member of the House Committee on Agriculture I find much in my experience to justify the observations made in an editorial appearing in the Christian Science Monitor entitled "Let Congress Face It."

This week has seen the House wrangle and fuss over two separate measures designed, respectively, to ease the situation in tobacco and wheat, and in my opinion both bills will only serve to compound the confusion which presently exists in those two commodities. Neither bill effectively tackles the glaring facts that there is entirely too much acreage presently being planted to these crops and that high level of supports can only result in increased production. Both bills also ignore the fact that with today's modern technology we just do not need as many farms as formerly to meet our needs at home, while the high price of our products makes them noncompetitive in the world market.

In my years on the Committee on Agriculture I have seen enough to convince me that neither party is wholly free of blame for the mess in which we now find ourselves. I have seen the Democrats fight to protect their cotton, peanut, rice, and tobacco acreage while on our side the Republicans have defied any attempt to approach reality in regard to corn and wheat. Indeed, the so-called farm bloc, as we look back on its operations from this distance, now appears to be little more than a band of brothers who may have wrecked agriculture in their attempts to be kind to it. And, parenthetically, I am entitled to point out that I have consistently opposed the continuance of high supports even when my own party has been in control and in one or two instances I was the only member of our committee who voted "No" to the perpetuation of unrealistic legislation that seemed to ignore the law of supply and demand.

The tendency today among my Democrat friends—and even among a number of midwestern Republicans—is to blame Secretary Benson for our agricultural ills. The charges they level at Mr. Benson are sheer demagogery since all that he is doing is administering the law that the Congress has handed him. Under the law he is under compulsion to lower supports whenever he finds the supply of a particular commodity is sufficient for our needs and he has done just that. And when he condemns the present sup-

port program as unrealistic and unworkable he is stating a fact of which, in my opinion, a majority of our citizenry are convinced.

As I have repeatedly stated it is my firm conviction that there is no legislative device we can develop that will maintain farm income at a high level at a time when we are producing more than the market will consume. Our problem is to set as our goal the abandonment of all semblance of supports and controls, except as they may be invoked to increase production in time of emergency, and then to reach that goal through a period of gradual transition that will do as little damage as possible to the hard-working farmers who are the backbone of America.

The Christian Science Monitor editorial included herewith is commended to your attention:

LET CONGRESS FACE IT

The failure of Congress to do something effective about American farm surpluses amounts to a shocking breakdown of representative government. The vast majority of citizens want action. Farmers themselves decry the waste in surpluses for which the Government paid \$9 billion. Both parties have promised solutions. Neither has produced.

Indeed, current measures being pushed in Congress—directed at the most ridiculous surplus—are mere excuses. Supposed to hold down wheat production, they could end by increasing it. For they embody two Alice-in-Wonderland theories Congress uses in farm legislation.

One is the belief that crop surpluses can be reduced by offering farmers incentives to increase production. The second is that acreage restrictions will hold down production at a time when yields per acre are being doubled by improved seed, fertilizer, and cultivation. These two theories are illogical on their faces and have been exploded in practice. But Congress still clings to them.

Let's be fair to Congress. Crop surpluses are only half the problem. The harder half is the surplus of farmers. Hardships of the displaced evoke our compassion. But the husks-off fact is that the industrial revolution on the farm makes it possible for several million fewer farmers to meet American needs for foods and fibers.

This change is not unlike that experienced in the original industrial revolution when introduction of machinery made the labor of millions of hand workers unnecessary. Would it have made sense to keep those people employed by having the Government buy and store the surplus goods produced? As much sense as what Congress is doing.

For in seeking to help farmers without machines to stay on the land it has only partially succeeded—about 5 million have quit farming since the war. And in trying to keep up prices for them it has offered terrific incentives for overproduction to farmers with machines. For instance, price supports for wheat at \$1.90 a bushel are three times the production costs of some big wheat farmers. About 10 percent of the growers get most of the price supports.

A,wiser basic policy would be to work with rather than against the forces of economic change. Men no longer needed on the land could be more truly aided by helping them find other jobs which need them than by trying to keep them working in unequal competition with new machines and methods on the farm.

Many Congressmen attempt to shift the blame to Secretary of Agriculture Benson. He has mad mistakes, and he has offered no complete answer. But he has courageously sought lower price supports. And he only administers laws Congress has adopted. It must assume responsibility for basic policy failures. Congress should be required to face that fact and to take more effective action.

Stockpiles and Surpluses: A National Problem

EXTENSION OF REMARKS

# HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the May 13, 1959, Bulletin of the National Association of Purchasing Agents by George Stuart Brady raising a number of thoughtful and serious questions about our stockpiling and surplus storage programs:

THE NATIONAL BOONDOGGLE—GOOSE FEATHERS AND CASTOR OIL

### (By George Stuart Brady)

"How specifically are the possible alternates to stockpiling fully discussed and priced in comparison to the cost of stockpiling?" That was the question asked of the Office of Defense Mobilization by the Bureau of the Budget during the fiscal year 1954-55, when stocks of many materials were already assuming alarming proportions. There have been closely controlled inside "surveys"; but, up to now, there is no record of any answer that would convince the taxpayer that a Government-owned inventory of raw materials, rapidly nearing \$10 billion, is necessary for defense.

In a previous article, it was shown that stockpile purchases of lead, zinc, and some other items during the past 5 years have had no defense significance, and were merely for the purpose of boosting prices, thus burdening the consumer two ways, through taxes and through higher prices. The large accumulations of some other materials, like vanadium, if not made for price regulation, can be explained only by a bureaucratic urge to make the job more important by expansion. Vanadium is a special-purpose metal used in limited quantities; and, readily-accessible supplies have always been ample for industry needs. After the basic stockpile objective was filled, a higher objective was set; and, this big supply was reported exceeded in 1958.

In February 1957, the president of one of the important tungsten-using companies, and also the owner of a mine that sold \$10 million worth of tungsten to the stockpile, told the Congress that "more consideration should be given to the taxpayer rather than to the mine producers." He pointed out that the stockpile of tungsten is a 20-years' supply, and he recommended that the Government sell 5 percent of the stock every year until it gets down to no more than a 5-year supply.

#### STOCKPILE OBJECTIVES OBSOLETE

But technical progress has made the old objectives of the stockpile so obsolete that even a 5 years' supply of tungsten would be far beyond reasonable defense needs. The high specific gravity of the metal gives it only a limited use in heat resistant alloys for militant equipment. Tungsten magnet alloys have been replaced by other more efficient magnets. In electronic tube fliaments, it can be replaced by the stronger

and stiffer rhenium. In carbides, titanium has greatly replaced it, both for cutting tools and for cermets. It is still a valuable metal for rotors and other heavy metal uses and as a special purpose alloy; but the use is relatively small, and the domestic production of tungsten can be doubled at any time.

Tungsten, however, is only a small item compared with the total extravagant accumulation of stocks of other materials whose defense requirements are based on obsolete usage factors and without regard for true military and political defense, which must include the courage to defend the supply lines. It is an old army saving that desk planners always plan for the last war. During World War I, when the desk strategists, planning in terms of the cavalry require-ments of the Civil War, had shipped enough currycombs to furnish 45 each for every horse and mule in France, the soldiers invented the term "horse feathers" to apply to any fatuous planning. Perhaps there are now no currycombs in the stockpile; but there are big quanities of goose feathers, and the present huge stocks of mica, selenium, abaca, castor oil, and other materials for which superior substitutes have been developed since World War II appear like "goose feather" thinking.

The annual cost of interest on bonds to carry the present stockpile exceeds \$400 million; and another \$100 million for maintenance costs would be a conservative figure to add to the permanent annual carrying charges of the bureaucracy. In other words, it can be figured that the entire income tax of more than a million workers' families goes every year merely to maintain the Government-owned stocks, not including the immense stocks of agricultural materials.

Of the 75 materials listed in the 1958 report to the Congress on the group I list of the strategic stockpile, 51 had already equaled or exceeded the maximum objectives, based on the policy of having an hand up to a 5 years' supply. Because of technical progress, more than 40 of these materials can no longer be considered as militarily strategic. Some, like quartz crystals and battery manganese, are being replaced by superior synthetics. Arguments for the stockpiling of others, like coconut oil, are so specious that, if taken seriously and applied generally, would require the stockpiling of scores of additional items, taking up much of the national income to meet the whims of the bureaucracy.

#### SUBSTITUTION OF SYNTHETICS

During World War II, there was no satisfactory substitute for natural quartz crystals for telephone and electronic applications. The Germans produced synthetic crystals by heating a metasilicate solution in a pressure bomb at 450° F. But we have gone a long way since then. Technicians now know what goes on inside the bomb, and the processes of nucleation and crystal growth are well understood. Natural quartz crystal is a very irregular and undependable product. Now solution differentials, temperatures, pressures, and seed types can be so controlled that crystals of the desired purity and plane orientation can be grown. Uniformly superior crystals are being produced up to 3 inches across and 6 inches long, from which nearly three times as many highgrade cut crystals can be made as from the same weight of the best imported crystals.

Equipment of modern mechanized warfare demands an unfailing high-grade uniformity in the materials used and, thus, it is doubtful if the stockpile of natural quartz can ever be used for military purposes. The same is true for battery manganese. Manganese dioxide for batteries is the gamma oxide with a peculiar pseudo-amorphous structure. It occurs only irregularly in the ore beds, and the natural product usually contains other forms of oxide that decreases

the efficiency of the battery. Lead, copperand other metal impurities are also found in the natural ore, and even small traces of these elements that are electronegative to the zinc of the battery decrease the poten-tial of the battery. Ultrapure synthetic oxide now being made gives batteries of uniformly higher potential and longer shelf life. Because the military services had been active in the development of synthetic manganese oxide, the technical impotence of the stockpilists was broken down, and they had to recognize the superiority; but it did not break down their fetish for big stocks, and they have been stocking the synthetic material, although there is no more reason for accumulating a stockpile of synthetic manganese dioxide than there would be for stockpiling a thousand other factory-made chemicals.

The big stockpile of natural mica is rapidly becoming a white elephant. Natural mica is a very irregular material, costly to work into insulating parts. Splitting is so tedious that blocks from other areas were sent to India for processing during the war. Iron spots and crystal imperfections make most of the sheets unsultable for high-grade insulation. Furthermore, the splittings are in small odd-shaped pieces and the separation, grading, and working makes tedious hand labor.

American companies have improved the German method of making synthetic mica, and about 30 different types have been selected from the innumerable varieties now available, make it possible to select a type for maximum resistivity, heat resistance, or chemical resistance, and assure a high-grade uniformity. The Germans aimed at produc-ing large blocks, but this retained the arduous hand labor of splitting and the difficulty of hand working the irregular small The American aim has been to produce flake mica on a production basis and then bind it-into uniform large sheets from which parts can be made economically. Where the heat requirements are not high, synthetic resin binders are used; but, inorganic binders are employed for high heat, and it is now possible to produce sheets without binders by recrystallization of the sheeted flakes under heat and pressure.

All of these reconstructed synthetic sheets are more economical to use and more dependably uniform than natural mica. Synthetic micas also have greater purity, and elimination of hydroxyl ions permits use at higher temperatures. Other substitutes have also decreased the need for the stockpile. Terephthalic plastic sheet, for example, has higher dielectric strength, is strong and flexible, and is being used where the temperatures are moderate. Quartz has higher heat resistance and higher dielectric strength than mica, and extremely fine fibers are being matted into thin sheets for insulation. When it is considered that less than 1 percent of Bihar trimmed block mica, such as is being stockpiled, will pass military specifications for such uses as condenser film after laborious splitting and grading, it can be seen that the stockpile has slight value as a defense measure.

Fifteen-year-old arguments are being used today for piling up stockpiles of graphite, yet, synthetic graphite, suitable for crucibles, can now be made even from low grades of domestic ores. By graphitization at high temperatures and further refining with hot gases, ultra-pure graphite is produced for nuclear reactor use. Large stocks of imported diamonds are stored at secret hiding places well known to industry and, probably to the Communists. But, synthetic diamond powder equivalent to the best grades of natural diamond powder is being made, and production can readily be expanded to meet any industrial needs. The production of larger diamond crystals is a reasonable ex-

pectation. In addition, boron nitride, as hard as the diamond, is now being made commercially and can replace much of the diamond abrasive. An official of a large company recently told the purchasing executives that "shortage of industrial diamond abrasive is a thing of the past"; but, the stockpile bureaucracy does not seem to be affected by such advice.

#### STOCKPILE ADVISERS

Congress provided in the law that the stockpile administration should hire advisers from industry; but, the record indicates that no advice is taken if it conflicts with predetermined big-stock ideas. It was early pointed out that selenium was an unsatisfactory material for military electronic uses, but stockpile buying continued. Sflicon and other semiconductors are now in ample supply and are nonstrategic, and they give greater efficiency with savings in space and weight. Purchases of selenium have finally ceased, but the stocks remain. Stockpile buying of pepper has also ceased, after the stockpilists were apparently disconcerted by the many jokes and guffaws. The American public, if given a chance to express an opinion, would have said that coffee is more important to an army than pepper and, if we stockpile pepper, why not stockpile everything and make a really big bureaucracy.

It is difficult to see any military reasoning in the purchase of big stocks of aluminum and magnesium. Capacity has kept well ahead of consumption, and, in case of war, many civilian uses can be cut without hardship. For example, more than 100,000 tons of aluminum annually goes into packaging film. The great stocks of bauxite are no more justified for defense than would be the stockpiling of coal, sulfur, and a host of other materials.

Bauxite sources are at relatively near points, not readily subject to submarine attack; and, the direct ore handling is so mechanized as to make the double handling from stockpiles uneconomical.

Much has been made of the fact that copper was controlled during the war; but, controls were more a matter of distribution than of supply, and are normal in wartime. There was no shortage of copper for military use, and almost a year's supply was on hand at the end of the war. Since then, efficient cartridge and shell cases have been developed from steel, aluminum, and plastics, and large-caliber, shells have been largely replaced by rockets. Aluminum wire and strip can replace a large part of the copper electrical wiring, and aluminum and plastics are replacing much brass formerly used. A reasonable extra supply of copper to enable industry to get into high production quickly would be justified, but several years' supply is not. The same can be said for the great hoards of manganese, chromium, and other materials, which can be transported more efficiently from the mines than from isolated stockpiles.

Officials of the rubber industry have already recommended liquidation of the huge rubber stockpile. The frequent rotation of the rubber is a costly burden. Vast improvements have been made in synthetic rubbers since the war, and for most military uses they are superior to natural rubber. Even high elasticity has been achieved in a new type of deuterium rubber with heavy hydrogen attached to the carbon chains. Polyisoprene or "synthetic natural rubber," is also now in production, and is equivalent to tree-grown rubber at a comparable price, The real natural rubber military needs are now small.

In the light of today's chemical progress the heavy stockpiling of fatty oils, old-style tanning materials, and natural fibers is beyond comprehension. Coconut oil was formerly needed to produce glycerin, and some

castor oil was used to produce an acid to make a mechanical grade of nylon. But, today, glycerin is easily produced from petrochemicals, and acids and esters for plastics and other uses are produced synthetically from more available domestic oils and from hydrocarbons. Superior synthetics have been replacing sperm oil as a lubricant. Big stocks of Mexican sisal cannot be justified by military arguments. Naval tow ropes of nylon are more efficient than Manila hemp ropes, and hawsers of polypropylene are lighter in weight and do not pick up water and freeze like Manila rope.

#### POLICY REVIEW

It is not possible in a short article to review in detail the many materials-the agar, the iodine, the talc, the castor oil, and the goose feathers; but, there is a growing belief in business circles that a public investigation of the stockpile is long overdue. Such an investigation is not likely to come about until there is a public demand that will react on Congress, and this is difficult, because the stockpile group operates in secrecy and gives out only such information as it wants the public to believe. Even the relatively few businessmen brought into the stockpile administration, after being awed by the security investigation and the cautions of secrecy, too often acquire the sheepherder tendency and are led to believe the bureaucratic argument that a program so vast and so costly could not possibly be erroneous.

The stocks have been built up at a time

The stocks have been built up at a time when the easy sales to Government boosted world price levels, and it will be difficult to liquidate them without worldwide economic disturbances to the countries that we have aided in increasing their production. Recently, when the OCDM considered the disposal of 5,000 tons a month from the supplementary stockpile of copper acquired under the Defense Production Act, there was a drop in smelter price, complaints from foreign producers, and a violent reaction from Senators of the mining States.

To complicate the situation still further, we are now facing a new phase of the cold war, where the Soviet Union stands ready to throw on world markets many of the same types of materials. One has only to look at the mess in the fluorspar market to see that attempts to regulate price and supply by Government purchase of surpluses has been a failure. Including agricultural products, we now have nearly \$20 billion worth of public-owned surpluses and, if the condition is permitted to drift further, it could lead to eventual socialization of all production. The international quota system, such as is used for sugar, is not ideal; but, it has worked better than the device of stockpiling, and it is now time for an open, nonsecret investigation of the whole stockpiling program before the situation becomes even more complicated.

# Federal Public Housing Problems Increasing

EXTENSION OF REMARKS

### HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. McDONOUGH. Mr. Speaker, here are the results of a survey on public housing throughout the Nation which appeared recently in the Wall Street Journal which indicates the extreme conditions that tend toward demoralization and loss of initiative on the

part of many who occupy this kind of heavily Federal subsidized housing.

Evidently public housing in many instances is becoming the permanent residence of many people who do not make an effort to improve their economic condition rather than a temporary residence where they may live during a period of low income in order to give them an opportunity to seek better employment and independence and a home of their own.

I recommend reading the following survey to the Members of Congress:

TAXPAYERS' TENANTS—"PROBLEM" FAMILIES
HIKE PUBLIC HOUSING UPKEEP, THREATEN
NEW SLUMS—RENT DELINQUENCIES HARASS
HAMTRAMCK: UNION RULES, VANDALS LIFT
CHICAGO COSTS—ALCOHOLICS AND UNWED
MOTHERS

### (By Ray Vicker)

CHICAGO.—At the 15-story Governor Henry Horner tax-supported public housing project here, the windows open outward and upward like awnings. A favorite competitive sport of high spirited lads on warm days is "atom bombing." You drop a pop bottle from the top floor, then count the number of windows it goes through on the way down.

In Toledo, Ohio, soaring maintenance costs threaten the solvency of public housing. High rental delinquencies form the central theme of one critical report on the program in Hamtramck, Mich. In Cincinnati public housing folk are seeking to discourage baby production by unmarried females living in tax-supported apartments and collecting bigger welfare benefit checks for each new child.

Public housing's difficulties with "problem families"—welfare and police cases, alcoholics, the chronically unemployed and such—are widespread. These troubles boost maintenance costs, threaten to make slums of new projects and are hiking the project managers' load in a job which may not be easy under the best of circumstances.

#### CLOSER CHECKS

The Public Housing Administration, the Federal agency which funnels public housing subsidies through about 900 local housing authorities scattered around the Nation, now is making closer checks of management practices of these local authorities. PHA wants to be sure taxpayers get their money's worth for the \$473 million the Federal Government already has invested in public housing through the subsidy payments.

Chicago, Toledo, Hamtramek, Rockford, Ili., and Zanesville, Ohio, are only a few of the communities where such studies have been made. Currently, other management reviews are underway at Minneapolis, St. Paul, Cincinnati, and various other places,

In Chicago 22 public housing projects are federally-supported to the tune of \$3.9 million annually. At least \$1 million a year is spent to cover waste, union featherbedding, mismanagement, and tenant vandalism, says PHA's Chicago regional office in one such review.

In Washington, Abner D. Silverman, assistant PHA commissioner for management, says nearly 200 management reviews have been made during fiscal 1958. He explains that in 1957, PHA launched a comprehensive audit and analysis program, with every local housing authority due to get such areview once every 3 years. He adds: "The recent study of the Chicago Housing Authority is an example of this new type of review and analysis. It is not an 'investigation' but an overall administrative management analysis and study designed to permit PHA to discharge its responsibilities under the law in a fashion that will prove most helpful to the local housing authority."

#### DEPRESSION MEASURE

Public housing was first spawned in 1937 as a depression make-work measure. A subsidiary aim was to provide rental assistance to families in the lowest income group. City planners subsequently saw it as a slum clearance weapon.

Social planners saw it as a sociological conveyor belt. Low income, poorly educated tenants-usually former slum dwellerswould come into a project paying minimum rentals. They would have roomier, lighter, cleaner, better ventilated apartments and would raise their own moral and cleanliness standards to match, the theory went. Incomes would rise until families exceeded the maximum allowed in a project. Rehabilitated families would move to new homes of their own. This would permit more lowincome families to be attracted at the base to start the process over again. Good housing was supposed to reduce juvenile delinquency and crime, promote stable family life and encourage an overall higher standard of living.

The social planners who subscribed to these theories went awry in figuring that good housing automatically stimulates problem families into rising above their previous environment, public housing officials now admit.

"Problem families merely recreate their old environment at the new site," says one Midwestern housing man. Growing cynical, he adds: "It isn't buildings that make slums. It's people. Move those people from a slum to a new housing project and they'll create a new slum."

#### MUSTERING EVIDENCE

Considerable evidence can be mustered to show that, far from stimulating people to socket. rise above sordid environments, public housing may discourage many from trying to better themselves incomewise. They prefer subsidized housing to being forced to move elsewhere if their income rises.

Under the Federal program, PHA underwrites loans of local authorities which build and operate projects. PHA then assists communities in paying off the debt through annual subsidies. Communities handle maintenance and operating costs from the rents they collect.

Today this depression baby has grown into a sprawling giant. Over 1.7 million people now live in more than 425,000 Federallyaided low-rental units operated by various localities. Some localities add units of their own with State and city money exclusively, raising the total number of people now living in public housing to around 2.4

This year 35,000 more Federally aided units are planned. And once again a recession is being cited as a reason for building public housing on a broad scale.

"There is every justification for low-rent public housing to represent 10 percent of annual housing-unit production on a 'con-tinuing program' basis," says the National Association, of Housing and Redevelopment Officials, an organization of State and local officials headquartered in Chicago., Such a figure would mean construction of 90,000 to 100,000 units annually.

#### FLURRY OF INTEREST

There are now over 900 public housing authorities serving 1,225 communities, up from only 265 communities served in 1949.

Recently there has been a further flurry of interest in public housing on the part of communities, say housing officials.

"There are five localities in the Chicago region for which applications for new housing have been made since September 30, 1957," says Brice Martin, assistant to the regional director for the Chicago region of PHA. "In addition, there are 27 localities PHA. "In addition, there are 27 localities that have evinced an interest in getting housing."

The 10-State Chicago region now has 96

authorities engaged in public housing.

There is no doubt, though, that many a city is having trouble managing the public housing it already has.

Authorities blame a lot of their troubles on the fact that public housing attracts a high percentage of broken families, families with big broods of children by nameless fathers, other welfare cases and shiftless characters who prefer unemployment to work as long as Government agencies provide handouts.

"We are becoming caretakers for problem families," moans one public housing official in Chicago, "Changes must be made in the setup of public housing if it is to survive."

There are, of course, many hard-working, earnest low-income families in public housing projects besides the problem cases. But housing authorities note many of the former sour on their less respectable neighbors and move elsewhere. The problem families then tend to take over, threatening to make slums of the housing developments.

#### MALADJUSTED FAMILIES

Visit some of Chicago's housing projects and you see what a problem these maladjusted families can be.

At Grace Abbott Homes, southwest of Chicago's Loop rags are stuffed into one broken window of a 15-story building. Steel doors bar some entrances, for anything less strong might be kicked in by rambunctious tenants. Children are playing with automatic elevators, so you walk up several flights of stairs noting how some hall windows are sealed up to prevent glass breakage. Light bulbs are frequently missing while the jagged pieces of one broken bulb still remain in one hall

Cockroaches scurry along the floor. On upper floors there is an odor of urine. tenant complains bitterly that her children can't reach bathrooms in time when playing downstairs because elevators usually are undergoing repairs or occupied.

Fire hydrant caps and hydrant control caps are missing. Brass caps, worth \$8 each, are stolen for sale to junkmen as scrap, explains one PHA official later.

Such conditions are underscored in a sixvolume report of Chicago Housing Authority operations released recently by PHA.

Vermin infestation is practically univer-" says the report. "With some notable exceptions, tenant cooperation in maintenance is most lacking."

In one apartment building of recent vintake, cockroaches are so thick that they are clogging motors of tenant refrigerators, says the PHA report. One investigator tells of seein bedbugs crawling on walls of the model apartment used as a demonstrator at Stateway Gardens development.

#### CONTROL BUTTONS

Consideration is being given to bolting steel plates over the button controls of automatic elevators. Holes would be drilled so that each control button can be pushed with a finger through a hole but the buttons cannot be damaged since they will be protected by the steel plates, says a PHA recommendation. Rowdy tenants now use hammers to knock off the buttons. Vandalism and tenant damages are costing CHA at least \$150,000 a year, says PHA.

Release of the report is resulting in a rash of activity in public houisng projects in Chicago. "Many of the suggested improve-ments already have been made," says Alvin E. Rose, executive director of the CHA.

Sheer size of some of the public housing authorities in large cities poses a manage-ment problem. The New York City Housing Authority, swelled by city and State as well as Federal projects, now is a \$1.1 billion empire consisting of 82 public housing developments. Many of them are cities in themselves. Chicago values the land, plant, and equipment of its public houisng at \$190 million.

In projects of such size, management's right arm may not know what the left arm is doing. This situation is idea for strong labor unions to run up operating and maintenance costs through featherbedding and restrictive practices.

#### LABOR PRACTICES

When PHA dug into this situation at Chicago, it uncovered a long list of practices, including:

Painters wash all painted wall surfaces while janitors wash only the tile, even though both surfaces are side by side, carpenter must be used to replace a

screw in a bracket.

An electrician must be called to plug in a new refrigerator in an apartment.

Removal of a hot water heater requires a plumber to disconnect the cold water pipe and a pipefitter to disconnect the hot water

Glaziers install 6.5 window panes per day. though in Detroit glaziers handle 18 panes per day.

Thirteen janitors are employed 8 hours a day each in one project though time studies show five janitors could handle all the work on a 4-hour day.

In some instances, electricians are used to replace light bulbs.

### A "MINOR" REPAIR

The sequence of operations in making minor plaster repairs to a wall behind the kitchen range is this:

Inspection by the head janitor and preparation of work orders.

The janitor sweeps out and removes debris. Inspection by plasterer to determine plastering work.

Inspection by painter foreman to determine extent of painting.

A visit by a pipfitter to disconnect the

The janitor moves the range out of the

The plasterer and a helper repair the wall.

A painter washes and paints the wall. The janitor moves the range into place.

The pipefitter reconnects the range. Janitor cleans up.

Chicago's public housing problems may be worse than average. Yet the city's difficulties illustrate the situations now facing many authorities in other cities.

Pointing in the direction of the LeClaire Courts housing project which ironically is almost in the backyard of his real estate agency, Ralph Finitzo, bespectacled and graying Chicago home builder, says: "That's the biggest slum in this whole area and it is only a few years old."

#### NEWSPAPERS AND TIN CANS

Slipping behind the wheel of his 1957 Buick sedan, he drives through the project. Newspapers blow across a lawn. Rusty tin cans lie beside one front door. But a new coat of paint lends a bright touch to the two-story apartments built with monotonous regularity on the site.

'We took so many photographs of this place to show people how a new slum was created that the Chicago Housing Authority got tired of it," says Finitzo, past chairman of the National Association of Home Builders' Public Housing Committee. "Recently CHA sent a crew of painters down here and slapped fresh paint on the buildings."

In another Chicago public housing project, an unmarried woman with four children by four different men lives in a taxsupported apartment while drawing aid-todependent-children checks from the welfare department.

A Chicago social worker expresses surprise when queried about that case: "Such cases are so common I don't know why you are asking about this one," she said. Then she tells of another woman with an even larger oan, I include the following editorial from family of children by different fathers.

There are six or seven children, I'm not sure which without checking records," says this social worker. "Now the eldest girl in the family is pregnant, too, father unknown."

The CHA claims it seeks to discourage illegitimacy in public housing projects. Stys a spokesman: "When a woman with children applies for housing she is given a form to fill out. On this she must list her children and their fathers. If there is more than one father she may not be admitted. However, if it appears that the pattern has been stopped, she may be admitted. She will be evicted automatically should that pat-tern be resumed again."

In Cincinnati the Metropolitan Housing Authority allows a mother with illegitimate children to enter housing. But it takes a count of the children and has mothers sign a statement that if another child pops up without a marriage license the family will be subject to eviction.

INTERFERING WITH THEIR RIGHTS

"When we first launched this program there were some complaints from women that we were interfering with their rights," says Harry L. Reece, executive director of the CMHA.

Problem families not only hike maintenance costs, they may cut revenue. The theory of public housing is predicated on having a spread of tenants in various income brackets, with those in the higher brackets carrying more of a load than those in lower brackets. If you earn more, you pay more. If you earn more than the top limit, you move.

Thus, in Chicago, the minimum rent is \$31 a month for the family with an income of \$1,705 a year or less while the maximum rent is \$96 a month for the seven-person family earning \$5.750 a year. To enter a project, the one or two-person family must earn no more than \$3,600 while larger families must earn no more than \$3,800.

But the housing authority finds that problem families are more heavily concentrated at the low end of the income scale. Once in a project they may not try to increase incomes yet they cling to subsidized apartments harder than the diligent families.

UPSETTING THE THEORY

Today, 50 percent of tenants in Chicago's projects are paying minimum rents. This upsets the cross sectional rent paying theory. There aren't enough renters at the upper end of the scale for total rents to carry the operations load.

"The current financial picture of the CHA Operations holds the threat of insolvency, warns PHA in its management review of Chicago projects. It urges that "selection of tenants be made from an income grade which will provide tenant families of such incomes which will help to achieve and maintain a representative cross section of low income families and produce more revenue."

A deficit of nearly \$500,000 is estimated for CHA in the current fiscal year, a figure Which will rise to \$1.2 million in fiscal 1960 if steps are not taken to correct difficulties, Bays PHA.

# You Can't Be Insured Against Inflation\_

EXTENSION OF REMARKS OF

### HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the REC- the Peoria (Ill.) Journal Star of June 10, 1959:

YOU CAN'T BE INSURED AGAINST INFLATION

Many people in the upper age brackets are painfully aware that the life insurance they paid for in 100-cent dollars is going to be returned to them or their beneficiaries in 48-cent dollars. That is one of the great injustices of inflation. Now there are efforts to protect people against this in the future with a kind of insurance against inflation. But actually there is no way of insuring against inflation, no way but to elect public officials who will hold to sound monetary policies.

New policies permitted in some States are called variable annuities. They are not contracts for the payment of a guaranteed number of dollars at a certain time. Their benefits are paid according to the value of property in which the insuring company has invested the premiums.

According to the theory, the company invests in a wide range of stocks representing many kinds of business and industry. If inflation continues, the value of these investments will go up accordingly and benefi-ciaries will be paid accordingly.

However, there is a distinct element of risk in this business. If inflation is halted and deflation sets in, or if there is a major depression and the bottom falls out of prices, you might get less than you bargained foror nothing at all. The person who wants to risk his money hedging against inflation can find various ways of doing it. But the buyer of life insurance is not a speculator. He is a saver. If speculation on the future value of the dollar enters into the life insurance business to any great degree, it will be important to make this point clear.

More important than trying to insure against inflation is to stop inflation. We can have stable money if we have a government that has the know-how and courage to keep it stable.

There is really no other way to make sure that your savings, life insurance, and pensions of the future will be worth what you expect them to be.

#### John Foster Dulles

EXTENSION OF REMARKS OF

# HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include three editorials from the Grand Haven (Mich.) Daily Tribune on the loss of John Foster Dulles. These are entitled "Dulles Refuses To Admit Defeat," February 19, 1959; "Dulles, a Great American," April 7, 1959; "Death a Reminder of Men's Usefulness," May 26, 1959:

[From the Grand Haven (Mich.) Daily Tribune, Feb. 19, 1959]

DULLES REFUSES TO ADMIT DEFEAT

John Foster Dulles is not to be sidetracked easily-even by cancer.

President Eisenhower is eager to have the ailing Secretary of State stay on the job if Mr. Dulles undoubtedly believes it is possible.

The much-traveled Secretary has had his ups and downs but at this critical period in history he is decidedly at the pinnacle of his long diplomatic career. The Russians have

helped, inadvertently, to boost him to this position by their attitude toward Berlin. His tireless efforts to get the Allies to pull together seems to be succeeding, thanks to the Berlin issue.

Those close to Secretary Dulles are his most loyal supporters. They believe that he has done an outright heroic job of patching up the hurts and bruises of diplomacy. He is sincere. He convinces everyone that America does not want war. But he does not com-promise or appease when it comes to the fundamental issues.

Columnist Drew Pearson, who often has been critical of Dulles, recently pointed to the Secretary's personal courage in carrying on under the handicaps of severe pain and possibly fatal cancerous symptoms. Besides,

Mr. Dulles is 71 years old.

It is worth noting that while there have been many global crises during the Eisenhower administration, each has been re-solved. Even the knotty Cyprus issue seems to be working out satisfactorily. The Berlin emergency could develop into a shooting war. But you don't find Secretary Dulles backing away from this kind of danger. A man who has physical courage and diplomatic knowhow usually can impart his sincerity and convictions to others.

We are sure that Secretary Dulles has more than earned a rest from duties that would have floored many a hardy man. But the immediate hurdles are so big that only a man

of his stature can meet them.

### [From the Grand Haven (Mich.) Daily Tribune, Apr. 7, 1959]

DULLES, A GREAT AMERICAN

Sincerity is one of the highest human virtures. Devotion to a good cause is another. John Foster Dulles possessed both of these qualities to a generous degree.

The disease that forced Secretary of State Dulles to resign may also prove fatal to him in a matter of weeks or months. Thus in a sense his retirement as Secretary of State has produced his orbituary while he is still living.

History marches into the future with eming indifference to the suffering of the individuals who make it. Secretary Dulles may find little comfort in the fact that while he is being praised by free people every-where, he is fighting a painful battle against cancer. Words of sympathy help. But they do not compensate for the grim toll exacted by a leading killer.

Perhaps no man in history has covered the mileage which John Dulles has to his

credit in troubleshooting by all kinds of transportation all over the globe.

A few months ago there was some dis-satisfaction with the Dulles brand of diplomacy. He seemed to be fighting a losing battle against a ruthless enemy that kicked up little rows and stole additional acres of territory.

All that has changed now. Dulles may have been inconsistent but he more than made up for this failing by a willingness to meet any friend, and even the Communists, halfway.

More than anything, he sold the idea that Americans want peace. At the same time he convinced a doubting world that Americans would also fight if sufficiently provoked—and if endangered would use all the weapons at their command to turn back the enemy. This was his version of the soft voice and the big stick.

There probably has never been a diplomat like Dulles. Some are more suave, others are more gifted in diplomatic double talk. Others may be more consistent and sure of themselves. But none ever worked so hard. And few could have done a better job in keeping the world from blowing up in its present state of tensions.

John Foster Dulles is not indispensable. But he is being forced to the sidelines when the ticklish Berlin crisis could still erupt into something serious. While it is wise that he retires at this time, it places a heavy responsibility on President Elsenhower in picking his successor.

Millions of us may owe our very lives to the man who felt that he owed more to his country than his personal health. God spare him undue suffering in his ordeal.

[From the Grand Haven (Mich.) Daily Tribune, May 26, 1959]

Tribune, May 26, 1959]
DEATH A REMINDER OF MEN'S USEFULNESS

In the great American drama men come and go, stamping their country's destiny with their own works. Nowhere in the world can the individual find greater opportunity for self expression.

On the national front John Foster Dulles finally succumbed to the scourage of cancer. His obituary had already been written at the time of his retirement as Secretary of State. Few words can be added now to the pyramid of praise for his success in steering America away from the pitfalls of war.

Mr. Dulles was a humble man. Circumstance and training cast him in his historical role. A few other men might have done better, but most would not have done as well.

Few of us know what life will demand of us. Greatness is not limited to global responsibilities. The essential in the American scheme of things is to be found anywhere people are.

For example, in recent days, our own community lost two businessmen and a piano engineer. "Michigan John" Steinbach, widely known owner of the Michigan Auto Parts, and Ulric G. Stearns, local paint store owner, had played important roles in the local business economy for a number of years. Both were taken from us during their sixties.

Joseph Klepac, who is given credit for leading the industry into manufacturing the small piano, was claimed at the age of 80. During his lifetime he had found outlet for many ideas that resulted from his fertile mind and sound early training.

This reflects the true greatness of America. We continue to develop men and women who can fill the various niches of living and provide that extra energy that has successfully carried us over the obstacles fashioned by ignorance and tyranny.

Useful citizenship is one of America's primary aims. The degree of that usefulness often is not recognized until death inter-

# Nebraska High School Students Write of the Value of Rural Electrification

EXTENSION OF REMARKS

# HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. CUNNINGHAM. Mr. Speaker, the Nebraska Rural Electric Association, in cooperation with power systems in my State, recently sponsored a contest for high school students. Students wrote on the value of rural electrification to the home and community.

Under leave to extend my remarks by including material in the Appendix of the Record, I submit four of the winning essays. I believe they give an interesting insight into the value of the rural elec-

tric program through the eyes of our Nation's young people:

ESSAY BY CARLYN HODDE, 16, GRANT, NEBR.

Electricity means progress in today's living. It has made our world a better place in which to live. With the use of electricity, the housewife saves many steps and hard work. For the farmer, much of the back-breaking hand labor is saved with the use of electricity.

It has made the home healthier through pasteurization of milk. With electricity, we are able to have pressurized water systems allowing us to have modern and sanitary bathroom facilities. It also gives us a faster and more effective way of fighting fires. Air conditioners keep the room free of dust and keeps the humidity at a comfortable and healthy standard. Heating with electricity is modern, healthy, and convenient. It is controlled automatically thus lessening the household chores. Electricity enables us to have a proper lighting system which is very important to prevent eyestrain.

The home and farm has also been made safer through electricity. The electric lights are much safer than the old gas and kerosene lamps. Gas and kerosene lamps were

a fire hazard.

Convenience is another contribution of electricity. In the modern age with a push of a button a whole house can be lighted, while back in the days of no electricity, fueling and cleaning of lamps were necessary and only a small amount of light was produced. Outside lights now enable the farmer to finish his chores after dark.

Electricity saves the farmer time and hard labor. With all the electric tools, he can repair his machinery in the time it would take him to disassemble it and take it to town to be repaired. This also saves money, for with the use of electric tools and equipment the farmer can construct many labor-saving devices. Without this, the cost of purchasing the factory-made items would prohibit these conveniences. An electric welder is another essential item on the farm. A farmer can make and repair machinery with little effort and time and at a minimum of expense.

With irrigation, a farmer can increase the yield of his crops, making farming a more profitable occupation. This especially is of great value to the smaller farmers who have a limited amount of acres. Grain dryers enable the farmer to get his crop ready for storage thus conquering the problem of storing wet grain. Electric fences are more effective and convenient than an ordinary fence. Electric chicken and pig brooders are economical and safe since they eliminate the fire hazard. Electricity enables the farmer to produce grade A milk for marketing with the use of electric milking machines and milk coolers.

The housewife enjoys many electrical conveniences which without electricity would be impossible. The family laundry is no more a drudgery. With the turn of a dial the work is completed. Weather conditions mean little on washday with the modern clothes dryer. Home freezers allow the housewife to serve nutritious food all year around. All the other appliances add much enjoyment to a housewife's chores.

All these conveniences give the farm family more time for pleasure. Television brings to the family both pleasure and education. What more could a family treasure than pictures of their times together? This showing is made possible by a movie projector.

ing is made possible by a movie projector. Electricity has modernized the rural areas. It can well be said that rural electrification has been one of the greatest aids to the farmer. No longer is there so great a difference between the farmer and his city cousin. Both can enjoy and profit from many of the same things. All this showing that we can live better electrically.

ESSAY BY JAMES L. JORGENSEN, 16, PAXTON, IND.

In this age of jets and the atom, people often speak of the wonders it has created. Little do they realize that a power of as much, if not more, importance is at work right under their noses. This power I am speaking of is electricity.

People nowadays seem to take this electrical energy as a matter of fact thing. I am sure that all elders and middle-aged people of our communities can remember when all of the homes were lighted by gas lamps and fireplaces. I can even remember the gas lamp myself. If electricity were now being used only to light our homes at night, it would be "worth its weight in gold." People don't seem to realize how much time they spend after the sun goes down just sitting in their own homes and enjoying a period of leisure. If we had to go to bed when the sun went down, our whole social atmosphere would change completely. Television, radio, theater, movies, and many other forms of daily entertainment would be completely imposible, if it were not for electricity.

Work on the farm has been made, faster, easier, and more efficient by electricity. First of all, without the electric spark created by our sparkplugs, none of our modern trucks, tractors and pickups would even run. If a piece of machinery is broken, it can be quickly and efficiently repaired by an electric arc welder. 'Such things as electric milkers and electric brooders for chickens have made the care of livestock almost a chore that can be done by children. As I sit writing this essay, an electric egg washer is cleaning our eggs. A job that previously took an hour a day is done by this electric washer in about 15 minutes.

In our communities, electricity is making progress go forward at a rapid pace. Small local factories near my home make small electrical condensers. Not only does electricity help run the factory, but it also plays an important part in the use of the product made by this factory. Employment in this industry has given livelihood to many families, who might have otherwise been unemployed.

Housewives should stop for 5 minutes sometime, and try to name all the conveniences made possible in their homes by electricity. Washing machines, dishwashers, irons, vacuum cleaners, and countless cooking utensils are run by electricity. Electricity has given them leisure time that they would not have had otherwise. Homemaking is now easier and well done because of electricity.

Benjamin Franklin, the discoverer of electricity, gave to America one of the greatest gifts possible. The progress of this Nation has been put many years ahead of what it would have been had we been without electricity. The farmer especially should be thankful for his discovery. We in the United States have the greatest farm system of the world. Without electricity it would be entirely impossible. Electricity has had a major hand in creating us to what we are, and without it we would be completely lost.

ESSAY BY RICHARD GUDGEL, AINSWORTH, NEBR.

Since July of 1951, life has changed greatly for the better in our community due to electrical appliances which were impossible before then. In that month we got a source of electrical energy as modern as you would find in the largest city of the world.

I think one of the most important of the benefits we get from our local rural electrification association is the electricity in our local grade school. Before REA came, movie projectors, modern lighting, phonographs, and other such devices were impossible. Now our school district has all of these.

Without electricity we would be able to have no modern means of refrigeration; there would be no good means of pumping water for household purposes as well as for live-stock. Another thing that is very useful on the farm is the electric fencing unit. This serves either as an exceellent temporary fence or as a good permanent fence at a small percentage of the cost of a barbed wire fence.

In the spring the electricity is used extensively in infra-red heat lamps. Many times we have to get up at night and bring a calf in that is almost frozen to death. Sometimes they seem almost dead; yet after a while with the heat lamp, they get up and try to run around the floor. This lamp is also used for brooding of little chickens. This is much safer and more economical than any other means.

As mentioned earlier, modern plumbing is found in about all the homes of this community that have electricity. Without electrical energy the modern bathroom would be hardly known to our area. This is a lot more sanitary than the old style outdoor toilet.

Anothing thing that came along with electricity that is found very useful on our farm as well as many others in our locality is the milking machine. This appliance is much easier in most cases and more economical in the long run than hand milking. It is also easier on the cows. Some of our neighbors find the REA very useful in the pasteurization of milk. The electric cream separator is another machine connected with dairy products that is used extensively in our community. It is a labor-saving device for the operator as well as for the lady of the house, since most of them are self-washing.

In the summer time, or in any other time of year, a welder on the farm is found to be a very excellent piece of equipment. When you are out in the fields mowing, raking, plowing, or any other one of the many things connected with farming and ranching; it is a lot easier to come to the house and weld something together than to go to town after repairs.

To make a long story short—REA is the most wonderful thing that could ever come to a farm.

ESSAY BY RUSSELL FRERICHS, HILDRETH, NEBR.

Rural electrification in the home and community is the most useful and the most valuable accomplishment in the years past. We, as citizens of a growing and prospering America, are endowed with luxuries and a standard of living found nowhere else in the world. A major factor in this cultural development has been rural electrification.

It has long been known that electricity provides the lowest cost power for more purposes than all other sources of energy combined. It is for this reason that the benefits of rural electrification have been extended to millions of people. Many of us fall to realize just how valuable it is and how much it does for us. Through the ever increasing world of science we are able to discover hundreds of new things about electricity to lighten our work and brighten our leisure. The vast capabilities of electricity reach as far into the future as man's imagination.

Rural electrification has revolutionized the home and community in countless ways. Just a few decades ago a common source of light was a lamp or lantern. Now with new economical light bulbs, we can see better with less strain on our eyes. With all types of major appliances, the housewife can prepare meals with greater ease and convenience, more cheaply, and in a shorter time, than ever before was thought possible. With today's new modern sewing machines, a family can save on clothes bills which is so important in view of today's higher prices.

No more does a housewife have to slave on washday. With a flick of a button and a turn of a knob, the clothes are washed easier, faster and better for the housewife.

Millions of people owe their daily entertainment to TV. New forms of entertainment are gradually entering the scene, such as stereophonic high fidelity sound record-

Rapid strides are also being taken on the farm scene in the field of electricity. All of these advances lead to a safer and easier life for the farmer. A farmer now does less work, gets more done, and get its done in a shorter time. The scientific world is finding new ways to put electric motors to work for the farmer, thus accomplishing what formerly required hand labor. He can now protect his livestock and farm animals with better lighting and better heating systems and electric fences and home welding now enable the farmer to work more for himself and more economically than ever before.

Newer and better ways of harnessing electricity are created every day and are doing more work so we have more time to spend

with our friends and family.

Listed are only a few of the countless ways rural electrification in the past 24 years has revolutionized the home and community and will continue to do so in this day and age of the atom.

### Won't-Do Congress

EXTENSION OF REMARKS

# HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Peoria (Ill.) Journal Star of June 10, 1959:

#### Won'T-Do Congress

Congress is repeating this year its well-known performance of ducking issues by doing virtually nothing.

Some issues are in effect sidestepped through resort to compromises which do not come to grips with problems. Often these are worse than doing nothing. They give the illusion of action while only postponing decisions.

We try to be realistic in appraising the work of Congress. We realize that no body of 534 individuals can be indifferent to the pressures of Washington, D.C., and constituents back home. But we are always hoping that they will rise above these pressures when the national need requires. The times when this happens are growing fewer and father between. Congressional action increasingly takes on the look of erratic patchwork, reflecting a crude balance of response to pressures.

See how foreign aid is handled. Congress is caught between the heavy pressures and, year after year, comes out with a compromise that simply postpones the making of a deci-

sion on a sane policy.

Labor reform, one of the Nation's most urgent needs, got the "do nothing" treatment last year and seems about to get it

again this year.

Congress is suffering from the malady of cumulative inertia. Less and less is it an effective instrument for positive action in any age of great stress. It has made a routine of the roundabout approach to national problems. Its results are watered-down bills, halfhearted measures, timid strides forward.

Genuine compromise often is the key to good lawrahking. But compromises which

cut the heart from issues simply constitute unrealistic failure to face issues.

Congress is inviting another strong man, like Franklin D. Roosevelt, to step in and make a rubber stamp of it.

# That "Wall" Again

EXTENSION OF REMARKS

# HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 12, 1959

Mr. YOUNGER. Mr. Speaker, it is unfortunate that so much of the Members' time has to be devoted to warmed-over measures which have been soundly defeated by the House on previous occasions. It would seem that we are to be confronted again with the Freedom Wall Monument, which not only has all of the objections that were raised when the measure was turned down by the House in the 2d session of the 85th Congress but, in addition, defeats the purpose of the resolution adopted by the American Legion at their national convention in Chicago in September 1958.

I trust the Members will read the following editorial from the Saturday, June 6, issue of the Evening Star as well as the American Legion resolution:

[From the Evening Star, June 6, 1959]

THAT "WALL" AGAIN

With a never-say-die spirit in accord with the principles it supposedly would symbolize, the so-called Freedom Wall, thought to have been buried at the past session of Congress, has been brought back to life by its sponsors. The project remains highly controversial, however, and Congress should see to it that any legislation passed contains adequate safeguards against unwise location, size, and design of the structure.

Although the purposes of the undertaking were praiseworthy, the House shelved the memorial bill more than a year ago after strong objections had been raised in Congress and elsewhere to the building of a huge walled enclosure adjacent to Arlington National Cemetery and the Marine Memorial. The final design of the shrine never was submitted to Congress or to Federal agencies concerned with protecting the Arlington end of the Mall axis against improper development.

If Congress now is to approve erection of a freedom memorial of any kind on the site originally chosen for the "wall," the legislation should make certain that (1) the project as finally planned has the unqualified approval of the Fine Arts Commission and the National Capital Planning Commission and (2) construction is delayed until all of the \$15 million or so to be sought by public subscription is in hand. Otherwise the Arlington hillside may be marred by a partly completed structure or by one not suitable for the site selected.

RESOLUTION ADOPTED AT AMERICAN LEGION NATIONAL CONVENTION, CHICAGO, SEPTEMBER 1-4 1958

Resolution No. 164 (Virginia)—Subject: "Enlargement of Arlington National Ceme-

Whereas it has been learned that unoccupted space for the burial of veterans and members of the armed services of the United States in Arlington National Cemetery is rapidly becoming exhausted, and is expected to be exhausted within a very few

years; and

Whereas the American Legion has a deep and profound interest in the continuation of honoring deceased veterans and members of the armed services with appropriate burials in Arlington National Cemetery, for as long a period of time as this can be made possible; and

Whereas approximately 20 acres of unoccupied Government-owned land that is suitable and appropriate for use as an extension of Arlington National Cemetery exists and adjoins this cemetery directly to the

Wheat Program for 1960-61

occupied and is suitable for this purpose.

SPEECH

## HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7246) to amend the Agricultural Act of 1939, as amended, the Agricultural Adjustment Act of 1938, as amended, and Public Law 74, 77th Congress, as amended.

(Mr. GROSS asked and was given permission to revise and extend his re-

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

There must be good reason for the enactment of this amendment. The chairman of the Committee on Agriculture at first said this was inconsequential, this amendment offered by the gentleman from South Dakota, but it seems to me it has developed into a pretty good argument. I notice the distinguished chairman of the Committee on Agriculture is now making quite a fight against it despite the fact that it was not supposed to affect anybody or do anything. That seems to me to be a argument for the adoption of the amendment.

Mr. COOLEY. Mr. Chairman, will

the gentleman yield?

Mr. GROSS. I yield to the gentleman from North Carolina.

Mr. COOLEY. It would have affected 237 people last year out of a total of 476,000. Why should we discriminate against 287 loans?

Mr. GROSS. I am in favor of putting this limitation on every bill just as fast as they come in here.

Mr. COOLEY. I say if you put it on every bill, even if you put a \$35,000 limitation on it, but you are not accomplishing anything. That is my point.

Mr. GROSS. Oh, yes, you are accom-

plishing something.

You are knocking Mr. COOLEY. these 287 people out of a loan.

Mr. GROSS. Would not the gentleman say that is some accomplishment? Mr. COOLEY. No.

Mr. GROSS. The gentleman from Iowa thinks it is and feels that we ought to put a similar limitation on every bill that comes in.

Why I Want To Go to College

EXTENSION OF REMARKS OF

### HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the REC-ORD. I include the following testimonial to the fine character of American youth in a prizewinning paper in the national Thom McAn leadership awards program of Vaira Haase, of 382 Arundel, St. Paul, Minn. Vaira ranks second in the senior class of Mechanic Arts High School and was given superior ratings by the faculty in every area. For her efforts in this contest Vaira Haase will receive a college scholarship and an all-expense trip to Washington, D.C.; and New York City.

> WHY I WANT TO GO TO COLLEGE (By Vaira Haase)

My family and I are displaced persons from Latvia. In Latvian there is a special word for school—"gaismas pils," meaning "castle of light." Ever since I was little I have thought of education in this way. It is a castle where prejudices and misconceptions are banished by the light of tolerance and truth. A place where people gain an understanding of life's problems and an appreciation of life's joys.

My family has taught me this viewpoint. In our country my mother was a teacher, my father a storekeeper, and my uncle a school principal. Now they all earn a living as janitors; their years of schooling no longer have any practical value. Yet it is from them I have learned the real meaning of education.

When I see my mother's tired face relax as she opens a book, or hear my father and his friends heatedly discussing ideas of right and wrong, I can see the continuing enriching effect education has had on their lives. I then agree wholeheartedly when I hear my uncle say, "We may have left everything behind, but we still have our two greatest possessions-the knowledge we have acquired and the desire to learn more."

I realize that not everything about education is as beautifully idealistic as this statement. The pursuit of knowledge can often seem a useless rat race filled with hard work, a shortage of funds, unfair professors, and dull classes. During my college years there will probably be times when I share

this outlook. But I am sure that the rewards will be well worth the sacrifices.

One of these rewards is the opportunity to work in my chosen field, teaching. As a high school English teacher I would work with the two things I love best-books and people. I can imagine no career more satisfying than that of helping others to gain knowledge. But before I can do this, I must acquire a college education myself.

There is another important reason for my ambition toward college. In a sense, I feel that I owe America a debt. The ideals of her leaders and the kindness of her people have given my family and me the right of "life, liberty, and the pursuit of happiness." The best way I can repay this debt is by being a good and useful citizen. A career in the American educational system would enable me to do this.

Of course education offers great practical rewards. An educated person has greater financial security and a higher standing in the community. The college years give the student an opportunity to meet new people and make new friends.

But these things seem like frosting on the cake when compared to the satisfaction of working at a job one loves and the joy of enriching one's life through knowledge.

Lewis L. Strauss: Outstanding Record of Public Service

EXTENSION OF REMARKS

### HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. HOSMER. Mr. Speaker, it is a matter of real personal satisfaction to see so many fine tributes appearing in the Nation's press to Lewis L. Strauss for the more than 30 years outstanding service he has given to his fellow Americans. The Independent-Press-Telegram newspaper of Long Beach, Calif., on June 8 contained one such fine editorial as follows:

STRAUSS REJECTION WOULD BE VICTORY FOR ART OF SMEAR

Controversy such as that now raging around the head of Lewis L. Strauss is nothing new in the life of the former Atomic Energy Commission chairman. Because he is an outspoken and courageous man and has an irritating way of being right, he has made some fierce enemies, some of whom are doing everything in their power at this time to torpedo his appointment as Secretary of Commerce.

Unfortunately, much of what is being said against Strauss is in a personal vein. Some of those against whom he has successfully prevailed in his effort to keep the United States ahead in the nuclear race would give anything for his scalp. Several Members of the Senate appear determined to give it to

For the sake of fairness the public should be reminded of some of the facts of Strauss' outstanding record of public service. Unlike some of his hottest critics, he is no newcomer on the scene of public affairs.

Strauss was Herbert Hoover's secretary when Hoover served as head of the U.S. Food Administration. In 1919 Strauss was on the staff of the U.S. delegation which helped arrange armistice terms with Germany. He was appointed to the Atomio Energy Commission under Harry Truman in 1946 and was President Eisenhower's liaison

adviser on atomic energy in 1953 and served 5 years as chairman of the AEC.

In large measure the development of the hydrogen bomb, the free world's greatest deterrent to war with Russia, can be credited to the tenacity and the wisdom of Admiral Strauss, who advised President Truman to go ahead with the project when others held back. Truman valued his advice and in retrospect wrote: "Your counsels have been invaluable."

During that controversy, Strauss' opponents expressed doubts as to the feasibility of the hydrogen bomb. Some warned hysterically that the bomb might explode the atmosphere, erase human life around the globe, and blow hunks out of the world. Strauss commented: "Extreme statements are not warranted by the facts as I know them." The project proceeded. Not long afterwards the Russians tested a thermonuclear device of their own.

It was Strauss who conceived the idea of developing a detection system that told the United States when Russia had broken into

the realm of nuclear weapons.

Strauss is now serving a recess appointment as Secretary of Commerce. He happens to be, among other things, a competent business man. A majority of the Senate Commerce Committee have given him their backing. A minority have repaid his good service with the baseless charge that he is a liar and lacks integrity.

If Strauss' appointment is rejected, it will

be a triumph for the art of smear.

# The Honorable Roland V. Libonati, Member of Congress

EXTENSION OF REMARKS OF

# HON. JOHN C. KLUCZYNSKI

OF ILLINOIS -

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted at the Cook County Council meeting of the First Division, Department of Illinois, the American Legion, paying tribute to the Honorable ROLAND V. LIBONATI, for his untiring efforts in behalf of the veterans, and also to reiterate their love and affection for him, which was also displayed in the recent issue of the National La Societe des 40 Hommes et 8 Chevaux magazine:

THE HONORABLE ROLAND V. LIBONATI, MEM-BER OF CONGRESS

Whereas the Forty and Eight national organization in its recent issue of their national publication has seen fit to pay honor and respect to a great Legionnaire, the Hon-orable ROLAND V. LIEONATI, for his untiring efforts and interest in the youth program;

Whereas La Societe des 40 Hommes et 8 Chevaux has made it a practice in their monthly publications to honor outstanding veterans who have served not only the American Legion, but other organizations in the

Welfare of veterans; and

Whereas a group of members of the American Legion have taken notice of this recent issue of the national publication of the Forty and Eight paying respect to a member of Federal Post, No. 437, of the second district, first division, Department of Illinois, feel that this publication which is nationwide should not go unnoticed, and for this reason feel that we should join with them in behalf of the American Legion to reaffirm our love for this outstanding veteran, and his continuous interest in the American Legion at all levels, and more particularly in the child welfare and youth programs, for which he has donated a most precious tract of land, consisting of 188 acres, situated in Coloma, Wis., for the children of all communities; and

Whereas each year, through this generous idea, born in the mind of this outstanding veteran, many blind children, including both boys and girls, spend several weeks enjoying the comforts and associations of nature, and the training provided through this great camp, and because of his intense interest in children and the child-welfare program, we request that the entire membership of Federal Post and first division join in the sentiments of paying respect and honor to a great veteran, public servant, and official for his love for the children of all communities in the American Legion; and

Whereas the Honorable ROLAND VICTOR LIBONATI, for 36 years a member of Federal Post No. 437 of the American Legion, has recently been elected to represent the people of the Seventh Illinois Congressional District, in the Congress of the United States;

Whereas Comrade LIBONATI, when he was but 17 years of age, enlisted in, and served his country as a member of the Armed Forces of the United States during World War I, and was honorably discharged therefrom shortly following the Armistice of November 11, 1918, as a lieutenant; and

Whereas Comrade LIBONATI also served the citizens of the State of Illinois, as a member of its house of representatives in the 57th, 58th, and 62d sessions, and as a member of its senate for a period of 16 years, from 1942 to 1958, 4 sessions of which service he was the minority whip, and during his entire period of service in such assembly, demonstrated his intense interest by sponsoring and passing legislation for the benefit of veterans and the solution of their problems; and

Whereas Comrade LIBONATI further demonstrated his interest in the children of servicemen and other youths, by founding and building the American Boys Camp at Coloma, Wis., starting in 1937 and completing the same in 1948. Many improvements have been added since by sponsors and friends. He made it available to the Past Commanders Club of the American Legion. Each year 800 children attend this

The superintendents of the State institutions throughout Illinois, the principals of the schools, the heads of the relief and charity organizations and councils, the judges of the correctional courts and boys' homes, and the Legion posts select the indigent handicapped orphans and so-called underprivileged and exceptional children to

attend this camp.

The funds for this purpose are raised by Legionnaires, political leaders and businessmen, together with ample contributions by the Chicago American, a metropolitan newspaper outstanding in its support of the Legion's Americanism programs, the Woman's Auxiliary of the American Legion, the Past Commanders Club, the Past Presidents Club and the State of Illinois.

This Legion program of child welfare, born of his mind and supplemented with action, is one of the outstanding successful efforts to combat child delinquency in America, giving even so-called incorrigibles a new hope in life.

Comrade LIBONATI through the many years of his respected service has always been in the forefront, championing the rights and privileges of "the little fellow," and made many powerful enemies doing so, without fear of the consequences to himself.

We are desirous of recording our high ap-preciation of the sterling character and accomplishments of our distinguished comrade through this testimonial and, thus, the esteem in which his fellow veterans hold him. We wish him the same successful service in Congress that he enjoyed in the State assembly: Now, therefore, be it Resolved, That the members of Federal

Post No. 437, in regular assembly on the 19th day of May 1959 do hereby commend this outstanding Legionnaire, citizen, and public servant for his interest in humane kindness, the American Legion, its programs, and for his constant interest for God and country, we adopt the above resolution for his untiring and unselifish efforts in behalf of the youth of our country; and he it further

Resolved, That this resolution be for-warded to the second district council, and forwarded on to the first diivsion council for adoption and to be sent to the Congress of United States to be inserted in the CONGRESSIONAL RECORD to display to all concerned.

HERMAN HELFER, Adjutant, Federal Post. /

SAMUEL E. NEWEY, Commander, Federal Post. This resolution was adopted at a regular meeting of the second district council held on the 20th day of May 1959.

M. EUGENE FARRIS, Adjutant, Second District. JOSEPH P. SWEENEY, Commander, Second District.

This resolution was adopted at a regular meeting of the first division council held on Wednesday, June 3, 1959.

DONALD S. MACIEJEWSKI, Adjutant, First Division. JOHN L. PAUKSTIS. Commander, First Division.

# The Postmaster General Is Commended for Preventing Obscene Matter From Going Through the Mail

EXTENSION OF REMARKS

# HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mr. REES of Kansas. Mr. Speaker, I join millions of American fathers and mothers in congratulating Postmaster General Summerfield on his forthright and public spirited action in banning this book, called "Lady Chatterley's Lover," from the U.S. mails. This is in the highest tradition of the performances by our Postmasters General of their legal duty to protect the public by closing our great postal communications system to peddlers of smut

I have devoted much of my time and attention, during my entire service in Congress, to the maintenance of a clean mail postal system. To me, the most significant factor in the Postmaster General's action is his recognition of the underlying principle that the test of obscenity in matters of this kind is whether, in applying "contemporary community standards," the dominant theme as a whole appeals to prurient interests. Few if any Americans would

want to acknowledge that the moral standards of their community are such as to condone use of the mails to distribute this type of book. The subject of the Postmaster General's ban is so vile and filthy—so altogether repulsive—as to offend the sense of decency of every right-thinking American. A calculated appeal to immorality of this kind cannot be glossed over and made less lewd by any artistry of rhetoric or prose. It is a misuse of languages toward an end contrary to all the finer ideals and standards of civilized mankind.

The Postmaster General is to be strongly commended for his alert and effective action to protect the public by forestalling this latest effort to open the mails for traffic in obscenity, pornography, and other illegal matter. This book not only should be excluded from the mails; it should be banned from newsstands, stores, and all other places

of sale or distribution.

Facts About Amendments Which Would Make Wheat Bill Workable

EXTENSION OF REMARKS

# HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. QUIE. Mr. Speaker, when H.R. 7246 was before the House, several Members, including myself, were not allowed to present our views on our amendments to this important legislation.

At this time, I would like to explain my amendments their effect, and the

reason behind them.

As a member of the Committee on Agriculture, I have devoted a great deal of thought and effort on the subject of wheat legislation. As the distinguished gentleman from North Dakota [Mr. Short] and I pointed out in our additional minority views, this bill does not provide the necessary legislative machinery to either implement an effective control of wheat production or to provide an acceptable choice to wheat farmers in the national referendum. We pointed out what we considered were, and are defects in this legislation.

These defects were and are:

First, That a 25-percent cut in acreage allotments for wheat, when coupled with payments in kind, simply will not cut into the excess availability of wheat in the market place.

Second. That the provision in the bill dealing with the control of acreage diverted from wheat was not effective.

Third. That the 15-acre marketing quota exemption, although reduced by the bill, leaves in effect a loophole which has caused an unwarranted shift of wheat production from the traditional wheat-producing areas to other less efficient areas and has resulted in the accumulation of some 600 million bushels of wheat by the CCC.

Fourth. That our agricultural history has been a sad testimonial to the fact

that acreage controls alone are not effective tools in controlling production.

Fifth. That the alternative of 50 percent of parity price supports offered wheat farmers in the referendum was offering a choice of price supports too low for our wheat farmers.

And sixth. That one referendum for / the 2-year period would be sufficient.

In order to correct what I sincerely felt were deficiencies in the bill, I prepared a number of amendments, some of which were read by the Clerk and summarily voted down by the House yesterday without the opportunity to be presented on their merits. My amendments were designed to accomplish the follow-

ing purposes:

First. To change the required amount of reduction in wheat acreage for 1960 and 1961 from 25 percent below the farm acreage 'allotments computed under present provisions of law to 30 percent. The most optimistic estimate of a 25-percent cut in wheat acreage was a 20-percent cut in wheat output. Some experts predicted only a 7-percent cut in wheat output. The Department of Agriculture predicted that wheat output would be reduced by less than 15 percent. In order to do a really effective job of cutting production, a 30-percent cut seemed absolutely necessary.

Another amendment dealing with the payment-in-kind section was designed to allow a wheat farmer to voluntarily retire all his wheat acreage allotment in return for payments in kind based on one-third of his actual annual produc-

tion.

However, in my bill, the 25 percent cut required by the bill would not be paid in kind because such payments in kind would only find their way back into the marketplace or into Government stocks. This is true due to the fact that the market can only absorb an estimated 1.08 billion bushels. In spite of reduction of wheat output under H.R. 7246, there would be more wheat available on the market than could be consumed.

Second. To prevent the use of the acreage diverted for wheat for raising other agricultural commodities which would create further problems, the next amendment would impose marketing penalties on the entire wheat production of the farm if any crop is raised on the acreage diverted from wheat production, or if such diverted wheat acreage is used for grazing.

This amendment would deny price supports on any crop produced on the farm in 1960 and 1961, if a wheat farmer grows a price-supported crop on the acreage diverted from wheat production. This would impose strict cross-compliance and prevent the use of former wheat acres for growing other crops.

Third. The next amendment was to repeal the 15 acres marketing quota exemption but allow all farmers the right to vote in the national referendum.

Fourth. Another amendment would direct the Secretary of Agriculture to make a thorough study of bushelage allotment for wheat; to report such findings and recommendations to the Congress by January 1, 1960. At this late date, bushelage controls could not be im-

plemented in this legislation, but a thorough study by the Department of Agriculture seemed to be in order.

Fifth. Lastly, to offer wheat farmers a choice more in line with that offered corn farmers last fall, this amendment would have given the Secretary discretion to set the choice for free production at not less than 55 percent of parity, a level more justly related to feed grains.

In conclusion, I regret that my amendments were not given an opportunity for debate, and I sincerely hope that the other body and the conferees on the bill will give each of them serious consideration.

Essays by Nebraska High School Students on the Value of Rural Electrification

EXTENSION OF REMARKS

### HON, GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks and include material in the Appendix, I submit four winning essays by Nebraska high school students on the topic of the value of rural electric service to homes and communities.

This contest was sponsored by the Nebraska Rural Electric Association in cooperation with power systems in the State. These essays show the real impact of electricity in rural areas over the past quarter century. I commend them to my colleagues:

ESSAY BY SUZANNE HESS, 15, GORDON, NEBR. Rural electric service is the key to rural

Rural electric service is the key to rural happiness and prosperity. It's the key that unlocks an invisible force to travel from the powerplant to our homes and our community and to completely change our lives from that of our forefathers.

Rural electric service has helped us advance to a higher standard of living. It has unlocked the door from a life that was a struggle for existence to a life where we can do our jobs better, faster, more efficiently, and is making us happier and better rural citizens of America by helping us to make our homes better for a higher standard of living.

I am only 15, but the imprint of the days when there was no rural electricity in our community is still in the back of my mind. The old pitcher pump in the kitchen, the outdoor plumbing, and the old teakettle we used for heating water have been replaced with water pumps, hot water heaters, modern plumbing, and electric appliances of all kinds. Every year we find new uses for electricity and its many servants.

Rural electric service has made a real difference in the life of our family and community and we are grateful for it. On the farm and ranch, electricity has become a very important part in the planting, irrigating, and harvesting of the crops; the raising and feeding of livestock; and the raising and cooking of foods for our own existence.

Rural electric service has saved the lives of many a small new born calf by sending electricity for heatiamps. The small, new born depends upon electric service all through his life. He depends upon rural electric service for electricity to run the electric pumps for water. The milking ma-chines, the electric lights, the cream separator, the electric grain cleaner, and the electric pumps aid the farmer in his success of maintaining a profitable farm.

The housewife puts her trust in the rural electric service for electricity to help her maintain a pleasant, comfortable, and happy With the many electrical devices and the rural electric service, she can do her cooking, sewing, house cleaning, and entertaining in a more efficient manner than her grandmother ever could.

The whole family benefits from the rural electric service—not only for the things mentioned above, but for their own enter-tainment, comfort, and pleasure. For with-out their service there would be no tele-vision, radio, electric fans, electric blankers, or other electrical annielectric shavers, or other electrical appliances we use and enjoy.

Rural electric service helps us become better citizens in our community and as a result improve our community, for it gives us the time and the electrical power to do the things that will make our community better. Rural electric service is an important factor in rural education because it furnishes power to rural schools and churches that would not otherwise be equipped with elec-

tricity or the conveniences it brings.
Our rural happiness and prosperity does depend upon the rural electric service. The value of electrical service is so great that it serves as an essential element in our Nation's progress, the success of our rural community and our own happiness.

ESSAY BY GERALD SCHAPMANN, TILDEN, NEBR.

Without electricity we would be at a loss as to what we should do to perform the daily tasks we take so often for granted due to electricity. I often wonder just what people would do if without warning the electricity would be shut off. There would be no lights to illuminate our homes in the midst of darkness, there would be no electric ranges to cook the victuals we eat, and the conveniences of the normal rural home would be an obscure dream of many housewives.

Electricity has other uses besides those of making life easier and more convenient for the rural people of our community. brings entertainment and valuable information to the farmers. Television provides fine entertainment of any type for people. It brings important world happenings right into your living room on film. The weather forecasts are sometimes very important to farmers in the wintertime because of their Warnings of severe storms in the immediate vicinity. Also in the summertime tornado warnings are very important, not only to farmers but to anyone who happens to be in the tornado's destructive path.

There are many aspects of the value of rural electrification in our home. For instance, electricity has made it possible for farmers to cool and store their meat and vegetables in the home. The invention of the refrigerator and food freezer has done a great deal to provide the farmer with fresh frozen vegetables and meat any time that he wishes. The housewife of the modern day has a much more leisurely day than the housewife of a century ago. Today, thanks to electricity, a housewife has many modern conveniences. There is the automatic washer and dryer to do the washing and drying automatically with a little assistance from the woman of the house. Then there is the electric stove, a great invention, to save many long, weary hours of standing and cooking a single meal. With this invention, all a housewife has to do is put the planned meal into the overn, turn one or two dials, and procede with any other duties she might have to perform. When the proper time comes for the meal to be taken out a buzzer

rings as a reminder to her that the food is done. There are many more inventions made possible by electricity that are too numerous to mention which save the modern housewife

many long hours of hard work.

Besides being a great helper to the housewife, electricity is a valuable assistant to the farmer. It makes possible the pumping of fresh, clear water to the family and also to the livestock of the farm economically. Electric pumps have also made possible irrigation wells, and as a result farmers are able to produce more abundant crops. All in all the value of rural electrification in our home and community is immeasurable in terms of money or any other tangible

ESSAY BY JUDY STUTE, HAIGLER, NEBR.

Electricity. Electricity. What does the word mean to you? To everyone the meaning is a little different but all meanings contain a common idea; electricity is a modern aid to man.

To the scientist, electricity is a current of tiny particles or electrons. It is a form of energy used to aid man for today and the future.

To the medics, electricity means a new aid in the struggle for better health. Electrocardiographs, arc-lights, X-ray, and many other devices are some form of electricity. With these modern electric machines and devices, man's health will im-

To the housewife, it is her environment, her servant, her friend. It is her environment because within the boundaries of her home, electric appliances are there at her disposal. Her home may be lighted and heated with electricity. The entertainment, television, electric organ, radio, or phonograph, is available through electricity. Electricity is her living and useful environment.

It is her servant and friend. Because of electric appliances, a housewife's chores are now on the push-button order. Food preparation and housecleaning have been made a great deal easier. For instance, potatoes and carrots can be peeled on a special peeler; the electric mixers blend batters and mix or whip potatoes with little effort; and a timer on the stove will turn heat off or on at the correct time. The dishwasher does her dishes, and automatic washer and dryer may do her laundry. In her housecleaning, an electric vacuum for rugs, floors and dusting and a waxer for the shining of her floors help Yes, truly electricity is her friend and servant in a hundred more ways.

On the farm, the meaning is similar-an aid, a different kind of friend to each farmer.

To the dairy man, electricity helps in a different way than for the rancher or farmer. Electricity helps the dairyman milk the cows, feed them, and keeps milk and equipment sanitary.

The rancher may have an electric pump for stock, tanks, electric brander, electric dehorner, and electric fences.

And the farmer uses still different means of electricity. He may have electric drill, electric welder, electric air-pump, and many other devices that aid him in his work.

To each one of these people, as well as everyone, electricity has a different meaning and a different value. The value of elec-tricity extends into the future—a better fu-ture. To the medics, one more life and more in the future. To the housewife, better living conditions and more time to spend with the family. To the rancher, dairyman and farmer, the value is better products for the

Electricity is part of the past, but still plays an important role in the present, and will play a larger one in the future. Electricity is man's modern servant.

ESSAY BY BILL RIGGS, STRATTON, NEBR.

In America today, millions of farm boys have never experienced bumping their heads on a stable beam in pitch darkness. Nor do millions of farm girls experience bending over a washboard. America has become an electrified country. In 1952, 80 percent of the Nation's farms were served by electricity. Today that figure is higher. Only yesterday most farms in America were lighted by oil lamps and lanterns, with mechanical power supplied by gasoline engines.

you have ever seen electricity come to the farm for the first time, you know what immediate convenience even a few electric blubs bring. I remember in May 1950, the REA lines were strung to our farmstead. My brother and I watched with fascination as linemen put in poles. The day they set poles in our yard was a farm holiday. Soon our house was wired and we had electricity. We got our "juice" about 6 p.m. one evening as we sat down to supper. It was indeed a great thrill to have this thing called elec-

This was only the beginning. Electricity brought new ways of working and living, just as it has to so many others. It brought good lighting to the home and farmstead. A home well lighted is much easier to keep clean and there is less danger of accidents. Therefore electricity has benefited our fam-

ily's health and safety.

If one should consider good light on the basis of farm income, one would be surprised at results. With it one can do more work faster and easier. A farmer can spread his work over more hours and do some necessary jobs without waiting for daylight. Many farmers use light to increase quantity and quality of farm production-by lighting henhouses in winter or lighting the mlikhouse so that he can maintain the cleanliness necessary for high grade milk. The farmer and housewife of modern America would be lost without their electricity. A good example of this was illustrated this spring by a freak ice and snow storm before Easter. Everywhere in our area farmers and townsfolk alike were without electricity for the first time in years. I know from my own experience it was no fun. There's just no comparison between candles and electric lights. We found it no little chore milking 17 cows by hand and turning the separator by hand. After 2 days without electricity, matters became quite serious. The deepfreeze was in the danger zone and some head of cattle were bawling for water. Only in an emergency such as this did I realize what a great part electricity plays in my

To show how dependent the housewife is on electricity, let us take a tour of the house. First the kitchen, here are electric range, refrigerator, deepfreeze, plus many other small appliances. In the workroom are electric washer, dryer, iron, sewing machine, and hot-water heater. In the dining room are lamps, radios, TV sets, clocks, and fans, not to mention light fixtures and out-Bedrooms need outlets for electric blankets, heating pads, and also for vacuum cleaners and waxers. Bathrooms are better lighted; you can actually see yourself in the mirrors to shave (electrically, of course), or apply cosmetics. Hallways, stairways, and porches are safer with ample light.

Electricity offers a farmer unmatched op-They are increasing producportunities. tion, improving health, saving steps, and providing fire protection. The average farmproviding fire protection. The average farmer uses electricity in all his farm buildings, especially the farm shop and pumphouse. Electricity has increased production on farms through pump irrigation in our community and increased farm incomes. Thus a new way of life has been brought to farm families by electricity.

# New Navy Era Begins With Sub Launching

EXTENSION OF REMARKS

### HON, FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. KOWALSKI. Mr. Speaker, when the Navy this week launched its first missile firing atomic submarine the *George Washington* at Groton, Conn., a new and most significant step was taken for the defense of our Nation.

If we are correct in our basic thinking that nuclear retaliatory forces deter war and sustain this world in peace, then the *George Washington* and its sister submarines yet to come off the ways possess tremendous potential for destruction or for peace. It is my fervent hope that the creative genius which gave us this devastating power to destroy will help us to use its terrible potential for peace.

Believing that it will be of interest to my colleagues in Congress, I include at this point in the Record the story of the launching of the George Washington by Steve Tillman, associate editor of the Army-Navy-Air Force Register:

New Navy Era Begins With Sub Launching (By Steve Tillman)

One tends to visualize the Navy in terms of fast aircraft carriers ranging the seas of the world, jet planes, and silhouettes of gray-hulled ships at sea with guided missiles pointing to the sky ready to spring into action.

But there is something new coming into the Navy. It is the missile firing atomic submarine. The first, the George Washington, was launched this week at the closely guarded yard of Electric Boat Division of General Dynamics at Groton, Conn.

The George Washington is the symbol of the new partnership the Navy is building between two of the most revolutionary technical developments of today, the nuclear powered submarine and the ballistic missile. This weapons system, unique in concept, will have a startling impact on naval strategy of the future.

This week will be a proud one for Texasborn Rear Adm. William Francis Raborn, Jr., for he is generally credited with having fathered what is taking place this week. At the beginning many of the Pentagon planners argued that the proposed weapons system was impossible, but Naval Operations Chief Adm. Arleigh Burke gave the go-ahead signal and Annapolis 1928 graduate Raborn went ahead.

Deceptively mild blue eyed, gruff but imaginative, Raborn broke into the news way back in May 1954 when he and Rear Adm. John M. Hoskins emerged as the heroes of the carrier Bennington tragedy. The press at the time said that while Raborn insisted that he had taken no active part in the rescue work beyond directing operations, it appeared "from his modest recital that he was very much in command of the situation throughout." His decorations include the SSM, the BSM, two commendation ribbons.

So when he got his go-ahead signal from Burke, he recruited some of the country's most ingenious brains for his Polaris Steering Task Group and set out to "outimagine Jules Verne." Simply stated, the new weapons system will combine into a single entity the vast potential of concealment offered by an atom-driven underseas vessel and the devastating striking power of the most awesome weapons yet conceived by man.

This new addition to the fleet is a 380-foot, nuclear powered submarine of about 5,400 tons light and 6,700 submerged. Funds for construction of this and two sister ships were provided by Congress in a supplement to the 1958 fiscal year shipbuilding program. Nine FBM submarines have been authorized by Congress, the George Washington to be the sixth nuclear submarine launched by General Dynamics.

TWO CREWS

When the Polaris firing fleet ballistic missile submarines join the fleet they will initially be assigned two complete crews. This concept is to insure the submarines being maintained at sea for maximum periods when they become operational. The crews will be designated "Blue" and "Gold."

Previous experience with the U.S.S. Skate, the U.S.S. Nautilus and the U.S.S. Seawolf indicated one crew would be overtaxed to keep a Polaris submarine at sea as long as Navy plans will demand.

Skipper of the George Washington is Comdr. James B. Osborne. When the sister ships to the George Washington are launched, Comdr. Harold E. Shear will command the Patrick Henry and Comdr. William E. Sims will command the Theodore Roosevelt.

### Tribute to Late John Foster Dulles

EXTENSION OF REMARKS

# HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. FASCELL. Mr. Speaker, it is with deep respect that I submit to my colleagues the following resolution in tribute to the late John Foster Dulles. His untiring efforts and dedication to the cause of peace are the subject of the greatest gratitude and admiration of the people of the State of Florida, as is expressed for us all in this resolution:

House Concurrent Resolution 1946

Concurrent resolution expressing gratitude for the contribution of John Foster Dulles to the world and sympathy for his death

Whereas the late John Foster Dulles devoted his life to the service of his country and to the cause of peace and freedom; and

Whereas the late John Foster Dulles was truly a great American patriot and statesman; and

Whereas the people of the State of Florida are eternally indebted to this courageous and self-sacrificing citizen; and

Whereas, the people of the State of Florida wish to join with all the people of the United States of America in an expression of gratitude and in an expression of heartfelt sympathy to his family and loved ones for their great personal loss: Now, therefore, be it Resolved by the Legislature of the State of

Resolved by the Legislature of the State of Florida, That on behalf of the people of the State of Florida this legislature does commend and accord its heartfelt gratitude to John Foster Dulles for his superb and untiring efforts in the preservation of peace and the expansion and preservation of democratic and Christian ideals throughout the world, be it further

Resolved. That on behalf of the people of the State of Florida this legislature does express and convey to Janet Avery Dulles, widow of John Foster Dulles, its warm and deep-felt sympathy for her, and the world's great loss; be it further

Resolved, That copies of this resolution be executed and dispatched to Janet Avery Dulies, widow of John Foster Dulles, to the President of the United States, and to each member of the Florida delegation to the Congress of the United States.

### A Salute to the City of Rochester

EXTENSION OF REMARKS

# HON. JESSICA McC. WEIS

OF NEW YORK

'IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mrs. WEIS. Mr. Speaker, this week the city of Rochester is celebrating its 125th anniversary, and I should like to take this opportunity to call to the attention of the Members of the House this memorable occasion.

Rochester has been my home for a great many years, and since last January, I have had the rare privilege of representing the people of a portion of the city in this Congress. I am extremely proud of both these facts, for I can think of no better place to live, and there are no finer people anywhere in this world of ours.

The first permanent settlement of Rochester, on the banks of the Genesee Falls, was established in 1812, but the city was not incorporated until 1834, and it is this event which is being celebrated this year.

In the past century and a quarter, the tiny community of 1834 has grown to a bustling metropolitan area, with the population of Greater Rochester now pushing 600,000. During this period the people of our city have prospered beyond the fondest hopes of those courageous early settlers.

The city is today world renowned as a great cultural center, and its colleges and universities are recognized as being among the finest in America. Who, for example, has not heard of the Eastman School of Music, or the University of Rochester School of Medicine?

But not only is Rochester known as a center of education and the arts. It is one of our great industrial areas, with scores of prosperous firms where the highly skilled workers turn out some of the very finest precision equipment. Eastman Kodak and Bausch & Lomb Optical Co. are but two of the many firms whose products are respected throughout the world for their quality craftsmanship.

More important than all of this, however, is the civic spirit which permeates the entire community—a dynamic, unifying spirit which sweeps aside factionalism, petty rivalry, and personal ambition and channels the myriad resources of Rochester and its citizens into the struggle for community progress and prosperity.

It is this spirit which has built the schools, the hospitals, and the beautiful public parks. It is this spirit which last month raised \$4½ million for the Community Chest. It is this spirit, I submit, which indelibly marks Rochester as one of the truly great cities of America.

Mr. Speaker, during this, its 125th anniversary, I ask all of the Members of the House to join with me in saluting the

city of Rochester.

### Annual Questionnaire

EXTENSION OF REMARKS

### HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. ROGERS of Florida. Mr. Speaker, each year since first coming to the Congress I have sent out a questionnaire in which I ask the people of the Sixth Congressional District of Florida to let me have their views on some of the matters which will come before the

Congress.

This year over 33,000 people took the time to send me their replies to these questions, and increase of 5,000 over last

year's total.

The newspapers of the district print the questionnaire, and ask their readers to fill in their answers, clip and mall it to me in Washington. Participation is also encouraged by our radio and TV stations. In addition to the newspaper copies, some spot mailing is done.

The total of 33,000 responses this year is most encouraging in that it indicates a great interest in national affairs by our people. By letting their officials know how they feel on these vital issues the people may be more properly represented

in government.

The results show a good cross section of public opinion, because of the makeup of the Sixth District of Florida. We have a large resort area along the east coast with people from all over the country now living there. There are several large industrial plants in the area, as well as the Indian River citrus area, truck farming, ranching, commercial fishing, and many other segments of the economic makeup of our great country. Rather than just an urban population, or just a rural population, or one of industry or a resort area, we have a portion of each, which makes up the Sixth District of Florida.

The questions and responses are as

follows:

1. Do you favor a cut in foreign aid spending? Yes, 81.9 percent; no, 18.1 percent.
2. Should Hawaii be granted statehood?
Yes, 89.1 percent; no, 10.9 percent.

3. Do you favor Federal aid for school con-

- struction? Yes, 45.2 percent; no, 54.8 per-, cent.

  4. Would you support legislation to regu-
- 4. Would you support legislation to regulate labor organizations? Yes, 94.8 percent; no. 5.2 percent.

(a) By requiring secret ballot for union elections: Yes, 92 percent; no, 8 percent.

(b) By publication of financial records:

Yes, 96.7 percent; no, 3.3 percent.

(c) By restricting secondary boycotts: Yes, 89.8 percent; no, 10.2 percent.

(d) By restricting jurisdictional strikes: Yes, 88.8 percent; no, 11.2 percent.

- 5. The President has requested an increase in the postal rates and the gasoline tax. Do you favor these tax increases? Yes, 24 percent; no, 76 percent.
- 6. Do you believe that the earning limitation of \$1,200 for social security should be removed? Yes, 74.2 percent; no, 25.4 percent.
- 7. The Government conducts medical research programs for cancer, heart disease, and affied health problems. Would you favor an increase in these programs? Yes, 78.5 percent; no, 21.5 percent.
- 8. Would you favor a cut in the Federal farm price support program? Yes, 85.3 percent; no, 14.7 percent.

### Hail and Farewell

EXTENSION OF REMARKS

# HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. ROGERS of Florida. Mr. Speaker, the U.S. Air Force will deactivate Palm Beach Air Force Base this month, after many years of operation in the Palm Beaches. The Palm Beach Post has expressed the feelings of many of the local citizens, in an editorial, which I would like to reprint in the Record today as a tribute to good community relations on the part of the U.S. Air Force, and the people of Palm Beach County:

#### HAIL AND FAREWELL

Citizens of the Palm Beaches today will hall their "power for peace" at an open house celebration at Palm Beach Air Force Base. And at the same time they will be saying farewell to the Military Air Transport Service wing which has been an integral and valued part of the community for the past 8 years.

It will be the final such event at Palm Beach Air Force Base, for inactivation of the base is to be completed on June 30 of this year. And another era will have passed into history.

We regret its passing, for more reasons than one. It goes without saying that having the MATS installation here was good business for the Palm Beaches. It was good business for America, too, which must be kept militarily strong if the dark forces of communism are to be kept at bay, MATS is an important adjunct of our Armed Forces, and the men who trained here learned their "trades" well under ideal conditions.

But most of all, we regret the loss of the fine young men and their families who have learned to call our community home. The superb leadership qualities of Col. George W. Peterson and his predecessors as base commander, as well as his staff officers, have been reflected in an organization that we as Americans can be proud of.

So today we salute Palm Beach Air Force Base—and everyone connected with it—with a note of sadness. But we suspect that we will have the pleasure of greeting a good many of them some time in the future, when they return to make their permanent homes in the Palm Beaches.

And in the meantime, we take comfort in the knowledge that they will continue to be our "power for peace" in other stations.

### Who's a Square?

EXTENSION OF REMARKS

# HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES -Friday, June 12, 1959

Mr. ROONEY. Mr. Speaker, on Wednesday, June 10, 1959, the New York World-Telegram and the Sun published the following column by a writer named Robert C. Ruark:

[From the New York World-Telegram, June 10, 1959]

ROONEY'S TROUBLE IS HE DOESN'T DIG JAZZ (By Robert C. Ruark)

I observed the feature space that old Sidney Bechet reaped when he died in Paris of cancer a bit back and I am betting that it is more space than Representative John J. Rooner, Democrat, of New York, will collect some distant day. And you had to be a real Jelly Roll Morton boy to dig old Sidney's tenor saxophone, because Sidney had been an expatriate for about 30 years on and off.

Representative ROONEY, obviously unhep, is now questioning a few thousand bucks allocated to sending Jack Teagarden, a trombone man from as far back as I can think, around Asia as a good will gesture to some of our bamboo-fluting brethren. It was supposed to cost \$66,350. It cost, as the demand extended for Jackson and combo to remain at popular request, \$102,000. The tour stretched out to 3 months and covered 17 countries.

I will not be square enough to hit this square ROONEY with any way-out allegations about \$12,500-a-year administration assistants or any details at all about the new Senate Office Building and all that wall-to-wall-rug jive or even about out-of-this budget front-porch administration or sneaky franking privileges or any of that other legislature jazz. Not me. Any Member of Congress with a conscience these days in light of farm subsidies is too far out for me to dig.

But I will guarantee that American jazz music has made us more friends and less enemies than anybody or anything we ever appointed to go out and spend money. I have seen Nat "King" Cole fill a 15,000-seat-capacity stadium at a \$10 top 3 times a day and turn 'em away in Australia. Sinatra has done the same thing. And these "cats" were charging money for music.

If I were to nominate somebody to the cultural side of Congress, apart from Congressman ROONEY, to whom I seem to have taken a violent dislike, I think I would nominate Jack Crystal of the Commodore Music Shop, which alas is no more. America fed off the solid jazz that Crystal and Commodore issued over the years and the careful selection thereof is almost our proud banner of the true American art form abroad.

Even back in the deep depression, when the horn-blowers didn't have it to eat, Crystal and Commodore were in there shoving out that "nonsquare" Americana which is sold abroad today as the only original American art form and which makes us appear abroad as something other than monsters.

You would be surprised what you hear over the local radio stations in little places as far out as Indian dukahs in the outback of Kenya, on the little tired radio stations of small towns in Spain, on the bigger things in England and France, on the tinny gramophones in Arab bazaars, from here to there to yonder.

You hear American jazz and a great deal of it is "stuff" that I've got in the house,

You might have to hide in an embassay in South America or get pelted in the streets, but you will still be able to hear Teagarden's slip horn or Satchmo's trumpet or Wild Bill's trumpet or the easy piano grace of Joe Bushkin.

I think we just better scratch Mr. ROONEY as a bad platter on this jazz bit and turn on somebody else who really "digs" how much solid good our solid American "jive" has done us abroad. And you got to admit I do travel.

Mr. Speaker permit me to first say that I do not have the slightest dislike for this fellow Ruark. I feel sorry for him. He is a gentleman as expertly misinformed and as expertly uninformed as a gentleman can be. He would not know that Nat "King" Cole, Satchmo Armstrong, Benny Goodman, and many others have played American music to foreign audiences all over this world without a nickel of the taxpayers' money for subsidy. And since I have never met Ruark in my life. I could not expect him to know that in my college days 35 years ago I played Dixieland jazz professionally and still enjoy hearing it if it is not too loud. But, Mr. Speaker, I do not intend to take up the valuable time of the House to debate with this gentleman or his expatriated friends for the reason that the very same newspaper the New York World-Telegram and the Sun, which carried his column on Wednesday, June 10, 1959, on the following day, June 11, 1959, published an editorial which very adequately answers him. It reads as follows:

#### RUARR'S DIXIELAND FIVE?

Our friend Bob Ruark, who occupies the southwest corner of this page more often than not, is a man of many facets and he has a host of friends, but sometimes he can stop us plumb in our tracks.

Taking his text from the recent death of Sidney Bechet, a jazz musician who dug "The Muskrat Ramble" the most, man, Herr Ruark held:

That Representative John Rooner was square (or is it more properly "a square"?) because he objected to the Government coughing up a few thousand bucks to send a gifted tail-gate man abroad to spread American culture, man.

That Sidney Bechet and other jazz musicians, including the trombone artist alluded to above, had done more to make Americans beloved abroad than anything.

We had always regarded Professor Ruark as a safe and sane "Dardanella" and "Japanese Sandman" man, man, and how he got tangled up with "When the Saints Go Marching In" may better be left for another But granting his taste in music is unassallable, we still entertain some nagging doubt regarding his geopolitical acumen.

True enough, American jazz is popular in quality deadfalls from Port Said to Snag, Yukon Territory, but this is not to say that Americans or American policies are likewise. It is too easy for people who have been in such places to imagine some happy raghead nationalist whistling "High Society" while slicing a Yank tourist into small, you'll forgive the expression, squares.

For ourselves, we hope Representative ROONEY and other tone-deafs will continue to worry about those tax dollars, and if Bob insists on exporting American culture, let him pass the hat among his jazz-loving friends.

Address by Harry Plissner at Mahatma Ghandi Memorial College in Udipi, Mysore State, India

> EXTENSION OF REMARKS OW

# HON. DANTE B. FASCELL

OF PLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. FASCELL. Mr. Speaker, one man who made up his mind to do what he could as an individual to promote better relations between Americans and other people of the world, is Harry Plissner. His letter writing and magazine exchange program has been of tremendous impact in other lands and during a personal visit which he made in India he addressed 1,500 members of the faculty and students of Mahatma Ghandi Memorial College, in Udipi, Mysore State, India. I submit to my colleagues Mr. Plissner's remarks on this occasion:

Ladies and gentlemen, as you know I have come to your country at the invitation of the Academy of General Education to accept an honorary fellowship. My wife and I have been in your country for the past 30 days and we have had an unusual opportunity to learn things about your country which an American seldom is fortunate enough to acquire. We have had at our service outstanding bankers, business and professional men who have taken a good deal of trouble to show us about. We have seen sights which are splendid for which you should be proud. We were also shown those areas for which you have given your keen regrets.

My appearance before you tonight was unknown to me 36 hours ago until this morning I was at a loss to what I would say that would be of interest to you. I was hesitant to speak to you about the things which I have observed, for I could not be very enthuslastic about your present nor about your future, except in the field of education which is superb. My reluctance has been dissipated and I believe I will have something of interest to tell you. My apparent boldness is due to the confidence which I now feel because I read a story in your newspaper this

Less than 2 days ago in the Capital City of my country, which is Washington, D.C., two Senators spoke out on a matter of great importance to your country. These Senators are Mr. Kennedy and Mr. Cooper. Senator KENNEDY is a likely possibility for President of our country and in the elections that will be decided in 1960; Senator Cooper is a for-

mer U.S. Ambassador to India.

Among other things, Senator KENNEDY said that unless India gets the kind of help from the West that China gets from Russia, the biggest nation in the uncommitted world may go under. He complained that only emergency help had been given to India and he proposed that long-term loans should be made, so that long-term economic aid could be arranged on the basis of India's needs and in conjunction with such countries as Britain, Germany, Canada, and Japan, make proportional sacrifices to meet those needs. This should be exciting news to the democratic people of India and it is exciting news to me. I was nearing the end of my visit to your country and I was heavy with doubts and misgivings. What I have seen of your economy and the living conditions of your masses made me depressed, altough there was no doubt that progress was being made. It seemed to me that the pace was not fast enough to overcome your most serious problems in any forseeable future.

In the area of big business. I have had an opportunity to assess the condition of labor in one of your largest industrial establishments which happens to be a Government operation. This establishment employs more than 5,000 people. While it may be a reasonable wage. I was surprised to learn that the average worker is paid Rs. 1-8-0 which is about 30 cents a day in our money. went by automobile and my wife and I had many opportunities to see your cities, towns, and villages. We covered 800 miles in Mysore State. We saw the workers processing jaggery in the canefields. We were told that nine men working as a crew could earn Rs. 17/- a day. We visited a school for the training of extension officers who would go into the villages and teach people how to increase their meager income by handwork. One of the crafts which were being taught by the few teachers was how to make paper by hand. The end result was so poor that I could not help inquiring from the headmaster of the school, "How much can a vil-lager earn by making paper by hand?" He replied, "12 annas in an 8-hour day," When he saw the look of amazement in my face, he said, "It will be better if idle hands earn something than nothing at all." To which I could not help but reply, "An idle man expects nothing and can be philosophical about his poverty, but to work for 8 hours and get nothing can make him a revolu-tionary." From this point the conversation led to the inevitable discussion of India and her problems which left me convinced that unless some massive capital investments were immediately forthcoming, the situation would grow worse.

Speaking as an ordinary American, with the background of an industrial and merchandising experience this is probably what I will tell my friends and neighbors when I return to the United States, "India is a country with problems beyond belief." These problems are so numerous that to tell of them in detail will take many hours. My general impression is that the people, whether they are in the higher brackets or in the depths of poverty are friendly and gentle. They have the know-how and the intelligence to be taught to do the work of the machine age if only they had the machines. Industrialization of the country would go a long way to bring them a far better way of living than they now possess. Four-fifths of the population live upon agri-culture when less than half would suffice. The result is that there are many idle hands in the small villages of which there are more than half a million. In the cities, employment opportunities are better but there, too. there are many unemployed. Getting these people to work at worthwhile tasks is the problem. Among the Indians themselves, there is a lack of capital which can be employed in massive enterprise. Nor does the government have the borrowing power to purchase abroad the machinery which is needed to industrialize the nation. To some degree, the United States has been helping in supplying loans but the need is so great. This is a country of almost 400 million people and the degree of industrial development is so low that any aid will have to be on a massive scale. We, in the United States must face the sad truth that if we are to have any hope that India will remain among the democracies, we will have to make the major contribution of providing the capital which will enable India to provide better living conditions for her people.

Ladies and gentlemen, that is what I will tell my friends and neighbors when I return

to the United States.

In conclusion, I wish to take this opportunity to thank all those who have helped to make my visit a memorable one and also to thank you gentlemen for coming here tonight to listen to me give my views during my stay in your country.

South Should Tell Its Side of Racial

EXTENSION OF REMARKS OF

# HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 14, 1959

Mr. SIKES. Mr. Speaker, I was very much impressed by two editorials ap-Pearing in the June 9, 1959, issue of the Florida Times-Union and I would like to call them to the attention of my colleagues.

I believe the editorial entitled "South Should Tell Its Side of Racial Story" very clearly brings out the erroneous impression held by many people not fully familiar with the circumstances which actually exist in the South and I am glad to have it inserted in the CONGRESSIONAL RECORD:

[From the Florida Times-Union, June 9, 19591

SOUTH SHOULD TELL ITS SIDE OF RACIAL STORY

The answer to the questions of whether Southern States should band together to explain its racial position to the rest of the country is an unequivocal "yes." And Florida should be in the ranks of those carrying the word to misinformed outsiders.

A good argument for this course of action can be found in the fact that President Eisenhower is scheduled to address today a national group on the subject of civil rights. The various movements that operate under the banner of civil rights help to put the South on the defensive and in a bad light, implying, when they direct attention to southern racial issues, that civil rights are held in low esteem here. By appearing be-fore the conference, the President adds the Weight of his office to that impression.

We already know that the South has the Pederal judiciary sitting in judgment against it. The latest reminder of this comes from Atlanta, where a U.S. court Ordered Atlanta to desegregate its public schools.

In addition there is that never-say-die organization, the NAACP, that keeps the fires of racial antagonisms well banked.

These efforts from the White House on down should be countered. The South's side of the segregated story should be sounded. We're not ogres down here, abusing Negroes at every turn, despite the image created by isolated incidents that are sensa-

It should be stated at this point that one of the best things the South can do to improve its public relations is to work diligently to eliminate the berserk actions by the mad-dog element in our midst. Such a group gives a distorted picture of our region, playing into the hands of those that oppose

There is a growing substantial Negro middle class, that is sharing in the fruits of southern progress. Good schools, neat homes, fine public facilities for Negroes and an enlarging Negro professional class attest to this.

If Southern States were to combine in a hard hitting public information campaign, as

suggested in the Florida Legislature-approved measure, then there is ample reason to think a dent will be made in the Paper

The fight in the second reconstruction is no more futile than it was in the first. Then there were two civil rights acts, the 14th amendment and other unfavorable measures to overcome. Eventually the radicals were deposed from political power and the South's will prevailed. History does repeat

Mr. Speaker, I feel that my colleagues will be interested in the editorial "Where Is the Political Support for Economy?" and particularly in reference to the comments of our distinguished colleague and my fellow Floridian from Jacksonville, the Honorable Charles E. BENNETT. I am sure that in addition to the reading of this fine editorial, we will all want to. read Mr. BENNETT's article in the June issue of Nation's Business.

The above-mentioned editorial fol-

[From the Florida Times-Union, June 9, 1959]

WHERE IS THE POLITICAL SUPPORT FOR ECONOMY?

Within the next few days, the first of a series of economic reports is expected from the special Cabinet committee set up by President Eisenhower to study inflation. Although the committee is headed by an astute politician, there has been no indication that the political purposes assumed by this group will include the foundation question of all concerning economy in gov-ernment. Vice President Nixon's committee on inflation will not answer this question:

Where within the body politic of this Republic can be found a substantial number of voters with a sustained interest in eco-

nomical government?

This is the \$64 question concerning inflation and possibly involving national survival. Although the question has not been answered, the closest thing to an answer comes from the pen of Congressman CHARLES E. BENNETT, of Jacksonville, writing in the June issue of Nation's Business, the magazine published by the U.S. Chamber of Commerce.

BENNETT says that all Congressmen are "in

a constant struggle to keep from becoming spendthrifts" because their supporters, all the while preaching economic commonsense, urge them to raid the public purse whenever local interests are involved. He recognizes that a politician must stay in office and therefore is a particularly vulnerable target. "So the primary source of economy must

be the public," BENNETT states.

True as this is in theory, it is hard to adjust to the political facts of life. The Republican Party is the party of economy or conservativism and the chances are that Representative BENNETT is aware of the declining population on that side of the aisle. President Eisenhower preaches economy for the Nation but his personal habits see very little of it practiced.

In a very real sense, the use of the negative word "economy," which carries visions of a confused Herbert Hoover holding tightly to the purse while thousands starved, does not adequately describe what America needs today. This country needs a large political force, conservative by nature, with a sufficlent understanding of the potential of the American economy to judge what the Nation can afford after defense and what it cannot

The United States, the richest nation in the world, would want no more to live too far below its means than too far beyond them. What is needed is political support for a government devoted to living within the Nation's income, spending neither too much nor too little.

Baccalaureate Sermon to the Graduates of St. Francis College, Brooklyn, Sunday, May 31, 1959, by Rt. Rev. Msgr. William F. Kelly S.T.D.

EXTENSION OF REMARKS

# HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House, I include the following baccalaureate sermon delivered to the graduates of St. Francis College, Brooklyn, N.Y., at mass on Sunday, May 31, 1959, by Rt. Rev. Msgr. William F. Kelly, S.T.D.:

"Enough for you, that the Holy Spirit will come upon you, and you will receive strength from Him; you are to be my witnesses in Jerusalem and throughout Judaea, in Samaria, yes, and to the ends of the earth." Acts, I: 8. (Words of our blessed Lord to His apostles before His ascension into

heaven.)

My dear graduates, an heroic statue of the great Genovese explorer stands in front of the City Hall in Columbus, Ohio. The splendor of the monument awakens awe in one who sees the beauty of this gift of the citizens of Genoa to the citizens of Columbus. More enduring than the bronze are the words of Vittorio Partusio, the mayor of Genoa, inscribed on its pedestal: "Testimonial of the values and virtues which the figure and enterprise of the great son of Genoa has entrusted to the human conscience."

This message, admirably apt, may be appropriated for and by each of you today. very truth, you, as a symbol and as a figure, are a testimony of the highest virtues and noblest values which Christ entrusts to the human conscience. To achieve widespread recognition and acceptance of these unchanging values and virtues, we have constructed in America an educational enter-prise of which you are the products. This vast system, of unparalleled dimension and cost, is maintained to preserve, to cherish and to nourish our highest traditions and noblest possessions.

We, your parents and your fellow Catho-

lics, have labored all the night of the past to bring you into this day of triumph. whole Catholic community, in addition to the excellent Brothers of St. Francis, have diligently spent themselves to develop you into intellectually full-grown figures and self-sustaining symbols as well as authentic witnesses and convinced sharers of the teaching, of the life, and of the activity of Jesus Christ and His Catholic church.

It is our continuing prayer that you abide constant in the enterprise and exercise of your influence for the enlargement of the human horizon, for the enrichment of the human spirit, especially for the defense of human rights particularly of the poor and the downtrodden.

This day is memorable for each of us because it marks your personal triumph over great difficulties, your victory over the past, your entry into the future. It stands a splendid tribute to your perseverance. It encourages us because it testifies to your sense of values. We therefore salute and congratulate you. We charge you to go with God.

What is it, then, that we have produced of which you are the significant symbols today? Surely not a faceless graduate, as is whimsically featured on the cover of a current magazine, for such is the antithesis of what you are, of what you were educated

The phenomenon of faceless man in our times is a revealing indictment of the degradation of man, more often reality than whimsy. Its tragic contemporary accompa-niment, the empty man, is the remorseless inanition of a life of modern confusion and without God. Is there a reality or, indeed, an imagined fantasy, more absurd, more contradictory of what any American college should produce, of what preeminently a Catholic college should provide, than this compellingly sad commentary on our times?

Human self-respect and dignity have one thing in common, notes Otto Karrer, namely, that human worth stands or falls on fidelity to conscience. Man without God relationship, to which conscience bears witness, is only a fraction of man, a fragmentary being. When a man lacks faith, he also lacks conscience, as Newman wrote. You live, no, no longer you but Christ lives in you. This is your identity that clearly establishes you as the personal property of Christ. You are His personal temple, His personal message, His personal workman.

You will recall a story of the closing days of the last war in Europe when some American soldiers came upon a bombed-out church. Strewn in the wreckage, they found a statue of Christ without hands. Christ has no hands but yours to do the work that must be done.

Why should you be concerned?

Justice may be defined generally as rendering to each his due. Thus the virtue of justice is a constant and permanent determination to give everyone his due. One of the integral parts of justice is the virtue of piety. In St. Thomas' definition, piety consists in a profession of charity for par-ents and country. Two acts proceed from this virtue, loyalty and reverence toward parents and country as the joint principles of our existence. Consequently, the basis and motive of piety is the close union existing between those united by blood or country. Thus the virtue of piety obliges you to respect your father and fatherland.

Piety or patriotism toward one's country can be violated by excess, as by excessive nationalism, or by defect, as in ignoring duties to country. In serving your country you are serving God, for to the extent you

do justice you do God's will.

If an ancient pagan could properly assert that he was human and nothing human was foreign to him-humanus sum et nihil human alienum a me, puto-obviously greater is your obligation as a member of the body of Christ to be deeply concerned in all the problems that afflict the human spirit. how else can a Christian society be built and improved unless through you the Lord build it.

Sacred Scripture instructs us that the "earth is the Lord's and the fullness thereof." Hence, the earth must be so governed in its use as to make its God-given bountiful resources accessible to all men. Though the world produces as much as it needs, there is the problem of abundance in one area and acute famine in another area.

The gravest problem, because it is the most ominous and in its dimensions is the largest, is the contrast of wealth and poverty tween a few wealthy white Western nations and most of the rest of the world. The contrast is readily apparent when you note that in the United States per capita income is above \$2,000 a year as opposed to an income of \$100 or less for two-thirds of humanity. This disparity is getting worse, not better, because the rate of population growth is higher in the underdeveloped countries than in the industrialized nations with their high standards of living. As the poet Blake wrote long ago-

"Is this a holy thing to see In a rich and fruitful land, Babes reduc'd to misery. Fed with cold and usurous hand?"

What is needed, as Mr. Stevenson observed recently, is not charity. "Our task, as the wealthy members of the world society," he 'is to link our resources to a systematic long-term program of education and basic development which will give the world's masses the opportunity to help themselves."

The late Premier All Khan of Pakistan stated during a 1950 visit to the United States: "As I let myself ponder over this, I suddenly see the United States of America as an island, a fabulously prosperous island. And round this island I see the unhealthy sea of misery, poverty, and squalor in which millions of human beings are trying to keep their heads above water. At such moments I fear for this great nation as one fears for a dear friend.'

Confronted by this challenge of widespread poverty, a complacent Christian abdicates his conscience. It is our current shame that American Catholics are not the foremost leaders by their word and work in the struggle for the survival of human dignity in enabling underdeveloped peoples through skill and resource to emerge as freemen through the Christian use of the earth.

Regrettably, there is abroad in our community the notion that we are not our brother's keeper. False prophets have for-gotten that it was Cain who first raised the insidious question whether he was his brother's keeper. The logical ultimate in political terms of this un-Christian notion would isolate us within Fortress America, with an ostrichlike unconcern about supersonic hydrogen warhead missiles breaching the walls. National security, we readily see, obliges us as forcefully as Christian principle to international solidarity.

My dear graduate, as you well know, it is idle, indeed futile, to consider international problems as foreign to your welfare or alien

to your concern.

Some rather absurd things are being pressed upon our attention today about population problems. Yet it would be to our peril if ignorance or prejudice were to obscure the magnitude of demographic problems of the immediate future. The solution is not to decelerate population growth through widely proposed immoral means of birth control, abortion, and so-called mercy killing. The problem is not people but goods of the earth. None of these illicit means attacks the basic problem of increasing food and fiber production, of imparting technical skills, of building irrigation dams and roads as well as factories and homes; of cheap desalinating process for the conversion of sea water, and a host of other positive and constructive means.

If, by the providence of God, communism were to be destroyed tonight as nazism was destroyed last night, the struggle of the poor and the hungry for bread and work would continue unabated. Man seeks a place in the sun to live as comports a child of God.

What happens in Kerala is reported alongside news from Kentucky. For the first time in history we have instantaneous and simultaneous worldwide communication. In your own lifetime rapid transportation facilities have become commonplace. These facilities have so delimited time-space dimensions, in terms of yesterday, as to make today's world a large neighborhood. These are your personal, not some one else's, far-off international issues, because it is you who are summoned into selective service, it is you who are taxed to provide resource and skill to needy nations which we as Christians should properly do and which we as Americans must do if we are to survive; it is you who must be ready to serve in Uganda as well as in Utah.

Dr. Malik, of the Lebanon, declared recently, "That there is an inescapable confrontation between communism and the rest of the world calling for historic decision, and I am not sure the effective forces of freedom are sufficiently aware of what is at stake, nor whether they are adequately prepared, on every level of human existence, to meet the

challenge.

"There is too much softness, comfort, com-placency, indecision, drift \* \* \* a vision of something great and tremendous, a call to an heroic mission, the challenge of a truly universal message—that is what is required today, and this, alas, is what is lacking. The immediate situation, then, presents the aspect of a final and total judgment: everything is being weighed—ones life, one's values, and one's culture, the vitality of the whole civilization to which one belongs."

But what are some of the problems confronting you as you commence your intellectually adult life today, what are those mat-ters closer to home that invite your interest and must engage your support. Your community needs and requires the contribution of your leadership and participation at all levels and in every field of activity. In addition to your activity within your parish you must consider the community's needs.

Active participation in parent-teacher groups; active membership in political parties of your informed choice; active participation in slum clearance programs and generally in all campaigns of civic improvement; in building better schools and preparing better trained teachers; in improving the caliber of professional training; in assisting adult education programs; in helping consumer groups; in the widespread provision of medical facilities for all in need of them; in the encouragement of strong democratic trade unions and equally widespread enterprising managerial groups; in strengthening the arts and professions; in bringing Christian inspiration and guidance in all business and commerce; in supporting good legislation; in cleaning up smut and obscenity, vulgarity and blasphemy; in improving cultural facili-ties; in general, serving all good causes in the many areas needing your enlightened Catholic and civic participation. America deserves nothing less than your best and nothing else is worthy of Christ.

Ten thousand avenues await the tread of your feet. Ten thousand issues oblige your Christian resolution. Everywhere and every thing you are called upon to act for Christ, to act for God and country.

You will recall another story from the last war. Some of our soldiers, in the cleaning up operation in Naples, saw a small boy carrying a child almost his own size. One of the soldiers, filled with compassion, said to the young Christopher, "Is he heavy?" The strong-willed generous lad replied, "He's

not heavy, he's my brother."

Among so many other contemporary matters, permit me to relate one more item. In a recent address in New York, Christopher Dawson, declared that the layman has enormous resources which he must place at the disposal of the forthcoming ecumenical council. He cited historic instances in Eastern Europe and in the Middle East where the Bishops, as guardians of the deposit of faith, had come to agreement on all doctrinal points, but unity did not eventuate because the common people, through exaggerated nationalism, opposed it. So, today. a Catholic layman, especially a Catholic college graduate, has an especial opportunity to be an effective witness of Christ for unity among his brethren.

Throughout this entire sermon I have implicitly called for a most active life of the intellect for only in this fashion can you truly be a witness to Christ. To fail in this would equivalently demonstrate that your Catholic college education has been in vain.

In conclusion, then, we note that since your purpose is to testify to Our Lord in the fashion of a Catholic college graduate, it is to be expected therefore that you will distinguish yourself and thus your college by the excellence of the careful and constant discharge of the duties and requirements of your citizenship in the city of God and in the city of man. America deserves your best; nothing less is worthy of Christ.

Your patriotism will be marked by intelligent comprehension of the issues and principles as well as the circumstances of the times that so brutishly try men's souls. Your dedication to the purposes of good citizenship, as well as to the apostolate of your Catholic life, will require you to give your full measure of support and intelligent participation in the various and diverse community organizations possible to you and feasible within the conditions of your life.

Above all else, you will engage in your professional life, as a Catholic college graduate, in such fashion as never to be ashamed to testify to Our Lord, nor ever to cause shame in others by your testimony.

Yours must be an apostolate of intellectual as well as spiritual excellence. Nothing less is worthy of Christ, your companion. Excellence is all you are and in what you do, excellence of integrity as well as of accomplishment, will be your testimony of the values and the virtues Christ has entrusted to your guardianship. This excellence will induce others to follow you and thus come to know, to love and to serve Christ.

Without flinching, without compromise, be loyal to God and country, be worthy sons of your alma mater.

# Obscenity in the Mails Is Everybody's Business

EXTENSION OF REMARKS

# HON. EUGENE SILER

. OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. SILER. Mr. Speaker, in a recent edition of The Pineville (Ky.) Sun, there appeared a reprinted newspaper editorial on the obscenity racket that is now flourishing throughout the country by using our U.S. mail for its damaging purposes. This editorial well explains that the restraint of this racket is really everyone's business. All of us should be interested in helping to put a halter on this animal before it rampages any further among the teenagers of our country. The editorial follows;

IT CAN BE STOPPED: SAYS THE PLANT CITY (FLA.) COURIER

A \$500 million a year mail order business in obscenity is being directed at the Nation's teenagers, according to Postmaster General Arthur Summerfield.

The American public, if it wants to, can

destroy this business.

According to postal officials, mail order dealers in pornography are flooding the

mails with lewd books, films, pictures, slides, and other materials.

If a citizen's home is invaded by unordered material, all he has to do is complain to the Post Office Department. This can be done by malling or taking the objectionable material and the envelope it came in, with a signed note of protest, to the local postmaster.

An investigation is then made by the Post Office Department's inspection service. If their findings justify action to ban the material from the mails, the Department then issues such an order. If the sender of the obscene material protests the ruling, the matter may then be taken to the nearest U.S. District Court for a decision.

Where the material is clearly pornographic, criminal action is usually taken by the local prosecuting authorities with the cooperation of the Post Office Department. Convictions in such cases can provide both jail sentences and fines for dealers in obscenity.

# Distinguished Belgian Envoy Ends Long Career in United States

EXTENSION OF REMARKS

# HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the Record, I enclose an article from the New York Times on our good friend Baron Silvercruys:

[From the New York Times, June 3, 1959]
DISTINGUISHED BELGIAN ENVOY ENDS LONG
CAREER IN UNITED STATES

One of the last of the "old pros" among Washington's diplomats, Baron Robert Silvercruys, Ambassador of Belgium, retired today.

After 41 years of diplomatic service, including nearly 16 as Ambassador to the United States, he went to the White House at 11:30 a.m. to say goodby to President Elsenhower.

Later the baron called on Chief Justice Earl Warren. In the next few days he will bid farewell to many others, not merely officially, but as a friend.

There is more good cheer than tears about these farewells. One reason is that Ambassador Silvercruys is known to official Washington not merely for his experience and wisdom, for punctillous correctness and equisite entertaining, but also for his galety and wit.

Another reason is that he is not really leaving. After a summer in Nantucket, he and Mrs. Silvercruys, the Mrs. Rosemary Turner McMahon, widow of Senator Brien McMahon, of Connecticut, will divide their time between Washington and Brussels.

"As of 11:30 this morning, I am out of the diplomatic service and of official life," Baron Silvercruys said today. "I shall continue the pursuit of happiness in private life. Although lacking diplomatic immunity, I hope that I will enjoy immunity.

"For the first time in 10 years I am carefree," he continued, "and I plan to enjoy

### PLANS SOME GOLFING

He said he planned to do some golfing and fishing, for which he found little time during his years in Washington

during his years in Washington.
Only a few men in official Washington can
look back on careers as long as that of Ambassador Silvercruys. One of them is Repre-

sentative Sam Rayburn, who was in his fourth term as Congressman from Texas when Baron Silvercruys arrived in Washington as an embassy attaché in 1918 and is today one of the Ambassador's many friends on Capitol Hill.

In 1918, when he was 25 years old, Baron Silvercruys had his first diplomatic assignment, preparing the visit to the United States of King Albert and Queen Elizabeth of Belgium. In 1959, at 66, he had his last big job, arranging the visit to this country of King Baudouin and accompanying the King.

In between, he has served in his country's Embassy here under every U.S. Chief Executive since President Wilson. In addition, he served as chief of mission to Canada for 6 years and has had assignments in Britain and China.

A member of the Ambassadors' committee in Washington that prepared the North Atlantic Treaty, he signed it for his country in 1949.

### GAVE SMALL LUNCHEONS

One of the few big receptions he gave at his embassy was the one for King Baudouin last month. But he gave small luncheons and dinners several times a week. These offered a gracious setting for the kind of diplomacy he liked best. Diplomats sometimes debated whether the Belgian Ambassador or the French Ambassador had the better chef. Most chose the Belgian

ter chef. Most chose the Belgian. Once he was asked what he would do if a photographer turned up to photograph his guests.

"I would ask him," the Ambassador is said to have replied, "why he was preventing me from doing my job."

"When I look back over my years in Washington," Ambassador Silvercruys said today, "I don't feel gloomy at all. I think we have laid the foundation for what may be called a commonwealth of freedom."

He spoke of the evolution of European economic unity from the agreement between Belgium, the Netherlands, and Luxembourg to the European Common Market. He also mentioned the growth of Western military unity from the five-power treaty signed by Belgium, the Netherlands, Luxembourg, Britain, and France in 1948 to the North Atlantic Treaty Organization.

"I am of good cheer," he said.

"I don't think I would deplore even the failure of a summit meeting. Failure may be more to the Soviet Union's disadvantage than to ours."

### The Wheat Bill

EXTENSION OF REMARKS

# HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. SHORT. Mr. Speaker, yesterday when the House had under consideration H.R. 7246, I was very disappointed that my colleague the gentleman from Minnesota [Mr. Quie] a distinguished and able member of the Committee on Agriculture, did not have an opportunity to speak in support of the amendments he offered to the bill. The gentleman from ' Minnesota [Mr. Quie] and I had given a great deal of thought to some of the shortcomings of the legislation under consideration and felt very strongly that while it moved in the right direction, it needed some further revision. I would have spoken in support of the amendments offered by the gentleman from Minnesota [Mr. Quie] had there been an opportunity. In my opinion, it is indeed unfortunate that adequate time was not given to the consideration of legislation as important to the American farmers as this wheat bill.

Bishop Wright's Commencement Address at Georgetown University

EXTENSION OF REMARKS

# HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. O'HARA of Illinois. Mr. Speaker, for the delightful reading of my colleagues who did not have the good fortune to attend the commencement exercises of Georgetown University on June 8, 1959, I am extending my remarks to include the commencement address of the most Reverend John J. Wright,

bishop of Pittsburgh.

I have never known an audience to respond more completely and spontaneously to the words of a speaker as the vast crowd on the lawn at Georgetown, now rippling with laughter at the sallies of an exalted dignitary of the church whose sense of humor was as keen as the edge of a razor, now raising a thunder of applause by the loudest of hand-clapping when the tempo of the oration changed to the serious.

Bishop Wright's address follows:

Most Reverend Archbishop, Reverend Father President, ladies and gentlemen, let me speak for all those honored today by honorary degrees our word of tribute, and congratulations to those who had to earn their degrees.

At about the year when I got myself graduated from Boston College there was a popular song, the lyrics of which promised abiding happiness, unalloyed, to all those who would remember to include in their lives "a little kiss each morning, a little kiss each night."

The advice was mildly potty; it held forth

"We'll be so happy, we'll always sing, If we'll remember one little thing, A little kiss each morning, A little kiss each night."

It was not entirely without realism. It contemplated some of the sterner possibilities of life:

"Who knows if sorrow may cause us tears, An empty cupboard, a night of fears? A little kiss each morning, A little kiss each night."

Alas, the advice left out the problems of a few of us, who have subsequently managed to scrounge out of life a few scraps of happiness without. And undoubtedly for one and all it was a slight oversimplification of the difficulties of existence in the postgraduate world. However, the lyric has been ringing in my brain for these last few days, so I decided that I might well present some small counsel, such as is expected on these occasions, by echoing at least a bit of the phrasing of the lyrics which have returned to haunt me after these almost three decades.

For one and all, whatever the callings or pursuits to which we will henceforth devote ourselves, certain signs and circumstances of the times suggest that one offer some more universally applicable counsel than the lyrics that I have recalled to you. For instance, I beg you, as you set forth to make your first million, to write the great American novel, to save the world from communism, or to become the Chief Justice of the United States. I ask you to make early and determined plans to include in your busy and useful lives a little leisure. Before the scramble becomes too intense and too involved, I ask you to re flect on some of the sobering statistics which make very timely the recommendation that you make provision for a little leisure. are constantly impressed by the citations given out by the junior chambers of commerce, by all manner of organizations in our so intrepid and enthusiastic activist country as to the tremendous numbers of those who make their fortunes and arrive at their posts of trust in church and state before they are, oh, say 40.

I ask you to check some of the insurance company statistics with regard to those who have their first coronary before they are 40, and for the same reasons. I suggest that you dig out from the files of the public library an article which appeared in the Saturday Evening Post 3 years ago which paid tribute tremendous numbers of American college and university men and women who arrived very early in life and were buried very shortly later. An article under the title, Youngest Men in the Cemetery"-a very sobering article. And I suggest that you read it within a few days of graduation week, before you become involved in what may otherwise deprive you, unless you plan carefully, of a little leisure.

"What is this life if, full of care, we have no time to stand and stare? No time to stand beneath the boughs and

stare as long as sheep and cows.

No time to see in broad daylight, streams full of stars, like skies at night.

No time to turn at beauty's glance, and watch her feet how they can dance. No time to wait till her mouth can enrich

that smile her eyes began.
A poor life this if, full of care, we have not time to stand and stare."

Closely related to this question of leisure in the good and the truly useful life is the question of the important place of mere nonsense in the life of the educated person. One wonders whether a saving sense of humor would not provide as much as almost anything else, save only the faith, that perspective needed to correct some of these grim extremes of our sometimes overly earnest educational and professional work.

In one of America's large cities, one of the very largest, suicide turns up currently as the eighth most frequent cause of death. And the statistics reflecting the number of suicides among the well educated are exceedingly sobering indeed. They would drive a sensitive educator to suicide himself. Such a situation argues many lacks and many limitations among our American intellectuals, but it argues to me in all probability the tragic absence of a sense of humor in the rest of one's educative program and personal growth.

There is a deadly earnestness surrounding the discussion of the current problem of the intellectual life of America and the intellectual life of the Catholic Church, a deadly earnestness which suggests that knowledge and information may be on the increase and wisdom and understanding on the way out.

Education that leaves no time for nonsense is no education at all. In many books on American education which are flooding the markets presently one common note cuts across all differences of progressivism, conservatism, liberalism, aristocracy, classicism, and scientism. It's the appalling absence of any trace whatever of a sense of humor.

Typical is a high-minded report I have in my hands which is entitled "The Pursuit of Excellence-Education and the Future of America." It is the work of a sober group of . serious thinkers who are greatly concerned with the greatness of our Nation, its purpose, its courage, its responsibility, its eminence, to quote the prefatory note, and they amass impressive statistics of the work hours needed and the urge of application required if collegiate and university education is to contribute to these so praiseworthy ends. But one asks, as he turns each page, why is it all so deadly earnest? What has become of the humanistic touch that used to betray a humane preoccupation and that revealed itself in an occasional trace of a sense of humor?

Two weeks ago there was a TV panel which brought together a half dozen distinguished educators from all over the country, male and female, and they talked specifically about the education of American university women. Someone asked what place sheer amusement played in the lives of their campuses. Two of the distinguished educators missed the point of the question entirely, three had no comment to make, and one spoke of what she called, with a grim expression on her face, "group diversions," Small wonder that happiness drugs, in the absence of a sense of humor, are being sold in such quantities in the drugstores around so many campuses.

I sometimes think that the students of Harvard University who some years ago hoisted a cow into the belfrey learned more in the process of doing so than they had picked up in the lecture halls during their four undergraduate years. In any instance, they got something out of their systems—and that's part of education, too. And I secretly suspect that if they avoided the detection of the dean's office they are now on the board of overseers as the ones most likely to contribute by reason of their initiative and sheer intelligence to the stability and the future of the university.

I suggest that we find place in our professional lives for a little nonsense. I ask too that you reflect on the need for a little impatience—a little impatience with the things that we can change for the better, above all ourselves, but also certain aspects of the society to which as people privileged to pursue so many years of study we are so genuinely indebted.

There is a danger that with the status and the success that you will in all probability have, there may come complacency with the world around you and a certain smugness with yourself. Nothing could be more deadly. And so I offer you the pearl of a devout Jew for your meditation:

"Open my eyes to visions set with beauty and with wonder lit,

But let me always see the dirt and all the spawn that die in it.

"Open my ears to music; let me thrill with spring's first flutes and drums,

But never let me dare forget the bitter ballads of the slums.

"From compromise and things half done, keep me, oh God, with stern and stubborn pride.

"And when at last the fight is won God keep me still unsatisfied."

And not at all inconsistent with this divine discontent is the further gift I beg you to develop. It is the gift of a little patience—a little patience with the resistance of fallen nature and rebellious history to our benevolent purposes and our sometimes overpat practical solutions for the world's woes. Most of us belong to the revoluntionary people, like the Irish, or the warm-blooded races, like the Latin, and so we tend to sign up fairly rapidly in any crusades—crusades for economic, political and related changes designed to solve by a speech or two, or a

campaign or two, or an election or two, or a war or two, the entrenched problems and accumulated evils of several centuries. We tend to take personal offense at the inertia of the world in the face of our inspiring convictions. This is particularly true when we are confronted by exasperating rejection of or dalliance with the corollaries of a creed which we know to be divinely revealed and to echo God's will for mankind, but which sometimes has rough going against the indifference and the inertia of unregenerate mankind.

Here we do well to have a little bit of God's patience, to offset our generous share of God's wrath. A little patience in the face of what we cannot change, at least alone and overnight, will be helped by reflection on the persevering patience of the church across the centuries, and the silent patience of God in the face of evil, our own included. So too some lines of Coventry Patmore may help a bit:

"Here is this little bay, full of tumultuous life and great repose,

Where twice a day the purposeless glad

ocean comes and goes
In the high cliffs and far from the huge town I sit me down.

"For want of me the world's course will not fail. When all its work is done the lies shall rot.

The truth is great and shall prevail When none cares whether it prevail or not."

I merely ask you to develop a little imagination and, together with it, a little humility.

The golden jubilees of those who today receive their degrees will take place, if all goes well, in June 2009. It is too soon to know on which of the planets the class outing will be held. But the odds still favor this earth and even, though less certainly, this conti-nent. These odds have been challenged, however, in recent months. They were challenged by a trip into space successfully ac-complished within the fortnight by two monkeys, one named Able and the other named Baker. They were also challenged, and a little more definitely so, by a trip into space by a dog from Russia named Laika. Both the monkeys, I am happy to say, were Ameircans. These three historic creatures. have, as I have suggested, already greatly influenced the golden jubilee plans for the year 2009. These same creates and all the developments of which they are symbols make it pertinent for you to develop a little imagination and a little humility as we face the future.

The new age of science, using telescopes instead of microscopes and grazing out into God's clear space instead of down into mind's murky psychological depths as the recent scientists have tended to do, will let fresh air into scientific, political, economic, academic thinking of every kind in the half century in which you will do your work. In such era it will be easy for the spirit moving where it will to evoke more ready response. An age of astronomy, the prospect of interplanetary studies and even journeys, theses are far removed from the introspective broodings and the negative agnosticism which were the frequent but unnecessary byproducts of the 19th century scientists. The directions of the age in which you will live will be quite literally toward the heavens, and once again those with a little patience, a little humor, a little leisure for reflection and repose and maditation, a little impatience with the status quo, a little humility and a little imagination will understand better than have generations what the Hebrew Psalmist meant when he wrote:

"I look up at those heavens of Thine, the Work of Thy hands, at the moon and the. stars which Thou hast set in their places, and I ask, 'What is man that Thou shouldst remember him; what is Adam's breed that it

should claim Thy care? And yet Thou hast placed him only a little below the angels, crowning him with glory and honor and bidding him rule over the works of Thy hand."

Georgetown has prepared you to do some part of that ruling, with a little luck and a little prayer and a little reflection on your gratitude to the university and those who made possible your attendance at it, and the God who is able to make great things out of little virtues.

God bless you.

Recalling Red Crime in Three Baltic

EXTENSION OF REMARKS OF

# HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1950

Mr. FEIGHAN. Mr. Speaker, the meeting of the Foreign Ministers presents an appropriate opportunity for the representatives of the free world to call upon the Russians to abide by agreements whereby the nations would be enabled to determine their own destiny by free and unfettered elections.

It is most regrettable that no voice has been raised at the Foreign Ministers' meeting on behalf of the rights of the people of the captive non-Russia nations now illegally dominated and controlled by the Russians. Worldwide attention has been diverted from the plight of the enslaved nations. As a consequence, the enslavement of the captive nations is being accepted as status quo on a de facto basis. By our failure to insist that the status of the captive nations must be considered on the agenda, the Russians are winning a victory to maintain the status quo, by default. The Russians are trying to break the will to resist of the people in the subjugated nations. We must not, by default, or in any manner, assist the Russians in their determined efforts to break the will to resist of the subjugated people.

I have repeatedly urged President Eisenhower to instruct the Secretary of State to demand that the Communistenslaved non-Russian nations be permitted to determine their own destiny by the use of free elections, including multiple political parties, the secret ballot, together with international supervision to guard these basic requirements.

Under leave granted, I insert a timely editorial which appeared in the Cleveland News of June 11 titled "Recalling Red Crime in Three Baltic States":

RECALLING RED CRIME IN THREE BALTIC STATES

In early 1940, the Baltic states of Lithuania, Latvia, and Estonia were free and sovereign nations. Then on June 14 the Red Army moved in and there was no more freedom. In 1941, the Russians began a mass deportation movement and hundreds of thousands were banished to slave labor

camps and to Siberia.

Clevelanders of Lithuanian descent on Sunday will mark these twin anniversaries with prayer and memorial services. Soviet action in Lithuania and the other Baltic states was a crime and is still regarded as such by the United States.

Sunday is a day of mourning for a proud people. It is also a day of dedication to the principles of liberty and independence which the Russians violated.

Along the Oregon Trail: A Real-Life Picture To Go With the Words in the History Books

EXTENSION OF REMARKS

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. PORTER. Mr. Speaker, the Onto-Oregon Cavalcade wagon train has traveled nearly half of the 2,000 miles it must cross before reaching Oregon. Wagonmaster Gorden Serpa says that the seven wagons have not strayed more than 6 miles from the original Oregon Trail that settlers followed West more than 100 years ago. Reporter Jerry Uhrhammer of the Eugene (Oreg.) Register-Guard recently spent some time with the caravan members.

Mr. Uhrhammer reports that often the wagons follow the original trail ruts of last century. He says huge crowds have greeted these modern-day pioneers. In Lawrence, Kans., for example, 25,000 people came to see the wagon train. The city's population is 20,000.

Spectators have come from the area through which the train is traveling and from other parts of the country. A photographer from Belgium followed the train for a day to shoot pictures.

This event has focused many eyes on Oregon and its centennial celebration this year. Under leave to extend my remarks in the RECORD, I include the Uhrhammer article:

[From the Eugene (Oreg.) Register-Guard, June 6, 1959]

WHAT THE WAGON TRAIN IS DOING WILL BENEFIT OREGON FOR YEARS

(By Jerry Uhrhammer)

THE OLD OREGON TRAIL, WYO .- Dave Gastman of Cottage Grove, his face almost as tanned as his buckskin shirt, fingered the Buffalo Bill-type goatee sprouting from his chin and predicted:

"Oregon will get repercussions from this for years."

This was Gastman's assessment last week of the On-to-Oregon Cavalcade, the seven mule-drawn covered wagons that are now almost halfway across the West on a trek to publicize the Oregon Centennial.

Gastman, the wrangler for the cavalcade. was sitting on the grassy bank of a small creek meandering through a cottonwood grove some 15 miles west of Guernsey, Wyo. A few yards distant, the seven wagons had parked for the night in a semicircle, just as emigrants parked their wagons more than 100 years ago. Horses and mules grazed in the flat meadow that rose into rocky, cac-

"It's grown to be more than just a publicity stunt," he said. "Everywhere we've been, teachers and college professors have told us that the wagon train has created great interest in the Oregon Trail.

"In fact, they say there's more interest in history among the youngsters than ever be-fore," Gastman continued. Whenever the

wagon train enters a town along the way, he said, schools are dismissed and children swarm to see the caravan. One school, 100 miles off the wagon train's route, loaded two school buses with children and drove them to a town where they could see the train.

#### REAL LIFE PICTURE

The experience of seeing the wagon train is likely to provide a long-lasting interest in Oregon for the youngsters, Gastman sald. "The interest is created because it's a real-life picture to go with the words in the history books."

The wagon train, which left Independence, Mo., April 19, last week had traveled more than 800 miles. Some 1,200 miles are left before it will reach Independence, Oreg., in August. So far, said wagonmaster Gordon (Tex) Serpa, the train hasn't strayed farther than 6 miles from the original Oregon Trail that carried thousands of settlers westward in the 1840's.

Many times, the covered wagons follow the deep ruts, still remaining after more than 100 years, that were left by the original emigrants' wagons.

Everywhere the wagons have gone, huge crowds have greeted them. The total is more than 1 million persons so far, according to various estimates. One community, Lawrence, Kan., outdid itself. The crowd there was estimated at 25,000. Lawrence's population is only 20,000.

#### HUMOR AND TRAGEDY

The cavalcade has had its humorous side—and one tragedy.

A note of comic opera was introduced near Bayard, Nebr., when town officials planned an "Indian attack" by some 30 Sioux Indians, descendants of the Indians who attacked wagon trains a century ago. Here is Serpa's account:

"First, the town officials had trouble getting enough horses for the Indians to ride. "Then they had trouble finding enough

Indians who could actually ride a horse."

When the wagon train neared Bayard, it was held up for a half hour so the Indians

could make a couple of practice runs.

Finally, when the Indians came whooping and riding from behind a hill toward the train, Serpa and Gastman fired three shots at them (blank cartridges)—and two Indians fell off their horses. (One of the Indians maintained that he fell only to make the mock attack look real, and not from lack of riding ability.)

One Indian became a casualty. He was too close when a blank cartridge was fired, and the heavy wadding penetrated his shoulder.

Several days earlier the wagon train had undergone another Indian attack by a flock of high school girls at Red Ridge, Kans. Their faces covered with lipstick the girls sneaked into the camp about 4:30 a.m., dumped Gastman and Serpa from their sleeping bags, then ran around, yelling and pounding on the wagon sides. When the attack subsided, the wagon train travelers gave the girls coffee and sent them home. "They were so darn tired," Gastman said. "They had stayed up all night planning the attack."

Up to the last week, the wagon train's only brush with snakes was at Marysville, Kans. With heavy rain outside, the wagon train members had cooked breakfast in the cafeteria of a public building. Everyone drank heartily of the coffee. Unknown to them, a teenager had flipped a garter snake (dead) into the coffee pot. The snake wasn't found until the pot was emptied out later in the day.

The tragedy happened at Ogaliala, Nebr., while the wagon train had pulled up for lunch along a highway. Traffic was being directed around the wagons, but one motorist, looking at the train, stopped suddenly.

A second car, following, smashed into the car that had stopped. A woman in the second auto was killed.

### PEOPLE ARE HAZARD

Indians and weather were the biggest hazards of the wagon trains of 1841 to 1848. And while the 1959 wagon train has had its share of bad weather (rain, hail, and several nearby tornadoes). Serpa lists traffic and people as the biggest hazards.

When the covered wagons are on the highway, horsemen at the front, side and rear flag cars and trucks. There have been no accidents so far. But, as for people, it's like living in the well-known fishbowl.

"Mainly, they keep us from getting to bed," smiled Serpa, "and they keep us from doing our work." That's why he prefers a campground some distance outside town. When they're camped inside the city limits, townspeople visit the camp at all hours of the night.

Nevertheless, they say it's their business to be hospitable to the visitors. And they keep account of some of the more unusual ones. For instance:

A Japanese college boy touring the United States on a bicycle followed the wagons for 2 days. "He said that when he got home to Japan he would be the pride of his hometown." Gastman laughed. "He was having the time of his life."

Three carloads of persons from Independence, Mo., drove all the way to Guernsey, Wyo., because they had missed the train when it started.

Six persons flew from Florida to Nebraska to see the wagons. They got there in time to see the "Indian attack."

One photographer came from Belgium, then followed the train for a day in a rented car, shooting roll after roll of film.

The wagon train doesn't hitch up on Sundays. Instead, ministers are invited to the camp to lead church services.

So far, the wagon train members have listened to sermons from nearly every Protestant denomination. (There are no Catholics in the train.) At Bridgeport, Nebr., three ministers appeared for the services. Who would do what was resolved when one clergyman led the singing, another gave the sermon, and the third pastor the benediction. Some 600 townspeople joined in.

# The Honor and Honesty of an Uncommon Family

EXTENSION OF REMARKS

### HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. SILER. Mr. Speaker, there was a news article in the Sun, a newspaper published in Pineville, Ky., in my congressional district, that appeared in this paper's edition of June 11, 1959. This article caught my attention and stimulated my admiration for an unknown American family interested in honor and honesty within the family circle. Only with families like this one can America succeed and grow and prosper in the years that lie ahead. I would like to commend the merchant and the newspaper that publicized the honor and honesty of this unknown, uncommon family that needs to become more com-

mon for the sake of a greater America.

FAMILY DRIVES 50 MILES TO PAY DEBT

EDITOR, THE SUN: Somewhere in America there is a family, probably just a good ordinary American family, and I do not even know their names, but the chances are, the children in this family will grow up to be honest upright citizens. The reason I bet lieve this to be true is explained by the following story.

Last week this family stopped in Pineville and while here, made some purchases in a local store and then started back to Ohio. When they were 50 miles on their way home they discovered one of their small children had picked up a 49 cent item that had not been paid for but instead of mailing the 49 cents to the store, the family returned to Pineville, brought the child into the store and made the child apologize for taking the item without paying for it. The parents explained to the store employees that they wanted to impress on the child the importance of being honest.

I hope some day to meet these parents and personally thank them for their honesty and also express my appreciation for their moral standards and their determination to bring up honest children.

> G. E. BRUNER, A Pineville Merchant.

# Resolutions Urging Enactment of the Fair Labor Standards Amendments of 1959

EXTENSION OF REMARKS

# HON, KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 12, 1959

Mrs. GRANAHAN. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution adopted by each of the following local unions in Philadelphia urging the Congress to pass S. 1046 and H.R. 4488, the Fair Labor Standards Amendments of 1959: International Brotherhood of Electrical Workers local union, No. 1161, AFL-CIO; the Restaurant Guild Chain Store Employees Alliance local No. 138, AFL-CIO; and Millinery Workers Union, local 45, AFL-CIO:

"Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

"Whereas the present Federal minimum wage of \$1 an hour is inadequate to provide a bare subsistence in the United States today; and

"Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation

on their hours of work; and

"Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

"Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

"Whereas there is now before Congress a bill introduced by Senator John F. Kennedy and Representative James Roosevelt and co-sponsored by many of their colleagues

in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to \$1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act; Therefore be it

"Resolved, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected."

Mr. Speaker, the resolutions which have been sent to me were signed by Charles F. Mumaw, president, local 1161 International Brotherhood of Electrical Workers, AFL-CIO; Wm. J. Brennan, president, and Chas. W. Shaffer, secretary, the Restaurant Guild Chain Store Employees Alliance local No. 138, AFL-CIO; and Ben Cohen, business manager, local No. 45, Millinery Workers, AFL-CIO.

Mr. Speaker, it is with good reason that so many unions in the Philadelphia area are urging immediate action to increase the minimum wage. I join in this recommendation.

### The Skyrocketing Price of Credit

EXTENSION OF REMARKS

# HON, CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. VANIK. Mr. Speaker, the present administration's high-priced money policies are giving consumer prices an unprecedented boost upward—contributing more to inflation than any other factor.

The current action of the big sales finance companies raising rates on commercial paper by one-fourth to three-eighths of a percentage point will result in a \$40 to \$70 increase in the credit cost of the average automobile with a corresponding increase in the price of appliances and household furnishings.

This added cost does not buy a single improvement or accessory. It simply adds to the profits on the use of money. This trend toward higher prices of consumer goods can only result in the development of consumer resistance with a resulting breakdown in sales and production.

The attached article which appeared on the financial page of the Washington Post of Thursday, June 11, entitled "Commercial Paper Rate Raised Again," describes briefly the current problem:

[From the Washington Post and Times Herald, June 11, 1959]

COMMERCIAL PAPER RATE RAISED AGAIN

New York, June 10.—The money market's short term interest rates went up another notch today when big sales finance companies hiked the rates on commercial paper by one-fourth to three-eighths of a percentage point:

Commercial Credit Co. and C.I. Financial Corp. made the first move.

Other big sales finance firms were expected to follow suit shortly.

This week's series of rises was triggered by a jump in the current issue of Treasury bills which competes with commercial paper for short term investment funds.

The current rates on finance paper range from 2% percent for 5 to 29 days out to 3% percent for 180 to 270 days.

### Life Sees, Knows All

EXTENSION OF REMARKS

### HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 12, 1959

Mr. COAD. Mr. Speaker, I wish to take this opportunity to share with my colleagues a most astute editorial comment on a recent article which appeared in Life magazine. The editorial was written by a very good friend of mine, who is not fooled by the flights of fancy often demonstrated by his fellow editors in the big cities.

I submit the following sample of the keen sense of political perception which Mr. Russell B. Waller possesses.

His editorial appeared in the June 7 issue of the Algona (Iowa) Upper Des Moines:

LIFE SEES, KNOWS ALL

Life magazine is either one of the most irresponsible publications in the Nation, or one of the sharpest.

Not so long ago, it was Life which managed to get half of South America mad at us with an article about South America, which among other things suggested that one South American nation be dismembered and divided up among its neighbors, canni-

bal style.

Now Life is trying to convince us that it has microphones planted even in the rear of automobiles carrying prominent Democrats. A recent issue says that former President Harry S. Truman and House Speaker Sam Rayburn have decided that only two men should be considered as the Democratic Party's presidential nominee.

This decision was reached, Life says, while Truman and RAYBURN were riding back to Washington in RAYBURN's car after a dinner party. How Life would know what the two men talked about in this private drive isn't explained. Both men have denied anything of the kind. It might be expected that they would talk some politics, however.

What Life is really trying to do is to drive a wedge into the Democratic Party and its membership. By giving the impression that Truman and RAYBURN are acting in a "kingmaker" role, Life hopes that supporters of other candidates will be affronted.

Life says Kennedy was rejected because of his youthful appearance and that his Catholic faith would hurt him more than help him. Senator Humphrey was said not to have the bearing of a presidential candidate. Adial Stevenson was reported as discarded because he had been twice defeated and a new face is needed.

The magazine pulled all of these points out of thin air, hoping that by some mysterious magic it would eventually damage the Democratic candidate, whoever he might be. Truman and RAYBURN were said to agree that either Senator Johnson, of Texas, or Senator STUART SYMINGTON, of Missouri, would be the only logical candidates.

RAYBURN, asked about the Life magazine story, said it was "far fetched," and that he and Truman visited as two old friends, but

certainly did not try to settle on these candidates nor did he recall having discussed the presidential candidates.

When one stops to consider that 95 percent of all newspapers, and about 100 percent of all big magazines in this country are Republican dominated, it's a really remarkable thing to find a few Democrats getting elected to office, now and then.

Olympics Committee Wants To Commit Suicide?—It Can Have Communist Political Domination or It Can Have the Participation of All Free Peoples and Governments; but It Cannot Long Have Both—The United States Will Not Be Party to Such a Front

EXTENSION OF REMARKS

# HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 12, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Dr. You Chan Yang, oKrean Ambassador to the United States. Is it possible that the International Olympic Committee will be so incredibly foolish as to try to slip the communist puppet regime in North Korea into the committee on some pretext that the regime represents Korea or even any Koreans? In reality, it represents the communist world conspiracy making war on the Korean peoples, and also waging political war against the whole free world-through an organization supposedly devoted only to athletics and completely nonpolitical.

It is time to consider withdrawing the U.S. invitation to hold the Olympics in this country. That would not destroy the Olympics; it would merely recognize that the Olympics has been destroyed—by the Communists and those who capiterlate to them.

The statement follows:

STATEMENT BY DR. YOU CHAN YANG, KOREAN AMBASSADOR TO THE UNITED STATES

Within the past several days, the International Olympic Committee has issued zerious errors of judgment. It has ruled out the participation of free China in the 1960 games and proffered an invitation to the Chinese Communists. The committee has also offered to meet in Hong Kong with the Red puppets from the northern part of Korea with the highly probable goal of permitting those Communists also to represent my country. Such moves are politically naive, dangerous, and a grave blow at all free Asian aspirations.

In the case of my own country, the Republic of Korea is the sole, sovereign, and only legitimate Government of all the Korean people. It is so recognized by the United Nations, by the free world, and—indeed—by Olympic athletes around the globe, except the Communist bloc. We sincerely hope that the International Olympic Committee will reevaluate their present position. Its contemplated move would mean de facto recognition of an international bully. It would mean the abandoning of

an attacked nation still in a state of war, It would mean a slap in the face of all 16 nations which fought with us during the Korean War to help protect the safety of

future game sites.

This is not a simple case of permitting athletes from the Communist satellites such as Czechoslovakia or from the Soviet Union itself to compete. This is the stark reality of permitting known and labeled murderers and world criminals to participate in the loftiest of athletic endeavors. When the winter games begin in February 1960, in Squaw Valley, Calif., will the American people countenance an invasion of those very murderers who killed tens of thousands of young Americans during the Korean war? Are the American people willing to welcome the MIG pilots, the Communist tank commanders, the leaders of the screaming Communist hordes who flung themselves down the Korean pe-ninsula? The hands which loaded the artillery may be the same ones throwing the shotput; those which hurled the bombs may be the ones to be throwing the javelin; and those hobnailed boots which crunched the poor faces of American GI prisoners-of-war, may be the ones to carry Red "track stars' to the Olympics. Are these the kind of men the American people want as competitors against the flower of their youth?

The Olympic games were recreated to bring back to the modern world the ancient Greek spirit of clean competition and fair play. Would this development help the Olympic torches burn more brightly? Certainly not. Surely the Olympic officials have not forgotten the tremendous spirit and wonderful records of free Koreans in medium- and longdistance track events. Surely they will recall how our athletes also used every device at their command to make sure that the world knew that they, as competitors and victors, represented the Korean people and not the Japanese occupation tyrants. Surely they will recall that our own Dr. Sammy Lee, of California, twice contributed mightily to the Olympics—this past time winning so handily and importantly that the American edge of

victory was guaranteed.

Deny to the Korean people their hardearned right to participate in the forthcoming Olympic games and you will be denying the very spirit and foundation of the Olympic games. The international committee certainly must reconsider their decision to grant on the playing fields that which was denied to the Communists on the battlefields at such tremendous cost of limbs and

Resolutions Memorializing the Congress of the United States To Enact Legislation Relative to the Fourth Preference Quota

> EXTENSION OF REMARKS OF

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolutions adopted on June 2, 1959 by the House of Representatives of the Commonwealth of Massachusetts:

RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION RELATIVE TO THE FOURTH PREFERENCE QUOTA

Whereas, there is a backlog of petitions for admission to the United States filed by persons whose cases fall within the fourth pref-

erence quota and the entry of such persons into this country has been seriously delayed; therefore be it

Resolved, That the House of Representatives of Massachusetts respectfully urges the Congress of the United States to amend Public Law 85-316 so as to include cases falling within the fourth preference quota thereby providing for the admission of the many thousands whose petitions have piled up in a backlog in prior years; and be it

Resolved. That in order not to create a problem of separated families the said House of Representatives respectfully urges said Congress to enact legislation permitting those petitioners who are married and have families to bring them into the country; and be it further

Resolved, That copies of these resolutions be sent forthwith by the Secretary of the Commonwealth to the Presiding Officer of each branch of Congress and to the Members thereof from this Commonwealth.

# The Silent Killer

EXTENSION OF REMARKS

# HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, Senate, Concurrent Resolution 34, the State of Louisiana, endorses a program to provide additional funds for experimental work looking toward the cure of cancer. So insidious and so lethal is the disease of cancer at the present time that representatives of the people at the State level are keenly aware of the need for additional effort and additional research looking toward cancer cure.

I am chairman of the Committee on Science and Astronautics. This committee is keenly aware of the need of a strong research and development program for combating cancer. Our membership has given this grave problem great thought and concern, and I as an individual am strongly in favor of increasing our effort and providing additional funds needed for this great program and the research in our scientific efforts to obtain a cure for perhaps humanity's greatest killer-cancer.

I commend the Senate of Louisiana for the favorable passage of this resolution which is as follows:

SENATE CONCURRENT RESOLUTION 34

Whereas cancer is ever on the increase in this State and nationally as well and has become man's No. 2 killer; and

Whereas science has indicated its willingness and ability to cope with this grave disease if the necessary funds are made available; and

Whereas funds are sorely needed to find a cure for this disease which has stricken so many; and

Whereas Congress is presently considering an appropriation for cancer research; and

Whereas U.S. Senator RICHARD L. NEU-BERGER, of Oregon, is asking the Senate to double the funds voted by the U.S. House of Representatives: and

Whereas the legislature and people of the State of Louisiana are in accord with the efforts of Senator NEUBERGER to increase the amount of Federal funds for cancer research: Therefore be it

Resolved by the Senate of the Legislature of the State of Louisiana (the House of Representatives concurring), That the Legislature of Louisiana urges the U.S. Congress to support the efforts of Senator Neuberger to increase Federal funds for cancer research; be it further

Resolved, That a copy of this resolution shall be sent to the Presiding Officers of the two Houses of the U.S. Congress and to each member of the Louisiana delegation in Con-

W. J. CLEVELAND, President pro tempore. ROBERT ANGELLE. Speaker, House of Representatives.

# Platform, 1959, Indiana University Young Republican Club

EXTENSION OF REMARKS

# HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include the 1959 platform of the Indiana University Young Republican Club. It is significant, I think, as reflecting the views of young men and young women upon some of the major issues of the day:

PLATFORM, 1959, INDIANA UNIVERSITY YOUNG REPUBLICAN CLUB

Foreign policy: The supreme power drive of the New Deal to change America from a representative Republic into a Socialist super-State began in 1934 when Congress was coaxed into delegating its power over foreign trade to State Department bureaucrats. We agree with Congressman Bray that we must return to the legislative branch the power to determine foreign economic policy as provided by article I, section 8 of our Constitu-Therefore, we recommend that Congress enact appropriate amendments to section 350 of the Tariff Act of 1930 to accomplish this purpose.

National security: We call upon Congress specifically to provide that legislation passed by States outlawing sedition against the United States be concurrently enforcible with Federal statutes and to revamp the Smith Act to include "recruitment of party members" as part of the definition of organizing by Communist and subversive groups.

Civil rights: We feel that the worst denial of civil liberty today exists in those States which permit employers to discriminate against their employees because of nonmembership in a labor organization. In fairness to unions, however, section 9(a) of the Taft-Hartley Act should be amended so that a labor organization is not forced to represent nonmember employees who are in the same bargaining unit.

Home rule: America's independence, individual freedom, and economic well-being are deeply rooted in home rule. Its destruction may be brought about best through strong centralization of power in the Federal Government. This is the method historically followed by socialists in eliminating free enterprise. In 1958 President Eisenhower sent to Congress six legislative recommendations, all of which would return to the States functions now performed by Washington bureaucrats. These recommendations were incorporated in a bill, H.R. 12524. We strongly urge Congress to take favorable action on this bill and on all other proposed legislation designed to bring Government back home to the grassroots level.

ment back home to the grassroots level.

Economic prosperity: Our present tax system must be overhauled so that funds for capital expansion can be provided out of savings rather than by inflationary increases in bank credit. We recommend passage of H.R. 3001 introduced in this session of Congress by Representative Howard H. Baker, Republican, of Tennessee, to amend the Internal Revenue Code of 1954 so as to provide for scheduled income-tax rate reductions without loss of essential revenue.

Constitutional amendment: We recognize the continuing need to protect the public from agreements made with foreign governments which might be enforced as internal law thus depriving citizens of their prescriptive rights. Therefore, we recommend favorable Senate action on a constitutional amendment to prevent treaties from having any internal effect where they conflict with the Constitution, Federal, or State laws and to prevent executive agreements from being made in lieu of treaties.

Social security: We wholeheartedly endorse Congressman Bray's stand on the Forand bill as a backdoor attempt to destroy the many voluntary hospitalization and health insurance programs now in effect by substituting a compulsory Federal program through the social security system. We believe it is axiomatic that when we narrow the individual's freedom of choice as to how he will spend his money and transfer these decisions to Washington bureaucrats we are forging the shackles of a Europeantype welfare state devoid of vitality, dull with conformity, and dedicated to the complete alteration of the base of our economic life.

### Poison in Your Water-No. 115

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Record an article appearing in the Homestead (Pa.) Messenger of April 21, 1959, entitled "Clean Streams Still Long Way Off—Laboon":

CLEAN STREAMS STILL LONG WAY OFF-LABOON

Although Allegheny County's \$100 million sanitation system will be placed in operation within 10 days, 30 or more upriver communities will continue to pour pollution into the rivers, according to John F. Laboon, executive director of the county sanitary authority.

Laboon, speaking yesterday before the Bicentennial Conference of the American Society of Mechanical Engineers in the Penn-Sheraton, said also that thousands of tons of mine acids will continue to pour into our rivers.

He said that the collection and treatment of sewage by Allegheny County is only the first step toward cleaning up our rivers.

Laboon listed some of the offending communities which he said will continue to dump their raw pollution.

He said that there are industrial plants which will continue to pour tons of corrosive acids into the rivers with the permis-

sion of State authorities.

Industry generally, he said, has dumped sewage and industrial wastes untreated into

the streams of the Commonwealth. He charged that the coal mining industry has been the worst offender.

Another speaker at the meeting was

Another speaker at the meeting was Adolph Schmidt, president of the Allegheny Conference on Community Development, who said that smoke control is a good investment. Also, John Grove, assistant director of the conference, said that since homes were also brought under the smoke ordinance. Pittsburgh is on its way "to becoming the cleanest industrial city in America."

Statement of Maurice H. Stans, Director of the Bureau of the Budget, Before the House Committee on Ways and Means Concerning the Statutory Debt Limit, June 11, 1959

EXTENSION OF REMARKS

OI

# HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. ALGER. Mr. Speaker, as a further informational aid to Members of Congress, I am submitting the following on the subject of debt management proposals:

STATEMENT OF MAURICE H. STANS, DIRECTOR OF THE BUREAU OF THE BUDGET, BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS CONCERNING THE STATUTORY DEBT LIMIT, WEDNESDAY, JUNE 10, 1959

Mr. Chairman and members of the committee, in support of the President's recommendations on the statutory debt limit, I should like to review the budgetary situation briefly.

As you know, we ended the fiscal year 1958 with a budget deficit of \$2.8 billion and with a public debt of \$276.3 billion. The revised budget figures for the fiscal

The revised budget figures for the fiscal year 1959, which ends this June 30—as estimated in January—showed expenditures of \$80.9 billion and a deficit of nearly \$13 billion. While there is the possibility that the budget deficit may be as much as one-half billion dollars less, the January estimates will not be very far from the mark.

In view of the size of the expected 1959 deficit, it will not be possible to come within the debt limit of \$283 billion that becomes effective on June 30 under existing law.

With respect to fiscal 1960, I pointed out to this committee on June 3 that as of now the only change in the January estimate of budget expenditures which seems definite is for interest on the public debt. Because of currently higher interest rates, this expenditure may be about one-half billion dollars more than originally estimated. As the President stated in his message on Monday, the strength of economic recovery and growth beyond our earlier expectations is now expected to increase revenues by enough to offset this one-half billion dollars of increased interest cost on the public debt.

There are, however, other factors—still not definite—which might affect the total of 1960 expenditures. The following seem important enough to deserve special mention.

Most of the regular appropriation bills for fiscal 1960 are still pending in Congress. The same is true of major substantive legislative bills that could have important effects on the total expenditures for the coming fiscal year. For example, major bills approved by one or both Houses of Congress include authorizations for housing, airports, and area assistance in excess of the

amounts recommended in the budget. While congressional action to date on appropriation bills alone indicates the possibility of some expenditure reductions, taken altogether action on all bills thus far would—if they were enacted in present form—result in larger increases than decreases in the budget.

Other factors which should be kept in mind in appraising the budget outlook for 1960 are the recommendations of the President to raise postal rates and to increase taxes on motor and aviation fuels. If these are not enacted, the expenditures for 1960 will increase by more than \$600 million, and the estimated surplus affected accordingly.

Finally, this committee is well aware of the difficulty of predicting expenditures very far into the future for certain largely uncontrollable items such as the amount of surplus farm crops which must be acquired under existing laws. In addition, there are always uncertainties about the international situation.

Considering all these factors, I hope we can manage to hold to the slim margin of balance estimated in the January budget. A \$70 million surplus in a budget of \$77 billion does not afford much leeway.

Assuming that revenues do cover expenditures for the fiscal year 1960, as estimated, the slim surplus could not effect any significant decrease in the public debt. It therefore seems reasonable to set the permanent debt limit at \$288 billion, which is \$13 billion higher than the permanent limit before the recession-induced deficits of 1958 and 1959 occurred. As the President and the Secretary of the Treasury explained, such a limit would provide about \$3 billion of leeway to protect the Government in case of unforeseen emergencies and to provide needed flexibility for debt management. I assure you, and I think the record shows, that the administration, while determined to meet our national responsibilities, will do everything in its power to achieve a balanced budget for fiscal 1960. Nevertheless, the debt limit should take into account the closeness of the estimated budget balance and the necessity for some margin of safety.

In addition to the budgetary situation, the debt limit should also take into account the Treasury's requirements for sound debt management—for flexibility in the timing of resort to the securities markets, and for adequate cash balances. According to the best estimates of the Treasury, this requires a temporary increase of \$7 billion above the proposed permanent debt limit of \$288 billion.

Tibet Facts Trickle Into India

EXTENSION OF REMARKS

# HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following news story from India on the facts about Communist repressions in Tibet. The story is from the Christian Science Monitor.

TIBET FACTS TRICKLE INTO INDIA (By Sharokh Sabavala)

BOMBAY.—While Peiping has sought to distract Indian attention by shouting about New Delhi's "expansionist" activities in Tibet, what really has been happening in that troubled land now is being told to In-

der by streams of refugees.

Peiping's version of Tibetan events is that the 650 million people of China have been winning splendid victories against the forces of rebellion "represented by an upper strata of reactionaries" out of a total population of 1.200.000.

India, hitherto, has not paid much atten-tion to this type of Communist jargon, putting it down to the usual, dreary propaganda which is reserved for home consumption.

Public opinion, indignation and revulsion, therefore, is all the greater when it becomes known that Peiping, in the words of an Indian newspaper, has used an "atom bomb" to annihilate a troublesome bee.

### FORCES POURED IN

Since March 31, the day on which the Dalai Lama crossed the Indian border, the Chinese, after smothering the national uprising in Lhasa by massive force (in the process it is reported part of the capital city systematically was demolished) poured in additional forces now estimated to be 80,000 strong into the Tibetan provinces.

These forces fanned out into the districts, burning villages, bombing rebel hideouts, destroying standing crops, and terrorizing a peaceful civillan countryside on the pretext that it had given refuge to the Khamba tribesmen.

All this took about a month, as apparent from the first appearance of refugees on the Indian border at the end of April. Since that time, more than 12,200 Tibetans have sought asylum in India, many of them bringing their arms with them, most of them carrying the scars of battle, a hungry, tired, disheveled, pitiable horde of bewildered men and women.

In the past few days, the columns have dwindled to a trickle to indicate that China's "victorious" people now are in full control of the passes leading into India.

### PRETENSE ABANDONED

It now is being made apparent to New Delhi that Premier Chou En-lai has abandoned the last pretense of Tibetan autonomy, has torn up the solemn agreement with the Dalai Lama, signed in New Delhi in 1951, and is proceeding to accomplish by force, intimidation and terror a complete revolution of Tibetan society.

This task, according to these refugees, requires the maintenance of one Chinese soldier for every 20 Tibetans, man, woman and child. It requires loudspeakers being installed in Tibetan homes in Lhasa and other towns which must never be switched off.

It necessitates the complete suspension of Tibetan trade and the removal of its gold and silver bullion to the mainland. It does not require the return of the Dalai Lama.

### OBLIQUE REACTIONS

In their relations on Tibet, India and Communist China thus have reached a point of no return. If Mr. Nehru needs this fact to be further underlined, there is a new 1,500word resolution of the still completely unabashed Communist Party of India, which reminds him that Tibet is an integral part of China and rebukes him for having "permitted himself on several occasions in recent weeks to take positions and make utterances which cannot be reconciled with his own foreign policy and its guiding principle: 'Panch

Mr. Nehru's immediate reactions, are obli-He has permitted his Congress Party in the South Indian state of Kerala to join a statewide agitation against Communist rule. And in Bombay he has said nothing about the fact that its Chief Minister now heads the Bombay branch of the Central Committee for Tibetan Relief.

dian rescue workers on the Assam state bor- LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take . Il needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-TRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript .- When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Mem-

bers without charge.
6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit .- The Public Printer shall not publish in the Congressional RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fxed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent Recorn is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or addi-

tions of new subject matter.
9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report of print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. Appendix to daily Record .- When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. Estimate of cost .- No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

# Appendix

Tribute to Senator Neuberger

EXTENSION OF REMARKS

# HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, June 15, 1959

Mr. JOHNSON of Texas. Mr. President. I believe that all of us derive a feeling of inspiration from the manner in which the junior Senator from Oregon [Mr. Neuberger] has met adversity.

When he received the bad news about his health, he faced that news with dignity and with fortitude. He earned profound and widespread admiration; and all of us were greatly relieved when we heard that he was back on the road to enduring health.

A very perceptive writer for the Houston Post, Jack Valenti, has summed up very well some of the universal lessons that can be drawn. I ask unanimous consent that this very fine article be printed in the Appendix fo the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Houston Post, May 30, 1959] As Measured Against Life, What's Success?

(By Jack Valenti)

Sometimes men on that cruel run to the top (wherever that is) get all wound up in their ambitions. The frenzy, the haste, the searing, ceaseless push forward, all mingle together to make this kind of a man a curious creature. Ambition is his god. Success is his altar. Anything that gets in his way gets galloped over. There is never time for anything except another step forward.

You know the type? Alas, there are too many who fit that description and I want to hurry on before we start comparing notes.

This could get highly personal.

Within the week I have read an article that I recommend to all menfolk who have been legging it down the success trail with

nary a look to enjoy the scenery.

The article is by Richard Neuberger. You know him best as the junior U.S. Senator from Oregon. Until recently he has been described by the wire services as an ultraliberal Democrat in politics and a shootfrom-hip debater with venom in his phrasing. Tough, sardonic, convulsively ambitious, clever, a rough opponent in a dark room: This was Neunenger.

Today, 46-year-old RICHARD NEUBERGER is recovering from a touch-and-go bout with

In this article, tender, moving, ripe with a man's revelation of faith and fear, Neu-BERGER tells you and me and everybody else who ever raced to mountain tops what it's like to look cancer in the face, and then lean back from its terrifying stare.

Today, the new Neuberger is a more mature person who plainly states that he and his wife have not had a quarrel since his illness was cataloged and his surgery seemingly successful. Now he does not get riled because somebody squeezed the toothpaste wrong, he doesn't growl at his cat. Neu-BERGER says the little things that never before seemed really important are now satisfying and happy times for him. Little things like having lunch with his wife, reading a book, sitting quietly and watching children play in a park, raiding the refrigerator for a late snack, gathering with friends and talking for no other reason than he's just glad to be with friends.

Suddenly his Senate seat isn't the most important treasure in the world. The size his bank account, the prestige of his name, and the age of his car somehow have retreated from their former frantic status.

Politically, Neuberger says he has changed. He doubts if ever again he will be wholly partisan. When he lay just outside death's door, the people in Oregon and indeed the entire country rallied to him. Republicans (both conservative and modern), Democrats (southern and liberal), businessmen, labor leaders, boys, girls, priests, rabbis, and ministers, they all called, sent flowers, wished him well, prayed for him. The newspapers, both those who had fought him tooth and claw and those friendly to him, earnestly and publicly hoped for his recovery.

Having cancer, and then fighting it through the dark nights, living with lumps of fright, sick and choked with the chill fact that the next month will be your last, is according to Neuserger a humbling experi-

From this remarkable document of one man's trial, there comes one plain conclusion. It's great just to be alive, and fame, success, glamour, prestige, victory, vengeance, vindication, and all the money in Fort Knox really don't count.

American Fairplay: What's Happening

EXTENSION OF REMARKS

### HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Monday, June 15, 1959

Mr. KEATING. Mr. President, on behalf of the Senator from Iowa [Mr. MARTINI, who is unfortunately confined to the hospital, but who, I am happy to say, is expected to return to the Senate within a few days, I ask unanimous consent to have printed in the Appendix of the RECORD statement entitled "American Fairplay: What's Happening to it?"

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MARTIN

On many occasions I have expressed concern to the Senate that our proceedings are misunderstood by those who live behind the Iron Curtain. In fact, they are delib-erately distorted to embarrass us in securing the support of the millions of uncommitted peoples throughout the world. On July 6, 1955, I reviewed some of the attacks which have been made upon us by the Soviet

bloc during the 17th session of the United Nations Economic and Social Council.

"It is quite apparent that the Communists read the American newspapers and the Con-GRESSIONAL RECORD. They are aware of what President Truman said in the 1952 cam-

"Mr. President, too many of our own Members have used the term 'monopoly' indiscriminately. They have applied it loosely to any big business. Hence, it is not surprising that the Russians feel justified in quoting them and in taking the same course of action. Committees of the Congress are presently holding hearings to determine whether our antitrust laws should be revised. This is an important subject, which merits careful and deliberate study. My concern is to be sure that in making these studies we refrain from any actions which can damage our own internal unity and which will provide additional ammunition for those who wish to discredit the American free enterprise system which I am proud to call capitalism. I have no hesitancy in taking a forthright position in support of capitalism."

Last year our former President, Herbert Hoover, attempted to dispel some of the false characterizations of our economy in a magnificant address which he delivered on July 4

at the Brussels Fair. He said:

We are often depicted as living under the control of wicked men who exploit our economic life through gigantic trusts and huge corporations. They are supposed to grind the faces of the poor and to exploit other nations. All this ignores the fact that our laws for nearly 70 years have prohibited the existence of trusts and cartels. In few other nations have the fundamentals of fair and open competition been so zealously maintained.

"This competition has spurred our industries to adopt every laborsaving device. And to create them, there are more than 5,000 industrial research laboratories that pour out new ideas which become open to all the

world.

"Insofar as large corporations are concerned, they are the property of millions of our people. The largest of them has more than 1,500,000 individual stockholders, one of whom owns more than one-thirtieth of 1 percent of the corporation.'

I again commented on the need for some discretion in how we conduct our discussions on the floor of the U.S. Senate. I said:

'Although I raised this caution in 1955. I find that those abroad who seek to destroy American capitalism can still find comfort in some of the documents which emanate from high places. The distinguished Sen-ator from Illinois [Mr. Dirksen], in his individual views on the investigation of administered prices in the steel industry, Senate Report 1387, 85th Congress, which was filed on March 13, had occasion to say:

"'The minority has long observed that at international conferences the Soviet Union and its satellites have used documents produced by our own Government to embarrass U.S. representatives. A review of the debate in the United Nations Economic and Social Council amply documents this statement.

"'Many American firms have encountered unwarranted difficulties in their operations abroad, because the Communist bloc was successful in labeling large American firms as cartels and American monopolies, even though there is no justification for such a characterization.

"Every Member of the Congress has a responsibility in terms of our national welfare to avoid exaggeration, partisan statements, and criticism not supported by the evidence developed in committee hearings or otherwise in the preparation of congressional reports. Every congressional report may be come an official Government document.

"The minority regrets that the majority has accepted the unwarranted and prejudiced assumptions of the staff in the preparation of its views. It is satisfied that they have unwittingly provided propaganda which may be used to our national detriment."

Many of us differ over issues and Government policy. This is in the American tradition. However, if we are to preserve the dignity of Government institutions and the respect not only of our own citizens but of all those who read American publications abroad, it is essential that our proceedings always be conducted with a zealousness for fairness and the protection of the rights and reputation of every witness who comes before us.

Mr. Tom Campbell, the editor in chief of the magazine, Iron Age, has formed certain conclusions about our procedures. taking no position on whether they are justified or not. Needless to say, I have developed certain impressions from my recent experience in considering President hower's nomination of Lewis L. Strauss to be Secretary of Commerce in the Senate Committee on Interstate and Foreign Commerce. Mr. Campbell's impressions provide further proof that each of us has an individual responsibility to make sure that no fair-minded individual could ever arrive at the conclusion that the American sense of fair play is being jeopardized in any way by our proceedings.

Because this editorial will be read behind the Iron Curtain, it serves as an admonition to each of us to exercise great restraintin our interrogation of witnesses and the statements we may make on the Senate floor. Each of us at times has perhaps been too eager to secure support for our views. Whenever we stray from the rules of fair play, we not only damage our own cause, but we cast a reflection upon the integrity of all of our proceedings.

Every Member of the Senate knows that each of us. As striving mightly to advance American principles, as we individually see them, but in this troubled world, we have the added obligation of doing so in such a manner that whether people agree with us or not, they will relaize that we make our judgments based on facts and with a minimum of emotion and partisanship.

The article from the Iron Age of May 7, 1959, reads as follows:

"AMERICAN FAIR PLAY: WHAT'S HAPPENING TO IT?

"(By Tom Campbell, editor in chief, Iron

Age)
"We seldom use this space to write about

"We seldom use this space to write about individuals. There are so many other must subjects that we usually don't have the space.

"But this time it's different. Two men have been so shabbily treated that we must call attention to the childishness—and the meanness—of certain Senators. How they can hold up their heads without a flush of shame is more than we can understand.

"Take Mr. Lewis L. Strauss, Commerce Secretary. For more than 100 days he has been waiting to be confirmed by the Senate. But he is being punished. He is on the rack because he offended Senators in the Dixon-Yates case.

"There are others in the back room who never forgave him for leading the fight to deprive physicist Dr. Robert Oppenheimer of his 'E' clearance, thus barring him from classified work.

"There isn't a more loyal and sincere American in Government service today than Lewis L. Strauss. He has sacrified time, money, energy and health to carry out jobs the President has assigned to him. He stands by principles. At times he may seem arbitrary, but the truth is that he searches the facts, probes reasons of the heart and brutally checks himself and his reactions before he comes to his conclusions.

"Another man who has been given the 'treatment' by some Senators is United States Steel's Roger M. Blough. We will skip the beating he took in August 1957 when his Senate committee appearance rivaled the Spanish Inquisition. Let's take week before last at Washington. It was one of the worst lashings ever handed an individual of such high standing in the industrial community.

"Ostensibly he was called to testify about an outlandish bill to control prices by threat and publicity. But what Senators O'MA-HONEY and Kefauver did to him was hardly what lawyers call material, competent, and relevant: It was a travesty on human justice. To be frank, he was all but called a dictator and if not a dictator, then a person whose actions were suspect.

"Yet in industry there isn't a man who takes his moral responsibilities to his company, to his country, and to himself more seriously than does Roger Blough. He is honest, stubborn on principies, and a most reasonable man. Yet because he is wise to political hypocrisy and recognizes a phoney when he sees it—and says so—he is safely slandered.

"Where is our vaunted American fair play?"

# The Shippingport Atomic Power Station

EXTENSION OF REMARKS

# HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, June 15, 1959

Mr. JACKSON. Mr. President, on Monday, May 28, 1959, Vice Adm. Hyman G. Rickover delivered an important address before the American Public Power Association convention in Seattle, Wash. He set forth in clear and practical terms the lessons from the operation of the Shippingport Atomic Power Station.

Admiral Rickover is most prominently known for his pioneer work on a nuclear Navy. Today 33 nuclear submarines are authorized, under construction, or built. By the middle of the 1960's we will have in being an entire nuclear task force—from submarines to frigates to cruisers to an aircraft carrier.

But the nuclear Navy is only one chapter of the admiral's work. Thanks to his success with naval reactors, we have our first large-scale civilian atomic powerplant at Shippingport, Pa.

The admiral's career is testament to the inseparability of military and peaceful invention. So often what starts out as a contribution to military security ends up a contribution to peaceful progress. Work done on the military atom yesterday gives us civilian atomic power today.

The admiral's review of the experience

gained at Shippingport should be widely read. The Shippingport reactor is still this Nation's only large-scale nuclear central station plant—and a great deal has been learned there to advance the reactor art.

This address is estimated by the Public Printer to make about three pages of the Congressional Record at a cost of \$243. Notwithstanding the cost, I ask unanimous consent that Admiral Rickover's address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SHIPPINGPORT ATOMIC POWER STATION: LIBSONS FROM ITS OPERATION

(Remarks by Vice Adm. H. G. Rickover, USN, at the American Public Power Association convention, Seattle, Wash., May 28, 1959)

The purpose of the Shippingport project is stated in the contract between the U.S. Atomic Energy Commission and the Duquesne Light Co. as follows:

"It is anticipated by the parties that the information to be gained by the construction and operation of the pressurized water reactor will probably permit a major advance toward realization of civilian nuclear power and that such information is expected to lead to further technical advances in subsequent power reactors. It is recognized that this first full-scale nuclear powerplant will be of a developmental nature and will be operated with the primary objective of gaining information and advancing reactor technology rather than with an objective of furnishing dependable power and maintaining a high load factor."

This point of view was also embodied by the Atomic Energy Commission in its announcement in 1954 of the selection of Duquesne as the operating utility for the Shippingport plant:

"It is not expected that this first plant will produce electric power at costs competitive with power from conventional fuels. The project has been undertaken in order to gain more design and technological experience than could be obtained otherwise."

In wording those statements in 1954, we anticipated that the Shippingport reactor might operate for a considerable period of time as the Nation's only large scale nuclear central station plant and that this would impose on us a special responsibility to utilize Shippingport to advance the reactor art.

### TECHNICAL CONSIDERATIONS

I will review some of the problems we have encountered at Shippingport, some of the lessons we have learned, and some of the developments we have made which benefit others. We have now operated the plant for a year and a half on the first charge of uranium and produced about 325 million kilowatt-hours of electricity as of May 15, 1959. The plant has operated at full power for 4,000 hours; two full-power runs of 1,000 hours each and one of about 2,000 hours have been completed. In addition to accomplishing an extensive and varied test program, the plant has demonstrated ability to perform well both as a base load or a peak load station. In particular, it has demonstrated that it can be started up and shut down more rapidly and can accommodate more severe load transients than a coal-fired station. Operation of this first large nuclear powerplant as a part of a utility network is in itself valuable experience for the electric utility industry.

### URANIUM OXIDE FUEL

From a technical standpoint, the most important information we have gained at Shippingport is knowledge concerning the beha-

vior of the reactor fuel as more and more of it is being consumed. Building a nuclear reactor core is an expensive business because of the absolute necessity of insuring that it has been well built. In view of this high cost; it becomes important to make the core last a long time; that is, produce a lot of power before it must be replaced. But almost no actual experience exists on this sub-Whenever you hear people talk about how long their reactor will operate between refuelings you can take it for granted that they are either extrapolating meager data from small samples or that they are drawing premature conclusions from the Shippingport operation, into which have been factored various degrees of optimism.

Originally we planned to use a metallic uranium alloy as fuel in Shippingport. This was the only type of nuclear fuel material about which we had any significant amount of information. But we soon discovered that any metallic low enrichment fuel element was not likely to last very long at the tem-Perature needed for power generation. We learned this only after we had made an extensive survey of the metallurgy of uranium and its alloys and had carried out many difficult irradiation experiments in test reactors under simulated operating conditions. I then had to make a difficult decision: Whether to continue with the exploration of metallic fuel elements, hoping that we could develop something which would prove to be satisfactory within the time we had allowed ourselves for design and development; or, instead, to break off from that approach entirely and embark on the nearly unexplored path of nonmetallic fuels, such as uranium oxide. It must be realized that the type of fuel used would determine the details of the entire core design. An oxide fuel element would result in a design quite different from a metallic one.

After discussing this problem in detail with the technical people on my staff and at Bettis, I concluded from the evidence available at that time that metallic fuel elements were inherently limited in the length of time they can operate, whereas this was not the case with oxide elements. Therefore, I decided we would develop uranium oxide as the fuel in order to achieve a reasonable fuel element life. The data we have since accumulated have tended to confirm this decision.

Very little was then known about uranium oxide, and we had to take the lead in building up a technology. This included basic scientific knowledge of the properties of the material and fabrication techniques for making it in satisfactory form—all this while the core design was being firmed up. We had to learn how to change a naturally sticky powder into a free flowing material which could be compacted into high density sintered fuel pellets of precise dimensions; we had to develop techniques for compacting these pellets under a pressure of 125 tons per square inch, nearly twice the maximum pressure normally used in industrial practice. They then had to be sintered at a temperature of over 3.000°F. The final product was precision ground to a dimensional tolerance of five ten-thousandths of an inch with the uranium density held within plus or minus 1 percent. These techniques finally produce satisfactory fuel pellets, and this type of fuel is now being used or planned for many of the major reactor designs underway in the United States and

The use of oxide fuel forced us to develop a method for manufacturing large quantities of nearly perfect seamless tubing of zirconium alloy to contain the pellets. This was another major development. As a result of the work done for Shippingport, such tubing can now be bought commercially for use

in other reactors or for nonnuclear applications such as occur in the chemical in-

There are a few examples of the type of basic developments which were necessary to design and build the Shippingport plant. Another way to evaluate what can be learned from Shippingport is to consider the design requirements we originally established and reexamine them in the light of our operating experience.

#### SAFETY

I frequently hear that I have been too conservative with regard to safety. But to my mind the overriding consideration in designing and building any reactor must be safety. Therefore, the first requirement we set for Shippingport was that there be maximum assurance that radioactive fission products would not escape from the reactor, even under extreme casualty conditions. We provided three separate barriers around the fission products: the fuel element cladding, the primary system boundary, and the plant container. Each of these was pretested to in-sure its strength and integrity. The primary coolant is continuously monitored to detect any leakage or presence of radioactivity from the fuel elements. The plant container atmosphere is also monitored to detect any leakage from the all-welded primary system. In addition, extensive analyses and experiments were performed on every component and system to determine its effect on plant safety.

The design was reviewed in detail by my people as it developed, and I personally looked into and passed on every aspect involving safety. We realized that design assumptions, procedures, precautions, and agreements made for Shippingport were doubly significant because no experience existed and we were establishing precedents for the entire industry.

Next, a series of 15 reports on various safeguards aspects of the plant was prepared and submitted to the Hazards Evaluation Branch of the Atomic Energy Commission and to the statutory Advisory Committee on Reactor Safeguards. These reports were then made public and you can buy them today from the Office of Technical Services, U.S. Department of Commerce. We also required the Duquesne Light Co. and Bettis to prepare detailed operating procedures, not only for normal operations but for casualty and emergency situations as well. We reviewed these by one, and after several revisions, finally approved them. No operations are permitted which are not in accordance with detailed operating instructions which we approve in advance. These operating instructions constitute a stack of books several feet thick and these have become, in effect, a part of the safeguards report. We also require periodic drills on the casualty and emergency procedures.

To do these things you have to have more and better qualified supervisors, operators, and maintenance people. You cannot base operating costs and personnel requirements for a nuclear plant solely on conventional station practice. A nuclear station is not like a conventional station; radiation makes the all-important difference.

I cannot prove by our operating experience that each of these actions in the interest of safety has been necessary. But I will state categorically that I feel just as strongly today as I ever did the burden of insuring public safety against radiation; I have seen nothing so far to indicate that safety requirements can be relaxed. I would advise anyone who becomes involved with radiation or radioactivity to recognize that the public is not becoming used to radioactivity, nor losing its apprehensions in this regard. If I were beginning the design of the Shippingport reactor today with what I now know, I would

maintain the same high standards where safety is concerned.

We are taking this very same attitude in our naval program: the new designs are as safe or safer than the old ones; the new crews are as carefully selected and trained. Of course, we are always trying to replace safety devices with greater knowledge or with improved inherent safety characteristics. But we have not lowered our standards one bit. My experience with the naval program merely reaffirms my conviction that safety cannot and must never be taken for granted.

#### MAINTENANCE

Another design requirement we set was that the plant must have maximum flexibility for maintenance and repair, and also for modifications that would permit us to exploit the developmental nature of the project. The inherently low radioactivity and chemical inertness of water made this possible at Shippingport, and we were willing to pay a price to achieve it. First, we designed the plant with four separate loops, each with its own pump, steam generator, and instrumentation. Then we required that any one of the four loops could be shut down and worked on while the plant continued to product full power. To this end, we provided each loop with double isolation valves where it entered and left the reactor pressure vessel. In addition we provided separate radiation shielding around each loop, around the reactor vessel, and around the pressurizer and other reactor auxiliaries. did all this in spite of the fact that our brief experience with the Nautilus, at the time this decision was made for Shippingport, gave no evidence that reactor plant maintenance would become a problem.

Reevaluating that decision in the light of our experience to date, how does it look? I can answer unequivocally that we have found this maintainability to be an important asset.

Now as to personnel: It is obvious that maintenance workers for nuclear plants must not only be more competent and more highly trained than those at conventional stations but there must also be a greater number of them because radiation limits the time any one worker can work on radioactive equipment. With the reactor shut down, radiation levels near the shielded reactor plant equipment of our pressurized water plants are low enough that from time to time a person can spend one or more hours in the vicinity without receiving a harmful amount of radiation. However, if a maintenance man has to work in direct contact with such equipment-for example, on a steam generator or a reactor coolant pump-and the job requires many hours to complete, then several men may have to be used. For critical skills, such as stainless steel welders, or special instrument technicians, this can become a serious problem. The operator of any nuclear reactor plant must develop and have available a backlog of maintenance personnel trained in the key areas. He must furthermore devote considerable effort to planning maintenance operations in such a way as to minimize exposure of personnel to

At Shippingport, because of the maintenance features designed into the plant, this has not so far been a serious problem. The radioactivity of the system is at present still low. However, we must assume that it will increase with time. This will make maintenance more difficult. Also, we must be ready to maintain the plant even should there be a number of fuel element failures which would increase plant radioactivity. We must assume further that standards of permissible radiation levels may continue to become more stringent as they have in the past. I have insisted that all of our reactor plants—both naval and Shippingport—meet not only

all existing radiation standards, but also have sufficient conservatism to meet any further restrictions which might be imposed. I urge other reactor designers to do the same.

### EQUIPMENT DIFFICULTIES

A corollary lesson we have learned is that conventional equipment troubles have not been licked. With all the many years of development work that has been done on the so-called conventional items, that is the pumps, valves, steam generators, instruments and the like for the naval reactors program, you might expect that there would be few troubles with this equipment, and that extensive provision for maintenance would not be required. This has not proved to be the case.

There are two major reasons for our equipment difficulties: first, despite more than 50 years of design and operating experience, adequate understanding is still lacking in regard to the fundamentals of moisture separation in steam drums, hydraulic system characteristics, boiler water chemistry, boiler gauge-glass design, fabrication of large steel forgings and castings, and many other basic phenomena on which our conventional equipment designs depend. As a result, even minor design changes often lead to unexpected major difficulties. Second, the Shippingport units are significantly larger than any previous equipment, and thus they presented formidable develop-

ment problems. Today, the situation is as follows: the Shippingport program has resulted in the development of large canned-rotor pumps with water-lubricated bearings, steam generators, valves, instruments, reactor control-drive mechanisms, and other key items of equipment for pressurized water reactors, and experience in constructing such equipment has now been acquired by several com-mercial manufacturers. But the problems are not solved; we have learned to expect unanticipated difficulties in the nonnuclear aspects of this equipment, because the existing technology is largely empirical. We have had to study and modify steam generators, steam separators, pumps, and instruments and we have been dependent on the special maintenance provisions I have mentioned. I would urge anyone who hopes to maintain a reasonable load factor on a nuclear powerplant to insure that provisions exist to permit both corrective and preventive maintenance to be readily done to the maximum extent practicable without interrupting the plant's power output.

I do not mean to imply by these statements that nuclear power is unreliable. Quite the contrary. But one can become so hypnotized with inherent reliability of nuclear power, often cited, particularly by those who have operated only laboratory-type reactors that he falls to follow the good engineering practice of providing for reasonable maintenance. Where radioactivity is involved, this could be a serious error.

### ADVANCING THE REACTOR ART

The last major lesson I will discuss concerns the advancing of the reactor art. If you do not become spell-bound by unsubstantiated claims; if you recognize subsidies for what they are; if you realize that nu-clear reactors now under design or construction will not produce electricity at a competitive price; then it follows that at this early stage, advancing the art should be the primary objective of any power reactor now being considered. The lesson we have learned from Shippingport, as well as from our naval plants, is that merely operating a reactor does not guarantee that the art will be advanced or that useful knowledge will developed. There have been reactors built, and some are being built now, with almost no instrumentation beyond the minimum needed to operate them, and with no

organized test program. They run, but all they prove is that if you bring enough uranium together in one place it will go critical and generate heat. Little new knowledge is created, few technical reports are written, and eventually the reactor is torn down and another reactor is built in its place—also with few instruments.

We have found that it takes 20 technically trained Duquesne people full time to think through a test program for Shippingport, to write up test procedures, to analyze data, draw conclusions, and write up the results. This is in addition to the people at the Bettis Laboratory and on my staff who go over the work carefully. It is a big job, and an important one. It also requires special and costly instrumentation, and the necessary design features must be incorporated into the reactor design from the start. There are special instruments for measuring pressure surges at various places in the system. Special radiation detectors measure the buildup of radioactivity in the system. Provisions for periodically removing sections of small piping installed for this purpose as a bypass in the main reactor coolant system permit the deposited radioactivity on the system walls to be carefully analyzed in the laboratory, and the effects of flow rate, temperature, and purification are studied.

The system which samples and monitors water from each natural uranium fuel cluster in the core has proved its worth. It has shown us that in spite of the extreme care taken to insure that only flawless fuel elements are installed in the reactor, 1 or 2 of the 100,000 fuel rods have apparently developed slight flaws. The Shippingport plant design was based on an assumption of 1,000 flawed fuel rods, and provision for this contingency was made—as for example, an all-closed coolant sampling and analysis system. By being able to monitor the flawed elements we have observed that the situation has not gotten worse; further, we can remove the fuel element whenever we wish.

To date the radioactivity of the plant has remained low, lower than expected. The radioactivity released to the river has had no detectable effect on the radiation background in the vicinity and is only a few percent of that allowed under the Pennsylvania State waste disposal permit. This permit sets limits which meet all recognized permissible radiation levels.

So there are two lessons from this: First, apparently no amount of care in design and fabrication can guarantee a perfect reactor core with no flaws. Second, with proper instrumentation and provisions for handling radioactivity, a small number of flaws can be tolerated in a plant of the Shippingport type.

To improve reactors, we must know what goes on inside the reactor core, and what limits its performance. We have wanted to do this from the beginning and, in fact, we set, as a design objective for our first re-actor, the Nautilus prototype, that we wanted to be able to measure temperature, water flow rates, and neutron intensities at various places inside the reactor core. But we were not able to develop instruments to do it at first, and I was urged by many of the scientists and designers to forget about it; that it was too difficult. I didn't forget about it, and today all of our naval land prototypes and the Shippingport reactor have extensive in-core and plant instrumentation, at hundreds of points, getting data obtained no other way. Future reactor cores for Shippingport and all other reactor plants in the United States and elsewhere will benefit from the data obtained from our present heavily instrumented reactor cores.

### REPORTING THE INFORMATION

None of the developments which I have been describing would be of much use to others unless they were quickly and accu-

rately reported and the reports made readily available to a wide technical audience. I can assure you that this is being done. Many people do not realize how much information is actually available from our programs, and that nearly all of it can be obtained from Government sources. In addition, much of it is reprinted in technical journals. Early in 1957, we established the following policy: First, all information on the Shippingport reactor was to be unclassified; second, all technology developed in the naval reactor program would be unclassified; only naval program would be unclassified, only havan reactor design and military information would remain classified. I have always taken a personal interest in insuring that all of our technology is made available to the widest possible audience. In line with this policy decision of 1957, we reviewed all of the classified reactor reports issued by our program, and we released several thousand publications for dissemination to people working in other reactor programs.

In addition we arranged for the Bettis and Knolls Atomic Power Laboratories to publish periodic unclassified reports covering all of the latest developments in pressurized water reactor technology. The latest of these was recently issued by Bettis and is devoted entirely to "One Year of Operating Experience at Shippingport." It contains a great deal of detailed technical information, and I commend it to your attention if you are interested. You can obtain it by writing to the Office of Technical Services, Department of Commerce, Washington, D.C., which also publishes our other unclassified reports.

We also encourage our contractors to report their work in Government reports, or
in professional journals, or as presentations
before technical societies. All of these are
also available to the public.

As a result of these actions, the naval reactors laboratories have published—all unclassified and available to everyone—several hundred technical progress reports; several hundred topical reports in the form of Government publications; more than a thousand technical papers in professional journals or meetings; and several thousand technical memorandums, specifications, or drawings. I believe that in the reporting and dissemination of really useful technical reactor plant information, the Shippingport and naval reactors programs are second to none.

We are also getting out much information through a series, of technical handbooks. They are comprehensive and detailed, and they are all unclassified except for one which contains classified naval reactor design information. These books cover the complete range of our technical experience. They are intended for the scientists and engineers who actually design reactors. They are thoroughly practical, they are up to date, and they have been written by the very people who design our plants.

The first one, "The Liquid Metals Handbook," came out in 1950. A revised edition came out in 1952, and then in 1955 we put out an entirely new book devoted entirely to the metal sodium and its uses as a liquid heat transfer medium. Also in 1955, we put out the definitive handbooks on zirconium and on beryllium. A bibliography of reactor computer codes, that is, reactor problems prepared for computation on large computers was also issued that year. We then put out a design manual on reactor shielding, and a handbook on the special problems of corrosion and wear which are encountered in water-cooled reactors. Two volumes of our three volume reactor physics handbook have been published, totaling over a thousand pages; the third one we hope to have out within a year. Also scheduled for publi-cation within a year are handbooks on hainlum, uranium dioxide, reactor heat transfer and fluid flow, reactor design methods, reactor plant piping, irradiation testing and hot lab techniques, and neutron absorbing materials for reactor control.

These books represent a distillation of the technology from both the Shippingport and naval reactors programs, and include not only experimental data and description of design methods, but also an evaluation and intercomparison of these data and methods by the people who actually developed and use them. In these books you can find another indication of what the country gains from Shippingport, although you cannot assign a dollar value to it.

COSTS

The total cost of the Shippingport project at the completion of construction was about \$120 million; \$35.5 million on this was Government-financed. Of the Government funds expended \$46 million was for research and development, and \$49.5 million was for construction of the reactor plant. Duquesne Light Co. contributed \$5 million to the construction of the reactor plant and built the turbine generator plant at a cost of about \$19 million. The Westinghouse Electric Corp. contributed \$500,000 to the construction of the reactor plant.

Many people have tried to estimate the cost of atomic power directly from these

Shippingport costs.

However, I consider estimates of this sort to be meaningless. Trying to predict the eventual cost of commercial atomic power by comparing the money spent on the developmental Shippingport plant with the electricity produced there, is like the Wright brothers trying to predict commercial airfreight costs from the money spent and the distance flown by their first airplane at Kitty

Shippingport is not a routine commercial atomic powerplant, although it is the closest thing in the world to it. The British reactors at Calder Hall are sometimes referred to as commercial atomic powerplants and used as a basis for atomic power cost esti-mates. But they are not primarily commercial atomic-power producers. Sir Christopher Hinton, Chairman of the British Central Electricity Generating Board, the man who directed the design and construction of the first British atomic energy installations, including the reactors at Calder Hall, stated in an article in the March 1958 Scientific American:

"It must be realized that Calder Hall was built essentially for the production of plu-tonium, and that electrical power is generated only as a byproduct. It would, therefore, be unrealistic to attempt to estimate the cost of nuclear power by a direct calculation of the cost of the electricity which

is produced in the reactors there."

We must not become so fascinated with watching or manipulating cost figures that We lose sight of the basic fact that atomic power development is a technical matter, that the rate at which it advances depends upon solving many difficult technical problems, and that we can best judge the state of the art by looking at the technology which is being developed and at the problems which

### PLANS FOR THE FUTURE

I will conclude with a brief discussion of our plans for the future. The heart of our developmental program at Shippingport concerns the nuclear reactor core itself. have a very extensive program to develop new physics concepts which can lead to longer life, better utilization of natural uranium, more uniform power generation throughout the core volume, reduced number of control rods, and the like. We have metallurgists and mechanical engineers exploring simpler designs and cheaper fabri-cating methods. We deliberately made the biggest reactor vessel we could for Shippingport in order to provide maximum flexibility for future reactor developments. This reactor vessel turned out to be none too big for the first reactor core, but now we believe we can get considerably more power from this same vessel with our second core.

Specifically, we designed the first core for 60,000 kilowatts of electricity, but electrical generating capacity for 100,000 kilowatts was installed by Duquesne so that it would be possible to utilize all of the power which a future reactor core might produce.

Recently, as the result of our development program, we have learned that, with a new core, it may be possible to get as much as 150,000 kilowatts of electricity out of the same reactor vessel. This was learned after the fiscal year 1960 AEC budget was submitted to Congress. Because of the importance of this development I have asked the Atomic Energy Commission for additional funds to make the alterations necessary to increase the capacity of the plant. This will require some changes to the reactor plant which will be financed by the Atomic Energy Commission. It will also require the installation of additional electrical generating equipment at the station by the Duquesne Light Co. at their expense. The Commission is currently discussing this with Duquesne. These changes will enable us to increase the output of Shippingport to 150,000 kilowatts for a small part of the original cost of the station.

### THE METHOD OF OPERATION

I would like to close with a word on how we carry out the Shippingport program. A single phrase such as "government" or "private industry" is not adequate to describe our method of operation. We have built up something unique and new. and I believe this method of operation is in itself an important development. have worked out a system which combines the peculiar abilities and experience of industry, the utility industry, the Atomic Energy Commission, and the Congress. In addition, of course, we draw on our experience and capabilities in the Navy, and the Navy in turn benefits from the things we learn at Shippingport.

This arrangement combines centralized decision-making and responsibility—which enables us to move just as fast as would be possible in a totalitarian state-but with private industrial ingenuity and with democratic processes; our work is under constant scrutiny by Congress which controls the expenditure of funds, and has final authority over the entire program.

In this regard, I want to pay tribute to the cooperative spirit displayed by Mr. Philip Fleger, chairman of the board of the Duquesne Light Co., in working out with us these new problems. We have both tried hard to make viable arrangements and procedures because we realize that we are establishing precedents which can have far-reaching effects and last a long time. I am grateful for the support I have received from the Atomic Energy Commission, and in particular from our Chairman, John A. McCone. As for myself, I am grateful for having had the opportunity to work in this partnership and to have contributed to this important project.

And without the constant understanding and confidence of the Joint Committee on Atomic Energy we could not have accomplished this job. This committee of which Senator Jackson has been a member from the very beginning, has consistently and fully supported us through the years. In a real sense, the Shippingport station is a tribute to their wisdom.

The Cry of "Wolf" in England Fades as the National Health Service Succeeds

EXTENSION OF REMARKS

# HON, CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 22, 1959, issue of the Oregon Labor Press, entitled "Surprise, Britain's Health Plan Is a Great Success":

SURPRISE, BRITAIN'S HEALTH PLAN IS A GREAT SUCCESS

We wish every American could read an article in the current (May) issue of Harper's magazine. It's called Socialized Medicine, 10 Years Old, and it describes the success of Britain's National Health Service.

Harper's is no radical magazine, and the author of the article is no leftwing propagandist. As a matter of fact he is Don Cook. a veteran newspaperman who is chief of the London bureau of the New York Herald Tribune-one of America's leading Republican newspapers.

Cook sticks to the facts. The facts show that Britain's great experiment in free medical, hospital, dental, and optical care for all

citizens is a tremendous success.

To us it seems a tragedy that this article appears in Harper's, with its small circulation, rather than in one of the big magazines with millions of readers. But the big magazines are afraid to offend the powerful American Medical Association. And the AMA doesn't want Americans to know that Britain's National Health Service is a success (heaven forbid).

Our eyes were opened by the following facts

and quotations from the Harper's article:
"Ten years after the establishment of the
British National Health Service it is difficult-in fact almost impossible-to find an opponent of socialized medicine on the island.

"Ninety-seven percent of the population are registered patients of the National Health Service, and never pay any medical bills. but a handful of Britain's 49,000 doctors

serve health service patients.
"On the 10th anniversary of the establishment of the service, the British Medical Association's Journal was full of praise for it from leaders of the medical profession.

From the point of view of the consumer it has been an enormous benefit and success. wrote Dr. H. Guy Dain. 'The absence of any financial barrier between doctor and patient must make the doctor-patient relationship easier and more satisfactory.'
"Iain Macleod, former Minister of Health

in the Conservative Cabinet, said: 'I believe in the National Health Service with all my heart. Indeed, I believe that some sort of national health service \* \* \* will come to every country in the world.'

"In Britain, more of the population get better medical care than in any other major country on earth.

"In Britain you don't pay, no matter who you are or how complicated your problem is or how long you have to stay in the hospital.

"You may sign up with any doctor, and you can change if you aren't satisfied. Likewise the doctor is free to turn you down if he feels he already has enough patients on his panel list.

"If you should need hospitalization, surgery, or special consultations, your doctor will make the arrangements for you to receive these services just as he he would in private practice.

"All National Health Service doctors are free to take private fee-paying patients along

with their state-paid patients.

"For free dental care, you simply make an appointment with a National Health Service dentist of your choice. He is paid a fixed fee by the state for routine work and passes you on to a specialist for complicated dentures or oral surgery.

"With over 50 million people in England, Scotland, and Wales, the cost this year will be less than \$50 per person for complete

medical and hospital care.

"All statistics show that the British people are much more healthy and longer lived than they were 10 years ago.

"A medical tragedy can no longer become a financial disaster. In Britain the shadow of medical bills has been removed from fam-

ily life forever.
"The National Health Service as it is working in Britain today affords a maximum of individual freedom to both doctors and patients. Most of the settled families of the country are signed up with the same doctor they had in the old days-only now he is paid by the state and they have no more doctor's bills.

"An American cannot live in Britain today and see the Health Service at work without coming to a simple realization: What has been done here by democratic processes in a free society is a great step forward and an object lesson for democracy throughout the

world."

### Worker in the Middle

EXTENSION OF REMARKS OF

# HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. MICHEL, Mr. Speaker, under leave to extend my remarks in the REC-ORD. I include the following editorial from the Peoria Journal Star of Friday, June 12, 1959:

WORKER IN THE MIDDLE (By C. L. Dancey)

One of the many areas where labor politics and labor's real interest clash is in all this fakery about the so-called excess profits

This device has been sold to labor as, a gimmick which will encourage corporations to spend money more freely and bestow benefits and wage increases easier. The idea is that since every excess dollar costs 52 cents in taxes, they are only spending 48-cent dollars.

This is pretty nutty thinking.

Any business desperately needs some margin of safety from profit and some means of increasing capital investment if there is to be any progress (and specifically jobs for our growing population).

What the so-called excess profits tax really means is that in order to salvage each dollar for these purposes beyond a ridiculously low figure any corporation must, in fact, manage to salvage \$2.08.

They may be spending 48-cent dollars but they are trying to save \$2.08 each to get 81 out.

Making profit harder to get hardly makes spending easier. Obviously, the opposite is , true. It tightens things up.

So that in fact this need for profit and this handicap in getting it, combine to put great pressure on corporations to resist costs. This tax actually produces much resistance to raise wages and benefit increases at the same time that it limits opportunity, job, and business expansion, and security.

Since it hurts the workingman-out of whose hide the money must come in partwhy do labor bosses so often support it?

The only explanation we can see is that some of them apparently think their power rests on keeping a fighting spirit against any and all company activities-in short they must damn companies right or wrong.

They must have a political need to damn companies, to do them such injury even when it means they are sabotaging their own union aims for worker benefits.

And, as usual, the laboring man is caught in the middle.

John Foster Dulles: A Profile on Courage

EXTENSION OF REMARKS OF

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, June 15, 1959

Mr. NEUBERGER. Mr. President, our able and talented colleague, the junior Senator from Massachusetts [Mr. Ken-NEDYl, is the authorsof a successful and extraordinary book entitled "Profiles in Courage." It heralds valor in the field of public service.

On Sunday, June 14, 1959, in the pages of the American Weekly, Senator KEN-NEDY added another name to his list of those whom he would include in "Profiles in Courage." This was the name of the last John Foster Dulles, from 1953 to 1959, our Secretary of State.

I ask unanimous consent that the tribute penned by Senator Kennedy to John Foster Dulles be printed in the Appendix of the RECORD, Mr. President, so that it may be read by an additional audience of men and women with a special interest in government and public affairs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Weekly, June 14, 1959] JOHN FOSTER DULLES: A PROFILE IN COURAGE

(By Senator John F. KENNEDY)

It is much too early for a final judgment on Mr. Dulles' enduring place among our Secretaries of State. Indeed, there is some risk that compassion over the tragedy which forced his departure from office at the height of his career may silence fair criticism. Sympathy can sometimes be as mistaken a

Judge as partisan bitterness.

Mr. Dulles has suffered his interludes of unfair attack, and he has also enjoyed occasions of excessive praise. In recent weeks he has seen many former critics turn into admirers of his record.

He had too patient an insight into world affairs to mistake the caprice of contemporary judgment for the more settled verdict of history. He can await that verdict with a tranquil faith that he will be judged more fairly than often seemed possible in the hurry and fret of political debate.

Of course, we need not wait for the verdict of history upon his personal courage. The intense pain he suffered from the unrelenting illness that pursued him the past 2 years could not force him to curtail his participation in important diplomatic missions in Europe, Mexico, and other parts of the globe. History will certainly record his fortitude in the face of physical suffering as an example of supreme dedication to public service.

We can also set down an additional title of Mr. Dulles was not a brief embarrassed phantom in the world arena; he held vast power and he used it for great ends. It is no small tribute to say that in the past 6 years his biography has been woven into the larger history of our age.

Only a great man, great alike in his gifts and his handicaps, could have cast so commanding an influence over the stream of events. He belongs to that small gallery of statesmen who spoke for their own age with a knowledge and dedication that may yet

rule a later day.

In part he owed this eminence to the trust reposed in him by President Eisenhower. rewarded this confidence with his own unhesitating loyalty. This certainly is not the occasion to assess the leadership of President Eisenhower, but it is beyond dispute that this deference to Mr. Dulles gave him a stature and authority possessed by no other recent Secretary of State

Foreign diplomats knew that Mr. Dulles was the accredited spokesman of the United States for a range of world problems. This unusual grant of authority, coupled with personal force and prestige resulted in the end in making him the acknowledged leader of the alliance for freedom.

Armed with the President's mandate, fortified by the cooperation of Congress, supported by the strength of the Grand Alliance, and animated by a trust in his own destiny, Mr. Dulles stepped forward with high confidence to carry out his design of diplomacy.

What use did he make of this great power? No agreed answer to that controversial question can now be reached but at least an interim judgment can be attempted.

During 6 tumultuous years, filled with almost constant alarm and anxiety, the free nations kept the Communist challenge at bay and prevented many new lands from being darkened and overrun by Communist power. This achievement would not have been possible without America's dedication to freedom, and without Mr. Dulles' ability to express that dedication.

But this estimate must at once be qualified if it is to be both candid and persuasive. Safeguarding the freedom of nations, though an indispensable task, does not exhaust the

obligations imposed on America.

Equally difficult and perhaps even more delicate is the task of commending America's purposes and policies to the uncoerced acceptance of the uncommitted world. These new nations, old in memory and young in hope, are eager to be heeded with respect in the march of world affairs. They are destined to grow steadily more important with the passage of the years, and it is therefore a matter for genuine regret that Mr. Dulles did not win a larger measure of their confidence

In Europe, where Mr. Dulles' policies have been more successful, he has been content to apply the program shaped by General Marshall and Mr. Acheson. The Middle East remains an enigma, and the giant, China. broods restlessly over a divided Asia.

The supreme stroke of ill-fortune came to Mr. Dulles just as he was reaching for a wiser, more creative, and more recourceful policy. He, above all others, had the authority to gain President Eisenhower's consent to wideranging negotiations with Russia.

The United States is fortunate in Mr. Dulles' successor—the new Secretary of State, Christian Herter, whose beginning has been auspicious-but it is a fact that the intimate relations enjoyed by Mr. Dulles with Mr. Adenauer and the West German Government would have made easier the road to the summent

In leaving office, Mr. Dulles added a testament of courage to the Treasury of the Nation's gallant memories. Not soon or easily will the American people forget this warrior for peace as his spirit sought fresh tasks which an overburdened body no longer could sustain. His cheerful fortitude in adversity has been an inspiration; and his wise concern for Hr. Herter's independence has formed an equally impressive model of statesmanship.

In his new duties he carefully and generously removed his shadow from falling between Mr. Herter and the White House. He became the special adviser on foreign policy alike to the President and the Secretary of

His experience and prestige were freely placed at the service of the Nation without in any way compromising the new Secretary's freedom of action and independence of judgment. Whatever else may be in doubt, there can be no doubt that a servant of peace worked with zeal and courage among us and for us during six tremendous and tragic years.

The name of John Foster Dulles will not quickly fade from honor. Gallant and controversial but already a part of history, Mr. Dulles always chose the policy which, in his conscience and judgment, would allow the American people to make their greatest contribution to peace and freedom.

In that faith he tolled heroically against

In that faith he toiled heroically against grevious odds—and by that faith is content to be judged as a valiant and memorable

Secretary of State.

### Address of Maj. Gen. C. K. Gailey

EXTENSION OF REMARKS

### HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 15, 1959

Mr. THURMOND. Mr. President, at the Military Government Association annual conference, held here in Washington on Saturday, June 13, 1959, Maj. Gen. C. K. Gailey, Chief of Civil Affairs, gave a splendid analysis of the role of the Army's Civil Affairs in future conflicts, whether they be conventional or nuclear Warfare. I ask unanimous consent that General Gailey's excellent remarks be printed in the Appendix to the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Remarks by Maj. Gen. C. K. Galley, Chief, Civil Affairs, at the National Military Government Association Conference, June 13, 1959, in Washington, D.C.

Ladies and gentlemen of the National Military Government Association, on several occasions in the past it has been my privilege to participate in meetings of your association. On each occasion I have been impressed with your intense interest in the defense of our Nation and particularly in the development of our Army's civil affairs capability and in the gearing of its organization and operations to the requirements of both conventional and nuclear warfare.

In considering these requirements, I would like to reiterate briefly my views on future civil affairs operations. First, I do not be-

lieve that there will be a great variation in operational techniques in a nuclear war from those employed in the conventional type warfare such as so many of you experienced in World War II and in Korea and for which our Nation must remain prepared. If there is a difference, I believe it will be in the intensity and extent of such operations.

The mission of commanders of large land forces in theaters of operations will not change regardless of the type, or destructive capabilities of the weapons employed. His mission will still be to defeat the enemy in land combat and gain control of the land

and its people.

As in the past, a commander must know the people with whom he must deal, know their historical background, customs and problems. He should know something of their social structure so as to be aware of areas of sensitivity and importance. He should know the general pattern of the economy so that he does not unnecessarily interfere with the livelihood of the people. He should have some appreciation of the general cultural, religious and political background of the people \* \* \* and, for purposes of day-to-day operations, he should acquire an understanding of the governmental structure to which the people are accustomed.

The commander must strive to indoctrinate his officers and men, from top to bottom, in the principles and techniques of civil affairs. The degree to which they understand and apply these principles will have a direct bearing on the success of his mission. It must be firmly understood, however, that responsibility for civil relationships lies solely with command. Subordinates may be charged with specific assignments, or entrusted with specific missions, but it is the commander who sets the tone of such operations.

Civil affairs activities must begin with the initial planning for an operation and continue concurrently through all subsequent operations in which the force—be it Army, Navy, or Air Force—is engaged. The moment a commander moves into an area, immediate decisions must be made with respect to the civilian population. He cannot afford to wait or defer these decisions which, either through commission or omission, will affect the attainment of the objectives and aims for which the war is fought. Civil affairs planning cannot be delayed until the war is won. The commander's proper utilization of civil affairs techniques and procedures contributes materially, and sometimes essentially, to the winning of the victory and later of the peace.

The commander's decision is influenced not only by the relative combat power of opposing forces but also by the characteristics of the area of operations. Accordingly, the commander makes decision with respect to his responsibilities to a population by carefully weighing the civil affairs estimate of the situation in conjunction with the estimates of the other members of his staff.

Civil affairs planning must be timely, concurrent, continuous and in full coordination with other staff sections to determine the manner in which civil affairs operations may best contribute to the overall operational mission. The coordination of civil affairs activities with tactical operations is also essential in order to insure the capability of the commander's civil affairs operations to cope with the civilian problems caused by war.

As the scope of warfare enlarges with the appearance of weapons of increased destructiveness, the scope of the commander's civil affairs operational responsibilities becomes correspondingly intensified. Modern military operations, even if carried out with discrimination, will create tremendous problems. Let's briefly examine some of the

problems arising from the presence of clvilians which inescapably confront a commander in the conduct of his operations.

Civilians, in larger numbers than ever encountered before, will suffer the effects of war in personal loss, injury, deprivation, and lack of the barest essentials of life. They will not have the guidance, assistance, or control normally provided by the former local levels of government. Continuing damage will contribute to mass hysteria and tend to convert the previously normal populace into an uncontrolled mob; a multitude of scared, hurt, and disrupted people who seek only to flee further injury with whatever possessions as are intact and obtain, by any means possible, that which is necessary to remain alive.

From the commander's point of view, what is the effect of the problems posed by these civilians on his combat operations? The answer is not difficult to imagine. They clutter the roads and interfere with or prevent the essential movement of troops and supplies. They require amazing tonnages of military supplies merely to remain alive and can compel a diversion of combat troops to protect lines of communications and supply installations. They can require a similar diversion of troops to neutralize guerrilla action fomented by undetected enemy agents among them. They can do all this and more; they can all but stop a military operation in its tracks unless proper action is taken to anticipate and plan in advance necessary CA controls.

Thus, the commander's CA operations are required fully as much by military necessity as by the customers of war and the principle

of humanity.

The objectives of his civil affairs operations will also remain unchanged. Those will still be to support military operations; to fulfill obligations arising from treaties, agreements, or customary international law; to support and implement national policies; and to provide for the transfer of military government responsibility from the military commander to a designated civil agency of government as soon as the military situation permits.

The destructive capability of the weapons employed will, however, have a tremendous effect on the population of any area in which such weapons are used. I believe that the employment of nuclear weapons will extend and intensify civil affairs operations to a degree far beyond any past military experience. Moreover, since the conduct of any war must realize the objectives for which it is fought, the commander must be allowed to use the force necessary to accomplish these objectives—though that force be great. Such conditions will demand the development, training, and employment of the most efficient and versatile type civil affairs organization which can be devised in order to cope with the characteristics implicit in such a nuclear war:

In considering the possible war of the future, let us consider for a moment, the present Army infantry division and its capabilities. As you no doubt know, it has approximately three-fourths the personnel of its World War II and Korean counterpart. It has five battle groups rather than the three larger infantry regiments. The battle groups have fewer personnel than the regiments but more than make up for this loss in increased mobility, versatility, and fire-power. The battle groups, in most cases, will not operate contiguous to each other and will be capable of conducting independent operations—they will operate more as staggered islands of resistance within the division area of responsibility.

How will this affect civil affairs operations in the division area? First, it is likely that the number of civil affairs units must be increased over those employed in like areas during World War II and Korea. The area support requirements will increase because of greater destruction and also for the simple reason that the increased size of the division area will encompass more civilians—and consequently more civilian problems to hamper the commander unless they are handled properly. The command support requirement will be magnified in order to support adequately the widely separated divisions and battle groups.

unfortunately, there is little accurate information regarding civilian reactions when subjected to the use or threat of the use of nuclear weapons. The present sociopsychological factors indicate, however, greater effort will be required to control, feed, and shelter civilians in modern warfare even though, through necessity, we may be forced to furnish from military stocks only those supplies necessary for them to remain alive.

Second, civil affairs operations will be affected by the fact that modern combat encompasses greater speed and greater mobility. This means a greater possible rate of acquisition of territory and consequently of civilians and their problems. It means the utmost use must be made of indigenous human and material resources within the limits of international law. This demand will require the commander, in many instances, to exercise rapid and effective control over not only the civilian population but also the local civilian resources. Every effort will have to be made to reduce the emergency demand for supplies and services of the indigenous population on our forces to an absolute minimum.

Third, these increased demands will occur in a combat area rather different from World War II and Korea. The traditional continuous front line which has served as a barrier to the enemy in the past will, in all probability, be missing. The majority of civil affairs activities may take place in areas between the areas physically occupied by our own troops—for the simple reason that the commander will be unable to disperse his tactical units over such large areas.

In view of the above, one point appears rather clear; in modern nuclear warfare, as major tactical units control greater areas with fewer combat troops, greater civil affairs support will be necessary. The units to provide this support, in addition to being well versed in the principles and techniques of civil affairs operations, must be completely conversant with the operational capabilities of the combat arms and their normal staff procedures, to include operational planning and implementation and logistical tech-The civil affairs units must be selfsustaining and well able to protect themselves against small organized enemy and guerrilla attacks. In the fluid type warfare for which your units are preparing, there is no place for the specialist as he is viewed by some people. Our civil affairs people must be soldiers, first, last, and all the time, for they must perform dual functions, perform their civil affairs functions at all times, and, at any time, if they are to survive, they must be prepared to take up arms and protect themselves against an armed enemy attack.

Thus far, I have been talking in terms

Thus far, I have been talking in terms of units, their missions, objectives and functions, all of which are of vital importance, however, there is one other all important element to be considered and I would be remiss in not mentioning it; that is, the all important factor of manpower in our Armed Forces. You, the commanders of Ca-USAR units, have a rare privilege in being able to shape your units in a period of relative peace, into the highly efficient organizations they must be in order to carry out the M-day mission that will be expected of them. Take full advantage of this

privilege, make sure the personnel you select for your units are the most capable that can be obtained. Settle for nothing but the best, and then make sure that their training is the most comprehensive and effective that can be designed.

Our civil affairs unit commanders have done and are continuing to do an outstanding job in maintaining a strong reserve structure of well trained units manned by capable and experienced personnel upon whom we must rely to accomplish these important functions.

'This is a critical period in the history of our Nation. The task ahead is a challenge, one which can and must be met if we propose to match our ability to wage war with an equal ability to convert a military victory into a politically sound and profitable peace.

It is a most satisfying feeling to know that your association stands ready to do its share, or even more, in the development and maintenance of those preparedness measures essential to our national security.

### European Wages Climb

EXTENSION OF REMARKS

# HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 15, 1959

Mr. PROXMIRE. Mr. President, the onrush of competition from abroad in many industrial fields, the serious threat to American export markets, to American jobs and prosperity, has been recognized by those with eyes to see. At the same time there are probably more mistakes made in economic policy because of the failure to recognize changing conditions than because of selfishness or stupidity. For this reason I call to the attention of my colleagues an editorial in the Milwaukee Journal that suggests that the rapid rise in European wage scales may equalize costs in international competition before this country is engulfed by low cost foreign competition. It is a development to watch very closely.

Mr. President, I ask unanimous consent that this editorial, entitled "European Wages Climb," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the Record as follows:

[From the Milwaukee Journal, June 11, 1959]

### EUROPEAN WAGES CLIMB

The vice president in charge of international operations for the Worthington Corp., S. Riley Williams, says that upward wage pressures on Western Europe eventually will put that area and the United States or even cost terms—if inflation can be checked in this country.

Actually, the wage tide has been running more strongly in Western Europe since 1950 than in the United States. It is true, of course, that American wages are still far higher. A steelworker earns \$3.22 an hour here, almost four times the 89 cents an hour paid the West German steelworker.

But consider the trend: Since 1950, hourly earnings in manufacturing have gone up 102 percent in France, 69 percent in Norway, 66 percent in Germany, 65 percent in Great Britain—and only 41 percent in the United States.

Studies made by Clark Kerr, president of the University of California, and Yale economist Lloyd Reynolds also indicate that between 1948 and 1957 wholesale prices, which strongly influence production costs, rose more in many countries than in the United States.

So it is not true, or at least not wholly true, that we are pricing ourselves out of our foreign markets and even out of our own domestic market, as some businessmen claimclaim.

'The principal reason for Western Europe's increasing competition is that war devastated plants have been rebuilt or replaced, and modern processes adopted. Much of this has been done with American aid and encouragement. The result is efficient, high quality, low cost production.

Eventually Western Europe's wage scales may come up to ours, as Williams expects. In the meantime, though, foreign competition is going to get even tougher. To hold foreign and domestic sales, American businesses will need imaginative new products, more efficient men and machines, improved quality and productivity—and labor costs which at least do not kick off successive rounds of inflation.

### Proposed Foreign Service Academy

EXTENSION OF REMARKS

# HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 15, 1959

Mr. YARBOROUGH. Mr. President, the members of the U.S. foreign service represent this Nation in the eyes of people overseas. For this reason, I feel it is necessary to encourage more high quality young people to enter this vital field.

In an effort to help along this line, I have joined in sponsoring a bill to establish a foreign service academy to train people who will be representing America overseas. The Beaumont, Tex., Enterprise, in a well written editorial, has endorsed this idea, and has given cogent arguments to support it.

Mr. President, I unanimous consent to have printed in the Appendix of the RECORD an editorial from the Beaumont, (Tex.) Enterprise for Sunday, May 24. 1959, entitled "A Foreign Service Academy."

There being no objection, the editorial was ordered to be printed in the Record, as follows:

[From the Beaumont (Tex.) Enterprise, May 24, 1959]

### A FOREIGN SERVICE ACADEMY

We commend Senator RALPH YARBOROUGH for his cosponsorship of a bill in Congress to establish a Foreign Service Academy to train people for representing this country overseas.

As the Texas lawmaker points out, residents of other nations form their opinions, in great part, from what they see of these U.S. governmental employees. The Senator adds:

"Because of the highly specialized type of work which these people are called upon to perform, I believe they should be given the finest training possible. The actions of these Americans can go a long way in helping prevent world war III."

Of course, this country has seen far too much of the practice of naming ambassadors Who have no special qualifications for the tasks they undertake.

In many cases, the claim to Presidential favor is based solely upon the record of a fat check to a political campaign fund.

Besides, a large number of the Foreign Service underlings are not amply trained for the jobs they are given.

Especially unfortunate is the widespread lack of adequate knowledge of other languages among our Foreign Service personnel.

Just the opposite is true of the Russians, who now see that members of every mission to a foreign country are able to converse with

the natives in their own language.

The Academy which Senator YARBOROUGH seeks would be set up under the Secretary of State. Each diplomatic cadet would be required to pass entrance examinations. In addition, to insure that the training would be used as it is intended, each cadet would be required to sign an agreement to complete the course of study, unless the State Department separates him from the school before

The agreement would also provide that he or she would have to serve with the Foreign Service for at least 3 years after graduation.

Mr. YARBOROUGH summarizes the purpose

of his measure like this:

"I feel that this bill would help our Foreign Service in two ways in its continuing business of putting this Nation's 'best foot forward' overseas. First, it would provide the Service with better trained personnel in the highly individual business of being a State Department officer. Secondly, it will encourage a great number of the outstanding cadets to continue in a Foreign Service career. As in any business, experience pays dividends, and we need to encourage more young people to enter this important field."

Important, indeed.
And all because the Foreign Service employee is the window through which the people beyond our shores see this great land of

This branch of Government service deserves the very best.

The very best is the best trained.

After all, this is the criterion for excellence in every field of human activity.

# New Idea on Dairy Selling

EXTENSION OF REMARKS OF

### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 15, 1959

Mr. WILEY. Mr. President, during June Dairy Month, activities all over the country are emphasizing the need for increased consumption of our high quality dairy products.

Today, food selling in America is an \$80 billion business. Of this amount, an estimated \$10 million is accounted for

by dairy products.

Even more than its monetary value, of course, is the fact that these high quality dairy foods are making a tremendous contribution to improved health for our citizens.

Representing the No. 1 milk producing State in the country—with an estimated Production of about 18 billion pounds

annually, or about 141/2 percent of the Nation's milk supply, I am naturally deeply interested in further improving the economic outlook of our Wisconsin dairy industry-as well as its increasing contribution to the public health.

According to January 1, 1959, inventory, there were over 2.5 million milk cows on our Wisconsin farms. In 1958, the annual production per cow had increased by 5 percent over 1957, for a total of 8,070 per cow.

At today's rate of consumption, 1 cow will produce more than enough for 11 persons. A major challenge facing the industry, however, has been, and continues to be, the need for increasing consumption of milk and other dairy products.

A recent edition of the Janesville Gazette carried an editorial, "New Idea on Dairy Selling."

Specifically, the editorial recommends brand-name advertising of the type that has served other industries in increasing consumption of their commodities,

In view of the fact that stepped-up consumption is one of our major problems-not only in terms of further improving public health, but in brightening the economic outlook for the dairy industry-I ask unanimous consent to have the ideas suggested in the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW IDEA ON DAIRY SELLING

As the June Dairy Month promotion efforts move toward the climax of the annual Alice in-dairyland festival here next weekend, the suggestions of a speaker at the annual Holstein-Friesian Association convention in Omaha are worthy of note.

The speaker was Charles G. Mortimer, who is not only a large-scale dairyman but also president of General Foods Corp., and an executive of experience in the sale of food prod-

ucts.

In brief, Mortimer's message was that dairymen, dairy processors, and distributors might take a leaf from other successful enterprises in selling and promotion. Insufficlent market, he said, is the villain of dairying and a major promotion is needed to increase the demand for milk.

The most telling point, however, relates to the approach to current sales efforts. Referring to the success of beverage promotions by coffee, orange juice, and others, Mortimer said:

"I wonder whether the continued emphasis on the healthfulness of milk over the years hasn't built up an image of the product which may in some respects overshadow the potentially great appeal of milk for sheer goodness' sake."

It seems here that the speaker has touched upon one of the weak spots in past and cur-rent dairy promotions. The public is not an rent dairy promotions. The public is not an infant, to be told that it must drink its milk for health's sake, whether or not it likes it.

Coupled with this is the emphasis on sanitation, a defensive sort of thing. The public nowadays is ready to assume that cleanliness and quality in foods are assured. Perhaps the industry has erred also in the past in stressing butterfat content in dairy products long after consumers were turning to slimming diets.

Most of all, the giant dairy industry has no brand name advertising on a scale approaching that of comparable industries. Too much advertising is milk, just any milk, or cheese; just any cheese. Everyone knows that all

brands of cigarettes are made from about the same tobaccos, for example, but it is note-worthy that the name and not the tobacco is what is being sold to the public.

In the important agricultural industry in Wisconsin, top place must go to dairying, and increasing markets is of importance to everyone. Consumers in the State owe a duty to utilize as much of the home State output as possible, but the way in which this appeal is made is vital. They won't buy because of duty, and it is doubtful if they will buy merely because milk or dairy products are good for them. Certainly it is not desirable that they buy because of pity for the poor dairyman.

What is left is approximately the suggestion that Mortimer, the food company ex-ecutive, made to Holstein herd owners.

# A Favorable "Business Climate" Can Be Felt if Not Actually Seen

EXTENSION OF REMARKS OF

# HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. McINTIRE. Mr. Speaker, the Maine Chamber of Commerce has drawn up a resolution designed to encourage economic development in the State of Maine

Although the resolution places justifiable emphasis on the aspect of a favorable climate for business, it contains, in addition, other ingredients equally vital . to the growth of Maine enterprise-harbored herein are also the soil, the substance, and, in effect, the seed from which can spring a heavy harvest of the fruits of commerce.

The Maine Chamber of Commerce is to be complimented for its originality. and I feel that this unique effort merits introduction to the RECORD:

A FAVORABLE "BUSINESS CLIMATE" CAN BE FELT IF NOT ACTUALLY SEEN

We would hate to have to write a technical definition of the phrase "business climate." It is an intangible thing. It is made up of too many factors.

But even though it cannot be actually seen, or described, it can be felt. It doesn't take a prospective industrial settler long to get the feel of a region's attitude toward economic progress. A genuinely favorable business climate advertises itself in dozens of different ways.

We suppose that every community in Maine, like every State in the Union, would insist that its climate is conducive to the growth of business. No community or State looks down its nose at a payroll. If it is true, then, that every area starts from scratch in this respect, what makes one climate look more favorable than another are the "extras."

For instance, there have been times when Maine's business climate has lagged behind other States. For years we did not put enough effort into the "extras," as did North Carolina and some other southern States. In the past couple of years, however, the atmosphere has improved, and precisely because Maine started doing something extra.

One of these extras was a joint resolution passed by the 99th legislature emphasizing the importance of the "business climate." A resolution is, to be sure, only a scrap of paper, but in this case the spirit behind it

is important. What it says is that Maine has been doing more than at any time in history to improve the business climate, and is prepared to do even more in the future.

Following is the resolution prepared by the State chamber of commerce, adopted by both branches of the Maine Legislature, and which in an intangible way bolsters Maine's business climate:

'Whereas the State and the cities and towns thereof have embarked upon an intensive program of industrial, recreational, and agricultural development, and

Whereas a favorable "business climate" is acknowledged to be a major factor in the advancement of such a development program; and

"Whereas the success of such a program means more jobs, more payrolls, new sources of revenues and greater prosperity for all our

"Whereas the creation and continuance of a favorable 'business climate' can only be attained by strict adherence to a set of well defined principles and conditions, and

"Whereas these principles and conditions are generally recognized and defined as fol-

"1. An atmosphere in which the triumyirate of government, management, and labor live cooperatively and harmoniously in full recognition of their interdependence and mutual interests;

"2. A friendly and understanding attitude on the part of government at all levels and a willingness on the part of government, within its proper sphere of activity, to do all within its power to keep Maine industry and commerce in a competitive position;

3. An attitude on the part of our people which clearly indicates to industry (both existing and potential) that they are sincerely

wanted:

"4. Careful and prudent planning activities within an eye to present needs and future efficient growth of the State;

5. Vigorous community attitudes which reflect concern for continuing and expanding

payroll revenues by making more attractive the ease and cost of doing business in this State: "6. Sound, stable, and adequate financial

institutions and established machinery for

capital generation;

"7. An informed, intelligent, and productive labor force dedicated to pride in product, and which endorses the profit motive as the source of job security and benefits for

all: Now, therefore, be it

"Resolved by the senate and house of representatives, That the 99th Maine Legislature shall examine all proposed legislation in terms of its effect upon the "favorable business climate" of the State and shall determine whether such legislation may have any deterrent effect upon the business climate of the State, as outlined and be it further

"Resolved, That copies of this resolution be transmitted by the secretary of the senate to the Governor and the heads of all departments of the State government with the request that they examine their own dis-cretionary acts in terms of the effect upon the 'favorable business climate' of Maine."

### Guilt by Association?

EXTENSION OF REMARKS

### HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. DEROUNIAN. Mr. Speaker, I doubt that my busy colleagues will have any more opportunity than Mr. Sokolsky to read the 1,128 pages of testimony in regard to the confirmation of Lewis Strauss as Secretary of Commerce. therefore, place in the Appendix of the CONGRESSIONAL RECORD George Sokolsky's article, which appeared in the Long Island Daily Press on June 11:

### MORE GUILT BY ASSOCIATION (By George E. Sokolsky)

When men and women work together, play together, know each other's private lives, gossip about each other, even though they may be of different political persuasions, they are a community and develop the characteristics of a community. Washington is such a place and partisanship plays less a part in the capital than back home where the votes are counted.

However, every once in a while, an issue does arise in which parochial conviviality is less characteristic than usual. The confirmation of Lewis Strauss is such an

instance.

It is unusual for the Senate to confirm an appointment to the President's Cabinet without much ado, on the assumption that the President is entitled to the men he \*wants to carry out the work of the executive branch of the Government. In the case of Lewis Strauss, Senator CLINTON ANDERSON has made an exception. He has devoted himself to the destruction of Strauss.

I have before me the hearing, 1,128 pages of it. Obviously, it is imposible carefully to read 1,128 pages very rapidly. Senator LYNDON JOHNSON, for instance, is reported to have said that he will make up his mind after he has read the record. How a busy man like Senator Lyndon Johnson can read a record of 1,128 pages rapidly and carefully enough to form an opinion conecrning Lewis Strauss, whom he has known for many years, is his psychological problem, not mine. I cannot read that fast.

But I did turn to page 448 of that record, to the testimony of Jarrel Garonzik, attorney, of Dallas, Tex. This Garonzik wrote a letter to Senator CLINTON ANDERSON, in which he describes himself as "a full blooded Jew," an adjectival designation usually reserved for cattle. Garonzik opposes Strauss because "I confess I cannot stand Strauss or his exbanking house of Kuhn, Loeb & Co."

Why? Well, in the testimony it appears that Garonzik is in the uranium business. Henry H. Patton of Kuhn, Loeb & Co., with which Strauss has not been connected for 13 years, also was interested in a uranium mine in the Lake Ambrosia area of McKinley County, N. Mex., the State which sent CLIN-TON ANDERSON to the Senate. Garonzik owned stock in this mine. This is his beef:

"Thereafter, when Kuhn, Loeb & Co. proposed a deal whereby one-fourth of this mine would be acquired by its exclusive designee, the American Metal Co., Ltd., at well below the intrinsic value and market value of the company's stock, I objected and I asked Mr. Patton why this company, that is, Pinon, had to sacrifice one-fourth of this huge ore body to American Metal Co., Ltd. I asked him why it was necessary to do it. and Mr. Patton replied that we had to do this in order to get an ore concentrate contract with the Atomic Energy Commission of the United States."

What this has to do with Strauss, the rec-

ord does not show.

From much that Garonzik said for the record, it is to be assumed that Garonzik met, talked with, and knew Strauss well. He could make a judgment as to his character from personal knowledge and experience, a judgment which appears in the record and gives the impression of intimacy. Not so. Here is the record.

The Mr. Dodds who asks the questions is

Strauss' counsel:
"Mr. Dopps. \* \* \* Did you ever receive any letter from Mr. Strauss in any capacity?

"Mr. GARONZIK. I don't recall receiving a letter from Strauss.

"Mr. Dopps. Have you ever had any dealings with him?

'Mr. GARONZIK. Well, now, I have written him.

"Mr. Dopps. Have you ever met him? "Mr. GARONZIK, Never met him; no.

This Garonzik goes into a business deal which does not turn out quite as he expected. Involved in the deal is Kuhn, Loeb & Co. with which Strauss was associated 13 years ago. Garonzik does not know Strauss, by his own admission, and has had no dealings with him. But he declares him guilty by association. When Joe McCarthy associated people together, he was accused of McCarthyism by the very liberals who regard Garonzik as a decent speculator in mining stocks although he applies the guilt by association yardstick to Strauss, who rid the AEC of Oppenheimer.

Whether Lewis L. Strauss is confirmed or not, be it noted that guilt by association. which liberals so roundly denounce, is used by them these days against conservatives.

### Protection From Atomic Fallout

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, June 15, 1959

Mr. YARBOROUGH, Mr. President, just over a week ago, we read in our newspapers that a number of serious cases of atomic fallout in the Middle West had come to light.

These reports were given special emphasis by the fact that the fallout just now reported is the result of testing which began in May 1957-over 2 years

Experts tell us the radiation which we absorb now will affect genetic mutation for 100 years and more in the future.

Mr. President, and editorial in the Washington Post and Times Herald for June 15, 1959, gives a good discussion of the need for a fuller monitoring system to protect the health of humanity now and in the future. I ask unanimous consent to have printed in the Appendix of the RECORD this editorial entitled "Fallout In the Dark."

There being no objection, the editorial was ordered to be printed in the RECORD.

as follows:

[From the Washington Post and Times Herald, June 15, 1959|

FALLOUT IN THE DARK

The scattered instances of unusually great fallout from American atomic tests in Nevada are perhaps no cause for general panic.

But it is exceedingly disturbing that these accounts have to be gathered from private of local government sources, here and there, and that long after various localities have experienced fallout resulting in radiation exposure well above permissible limits, the Public Health Service and Atomic Energy Commission seem indifferent to the need for a better monitoring system.

What seems to be required, in the light of the alarming reports from several Midwestern States, is a more extensive check on the external radiation resulting from fallout and on the amounts of strontium, cesium, and other radioactive elements finding their way into milk and other food. Without such information, anxiety will only be heightened and will feed upon possibly inaccurate facts deduced from partial or haphazard local testing.

Undoubtedly many individuals in the localities where rain has washed down a heavy dose of fallout have received damaging ex-Posures. Many areas may have been touched and not even be aware of it. If this kind of risk needs to be taken-a basic assumption which itself needs to be more thoroughly examined and debated—the very least that the Government owes to the people is a frank and full appraisal of just how great the risk may be. And in areas where exposure has been predictably or unexpectedly great, something much more than bland assurances that "all's well" ought to be provided. The extrs expense of fuller monitoring could not possibly be greater than the to understand more thoroughly this insidious threat to the health of this and future generations.

Address by Secretary of Labor James P. Mitchell Before the 43d Session of the International Labor Conference in Geneva, Switzerland, on June 12, 1959

EXTENSION OF REMARKS

# HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. KEARNS. Mr. Speaker, I was greatly impressed by the address of the Honorable James P. Mitchell at the ILO Conference in Geneva last Friday. The Secretary was excellently received, and I believe his remarks will be of interest to all of my colleagues in the Congress: Address by Secretary of Labor James P. Mitchell Before the 43D Session of the

INTERNATIONAL LABOR CONFERENCE, GENEVA, SWITZERLAND, JUNE 12, 1959

Mr. President and delegates, I am gratified once again to be able to join with an International Labor Conference in its discussion of the Director-General's excellent report.

Before that, however, on behalf of the President of the United States, I have the honor to read the following letter to the Director-General of ILO:

THE WHITE HOUSE, Washington, June 9, 1959.

DEAR MR. MORSE: I have asked Secretary Mitchell to carry this letter of greetings to you and to the members of the International Labor Organization assembled in Geneva for their 43d anniversary session.

The ILO is a vital forum for the exchange

of information and opinions by representatives of governments, employers, and working men and women. It has adapted itself ably to changing conditions and developed new techniques to meet new problems. It has grown strong in service to the people of the world.

Over the years, from its rich store of experience, the organization has shared its wisdom with newly developing countries through technical assistance and educational programs-and advisory and informational services. I understand that these countries call upon the ILO increasingly to help them realize their aspirations for a better life.

The United States is proud of its memberhsip in the International Labor Organization. We are glad that so many of our citizens have been able to serve the cause of world peace through participation in its work. Your own distinguished service as Director-General for more than a decade is a source of special pride.

On this occasion, I am delighted to reaffirm our support of the ILO and to add my best wishes for a memorable session. Sincerely.

DWIGHT D. EISENHOWER.

Over the past 40 years, conferences such as this have carved out 222 conventions and recommendations, ranging from precise technical prescriptions—on social in-surance or on the permissible use of dangerous substances-to declarations of the most profound and sublime objectives of freemen. ILO has declared against forced labor, and discrimination, for example, and it has declared that men have a right to draw together and associate freely for their economic advancement. At the same time, ILO staff and experts have completed a variety of studies and developed a myriad of technical standards for the protection and advancement of working people.

We are happy to see the ILO strike out in new directions which give better balance to the total ILO program. If the task of legislating standards has been largely completed during the first 40 years of existence, ILO's responsibility for making it possible for the people of the world to tain those ideal conditions and to enjoy the kind of life the standards envisage has just been taken up. It is only within the last fifth of ILO's life that it has stepped forth on a wide stage to offer to the developing areas of the world its acquired knowledge of better production methods, peaceful labor relations, quicker and more efficient training, and all the rest of the catalog of technical assistance services, research, and investigation which is the ILO's operating program.

These are the channels of service which must continually be deepened and widened so that the reservoir of knowledge and skills which ILO has stored up can flow more quickly and more smoothly to all the places of the earth where men demand a fuller, happier life.

The ILO's work in manpower development, training and productivity improvements have pointed to ways of helping nations break through some of their economic development bottlenecks. The new program of management training can help provide leadership socially responsible business which is so necessary for the development of productive enterprises and for the attraction of needed capital.

It seems to me that technical training in management might well include not only training in dry administrative techniques, but also, among others, education in human problems of safety, of worker training, of equitable wage administration, of grievance procedure. Every study of experience in labor-management relations emphasizes the point that basic acceptance, understanding, and willingness to work with the other side are crucial to successful relations. If the ILO's programs result in nothing more than the imparting of a healthy attitude to large groups of responsible labor leaders and management officials, they will have been worth-

Flexibility rather than rigidity in all its activities will enable the Organization to have its widest influence, to preserve what is good, to promote constructive change when change is warranted, and to contribute its best to a world that is seeking realistic solutions to practical problems.

We believe, Mr. President, that the forthcoming ILO African Regional Conference of 1960 can give the Organization an improved idea of the needs of that continent, the problems that the African peoples face in improving their economic status, and the order in which those problems should be taken up. At the same time, that discussion will better acquaint the people of Africa with the help ILO can provide in carrying out the tasks before them.

Today I would like especially to discuss with the Conference two aspects of the ILO's current work to which the U.S. Government attaches particular importance as challenges to ILO's capacity to find new directions and new means to meet its obligations and opportunities in a changing world.

The first of these proposals is that for an Institute for Social and Labor Studies. This idea is close to the spirit of the resolution on labor-management relations which was proposed by my Government and adopted at the 42d session of the International Labor Conference last year. That resolution said in part that the ILO should "become a center for the exchange of information in the labormanagement field," and that the ILO should "encourage and foster the establishment of national, regional, and international institutes and centers for systematic training and study in labor-management relations."

The Institute could give life to these two aims. But especially we would hope that the Institute, as part of the expanded program of ILO services, and in cooperation with other agencies in the United Nations family, might develop into an instrument of value for training and for studying a whole range of questions in the labor-management relations field. Labor-management relations means to me collective bargaining, workeremployer relations, personnel administration. worker and supervisory training-in effect, everything that has to do with the atmosphere and climate and spirit of the work-To the extent the Institute concentrates on these problems it will, in our judgment, render the greatest service. New societies are building in all the regions of the earth; they will look to us here for help in answering questions in the field of labor-management relations which they face for the first time, but for which a storehouse of proven experience has already been built

The Director General's report includes a second new direction for the development of ILO program. We agree that resources of the ILO must be committed to the evolution of a broad policy and program to equip young people to meet the demands of modern economic life. In every land where technology is advancing, there is the awareness that youth must be given the opportunity and encouragement for education and training, and that society must find the means to avoid conditions which drain away some portion of every nation's vitality through underdeveloped potential. The benefits flow not only to the youth as a worker, but to society in general. The youth program we seek must deal with education for work, vocational guidance, placement, inservice training, and advancement on the job. would hope that action to be taken by this conference, in the form of resolutions to stimulate such a policy, would be flexible enough to be generally useful around the world, and simple enough to be attainable.

I have thus far addressed my remarks principally to the Director General's report, which I understand to be the purpose of our discussion. Before sitting down, however, I would like to bring up to date the account I gave you a year ago on the economic outlook in the United States. Last June from this rostrum, I said, "There is no doubt in the minds of all Americans of the strength and resiliency of the American system, or of its capacity for continued growth." I can report to you now that the confidence of a quick recovery we held then has been justified.

When I spoke to you in June 1958, our economy had already begun to recover from a sharp rise in unemployment. The recovery since then has been very encouraging, and economic activity in recent months has been rising to new peaks.

Last month, more than 66 million people were at work in the United States—an all-time high for the month of May. Employment has risen by over a million from April to May of this year and by more than 2 million since May 1958. Income, output, consumer buying, as well as employment are all at record levels. Our actual physical output of goods and services in the first quarter of 1959 bettered the previous all-time peak, reached in the second quarter of 1957, by \$9½ billion. Thus far in 1959, each report month after month, has shown accelerating gains, both in the general economic picture and in specific employment

situations as well. During the 1958 recession we added to our experience in coping with economic downturns the valuable fact that our unemployment compensation system can be a stimulating factor for economic as well as social protection and we will continue our efforts to improve that system. Nearly \$4 billion were paid out in public unemploy-ment benefits during the year 1958, at an average weekly rate of \$30.58 of purchasing power that helped maintain markets for goods and services. These benefits represent the contribution of our public systems of unemployment insurance to worker security. In addition, millions of American workers enjoy the benefits of privately negotiated plans of unemployment benefits which add substantially to the public pro-

Although our economy is again operating at record levels and although our unemployment problem is receding, we are still confronted with the problem of maintaining reasonably stable prices, while we attain the economic growth necessary for full employment and higher living standards. In my own country, we are determined to achieve these goals. I am a member of a special Cabinet committee, headed by the Vice President of the United States, which is at work on this problem, and several committees of the Congress have begun to attack it as well. In the United States we recognize that the simultaneous achievement of these goals depends on the attitudes and actions of workers, and the unions that represent them, and of the attitudes and actions of employers as well as of governments.

But we are aware from the discussion here and elsewhere that reconciling economic growth, full employment, and price stability is a problem that challenges every country and every economy, And we know that lasting solutions can be found only by the full collaboration of free workers, independent managements, and their govern-Therefore, ILO is in a unique position and has a responsibility to contribute to a better understanding of the problem. I would recommend that the governing body and the director-general initiate studies and inquiries and arrange for appropriate exchanges of experience so as to assist all member nations in their efforts to maintain price stability without sacrificing or delaying economic growth.

I would close my remarks by saying that I have particularly enjoyed seeing so many observer delegations here, many of, whom are attending an ILO conference for the first time. Their presence among us should help to insure that their peoples will benefit from the technical and personal exchanges which characterize our conferences. What better proof can be found of the vitality and the utility of the ILO, serving in the improvement of the condition of man and advancing his eternal quest for universal peace with justice.

# How National Parks Add to Local Prosperity

EXTENSION OF REMARKS

OF

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, June 15, 1959

Mr. NEUBERGER. Mr. President, one of the outstanding public servants in our Federal Government is Dr. Conrad L. Wirth, Director of the U.S. National Park Service. For the June 1959 issue of Think magazine, which is published by International Business Machines Corp., Dr. Wirth has written an illuminating article entitled "Birth Throes of a National Park."

In his article in Think, Dr. Wirth has particular reference to the proposed Cape Cod National Seashore, sponsored by the distinguished Senators from Massachusetts [Mr. Salstonstall and Mr. Kennedy]. But he might also have had reference to all other pending national parks—for example, the one I am urging in the Oregon Dunes and Sealion Caves, along the magnificent shoreline of my own State.

Let me emphasize one statement by Dr. Wirth, in which he writes in Think magazine:

In the long run, national parks have always resulted in a better economic status for the surrounding areas.

As if to corroborate this statement by the Director of the National Park Service, the New York Times for Sunday, June 14, 1959, has published a lengthy article in its travel section on the 30th anniversary of the Grand Teton National Park in Wyoming. The New York Times correspondent, Mr. Jack Goodman, has stressed the fact that local ranchers originally claimed the national park was a threat to prosperity in their area. At that time local bank deposits at Jackson totaled \$395,000.

Fortunately, Grand Teton National Park was established in the Hoover administration. Today, according to the New York Times article, some \$4,500,000 are on deposit in banks in Jackson, Wyo., and over 1,500,000 visitors are expected to visit Grand Teton National Park this year, to swell this substantial prosperity. At the time that John D. Rockefeller, Jr., and his family began buying up scenic land in the Jackson Hole region preparatory to giving it to the Government for a great new national park, there was much local hostility to their idea. Today, Mr. Rockefeller and those who were associated with him are regarded as benefactors of the area

I feel certain that the same wholesome revision of public opinion will occur in the Oregon Dunes, at Cape Cod, at Indiana Dunes, at Point Reyes, and at other places where shoreline parks are being proposed by Members of Congress.

Mr. President, I ask unanimous consent that the article by Dr. Conrad L. Wirth, in the June issue of Think mag-

/ azine, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Record, as follows:

BIRTH THROES OF A NATIONAL PARK (By Conrad I. Wirth)

A few weeks ago, I stood on the speaker's platform in the townhall at Eastham, Mass., and looked out over a sea of some 500 grimfaced Cape Codders, packed together like sardines in the little auditorium. There were rumblings of restlessness both in the hall and outside where more cars were still squeezing into the packed parking lot, lighted up by a full moon coming up over Nauset Bay. I must confess to a feeling of some uneasiness in the pit of my stomach, because I knew what was coming. I had been through it all before. -Not once, but many times.

These people were here because a National Park Service report had just been issued, recommending the establishment of a national seashore on Cape Cod that would set aside and preserve some 30,000 acres of still-unspoiled beach, dune, and marshland as a federally protected recreational sanctuary for all Americans—those now living and the generations to come. They were here because this proposal not only affected the lives of each of them, but also could mean a drastic change in the economics and way of life of the area in which they had their homes and businesses, in which many of them had grown up and reared their children.

At 8 p.m., Maurice Wiley, chairman of Eastham's Board of Selectmen, stepped to the microphone and opened the meeting. "It is a pleasure to welcome all of you here tonight," he said, a little nervously. "Let's hope that we can all be ladies and gentlemen."

As he spoke I took another look at the faces in the audience. These are the people. I thought, who will have to make personal sacrifices of greater or lesser magnitude, the few who will have to make unwanted adjustments in their lives for the sake of the many who will benefit if the present dream of 3 national seashore area for the use and enjoyment of all becomes a future reality. Some, obviously, would be less hurt than others. In the audience there were well-known writers-Edmund Wilson, literary critic and author of "Memoirs of Hecate County," O'Connor, author of the bestselling novel "The Last Hurrah," Paul Chavchavadze. noted author and playwright. They had come over to the meeting from the writers' colony at Wellfleet. Their lives would be disturbed, but certainly they would not suffer too greatly. But what of the grizzled oldsters, the carpenters, the fishermen, the just plain old folk living out their lives in the only homes they had ever known? What would the change mean to them?

There was little time to contemplate these things because, at that moment, the dammed-up flood of questions burst. For the next 4 hours I did my best to set fears at rest, to clear up unfounded rumor, and to dodge the formidable brickbats of criticism flung my way in the course of the heated and sometimes unruly discussion. I will say, though, that most of the men and women in the gathering did remember that they were ladies and gentlemen. I have been in other meetings where this was not the case.

The people there that night wanted to know what was going to happen to them and to their homes. They had heard all kinds of stories about how, if the national seashore proposal were approved, the Government would come in and seize their homes and simply throw them out. Some of them felt that they were being given the same kind of treatment the early white man gave the Indian, and that they, too, would be

driven helter-skelter off their land. And under the sun. Now the visitor may drive there were many other fears. What about from one end of the beach to the other the loss of tax revenue? How would the affected towns—Truro, Wellfleet, Eastham, Orleans, Chatham—continue to exist if large sections of their tax-producing land were swallowed up in the proposed new park? And how would residents of the area find a livelihoood if the current building boom and all its attendant bonanza of jobs and sales were suddenly cut off?

Much of the feeling was summed up in a single question from the floor. It was di-rected to me, politely but firmly, by a spare and sincere man of 75, Dr. Frank J. Maguire of South Wellfleet. "I began 20 years ago." he said, "to buy land and build cottages, 12 of them, 1 of which is my summer home. Will I have the use of that summer cottage by the sea and the dunes that I love? talk about preserving the beauty of the land, Which I appreciate. I have turned away many a person who wanted to put up a hot dog stand on my land. But I ask you for a little credit for me and the others. Who has kept the land unspoiled up to now? Haven't We done a pretty good job of it on our own?

It was up to me to do the explaining. It was by no means an easy thing, but I could put my heart into it because I felt so strongly that what was being proposed was a vitally necessary thing for America.

I began by saying something like this: "This is a country which has grown because, at one time or another, we have all made some sacrifices to make it great. I will not say that some of you won't be affected, be-cause in an undertaking of this size it is inevitable that some will. But we are sure that in the long run the community, the State, and the Nation will be better We honestly want to work with you and for you and to cause as little disruption as possible in your way of life. If the Congress approves this seashore, that is the basis on which we will proceed, and on no other."

Then I undertook to explain that Cape Cod was only one small part of a much larger picture, a larger problem. To begin with, I quoted the following paragraphs from our report recommending establish-

ment of the seashore park:

"The inexorable march of progress brings many and varied benefits for which all can be deeply thankful. But inevitably the march imperils other values, old and often deeply loved. This surging tide of modern progress has rolled over vast areas of our pristine coastal country, wiping out, one after another, the natural open spaces so long serene and undisturbed. Houses, busi-nesses, resorts of all kinds continue ever more rapidly to invade, disrupt, and destroy the very beauties we seek most to enjoy.

This is happening to Cape Cod. now the still unspoiled Great Beach is vanishing under buildings. It is time to set aside, preserve, and protect the last of the old Cape so that the inspiration of its surpassing beauty can be kept intact and handed down to future generations of

Americans.

"Until now, that beauty has been protected by the good taste and care of individuals, towns, and the Commonwealth. Their efforts, however, may soon be engulfed by the wave of development that threatens. National protection will be needed to achieve the conservation ideals of the people who love Cape Cod.

To accomplish this, to save this irreplaceable treasure for the future, a Cape Cod national seashore comprising Great Beach and related areas is proposed."

As I read these words, I was thinking of What had happened, in the space of a few short years, to what once was the magnificent open waterfront of Miami Beach, a place where rich and poor alike could find health-ful recreation in the golden open spaces from one end of the beach to the other without ever seeing the sand or the sea. All the shoreline is now hidden from view behind unbroken stretches of glistening luxury hotels, and the secluded beach areas are for the enjoyment of the comparative few who can pay the price. We can't blame these people for doing this, but we can blame ourselves for not planning ahead.

This was the thing that I was trying to tell these people, that time was running out, not only for Cape Cod but for most of the remaining significant open spaces in America, both coastal and inland, where all of the people, not just a few, could find pleasure and relaxation in natural surroundings, unspoiled by the handiwork of man. I wanted to explain that the mounting pressure of a growing national population looking for recreation, together with the pressure to commercialize the natural resources these people are seeking to enjoy, is too powerful for purely local measures to cope with successfully

The danger is a very real one. It was well expressed, I thought, in a recent editorial in the Cape Codder, the good little weekly newspaper published at Orleans, Mass., which has fought very hard for accomplishment of the national seashore proposal. "Let's face it," the editor wrote, "We—the people who own and live on Cape Cod-are losing a little more of it each year, each month, each week. Are there any who cannot see the creeping desecration, the impinging blight that chews like disease into area after area? This can go on for just so long. Then, one day, there will be no remoteness, no beauty left."

This, I knew so well, could be said not only of Cape Cod, but of all the rest of these United States. In our rush to expand and build and make more money we are too preoccupied to think of tomorrow, when the work is done and we many want to relax and enjoy nature in some remote and peaceful spot. But if we don't think of tomorrow now-while there is still time-where will we find that peaceful place, where will we find the beauty which our souls require?

I believe many of the Cape Codders at the meeting understood these things. It was all right, they agreed, to think of the future of America, to try to plan for it. But what of their own future? What about the Government's coming in and, overnight, taking away their homes, driving them out?

I explained that this simply wasn't the way that things were done. In the first place, I said, if Congress does approve the proposal for the national seashore, it will probably take at least 2 years to get the legislation finished and passed in final form and funds appropriated or donated. there would follow a period of establishing boundaries and acquiring available land Actually, it would probably be 10 to 15 years after passage of the legislation before all of the land for the Cape Cod seashore could be acquired and formally established. So it would not be something that would happen overnight.

And as for the 700 homes or so involved in the proposed park area, there just wouldn't be any such thing as Government seizure. Except in extreme cases, there would be no interference with property

'I've driven 140 miles to get to this meeting," a man from Connecticut interposed, and this is my question: What is going to happen in the next 40 or 50 years to those of us who own property on Cape Cod with-in the national seashore?"

"As a property owner," I told him, "You will continue to have the rights you now have. Assuming that Congress authorizes the seashore and we can get funds with which to buy property, we would like to sit down and negotiate with you for your prop-

erty. We would do this on the basis of appraisals made by locally recognized real estate people who are familiar with values. On the other hand, if you do not wish to sell, that is that. I hope you will, if your property is within the boundaries proposed. But we will not force you to sell. If you wish to stay on your land we will be glad to work out a life tenancy arrangement whereby you can keep your home as it is and live there for the balance of your life."

WHAT ABOUT EMINENT DOMAIN?

"But what about our children?" someone else put in. "We like them to live here, too, as we have, and to know the Cape as we have."

That, I explained, is precisely why the seashore proposal was made—so that their children, and their children's children, could know the Cape as they have known it.

But." someone else wanted to know "what about the right of eminent domain? You say that you wouldn't take our homes, but couldn't you, if you wanted to, condemn our property and take it over that way? Haven't you done that in the past?"
"Yes," I admitted, "a few times,

I admitted, "a few times, a very I recalled the case of a man who owned an acre and a half of unimproved land in Yorktown, Va., which we had been trying for 3 years to purchase for inclusion in the Colonial National Historical Park. "One morning," I said, "the park superintendent called me to say that the owner had bulldozers on the land and was about to rip it up to build another house. Now, the land in question was Redoubt No. 9, which Alexander Hamilton and American troops stormed and took, leading to the surrender of Cornwallis and the British Army on October 19, 1781. It was of such historic importance that I went to the Secretary of the Interior, got his approval and secured an injunction to stop its destruction. The courts then awarded the owner a fair price. "But," I added, smiling a little at the memory of that hectic day, "such things, fortunately, happen very rarely."

Still the questions came. Many of them expressed serious fears about the effect of the proposed Government action on the economic future of the area. I admitted, of course, that temporary dislocation was quite possible. But I pointed out that, in the long run, national parks have always resulted in a better economic status for the surrounding areas.

As an example, I cited what has happened to the area around it since the Great Smoky Mountains National Park was dedicated in 1940. This is a very interesting story and perhaps holds a lesson for all of us. The Great Smoky Mountains National Park is a 700-square-mile mountain mass located in southeastern Tennessee and southwestern North Carolina. Today the park attracts more visitors than Yellowstone, Yosemite, Glacier, Grand Canyon, or any other of the national parks.

In 1947, there were 1,204,107 visitors.the next 10 years this figure more than doubled to 2,885,819. North Carolina's highway department reports that in the same period traffic increased 88 percent, the greatest growth in that State's history. the Great Smokies increased 140 percent. The 21/2 million visitors in 1956 spent over \$28 million in the cities and towns around the park area.

This, then, I explained, was the sort of economic growth that might be expected in the vicinity of a park area such as the proposed Cape Cod National Seashore.

"But what," I was asked, "about the loss of tax revenues? You spoke about no drastic upheavals. Certainly this is about as drastic as anything could be. I'm not sure that some of the affected towns here on the Cape could survive the heavy loss of tax-producing land. Some of them might simply cease to exist. Where is your remedy for that?'

I shook my head. I must admit that by this point I had grown quite weary. Where is your remedy? There are so many, many things to which remedies must be found if we are to succeed in our efforts to assure the Americans of tomorrow a place of beauty and

a place of peace.

I cited for this particular question what had been done when Grand Teton National Park was established and the nearby town of Jackson, Wyo., had similar and quite justifiable fears about its ability to survive the loss of revenue. I explained that as we purchased private land in that area we compensated the community taxwise for the full value of the property over a 3-year period. We then decreased the payments 5 percent a year for 20 years. This situation, I said, worked out very well in Jackson. Of course, I don't advocate this or know what Congress would agree to. I do know that Jackson is much better off economically now than before the park was established.

There were more questions, but they largely covered the same ground. The next night there was more of the same, in another meeting in another auditorium—this time in

nearby Chatham.

The following day we left the cape. As our early morning flight took off I looked down the sunlit dunes and heaths and knew that I had not seen the last of them. Nothing was settled. There would be other meetings, other questions, other problems.

But we must solve them. We must proceed with all possible vigor in our efforts to save America's few remaining nationally signifi-cant recreational areas. We simply must be sure that there is always a spiritual side of life as well as a material one in this country of ours. There must be such places as Cape Cod for tomorrow, and tomorrow, if we are to continue strong. It is unfortunate but necessary-that some must make sacrifices in order that this goal can be achieved.

Tribute to Charles E. Dansby of Gatesville, Tex.

EXTENSION OF REMARKS OF .

# HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, June 15, 1959

Mr. YARBOROUGH. Mr. President, with the death of Charles E. Dansby of Gatesville, this Nation lost a front-line soldier in the fight for good government. He was a leader in Coryell County, and in all central Texas.

Charlie Dansby spent the better part | PRIVATE LEADERSHIP VICTORY CALLED LESSON of his 86 years hard at work in the activities of a good citizen. In addition to his business interests, he was active in his church and in civic and fraternal groups which work toward a better America. Beyond this, he translated his dreams of good government into action by hardworking, unselfish support of the candidates and issues he believed to be right. I am glad I could have him as my friend. He fought shoulder to shoulder with us in Texas for good government in our time.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "C. E. Dansby of Gatesville Dies Sunday," from the Waco (Tex.) News-Tribune for Monday, April 6, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(From the Waco (Tex.) News-Tribune, April 6, 1959]

C. E. DANSBY, OF GATESVILLE, DIES SUNDAY

GATESVILLE.—Charles E. Dansby, of Gatesville, died at 1:15 a.m. Sunday in a Gatesville hospital. He was 86.

Funeral services will be at 4 p.m. Monday in the First Baptist Church, of Valley Mills. Rev. Hugh Durham and Rev. J. D. Barnes will officiate with burial in Valley Mills

Wilkirson & Hatch Funeral Home, of Waco, is in charge of arrangements.

Mr. Dansby was born at the Norse community in Bosque County December 23, 1872. He was reared and educated in Bosque County, moved to Waco in 1926, to Valley Mills in 1930 and to Gatesville about 8 years

He was president of the First National Bank in Valley Mills from 1910 until resigning in 1918. On his return to Valley Mills in 1930, he again became president of the bank and served until 1932.

Mr. Dansby, in addition to being a banker, had wide farming, ranching, and oil interests.

He was a member of Gatesville Masonic Lodge No. 197, A. F. & A. M., was a charter member of the Karem Shrine in Waco and was a member of the First Baptist Church in Gatesville.

Mr. Dansby had been a Mason 55 years. Survivors are three sons, H. M. Dansby, of Texas City, C. T. Dansby, of Gatesville, and C. E. Dansby, Jr., of Valley Mills; four daughters, Mrs. L. E. Walker, of Valley Mills, Mrs. Pat Sherwood, of Clifton, Mrs. A. P. Ratjen, of Tula, and Mrs. Olon F. Fox, of Tyler: 14 grandchildren and 16 great-grandchildren.

### A Lesson in Economics

EXTENSION OF REMARKS OF

### HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. DEROUNIAN. Mr. Speaker, I commend to the attention of our colleagues, and especially to those who so strenously insisted that economic recovery was possible only through Gov-ernment intervention, the following article by Roscoe Drummond, which appeared in the June 15 issue of the New York Herald Tribune:

OF RECOVERY

WASHINGTON .- The continued rise in employment, the continued rise in average weekly factory earnings, the continued rise in sales, the continued rise in capital spending for new factories and machines, the continued decline in unemployment—these developments are the most impressive proof of the resilience of the Nation's free, competitive economy.

These are reassuring and welcome develop-

They are welcome because they are humane; they mean that millions more Americans are working and sharing well in the common prosperity.

They are reassuring because they constitute precious assets in the cold peace, for the whole free world.

There is every reason to examine these assets with satisfaction: (1) Unemployment at the lowest level in 17 months, down in \*May to 3,389,000, about 1,500,000 below a year ago; (2) employment at 66 million, a new May record, 1 million above a year ago; (3) average weekly factory earnings exceeding \$90 for the first time; (4) prices continuing stable.

It is all to the good to proclaim these facts, as many spokesmen for the administration are doing.

But what is more important is to ask ourselves what brought about this virile recovery, a recovery which an objective and expert analyst like J. A. Livingston, says "is assuming classical proportions." In other words, what is the real lesson, the economic and political lesson, to be learned from the experience of the past 2 years?

The economic facts of the recovery are becoming clear, but is the lesson to be drawn from the recovery becoming clear? It seems to me that this lesson ought to be faithfully examined and pondered by every worker and every union leader, by every businessman and banker, by every Congressman and politician, by every economist and every professor, by every voter—Democratic, Republican, and independent.

It seems to me that the lesson is this:

That the economists and the lobbyists and politicians—thoroughly honest advocates all—who believed that the recession could only be turned back by massive Government intervention in the economy, have now been twice proved wrong; proved wrong in the recovery from the 1954 recession, proved wrong in the recovery from the 1958 recession.

That twice a vigorous recovery has been led by the private sector of the economy, by consumers and by businessmen and that it can now be seen in retrospect and again, if necessary, should be seen with foresight that major tax reduction and planned deficit spending were unneeded and undesirable.

That the Eisenhower administration was both prudent and courageous in standing against massive intervention in the economy and that this course of action, far from being a casual and callous neglect of the Nation's welfare, served the greatest good of the greatest number.

The recovery of 1959 is proving to be closely parallel to the recovery of 1955. The pace and thoroughness of both recoveries, achieved without massive Government intervention-aided, it should be frankly admitted, by the rise in the postsputnik defense spending-exceeded the forecast of those who appeared to have little faith in the dynamic forces of our enterprise economy.

I don't mean the Government has no role in cushloning a recession or in promoting recovery. No recession is exactly the same as another and you wouldn't want to rule out deficit spending. But isn't it time we recognized that big public works and big tax cutting are not the first or best sources of economic growth?

# U.S.-Soviet Exchange Urged

EXTENSION OF REMARKS OF

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 15, 1959

Mr. WILEY. Mr. President, as we know, the challenge of reducing East-West tensions continue to be one of the major problems confronting the world.

The unproductiveness of the Geneva Conference again emphasizes the need for, and examination of, new ideas.

We recall that, over the years, a variety of approaches have been put forward, aimed at improving understanding between people of the Western World and those behind the Communist curtains. Particularly significant has been the people-to-people program, which, through private initiative, is stepping up the exchange of people, ideas, and information.

At this time, I want to call attention to a proposal for increasing the exchange of American and Soviet citizens that is receiving ever-widening attention in Wisconsin and elsewhere in the country.

The plan-a kind of open city idearecommends the exchange of delegations of citizens between whole communities, for example, of the Soviet Union and the United States.

A number of communities in Wisconsin have examined the proposal and have officially informed the State De-partment they are ready to exchange delegations with the Soviet Union.

Originator of the plan-and its prime enthusiast-is Dr. Edmund Zawacki, chairman of the Department of Slavic Languages and Literature at the University of Wisconsin.

The June 12 issue of the Christian Science Monitor carries an item describing this plan and its objectives. To give my colleagues the benefit of this approach to resolving East-West problems, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLD WAR REMEDY?-U.S.-SOVIET EXCHANGE URGED

### (By Godfrey Sperling, Jr.)

Madison, Wis.—From Wisconsin, tradi-tionally the State of new ideas and experiment, has come projection into global affairs—a plan for a massive exchange of leading American and Soviet citizens.

Originator of the plan, University of Wisconsin Professor Edmund Zawacki calls his proposal "power politics with moral force,

the opposite of war."

So persuasive is Dr. Zawacki's idea that wisconsin communities have joined the "open city" plan, officially informing the State Department that they are ready to exchange delegations of citizens with the Soviet Union.

Madison, Wisconsin's capital city (population: 100,000), has suggested Kazan on the middle Volga as its exchange partner. Kazan would be of comparable size and geographical location inside the Soviet Union to that of Madison.

With these same geographical and population factors in mind, Appleton, Wis. (30,-000), has suggested Arzamas; and Belleville, Wis. (900), has suggested a village near Kazan.

Latest community to foster the program is Jefferson City, Wis.

### PLAN EXPLAINED

In Jefferson City, the city council first heard two attorneys, Richard Smith and J. M. Slechta, explain the "open city" plan. Then the council voted to send a letter to the State Department, offering to exchange delegations. The council voted to send between 5 and 10 delegates to a Soviet city

near Kazan. Dr. Zawacki, chairman of the department of Slavic languages and literature at the university here, says he already has the backing of Senators William Peoxmire, Democrat of Wisconsin, and Jacob K. Javirs, Democrat of New York, for his plan.

If the Zawacki proposal were carried out fully, delegations from some 20,000 American communities would be exchanged with comparable Soviet delegations.

Dr. Zawacki says that such an "open city" program of reciprocal city-to-city visiting on this massive scale would be a self-enforcing peace as opposed to coexistence.

All expenses for these visits, as Dr. Za-wacki sees it, should be paid by the host countries. He feels it would require a congressional appropriation of \$250 million. He says this is a small price to pay for a workable peace program. He says that without such a program coexistence is merely a drift toward thermonuclear war.

### COEXISTENCE OR PEACE

He says the choice before U.S. policy never was, and is not now, thermonuclear war or coexistence, but coexistence or peace.

Would the Soviets be able to accept such

a plan?

'The political results expected from resolute American launching of the open city idea on a total scale like this," says Dr. Zawacki, "do not depend at all on the immediate and actual practice of city-to-city visits, but upon a cumulative and relatively swift precipitation inside the Soviet Union of an active public opinion on this issue, hostile to the negative stand that the Communist regime must take in every city, town, and village in the U.S.S.R."

Thus it seems that Dr. Zawacki feels that a great deal could be gained by the United States in merely adopting the "open city" plan in principle. He does not look upon the plan, however, as a "propaganda tactic." He doesn't like the insincerity overtones in the word "propaganda." He feels that the United States should adopt his plan with full sincerity, taking every step necessary to implement it. Of the initial impact on Moscow he has this to say:

The idea is as simple as it is tremendous, and no Communist regime can accept this friendly American proposal and hope to continue its totalitarian monoparty, political control thereafter over the vast population outside the Communist privilegentsia.

### CURIOSITY TAXED

"Nor can the Communist leadership in the U.S.S.R. repeatedly reject this American proposal, held in a continuous glare of worldwide publicity, and hope to escape the mounting wrath of the Russian people.

"It is conceivable that the Russian people's deep tradition of hospitality, their equally deep curiosity about everyday life in the United States, and their normal human desire to avoid biological extermination in a thermonuclear holocaust would outweigh their concern, if any, for the longevity of the Iron Curtain and the Communist monoparty system that cannot exist without it."

But Dr. Zawacki says that what would happen to the Communist regime in the Soviet Union would be the business of the Soviet people.

"Our business," he emphasizes, "is only to demonstrate to the Russian people that our 'open city' proposal is friendly, sincere, and

serious."
Dr. Zawacki points out that his suggestion is in line with the Lacy-Zarubin agreement of January 1968, for cultural exchange between the United States and the Soviet Union: "Both parties will promote the development and strengthening of friendly contacts between Soviet and American cities."

He feels that 2-week visits for these delegations would be sufficient to break down the doors of misunderstanding between the two nations.

Most of all, Dr. Zawacki stresses that this would be power politics with moral force. 'If power politics of this new kind," he says. "is acceptable as a realistic definition of peace in the hydrogen age, it is perhaps time to practice it and quit trying to make friends of Communist Parties and quit talking ponderous nonsense about mere sur-vival. People want to live, not survive."

# The Voice of Democracy: Address by Herman Mast

EXTENSION OF REMARKS OF

# HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES Monday, June 15, 1959

Mr. SCHOEPPEL. Mr. President, on May 23 of this year, in the city of Wichita, Kans., a State convention of the Kansas Radio Broadcasters was held. On that occasion the winner of the Voice of America contest was Herman Mast, of 208 West 15th Street, Lawrence, Kans. I ask unanimous consent that his excellent speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

### VOICE OF DEMOCRACY

It was a bright and beautiful morning, but then, only as you would expect, considering it was June 15 in that year of 1950. On his way up from the field, grandfather was thinking that everything was intact; grandmother was busy in the kitchen preparing a hearty breakfast for grandfather was a hearty man, as most farm men are. this was not just another day among the many I spent at my grandparents' farm that morning the air was filled with an excitement so special in the life of a small boy. Today was to see the purchase of my very own bicycle, so we got into the family pickup and traveled to a neighboring town to make the purchase.

Home again, with a shiny new bike and with likewise new ambition to travel to new places. As I started down the narrow lane. I noticed that nothing was in my way, and the only thing necessary for a trip across the beautiful Kansas plain which stretched out before me on this nice summer day was the strength to paddle my new bike.

It did not occur to me, as a small child, and would not occur, in many cases, to the oldest and wisest of adults, that this bicycle was a product of our capitalistic society, paid for with money drawn from a Government insured savings account, and that it may travel over highways constructed for the use of all.

Creditors and debtors, leaders and followers, must all obey the same set of rules and responsibilities that have been agreed upon by at least one over half of them who took the time to vote, on that day when they are all equal in power and wealth, that day when they mark their secret ballot.

We must not neglect our responsibilities. we must obey, with respect, our rules, and we must stop apologizing for our capitalistic

It has made us strong without corupting our humane sympathies for the world of starving or staggering collectivist or semicollectivist nations around us. When you hear the sneers of critics across the water, remember they come from people who are crying to us for help and are sneering at the social system that has made us strong enough to give that help. In many of these foreign countries, the bicycle is the principal means of transportation, but it probably never occurred to our sneering critics that their bicycle has physical laws similar to those of our own democracy. Democracy is like my new bike.

THE FASTER IT GOES, THE LESS LIKELY IT IS TO TIP OVER

If it leans to one side, we simply lean in the opposite direction to correct it. And to accomplish its purpose, it must maintain its balance. Just as a small boy must master the technique of riding a bicycle, so we, as parents, adults, citizens, and yes, even teenagers must master the technique of a democracy.

I am like you, I stand for rules, responsibilities, and the conscientious or complacent people exercise or lose these coveted privileges, which millions long and hope for, fight and die for, receive and fail to work for. In short, I speak for democracy.

That line that forms right from wrong, the dent in the high hat, the feeling of vitality, the score at the beginning of the ninth, the suspicions of the people who are free to express their fears. I speak for quick TV dinners and slow income tax returns, the chain that never breaks, the frame that never seems to come apart, the valve core through which air never seems to leak. I speak for an idea yet to be disproven. I speak for the guiding hands on the handlebar which make the right turn more than 50 percent of the time. I speak for U.S. That's spelled, capital U period, capital S period.

### Coal Research and Development Act

SPEECH

OF

### HON. WINFIELD K. DENTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6596) to encourage and stimulate the production and conservation of coal in the United States through research and development by creating a Coal Research and Development Commission, and for other purposes.

Mr. DENTON. Mr. Chairman, I rise in support of H.R. 6596, the bill to encourage and stimulate the production and conservation of coal in this country through research and development and by creating a Coal Research and Development Commission, and for other purposes.

At the present time there is great unemployment in the Nation's coalfields. Perhaps no other industry has been so hard hit. Despite the fact that coal is our country's greatest remaining natural mineral resource, we have seen a great decline in its use in the past 10 years. A decade ago, more than 500,000 coal miners were employed by the industry; today, we have approximately 225,000. Last year we only mined 410 million tons of bituminous coal, in contrast to the

more than 500 million tons of coal produced 10 years ago.

Not only does the situation in the coal industry weaken our national economy, but it also endangers the security of our country. Should there ever be an outbreak of war, this Nation would be forced to rely on coal as its principal fuel. For that reason alone, it is essential that the Federal Government see that our Nation's coal industry is able to supply the great quantities of coal which would be needed for national defense.

The bill which is under consideration today would be beneficial to the entire Nation, and not just to the coal-producing areas alone. By setting up a research program into better and more economical ways of producing and using coal, this bill will provide for lower coal costs, newer uses, and other developments that will improve the economic position of the industry at large and also benefit consumers of coal, coal mine workers, distressed coal mining communities, and the general public.

Creation of this coal research and development program for coal will also aid our national security by insuring that our coal industry will be able to meet the demands on it in future years, and by finding ways to better utilize coal; thereby conserving this natural resource.

The Coal Research and Development Commission provided for in this bill will conduct, sponsor, cosponsor, and encourage coal research, and will cooperate fully with all other research agencies. both governmental and nongovernmental, in order ot prevent duplication of research. At the present time, there is very little coal research being conducted. The Bureau of Mines is doing some research, but it is mostly of a long-range nature, whereas what is needed is research directed toward assisting the coal industry with its immediate or shortrange research and development problems. The coal industry has done the best it can with limited means, but has been able to spend only around \$17 million annually on research. By way of comparison, research expenditures by the petroleum industry in 1953 were \$145.9 million; textile industries, \$280 million; rubber products, \$53.6 million; and chemical industry, \$361.1 million.

I urge enactment of H.R. 6596, as a measure that would help the coal industry, and industries dependent on it, the consuming public, and our national security.

# Recovery Lessons: Industry Given Credit

EXTENSION OF REMARKS

# HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by the well-known columnist, Roscoe Drummond, appeared in

this morning's Washington Post and Times-Herald, June 15, 1959. It points up the strength and resiliency of the American free enterprise system. This system is something most of us politicians know little about and have done much to destroy.

Mr. Drummond does well to point out how the present administration, through a minimum of Government interference, made possible the recovery of 1954 and turned back the recession of 1958, which has now turned into an era of great prosperity, surpassing many of our wildest hopes, and confounding the prophets of doom and gloom who, for political reasons, hoped for a complete depression similar to that of 1929:

RECOVERY LESSONS—INDUSTRY GIVEN CREDIT (By Roscoe Drummond)

The continued rise in employment, the continued rise in average weekly factory earnings, the continued rise in sales, the continued rise in capital spending for new factories and machines, the continued decline in unemployment—these developments are the most impressive proof of the resilience of the Nation's free, competitive economy.

These are reassuring and welcome developments.

They are welcome because they are humane; they mean that millions more Americans are working and sharing well in the common prosperity.

They are reassuring because they constitute precious assets in the cold peace—for the whole free world.

There is every reason to examine these assets with satisfaction: (1) Unemployment at the lowest level in 17 months, down in May to 3.389,000, about 1,500,000 below a year ago; (2) employment at 66 million, a new May record, 1 million above a year ago; (3) average weekly factory earnings exceeding \$90 for the first time; (4) prices continuing stable.

tinuing stable.

But what is more important is to ask ourselves what brought about this virile recovery, a recovery which an objective and expert analyst like J. A. Livingston says "is assuming classical proportions." In other words, what is the real lesson—the economic and political lesson—to be learned from the experience of the past 2 years?

The economic facts of the recovery are

The economic facts of the recovery are becoming clear, but is the lesson to be drawn from the recovery becoming clear?

It seems to me that the lesson is this:
That the economists and the lobbyists and
politicians—thoroughly honest advocates
all—who believed that the recession could
be turned back only by massive Government
intervention in the economy, have now been
twice proved wrong; proved wrong in the recovery from the 1954 depression, proved
wrong in the recovery from the 1958 recession.

That twice a vigorous recovery has been led by the private sector of the economy, by consumers and by businessmen, and that it can now be seen in retrospect, and again, if necessary, should be seen with foresight that major tax reduction and planned deficit spending were unneeded and undesirable.

That the Eisenhower administration was both prudent and courageous in standing against massive intervention in the economy and that this course of action, far from being a casual and callous neglect of the Nation's welfare, served the greatest good of the greatest number.

The recovery of 1959 is proving to be closely parallel to the recovery of 1955. The pace and thoroughness of both recoveries, achieved without massive Government interven-

tion—aided, it should be frankly admitted, by the rise in the post-sputnik defense spending—exceeded the forecast of those who appeared to have little faith in the dynamic forces of our enterprise economy.

I don't mean the Government has no role in cushioning a recession or in promoting recovery. No recession is exactly the same as another and you wouldn't want to rule out deficit spending. But isn't it time we recognized that big public works and big tax cutting are not the first or best sources of economic growth?

The Budget: End Versus Means

EXTENSION OF REMARKS

# HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an editorial "The Budget: End Versus Means," appearing in the New York Times of June 12, 1959.

As the editorial well said:

But if a budget balance is reached in 1960 the President will have to credit important assists to first, the political opposition, and second, a business recovery more vigorous than he could possibly have foreseen in January.

By "the political opposition" is meant the Democratic Party in the Congress.

A pointed illustration of this fact is the bill increasing the International Monetary Fund by only \$1,370 million.

According to the evidence presented to congressional committees, none of this money will be spent until after July 1, 1959—in fiscal year 1960. The authority to take advantage of this very large increased amount should, in fact, be in fiscal year 1960. If this happened, the alleged statement of the President of a balanced budget would have been destroyed.

The President wanted this authority charged up to fiscal year 1959, because the deficit for this year will be over \$12 billion. In other words, to the President and the Republicans, a deficit of over \$12 billion this fiscal year is of no signficance in relation to inflation or a sound dollar.

The Democratic-controlled Congress complied with the President's request changing this tremendous sum to 1959 fiscal year expenditures rather than to 1960 fiscal year.

The President calls for "a sound dollar." Everyone, even the youngsters attending our high schools, want "a sound dollar."

But when the President calls for "a sound dollar" now, that justifies the inference that he thinks we now have an "unsound dollar."

This, then, raises the question, "Which political party has been in control of our Government for the past 6½ years?"

The answer: The Republican Party.
THE BUDGET: END VERSUS MEANS

The budget submitted to Congress by the President on January 19 foresaw expenditures of \$77 billion and receipts of \$77.1

billion. Since the revised budget estimate for the present year pointed at the time to a deficit of \$12.9 billion the President's estimate for 1960 indicated an over-all improvement of \$13 billion.

The increase in receipts from this year's \$68 billion to \$77.1 was based predominantly on an expected business recovery and a corresponding rise in tax yields. But the hope of a balanced budget for 1960 also rested on certain assumptions as to added revenues to be provided by Congress. One or two of these at least, such as revenue for the interstate highway program on a payas-you-go basis, are no less a question mark today than they were then.

As for the proposed reduction in spending by \$3.9 billion, that, unfortunately, was less impressive than it sounded. For example, what appeared to be a reduction of \$775 million in the farm price support program merely indicated the termination of the acreage retirement section of the Soil Bank plan. Another major item, a drop of \$2.564 million in the housing program, reflected a decline in the estimated need for support of the Government-guaranteed mortgage market. Moreover, another illusion involving \$1,375 million entered the plan for achieving a balanced budget next year. This was to prevail upon Congress to pass the legislation increasing our subscription to the International Monetary Fund early enough so that this large sum would fall within the 1959 budget, thus adding \$1,375 million to the 1959 deficit in order to bring about the hoped-for balance

Last week conferees of the Senate and House went along with the scheme, which could conceivably prove to be the determining factor in the balancing of the 1960 budget.

in next year's budget.

One may argue that a balance budget, even if achieved by somewhat meretricious means, is better than an unbalanced budget. But if a budget balance is reached in 1960 the President will have to credit important assists to (1) the political opposition, and (2) a business recovery more vigorous than he could possibly have foreseen in January.

Extemporaneous Remarks by the President at the National Conference on Civil Rights, Held at the Hotel Statler, June 9, 1959

EXTENSION OF REMARKS

# HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. LINDSAY. Mr. Speaker, I am privileged to include in the RECORD for the perusal of the Members, the remarks made by the President of the United States before the National Conference on Civil Rights on June 9, 1959:

EXTEMPORANEOUS REMARKS BY THE PRESIDENT AT THE NATIONAL CONFERENCE ON CIVIL RIGHTS, Held at the Hotel Statler, June 9, 1959

Mr. Chairman and my friends, I came over here this morning primarily to thank you for your undertaking of a work that in my opinion is one of a vital, prime importance to the United States and to its future.

Because the problem in which you are involved is an emotional one, it is certain

that you have to have qualities of courage to undertake it. But above the quality of courage it is quite necessary that we have within our breats, if we are to do this work, those feelings of compassion, consideration and justice that derive from our concepts of moral law.

'I say moral law rather than statutory law because I happen to be one of those people who has very little faith in the ability of statutory law to change the human heart, or to eliminate prejudice.

I think that the Congress was wise in establishing this Commission because thevery purpose of the commission is conciliatory, factfinding, and giving examples to us. Indeed at times I think it holds up before us all a mirror so that we may see ourselves, what we are doing and what we are not doing, and therefore making it easier for us to correct our omissions.

There can be no doubt that America has not reached perfection in attaining the lofty ideals laid down for us in our founding documents and in the amendments that have been made to our Constitution. The important thing is that we go ahead, that we make progress. This does not necessarily mean revolution. In my mind it means evolution. This is what we are talking about.

We are saying that the concept of equality among men is equality in their opportunities, that we do not deny them that opportunity. I think no one could find complete equality between any two individuals in the world, if we wanted to take absolute values in all of their spiritual, intellectual and physical connotations. But we can talk about equality of opportunity, guranteed to each person in this Nation.

Just as the members of that commission have undertaken a job that is difficult, so each of the State commissions has done the same. The progress that you are going to help achieve is that of education, promoting understanding to see that we come nearer to achieving our ideals without necessarily, or maybe not even wisely, trying to place on our statute books too many punitive laws.

If I may digress from the exact subject of which I have been speaking, and which, of course, is occupying your thoughts and efforts while you are here, I should like to talk about the word "understanding" for just a moment.

The Federal Government in both its legislative and executive branches is involved in many problems that are most difficult of solution. In fact, some of them, under the particular conditions of the present, seem almost to defy solution: all we can do is to hold the line and wait for some change in either material or, let us say, mental conditions in which people are living. But the big, the strong thing, that must be behind the whole effort of the United States is understanding at home on the basic issues. This is needed to bring about higher standards of living in our own country, to make certain that free areas in other parts of the world do not go under the domination of communism, to make certain that our alliances are stronger through the intellectual, spiritual, and material development of those countries with which we are allied.

We are too often swayed by slogans. For example, in the fields in which the United States is attempting to help other free countries so that together we may be safer and stronger and more confident, we use the slogan "give away." I submit, any intelligent man that will look at the world today and can find it in his heart to condemn America's purpose and her efforts to bring other free nations into a higher level of sturdier better allies, more effective allies, then he is following a line of reasoning which I cannot follow.

All of our domestic problems, including the one now before you—the equality of opportunity of all men regardless of inconsequential considerations—comes in the same category of demanding understanding. This is so whether it be the farm program, the debt program, the need for reducing Federal expenditures, how we want to expand in one direction and contract in another. All demand understanding.

mand understanding.

None of these problems, when you come down to it, can be dealt with in a vacuum. They are not mutually exclusive. In almost all cases, you will find them interdependent.

As we achieve a better level of equality, of opportunity in this country, our own national prestige and leadership is enhanced. Our economic problems are involved often with this same subject with which you are now dealing. Therefore, not only by developing a better understanding in these basic issues can we help solve the problem with which you are specifically concerned this morning, but by bringing your own minds and hearts into focus on this particular question you helped to develop better understanding through the whole of the United States. Remember, in a democracy, the only mo-

Remember, in a democracy, the only motivating, energizing force is public opinion. If that public opinion is well informed, then the United States will act wisely and strongly and fairly at home and abroad.

So you are not solving, or helping to solve, just one problem. You are working for America. I say to you, in my opinion, there can be no better thing to do.

Thank you very much.

### We Lose

EXTENSION OF REMARKS

# HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the daily CONGRESSIONAL RECORD I include an editorial from the June issue South Carolina Electric Co-Op News entitled "We Lose":

WE LOSE

When the House of Representatives, by the narrowest of margins, let the President's veto of the Humphrey-Price bill stand, we lost—and by we, we mean the rural people of America.

By this action, the Congress leaves lifeand-death control of the Rural Electrification Administration in the hands of a man whom Congress did not even confirm. In theory, Secretary Benson is charged now with approving or disapproving REA loans. He delegates this authority to Ken Scott, a political appointee responsible only to Mr. Benson.

REA Administrator Dave Hamil is bypassed with just a nod and no authority. Actually, Mr. Hamil is saddled with a vast amount of responsibility but he is without authority. That's kind of like hiring a man to run a farm for you, but telling him he cannot buy fertilizer in anything bigger than 10-pound bags.

It also means that when your co-op president goes to Washington to seek a loan to heavy up your lines, he talks with Mr. Hamil about borrowing the money. But Mr. Hamil is not the man who says yes or no.

Your co-op president doesn't even get to see the man with the answer, Ken Scott. Your president can't even explain face to face his needs, As NRECA general manager Clyde Ellis said, "Centralized government has enough evils at best. We must not make it worse by keeping the citizen from dealing face to face with the decision maker, and this is exactly what has happened to you; you can talk to the Administrator about your loan application, but you know the final decision is not his."

Anyway, in beating the attempt to override the President's veto, the Republican administration was forced to haul out its biggest gun—meaning the biggest of all, Mr. Elsenhower. It was he who whipped the Republicans into line and made the vote a party-line affair. And somewhere along the way, somebody talked some Democrats into voting Republican.

Anyway, Mr. Eisenhower continues to rule by veto and Mr. Benson goes his merry way toward turning all American farms into corporations.

# June Dairy Month

EXTENSION OF REMARKS

# HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. EVERETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, "June Dairy Month."

The author of this article is Ed Jones, who has a weekly column entitled "Down on the Farm" in the leading county newspapers in the Eighth Congressional District of Tennessee. Mr. Jones is a very capable and able agricultural agent with the Illinois Central Railroad. He is a former Commissioner of Agriculture for the State of Tennessee and certainly is an outstanding leader in agricultural affairs of the entire State:

### JUNE DAIRY MONTH

(By Ed Jones, agricultural agent, Illinois Central Railroad)

Much has already been written about June being Dairy Month. It is observed nationally and a big push is on to get more and more consumers interested in consuming more dairy products. More milk and milk products are needed in the average diet, yet as our population increases, the number of dairy cattle continues to decrease. The per capita consumption of dairy products in some fields has also decreased and all dietitians admit that it is nature's most perfect food. A good many people fail, however, to include as much milk and milk products in their diet as they should.

One of these groups who fail to consume milk and dairy products to the level that they should are our own farm people. For some reason, they just simply do not use as much as the actually need in many cases.

The dairy industry is a very important business in this country. The number of farms which produce milk has dropped from 2,340,000 15 years ago to to less than 1,250,000 today. Dairy farms and dairy farmers are getting larger in size, therefore the number in business is naturally on the decline. It is said that with the present application of technological knowledge that it is possible for 325,000 farms or less to produce all the dairy products required by our Nation today. If that were the case, the average dairy farm would have 40 producing cows with each cow producing 10,000 pounds of milk per year.

The dairy industry through its own organization, the American Dairy Association, is doing a wonderful work of selling its own business. Through a system of voluntary deductions based on the amount of milk sold, dairymen are advertising their business. This is Dairy Month throughout this land and it would behoove every citizen to join with dairy farmers and consumemore milk and dairy products, not only for this month but for all months to come. For your own health's sake, drink more milk and use more dairy products.

# No Easier, Less Painful Way To Reduce National Debt

EXTENSION OF REMARKS

# HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. FINO. Mr. Speaker, I am happy to insert in the Appendix of this Record an editorial from the Fort Lauderdale News which appeared in that paper on June 10

In view of the current fiscal headaches of our National Government, I am certain that the Members of this Congress will find this editorial most interesting. I urge that each and every Member take time out to read it:

NO EASIER, LESS PAINFUL WAY TO REDUCE NATIONAL DEBT

(By Jack W. Gore)

With the Eisenhower administration again asking Congress to approve another hike in the statutory limit of the national debt, and many legislators and Government officials now frankly worried about when, if ever, there is ever going to be any attempt to stabilize and reduce this gigantic debt load, we think it is about time further consideration was given to the proposition of establishing a national lottery in this country.

We fully realize that even mentioning such a subject is apt to draw horrified comments from some segments of our society. We also fully realize that many of our legislators, while they might look with favor on the idea of setting up a national lottery, would never take the lead in proposing or supporting such a project.

But let's look at this national lottery business in a realistic light. The basic objection to the idea is that it would stimulate our people to gamble, and that many of them would be inclined to put money into lottery tickets at the expense of family comforts or necessities.

This might well be true in a very limited number of cases. But anyone who is familiar with the manner in which the American people already gamble must realize that a legalized lottery would certainly not create any conditions in this Nation that already don't exist to a tremendous degree.

Think, for instance, of the millions of dollars that are wagered every day in this Nation at our horse, dog, and harness tracks. Think of the billions that are bet on baseball and foetball pools and on boilta and other forms of illegal gambling, all the profits of which go into the pockets of the underworld. Think of the speculation, which is just a polite world for gambling, now going on in the stock market, and think of the millions of dollars that change hands every week on our golf courses, around our card tables, and in other types of friendly wagering. Think, too, of the millions of dollars that flow out

of our Nation every year on foreign lotteries such as the Irish Sweepstakes.

Whether we like to admit it or not, gambling in this Nation is a multi-billion-dollar industry which goes on all the time and which will continue to thrive in one form or another despite the most strenuous efforts we can make to stop it and despite all the pious protestations that it is an immoral thing.

Man is by his very nature a gambling creature as living itself is a gamble against the forces which are constantly working to deprive a man of his life. And it makes no sense, whatsoever, to take the position that while there is nothing wrong or evil about wagering a couple of dollars on a horse race, there is something evil or wrong about wagering the same couple of dollars on a

lottery ticket.

There is currently pending in the Congress a bill introduced by Representative Paul. Fino of New York, which would establish a national lottery for this Nation. Since this is a revenue measure it has been referred to the House Ways and Means Committee, where it has been languishing for many months because none of the Members of this powerful House committee have any desire to take the buil by the horns and even discuss the possibility of establishing a lottery as a means of either reducing the national debt or of financing some other extremely worthwhile venture which is going by the boards now because of no money being available.

Offhand, we don't know how much the Government might be able to raise each year out of the proceeds of a national lottery. But we believe the amount would be very substantial, particularly if the Government followed the practice of other nations having lotteries and made lottery winnings

tax-exempt.

Few people in this Nation would kid themselves about their chances of winning a tidy fortune on a lottery. Most of them would realize the odds against them, but that wouldn't prevent them from risking a few dollars on the outside chance they might be one of the lucky winners. And, in most cases, the money they might devote to the purchase of lottery tickets would not be money that was urgently needed for some necessity but instead would be money that would otherwise go for something frivolous, entertaining or just as speculative.

From a realistic and practical standpoint, there are no arguments that can be raised against a nationi lottery that cannot be raised against other types of gambling that have been legalized as a means of providing Government with some much-needed and

easy-to-get revenue.

Certainly, the way things are going today, something is going to have to be done soon to start getting our national debt reduced and we can think of no easier or less painful way to get started on this project than by establishing a national lottery and applying the proceeds to reducing a burden that now amounts to over \$1,700 for each man, woman and child in our Nation.

# Fair Play?

EXTENSION OF REMARKS

# HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. DEROUNIAN. Mr. Speaker, the following editorial in the June 11 edition of the Seattle Post-Intellingencer ex-

presses the indignation of millions of Americans at the treatment being accorded Lewis L. Strauss:

STRAUSS SCANDAL

The testimony in the matter of the confirmation of Lewis L. Strauss has been published in a document which consumes 1,128 pages of material.

As 'no one can read 1,128 pages of fine print with sufficient repidity from beginning to end in the time available to form a judgment before this Congress adjourns and attend to any other normal business, the heavy volume will be set aside for further consideration.

Even a casual glance at this mountain of testimony shows that it is the lowest form of what the liberals call McCarthyism. In a word, an attempt is made to lynch a man, to destroy his character, to paint him as a natural born villain, to question his probity, to deny his patriotism and his great services to the United States over a period of more than 40 years—&I for the purpose of humiliating the man and ending his career in public life.

Senator Anderson, of New Mexico, continues a vindictive vendetta against Lewis L. Strauss for private reasons. There can be no public ones. He has established it in the Senate that a Democrat who votes for Strauss is his (Anderson's) personal enemy. It is one of the most curious situations

It is one of the most curious situations ever to befall the U.S. Senate and even those who support Anderson, out of regard for him, do not understand his violent vindictiveness.

# The Family Poultry Farm

EXTENSION OF REMARKS

# HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks I wish to include a resolution recently adopted by the Columbia and Rensselaer County Egg and Poultry Producers Association setting forth the expressions of that organization in connection with the plight of the poultry farmer.

The cost-price squeeze of that industry, I understand, will be the subject of hearings before the House Agriculture Committee this week and will include current marketing conditions of eggs and poultry. The subject of corporation farms seems to be involved in the poultry industry, as it is in other lines of agriculture, and I trust that the committee will be able to expend its efforts in behalf of the family farm rather than the big fellow. This problem is definitely related to the Nation's economy and especially to full employment. We cannot drive the small farmer into the city and maintain a balanced economy with a flooded labor market.

I trust that the committee will be able to formulate constructive legislation before Congress adjourns, profiting however, from our unfortunate experiences in other lines of agriculture. The association's position is set forth in the following resolution:

We, the Columbia and Rensselaer County Egg and Poultry Producers Association recognize that supports by Government have

not helped us. We are therefore opposed to subsidies or price supports, and urge the withdrawing of all supports on grains and other commodities. Government assistance is needed. We feel this to be in the direction of production controls, such as, regulating unfair competition by limiting or excluding bankers, whether feed companies or other outside entrepreneurs, from financing the establishment of farm enterprises in competition with the family farmer. We also urge that Federal legislation be enacted which will compel all who engage in poultry farming to file a separate income-tax report for this enterprise.

New Glory for Cld Glory

EXTENSION OF REMARKS

# HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. FOLEY. Mr. Speaker, yesterday was Flag Day. Throughout our land, our flag was properly displayed by homeowners, farmers, business places, and towns. An organization with a special mission to glorify our flag are 8,600 dry cleaners who are members of the National Institute of Dry Cleaning. The institute is located at Silver Spring, Md., in my district.

Because of the patriotic efforts of the members of the institute to encourage the flying of a clean flag, the Freedom Foundation honored this fine group with its George Washington medal for 1958.

Members of the institute, for the sixth consecutive year, cleaned flags free between June 1 and June 12. In support of this patriotic effort, 17,000 American Legion posts under the leadership of National Commander Preston J. Moore, encouraged citizens to fly clean flags June 14, by accepting the offer of the institute members. Recognition of the institute's patriotic effort was nationwide.

For the purpose of emphasizing this constructive work by the institute members to the end that deeper reverence for Old Glory will be stimulated, the following references are included in the Congressional Record.

[From the Jackson (Miss.) Clarion-Ledger, May 16, 1959]

CLEANING OLD GLORY

(By Drew Pearson)

The National Institute of Dry Cleaning has found that few Americans want to clean the Stars and Stripes.

With Flag Day approaching on June 14, most of the 35,000 dry cleaners in the Nation have come up with their annual offer to clean Old Glory for anyone between June 1 and June 12—if their customers promise to fly it on Flag Day.

But there aren't many takers. Maybe it's because it has gotten to be "corny" to fly the flag, or maybe folks are waiting for the approval of the 50-star design before unfurling the new Old Glory.

Nobody seems to have the answer. But with Memorial Day coming up on May 30, Flag Day on June 14 and Independence Day on July 4, now might be a good time to take

advantage of the dry cleaners' generous offer of supplying "New Glory for Old Glory."

[From the Pittsburgh (Pa.) Sun Telegraph, June 3, 1959]

### FLAG DAY OFFER

The National Institute of Dry Cleaning has thought up a very good idea for Flag Day, June 14. In this good idea the American Legion joins.

Institute members will accept American flags for drycleaning, free of cost, from now to June 12 if the flag's owner agrees to fly the country's banner on Flag Day

This is a generous and patriotic gesture on the part of this industry and is worthy of

the applause of all Americans.

But applause is not sufficient. Let us fly the flag on June 14. Let Pittsburgh be a forest of flags, waving in the breeze-an emblem of freedom and good will.

Frank Park Samford: Man of the South for 1958

> EXTENSION OF REMARKS OF

# HON. GEORGE HUDDLESTON, JR.

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. HUDDLESTON. Mr. Speaker, in January of this year a very significant recognition came to an outstanding citizen of my district. Mr. Frank Park Samford, president of the Liberty National Life Insurance Co., was selected as Man of the South for 1953. This award is presented annually by the magazine Dixie Business, published in Decatur, Ga. Mr. Hubert F. Lee is the magazine's editor.

All of us in Birmington are proud of this honor which has been bestowed on

one of our truly great people.

Under leave heretofore granted, I am pleased to insert herewith in the Con-GRESSIONAL RECORD a copy of an article; dealing with the award, which appeared in the most recent issue of the Dixie Business magazine, along with an editorial from the Birmingham (Ala.) News:

MAN OF THE SOUTH FOR 1958

(By Hubert F. Lee)

I stood in the street in Birmingham blowing a bugle, that long ago hot summer July day of 1918.

I was 17, and the enthusiastic patrol leader of the Devil Fish Patrol of old Boy Scout Troop 31.

With Ira McDavid, Shark Patrol leader, Ray McDaniel, Flying Fish Patrol leader, Howard Groves and Walter Wanderwell, assistant scout masters, we were on the last lap of a 650-mile hike that had taken us to Rome, Chattanooga, down the Tennessee on a river boat, Guntersville, Gadsden, selling war bonds on the street corners.

That is how I came to know and to love Birmingham, that giant industrial stronghold in beautiful Jones Valley a 4-mile-wide ribbon stretching 75 miles bordered by mineral rich mountains.

Birmingham is a young city. Its petition for charter was filed December 19, 1871. I was born December 19, 1900, and Dixie Business in November 1929. So it is only a third older than me and two-thirds older than Dixie Business.

When the late Dough Davis operated his airline, I traded advertising for trips to Birmingham, where Dixie Business had an office in its first year.

What a thrill to recall Doug break through the clouds and sun-splashed beauty of the mountains and see the giant smokestacks of belching fire and smoke from the great

When the Flowers for the Living movement began, Thomas W. Martin in 1946 and Donald Comer in 1947, were the first two to be named Man of the South.

They were among the 7 from Birmingham in 1949 when we picked the South's 50 foremost business leaders, which included Frank P. Samford, Lt. Gen. John C. Persons, Ed L. Norton, Maj. Clarence B. Hanson, Jr., and Robert Gregg.

As the honor group was changed to South's Hall of Fame for the Living with membership limited to 200, other Birmingham leaders were added: Hugh Comer, Frank E. Spain, Tom D. Spies, M.D., Bishop C. C. J. Carpenter, Louis Pizitz, Robert Jemison, Jr., Alston Callahan, M.D., John Temple Graves, and Milton Fies.

Practically all of these approved the election of Frank P. Samford as Man of the South, by letter or by their presence at the dinner January 20, 1959 at Birmingham's Mountain Brook Country Club when his friends honored him as the Man of the South for 1958.

Dr. John H. Buchanan, chaplain, Baptist hospitals, delivered the invocation:

'Eternal God, our Father, we invoke Thy blessing upon him whom we honor this evening. We thank Thee for his breadth of sympathy, his length of purposes, his height of ideals and his depth of character. We beseech Thee that all of us may seek to emulate these fine Christian virtues, so that we may serve humanity and glorify Thee as he has done in his useful life.

"Accept our gratitude for all the blessings this day has brought, we ask through Jesus Christ our Lord. Amen."

It was a wonderful and impressive testimonial, with every man present an outstanding leader in his own right.

Frank E. Spain, noted lawyer and past president of Rotary International was master of ceremonies.

Mr. Samford was presented the Gold Key to Birmingham by Roy Hickman, who heads he chamber of commerce—"for the honor you have brought Birmingham."

A file of letters and telegrams was given Mr. Samford from friends over the Nation extending congratulations.

A. J. Chapline Hodges so aptly put it in a

letter several years ago:

"Mr. Samford has accomplished what I esteem as an ideal program in that he has raised a wonderful family; is an upright churchman; has done more than his share of civic activities; has always found time to help the needy; and last but not least has made a wonderful business success.

Frank P. Samford stands high in the esteem of leaders of the highly competitive insurance profession.

His building Liberty National Life Insurance Co. into the 45th largest in the vast industry is a saga of personal achievement and leadership.

Frank Samford is a fine example of the dedicated men who have the financial destiny of millions of widows and orphans of our country.

Another fine Christian gentleman, Mr. A. M. Burton, a founder of Life & Casualty Insurance Co. of Tennessee, in ratifying the 1958 poll, wrote me:

"I am happy to cast my vote for Mr. Samford. I commend you for his selection for he is not only an outstanding leader in the insurance profession, but he is a high-class citizen and deserves the honor."

I remember the wire from another top insurance executive, who in 1952 when he was president of the Chamber of Commerce of the United States, wired:

"Certainly no man in the South has better earned the honor of being designated as Man of the South than has Frank P. Sam-I earnestly urge that he be so desig-

nated."

Among the distinguished men at the dinner were Col. William J. Rushton, president of Protective Life Insurance Co., and Andrew J. Lewis, president of Vulcan Life & Accident Insurance Co.

Few executives have faced a harder job than was assigned Frank Samford in 1921.

He was asked to help rehabilitate a small fraternal benefit society that wrote its first policy in 1900.

Mr. Samford had completed 4 years as Alabama's deputy insurance commissioner, a scholing equal to 4 college years majoring in insurance

The Heralds of Liberty had \$11 million insurance in force; \$100,000 in assets and no reserves.

In 1927, the entire society was moved bodily in one single boxcar, including files, desks, equipment, and everything.
"I will never forget," Mr. Samford recalls,

"We were moving into the Baptist Educa-tion Building and we could not work on Sunday.

"So Carl Wittinchen, Sr., and I broke the seals at 12:01 a.m., Monday morning and we started unloading the car.

We had the desks placed for the clerks by the time they got there at 9 o'clock in the morning.

"Certainly it was beyond my dream of vision that we could have an insurance company that today, assetwise is 45th in the Nation in size.

"It wasn't due to me, it was due to our grand organization."

### A GREAT LEADER

But what Frank Samford didn't mention is that he "hand-picked" that grand organization he is so proud of.

It is one of the great teams of modern business.

And every member of the team thinks there is no one greater and finer and more gracious than their leader.

I have read letters from friends of Frank Samford since 1948.

Lt. Gen. John C. Persons proposed Mr. Samford for the Man of the South for 1948. which would haven Birmingham three in a row as the first two, Thomas W. Martin in 1946 and Donald Comer in 1947, had blazed the trial of honoring living leaders.

I recall the letter from W. P. Rainer, chairman of V. J. Elmore Stores:

"Frank Samford has been known to me since boyhood.

"Efficiency, honesty, enthusiasm, friendliness-these are the qualities that first come to me in describing him.

"He is an energetic, enthusiastic worker in anything he undertakes; he stimulates those who work with him.

The Samford family has long been highly regarded in the State and has an enviable record of leadership.

"Frank Samford is a good man, and it is a privilege to endorse him."

### FRANK SAMFORD'S SECRET

Frank Samford saw the vast number who were still employed and did not lose their jobs as opportunity and in the depression thirties Liberty National made great strides

The only thing a Horatio Alger hero had that Frank Samford lacked, was he came from the right side of the tracks and had the family background and educational opportunities.

While insurance companies were feeling the depression and some taking a panic atti-

tude, Frank Samford and his team were seeing visions.

In building his own great organization, Liberty National kept a youthful enthusiasm and boyish outlook.

I know about Frank Samford because we are kindred souls.

In 1929, the year I started Dixie Business,

Frank Samford changed the society into an Insurance company,

Instead of panicing, as was the order of the day for so many as the depression spread like a fog over our great Nation, Frank Samford looked on the many thousands who were still at work and knew that they needed the assurance and protection that insurance gives.

His heart went out to these people who still had jobs and were taking in their kin to feed and house.

He and his team were serving heroes of the depression—the little people who were spreading their lower wages to help their own and their neighbors

Frank Samford and his team were serving as well as selling.

Two decades later, O. Z. Hall was to write of him:

"Mr. Samford has been my ideal in the business world.

"He is down-to-earth, democratic and one of the most unassuming men in a top position I know.

"He has contributed his time and great financial resources tirelessly and gen-erously. \* \* \*

"He has twin granddaughters who were born within 2 or 3 months of my own twin daughters, so for that additional reason I have kind and kindred thoughts toward him."

Two years after the one boxcar of all the company's possession was set up at its new home in Birmingham, the 1929 statement showed insurance in force had been tripled to \$30 million and the 1921 assets when Frank Samford entered the picture, had been multiplied 14 times to \$1 million.

One year later, in 1930, the company began writing industrial insurance and took over the Citizens Life Insurance Co., of Huntsville, Ala.

It was like a new company starting out with new vision and new hopes and each new member of the team became enamoured of the enthusiastic way.

This Frank Samford way was reflected in the 1935 statement when Liberty National Life had over \$50 million of insurance in force and admitted assets had jumped to \$3 million.

No wonder his peers, like A. M. Burton, were proud of him.

'It was my good fortune to live next to the Samford's at Troy, Ala., where Frank was born in 1893," wrote Leo E. Bashinsky, a director of Liberty National Life.

"We spent our boyhood together and both literally and facetiously, within a stone's throw of each other. It has been a privilege to have this friendship continue through the years. There is no one for whom I have a greater affection or greater admiration.

Frank is a man of tremendous energy. keen business judgment, intellectually hon est thinking, and great in character and spirit.

"He has the human touch, mindful of others in all he undertakes, charitable in deed and purpose, a man of real character.'

[From the Birmingham (Ala.) News, Jan. 22, 1959|

FRANK P. SAMFORD, MAN OF THE SOUTH Well-deserved is the recognotion and honor given Birmingham's Frank P. Samford by Dixie Business magazine in naming him Man of the South for 1958.

As president of Liberty National Life Insurance Co., he has made signal contributions to the business and economic life not only of this community but the entire region and the Nation as well. His devoted leadership in civic affairs has been of outstanding public value.

We join in saluting Mr. Samford and in congratulating him warmly upon this award.

# Monsigner Sherlock Eulogizes Beloved Monsignor McGlinchey

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the eulogy of Right Rev. Cornelius T. H. Sherlock, LL.D., pastor of the Immaculate Conception Church in Cambridge, Mass., formerly curate at St. Mary's Catholic Church in Lynn, at the solemn pontifical requiem mass held in St. Mary's Church in Lynn, at the funeral services of the Right Reverend Monsignor Joseph McGlinchey, P.A., D.D., LL.D., beloved pastor of that church.

MONSIGNOR SHERLOCK EULOGIZES BELOVED MONSIGNOR MCGLINCHEY

Rev. Cornelius T. H. Sherlock, LL.D., pastor of Immaculate Conception Parish, Cambridge, former archdiocesan superintendent of schools, and a former curate at St. Mary's Parish where he served for 16 years, was the eulogist at the Solemn Pontificial Regulem Mass for Monsignor McClinchey in St. Mary's Church this morning.

In a touching and heartfelt sermon Monsignor Sherlock extolled the priestly qualities of the late St. Mary's pastor, his close friend for many years. He said:

"'I have no greater grace than this, to hear that my children walk in truth.' (John 1:4.)

"We are people of uncertain and mixed emotions. God, in His inscrutable but infinitely wise way, has taken from our midst one whom we have greatly loved. It is but natural—and good—that, as we greet each other, we express the sorrow that we feel and breathe the prayer that this bereavement may not weigh too heavy on our all-too-human hearts. For those who have been close to Monsignor McGlinchey, his relatives and intimates who watched through his many trials, who were faithful in their loving concern and ceaseless devotion, we promise prayers that God may lighten their burden of sorrow.

"To the priests who have worked and lived with him through the years we express our deep sympathy on the loss they have sustained. To the great army of priests, brothers, and sisters, whom he knew and served so well over 50 years, now scattered all over the world, we don't trust ourselves to put in words the sympathy we feel but pay only the suffrage of our prayers. To all those men and women who were fortunate enough to know him, in other times and in other places, to the children and youth whose lives are different because of the disciplined zeal of his priestly life, we extend our deep condolence on the loss of their priestly benefactor. We, the companions of his later life, we who had worked and talked and prayed together, tell

each other how hard it is to lose one we esteemed so much.

"But if thoughts of sympathy and sorrow seem to be uppermost in our minds they are far from the most important truths of which we should be conscious. The Church, still mindful of the sadness of deserted friends, reminds us that death is but the vestibule of Heaven, that after all, Catholics spend their lives preparing for that last day on earth when the cares and the heartaches. the trials and disappointments of life are finally put aside and the most recent triumph, the last success takes on its true proportion of littleness compared with God's eternal reward for those who love Him. She would drive home to our minds the unchanging truth that death is the gateway through which those who have served God well, move on to an eternity of supernal happiness.

"The truth is that Monsignor McGlinchey, deep, restrained, intense as was his love for us, would not return from the joys of Heav-He would tell us all that life at most is but a passing instant, and that, if we will but follow the command to love God and love our neighbor, with all that this command implies, we shall join him in his happiness in God's good time.

"Laughter and tears have a strange way of being mixed in this uneven life of ours but for Catholics, even in such deep sadness as this, the fact of our eternal destiny transcends our sorrow and makes this day rich in the reality of a priest's ineffable reward, prepared for him before the beginning of time by an almighty and all-loving Father. Today must be for us, as it is for Monsignor McGlinchey, a day of splendid joy, seen though it is through the evanescent mists of temporal loss and passing sorrow. After all, a priest has realized the destiny for which he was created, unbounded joy in the Lord.

"When priests gather together and talk about their fellow priests they often simplify their thoughts by brief and terse descriptions. The priest whose life is thoughtful and whose interests are profound, who still burns the midnight oil in his quest for knowledge to answer the whys and wherefores of this uncertain life, who with a deep Christian philosophy weighs the problems of the day and, with careful steps. appraises the course of the world, he is known simply as the scholar. Another, afire with a desire to change the world, articulate beyond his fellow priests, a master of language and afire with zeal, takes his place on pulpit or platform, a veritable mouthpiece of God, the orator. Still another, gifted with a superlor understanding of the structure of society and its activities. an organizer of men to carry on the work of God in more efficient ways; he is known as the administrator."

### MAN OF DIGNITY

"Scholarliness, rhetorical competence, and administrative skill were all found in Monsignor McGlinchey in their proper measure. But underneath the competence that described him to the world there lay an inner man, a man with a single conviction that man, a man with a single conviction that moved him through every activity of his daily life. His self-denial and intense self-discipline, his natural piety and personal generosity, his constant dignity and persevering industry, all were subordinated to the one directive—work to extend the kingdom of God on earth.

To him the kingdom of God was the church, the church in all its extension here, in the frozen North, the Far East, the steaming jungles; the teeming cities and drowsy villages, the church in the clear cold mind of the captain of industry or in the small warm heart of a child. Two thousand years ago his Savior had founded a church. He saw it today in all its extension and in its He was parish-minded without local detail. being parochial. He was universal without excluding a soul. He was, in the finest connotation of the word, first, last and always, the churchman.

"Although he had been born in Kansas, he grew up in the shadow of Saint Paul's Church in Cambridge. Here he had observed the wonderful priests of his childhood, each with his individuality and yet all working together for good. As a young man he moved about the university guiding strangers from far places about the ancient campus and his imagination found it easy to embrace a world of variety and distance and a church functioning throughout this world serving the spiritneeds of every creature, yellow or red, black or white, and as effectively as it served him and the neighbors of the parish in Cambridge.

"The idea grew and, when he returned from his studies in Rome in 1907, he went back to his own parish to serve with these admired priests as the junior curate at Saint Paul's. But his mind, systematic and orderly, constantly thought of Christ's problems in other lands and in 1911, by appointment of Cardinal O'Connell, then archbishop of Boston, he took up the work of the propagation of

the faith.

"In a lesser man this devotion to the missions would be called a consuming passion but in Monsignor McGlinchey there was no consuming passion. There was only a zeal that was divinely inspired but always directed and controlled by a fine mind and a disciplined will. His work was that of supplying the needs of priests, brothers, and sisters on the frontiers. Here, in what was probably the foremost propagation of the faith office, he collected the funds necessary for the support of missions, wrote letters, advised missioners, directed mission vocations, lectured from pulpit and platform and, in his free time, wrote books. His writings were translated into many languages and he himself, by the skill of his own translating, brought books and articles in other languages to readers in English-speaking countries.

"In those days a tall and earnest priest worked in the mission office. One is permitted the conjecture that his years of service under the influence of Monsignor Mc-Glinchey may well have been the experience that gave direction to his life, the direction that made him ultimately the spiritual father of over 3 million people, our renowned and much loved cardinal archbishop.

"In 1952, in a remote mission in Peru, Monsignor McGlinchey and I were introduced to two radiant missionary nuns. I remember the day well. One of the sisters could hardly wait and, as she greeted him said, "I always hoped I would some day meet you. It was reading your book on the missions of India that decided my vocation and here I am with these poor Indians of Peru." In the midst of poverty she was the picture of serene delight. Because she read his words

she radiated Christ.

"Shortly after coming to Lynn he moved into the problem of a secondary school for His primary concern was that of religious vocation but, with his knowledge of the psychology of young people, he knew vocations are the outcome of high years. There was no Catholic high school for boys in the area then and he felt that the few who went to Boston for Catholic education did not satisfy what he felt was a great need in this city. The girls had enjoyed the education of a great Catholic secondary school since 1881. In that year, a half century before, St. Mary's Girls' High School had been established by Sister Georgiana of the Sisters of Notre Dame and, when monsignor arrived, this school had made a wonderful contribution to this city by the high order of Catholic education

which it supplied. But secondary education for boys was the problem."

ZEALOUS AND PRACTICAL

"Monsignor was both a zealous and a practical man. As a practical man he surveyed Accompanied by one of his assistants, who is here this morning, he visited all the neighboring pastors, explored the possibility of a regional high school and then reported to his cardinal archbishop. At that time the uncertainty of divided financial responsibility proved the deciding factor and in 1929 he went ahead with St. Mary's High School for Boys. Sister Helen Francis and Sister Justine of the Sisters of Saint Joseph were the first teachers, and on June 19, 1934. the first class graduated. His words on that occasion were most revealing. They were heard at times in a voice a blt husky from an emotion which he could not entirely control. Let me read them to you. He said:

'Now we are sending forth the first fruits of our efforts, 41 boys of whom we are proud. proud beyond expression. You cannot expect to know the sentiments that grip me at this moment when I see the realization of my fondest hopes, a group of young men fortified with an intelligent grasp of the church's teaching. I want you to be practical members of Holy Mother Church, loyal and patriotic citizens of this glorious Republic. I want you to be faithful to the sound Christian principles St. Mary's has taught you. I want you to love the Cross of Christ and

the flag of our beloved country.'

"It was a dramatic moment for those of us that were there. It was the materialization of a dream, a dream that was yet to grow. This is the 25th anniversary of that first commencement. Already doctors and lawyers, teachers and businessmen, family men and religious, all graduates from this school of his dreams enrich the life of cities and towns, here and in foreign lands, with the important lessons they learned in his school. Today, one silver jubilee later, over 60 priests look to his school as their alma mater. This very day more than 70 young men of St. Mary's Boys' High School walk the corridors and listen to lectures, plough through their volumes of divine science in seminaries throughout the land. In truth, he had no greater grace than to hear that his children walk in truth.

"It is unjust but unavoidable that eternally great men are sometimes slighted in the pages of history while temporarily obtrusive men have their exploits recounted through generations and centuries. However, we are assured by Scripture that there is a book of eternal importance wherein the true and glorious record of mankind is found. There you will find Monsignor McGlinchey's name, etched in living glory in the Book of Life (Apoc. 3: 5).

"But if you wish to read his record now, if you yearn to see his deeds recorded in the warm colors of his love for men, look into the hearts of those who knew him, those who drew strength from the kindness of his heart, those who, having seen him, smiled once more in the grace of God. But you yourselves knew him. Some of you knew him well indeed. Look, then, into your own

hearts and find there a eulogy surpassing any that may ever ring out from golden tongues to the end of time.

"Monsignor McGlinchey, we are all realists here. We know we shall see you again, and that before too long. But while we go about our appointed tasks, waiting for that day to come, we shall remember you and recall your leaving us in a paraphrase of the gentle Father Faber. 'You served Jesus out of love, and even before your eyes were closed for the last time, before pallid death o'erspread your countenance, even before those about your deathbed were sure that the last sigh they heard was your dying breath, what a surprise was yours. You stood before the judgment seat of your Dearly Beloved Himself; the music of heaven sounded in your ears and the glory of God shone from your eyes, never again to be extinguished'."
(Frederick Wm. Faber, "All for Jesus.")

# H.R. 3

EXTENSION OF REMARKS

### HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 25, 1959

Mr. CELLER. Mr. Speaker, I am happy to note that the Boston Herald, in its issue of Friday, June 12, 1959, editorially went on record against H.R. 3. I herewith insert, with a great deal of pleasure, its editorial entitled "States Rights Revolt":

### STATES RIGHTS REVOLT

We are glad that the House Republican policy committee is above rubberstamping administration proposals. But we wish it had found a better issue on which to demonstrate its independence.

The 33-member committee has endorsed the so-called States rights bill, aimed at curbing the power of the Supreme Court to overturn State legislation, despite the fact that administration has called the measure the most hazardous before Congress. The committee should have thought twice before taking the step.

The chief purpose of the States rights bill . is to reverse the Supreme Court's decision in the Steve Nelson case. This case, which was decided in 1956, declared that the Federal Government had preempted the field of sedition control and that State laws in this field were no longer enforceable. (A clarifying opinion this week said that the States could punish sedition against themselves, but not against the Federal Government.) Reversing this finding would be within Congress' rights, because it was presumably a congressional act (the Smith Act) that preempted the field in the first place.

But the bill goes beyond this and attempts to set up a general rule for the Court to follow in other cases.

"No act of Congress," the offending section says, "shall be construed as indicating an intent on the part of Congress to occupy the field in which the act operates to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect, or unless there is a direct and positive conflict between such act and a State law so that the two cannot be reconciled or consistently stand together."

This language, if it were to become law, would be extremely mischievous because it would invite the relitigation of every case that has raised the preemption issue in the And as a guide to future decisions it provides little for the court to go on that it does not already have.

If Congress doesn't like the result of the Steve Nelson case, it can reverse it, although we think even that step would be unwise. It can also resolve to make its own intentions clear in future legislation which overlaps State law. But it should not try to write general rules for the Court. The effect, as the administration says, will be most haz-

The House Republican policy committee has endorsed a bill which will produce chaos instead of clarification. It should clarify its own thinking.

### Poison In Your Water-No. 116

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Monday, June 15, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in the Lancaster, Pa., New Era of June 10, 1958, entitled "Raw Sewage in Stream Charged":

RAW SEWAGE IN STREAM CHARGED—SCORES OF CHILDREN PLAY ON BANKS IN ABBETVILLE ROAD SECTION

A Lancaster Township real estate man said today that raw sewage is flowing in a stream through a field at the corner of Abbeyville Road and Meadowcreek Lane.

J. Herbert Fehl, 330 Abbeyville Road, said the sewage is a health menace to dozens of children who play along banks of the stream. The stream runs near more than 50 recently built houses in the neighborhood and near Fehl's home.

### COMPLAINED MANY TIMES

Fehl said he has complained many times in the past six years to township supervisors, county commissioners and State health authorities, but nothing has been done to remove the sewage.

Supervisor Frank H. Feagley said the township directed by the State health department, installed a metal trap in the stream about 12 or 14 years ago to remove the sewage. He said the trap doesn't work because children throw stones into it and clog it up.

### TRAP DOES LITTLE GOOD

Township employees clean the trap, called a "diversion chamber," once a week, Feagley said, but that does little good: He added that there are no immediate plans to clean up the stream, but said a metropolitan sew-erage system now being planned would take care of the situation.

Fehr said the stream apparently begins at underground springs near Race Avenue, and flows through pipes beneath streets of the Hamilton Park development until it emerges at Abbeyville Road. Storm sewers to carry off rain water empty into the underground stream, he said.

### HOMES CONNECTED TO SEWER

Both Fehl and Feagley said the raw sewage apparently comes from homes that have connected sewer lines to the storm pipes instead of a sanitary sewer main.

The diversion chamber is located at the end of a large concrete pipe where the stream comes above ground. Its purpose is to catch sewage and divert it to the sanitary sewer that hooks on to the city's Maple Grove sewage pumping station. If the chamber Works properly, it should leave only spring water and rain water in the stream bed that continues to the Little Conestoga Creek.

Fehl said Feagley told him 6 months ago that Henry F. Huth, township engineer was designing a new diversion chamber and manhole. But nothing came of it, Fehl said. He stated that Feagley told him 5 years ago thta State engineers were designing a new chamber, but nothing came of that, either.

The State said it was a job for the county government, Fehi added. The county, he said, did nothing.

ODOR IS TERRIFIC

"It's a crime that children play there," Fehl said. "The sewage could cause an epidemic. The odor in summer is terrific."

"There's nothing we can do about it," Feagley said. "Every time we clean out the chamber, it gets clogged again. There is some sewage in the stream, but it was there long before I was a supervisor. It was there as far back as I can remember.

"We put the chamber in, but that is only a relief. This area sewer plan would do something permanent about it."

# Labor Legislation

EXTENSION OF REMARKS

### HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the June 11, 1959, issue of the Flint (Mich.) Journal relative to the labor reform legislation now under consideration by the House Committee on Education and Labor. Judging from my own mail, and from a questionnaire poll of my constituents earlier this year, there is no question but that this editorial represents the consensus of the Michigan Sixth Congressional District, which contains the heaviest concentration of AFL—CIO auto workers in the Nation.

The editorial follows:

### LABOR LEGISLATION

The House Labor Committee began today the task of drafting a labor bill designed to make it impossible for racketeers to gain control of trade unions.

The committee has as a nucleus for its bill the labor reform measure passed by the Senate, 90 to 1. But changes are being suggested.

The kind of bill the committee will draft is a guess. Some predict a stiffer bill than the Senate measure. Others are not sure the House or the committee will be able to agree on any legislation.

The latter development would be unfortunate. America has been hearing of the gangster control of some unions. The rank-and-file union member deserves laws which will enable him to keep such racketeers out of his local.

The AFL-CIO, which originally approved the Senate bill but withdrew support because of a bill of rights added in final floor debate, now seeks a less restrictive measure or no legislation at all.

Actually, the huge labor organization would like to write labor reform legislation. Allowing that to happen would be like asking the National Association of Manufacturers to draft business monopoly laws.

If the House committee will ignore labor leaders and write reform legislation with the idea of serve to union members and the public, it will report out a bill providing at least as much control as the Senate measure.

Anything less will be a backward step.

Flag Day, 1959

EXTENSION OF REMARKS

# HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. DENT. Mr. Speaker, due to the fact that I find it impossible to attend certain Flag Day activities in my home district, I am taking this means to convey my remarks to my constituents.

This day, Flag Day, is dedicated to the glorious symbol of our United States. We meet to honor our flag, and to reaffirm our faith in the Nation and the principles for which it stands.

It is 182 years since Congress authorized the use of a new flag for a new nation. Prior to that time the Continental Army had carrier various banners, from the pine-tree flags of New England to the rattlesnake banners of the South. One of the most persistent designs was the Grand Union, which bore the British Union Jack in the upper left-hand corner, and had 13 alternate red and white stripes. It was hoisted by Gen. George Washington in January 1776, at Cambridge, Mass., as the standard of the Continental Army.

It was not until June 14, 1777, almost a year after the adoption of the Declaration of Independence, that the Continental Congress in Philadelphia passed a simple resolution which read:

Resolved. That the flag of the United States be 13 stripes, alternate red and white; that the union be 13 stars, white in a blue field, representing a new constellation.

The special committee that had been appointed to design the new flag offered this explanation of the proposed designs:

The stars of the flag represent a new constellation rising in the West. The idea is taken from the great constellation Lyra, which in the hands of Orpheus, signifies harmony. The blue in the field is take from the edge of Covenanters' banner of Scotland, significant of the covenant of the United States against oppression. The stars are disposed in a circle, symbolizing the perpetuity of the Union, the ring signifying eternity. The 13 stars show the number of the united Colonies and denote subordination of the States of the Union as well as equality among themselves. The red, the color which, in the Roman days was a symbol of defiance, denotes daring, and the white, purity.

The resolution was not promulgated by the Secretary of the Congress until September 3, 1777, and the flag as first carried in battle at Brandywine on September 11. It was first saluted by a foreign power when the Ranger, in command of Capt. John Paul Jones, arrived at a French port on February 14, 1778, with the flag flying.

According to legend, the committee, if left to its own devices, would have given us six-pointed stars; But Mrs. John Ross, upholsterer and seamstress, who was to make the flag, preferred a five-

pointed star. With a few snips of the scissors she showed the gentlemen how much neater the less bulky stars would appear, especially as their numbers increased. The gentlemen of the committee, Robert Morris, Colonel Ross, and perhaps even George Washington himself, agreed that she was right.

Although Congress formally approved the new flag in 1777, it was 2 or 3 years before the flag was generally adopted. But somehow the idea of a flag with stars and stripes took hold. The feeling of ardor for the flag possibly has never been better expressed than in the lines from the pen of Joseph Rodman Drake, a young poet who grew up with the young flag:

Flag of the free heart's hope and home, By angel hands to valor given; The stars have lit the welkin dome, And all thy hues were born in heaven. Forever float that standard sheet! Where breathes the foe but falls before us, With Freedom's soil beneath our feet, And Freedom's banner streaming o'er us?

The appearance of a piece of bunting can change the mood of men. The stir of emotion at the sight of the flag is the common sentiment that binds us together spiritually. When men have died fighting in good causes under a flag, that banner is no longer merely a piece of cloth. It takes on a new and solemn

Since its adoption in 1777 more than 20 changes have been made in our flag. At first the admission of each new State was marked by the addition of a star and a stripe to the flag. In 1818 Congress stipulated that the number of stripes remain 13, in honor of the original States, and that "on the admission of every State into the Union, 1 star be added to the union of the flag; and that such addition shall take effect on the 4th of July next succeeding admission."

Like the flag itself, Flag Day did not attain its final form at once. The popular observance of the anniversary was of slow growth. In 1889 Prof. George Bolch, principal of a free kindergarten for the poor in New York City, decided to hold patriotic exercises on that day. They attracted considerable attention and the State department of education arranged to have the day observed in all the public schools.

In 1897 the Governor of New York issued a proclamation ordering the display of the flag over all the public buildings in the State. This is sometimes called the first official recognition of the day outside the schools. However, 4 years earlier, the mayor of Philadelphia, in response to a resolution of the Society of Colonial Dames of Pennsylvania ordered the display of the flag on the public buildings in that city. The resolution was offered by Mrs. Elizabeth Duane Gillespie, a direct descendant of Benjamin Franklin.

Although the anniversary is not a legal holiday in any of the States except Pennsylvania, it has come to be observed unofficially throughout the whole country. The flag is displayed, special exercises are held in the public schools, and the day is observed by lodges and civic organizations. It is customary to hold a

celebration in the Betsy Ross House in Philadelphia, and the patriotic order of the Sons of America are in the habit of placing a wreath on the grave of Betsy Ross in Mount Moriah Cemetery in Philadelphia.

The increasing observance of Flag Day with the passing years has brought about a more lively appreciation of this banner of a free people. More than most peoples, we Americans have become accustomed to pay a very special homage and reverence to our flag. In a mystical way. such as is perhaps the case in on other land, the American flag symbolizes the hopes and ideals, the faith and pride of a Nation. It reminds us of our heritage, of the struggle, the sacrifice, and the triumphs of those who have gone before us. In these days of international tensions it gives assurance to us and hope to the free world. It represents those ideals of democracy, truth, and justice, toward which we must continue to strive, with confidence in the future of America.

### Poison in Your Water-No. 117

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in the Harrisburg (Pa.) Patriot-News of June 4, 1958, entitled "Enola Sewage Co. Ordered To Stop Dumping in River":

ENOLA SEWAGE CO. ORDERED TO STOP DUMPING IN RIVER

The Enola Sewage Co., which has operated a disposal facility since 1903, has been ordered to cease dumping raw sewage into the Susquehanna River. The State's sanitary water board issued the order.

Luverne Snavely, the company's president, said the Caiptol Engineeering Co., of Dillsburgs, has been hired last summer, and Gannett, Fleming, Corddry and Carpenter, Harrisburg engineers last week to estimate the cost of constructing a new disposal plant. The present facility is located on Route 11–15 midway between the north and south boundaries of Enola.

The Enola firm, owned by stockholders, has no connection with the East Pennsboro Township sanitary sewer system which has a treatment plant in operation and serving the Louis Park area.

James Close, chairman of the East Pennsboro Township Sewer Authority, said: "The immediate threat of existing sewage

"The immediate threat of existing sewage problems is one of public health. Disease-carrying insetcs feeding on seeping and raw sewage, windblown bacteria from dried sewage, and contaminated wells are definite public health hazards."

The State sanitary water board has also warned the boroughs of Wormleysburg, Duncannon, and Marysville about dumping raw sewage into the river. Wormleysburg already has set up a municipal authority to finance and build a sanitary sewer system.

ACTION HINTED TO CLEAN UP ALL STREAMS

More legal action may be necessary, a State
health department official predicted yester-

day, in order to convince some communities of the need to clean up Pennsylvania streams.

Walter Lyons director of the department's division of sanitary engineering, said many citles have been convinced that there is a need for cleaner streams and have built sewage treatment plants voluntarily. The department's main problem now, he said, is to convince cities and municipalities that have shown no interest in compliance.

Lyons said he anticipates more legal action, especially for those communities that for a long time have been in violation of specific orders from the State sanitary water board.

### Blind Alley on Wheat

EXTENSION OF REMARKS

# HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the Records, I ask to have printed in the Appendix an editorial with which I agree that appeared in the Washington Post and Times-Herald on Saturday last, June 13:

### BLIND ALLEY ON WHEAT

The passage of a price-boosting wheat bill by the House yesterday was a dismal performance. A majority of the legislators simply could not bring themselves to an acceptance of the basic facts concerning the American wheat industry. Instead, they closed their eyes to the experience of the past and voted a return to support prices of 90 percent of parity—a policy that has contributed mightily to the dumping of \$3.5 billion worth of surplus wheat into Government bins.

One recent visitor to the Middle West concluded that the cities of storage bins are so extensive that within a few years they may cover the wheat fields and thus force a curtailment of production. That is, of course, a gross exaggeration, but the use of tax funds to finance over-production has unquestionably gone to ridiculous extremes. Why should the Government continue to pay farmers excessive prices for a commodity produced far in excess of the country's needs?

The House made some gesture toward cutting down production while offering farmers higher rewards for unneeded wheat. It called for a 25 percent reduction in acreage in order for farmers to qualify for the higher support prices and it reduced the 15-acre allotment to any and all wheat farmers to 12 acres. But acreage control has proved to be a singularly ineffective means of curtailing output in the past, and there is no reason to believe that it will be effective now.

The action of the House probably means that no wheat legislation will be passed this year. President Eisenhower is almost certain to veto any measure following the pattern of the House bill and the bill passed by the Senate is not much better. Since Congress appears determined not to adopt legislation that would discourage the production of surpluses, it might well consider a totally different approach—the disposal of those surpluses on a large scale to hungry peoples of the world.

The mere cost of storing our mountains of unneeded wheat is now a heavy drain on the Treasury. If Congress will not let the price of wheat subside to a point where the surplus can be used economically as

feed, it ought to be thinking seriously of ways and means of distributing it for humanitarian purposes. Such a policy would need the cooperation of other wheat-producing countries, notably Canada and Argentina. Fortunately, the Department of Agriculture has already done a good deal of exploring in this field. The failure of the current wheat bills may afford an auspicious occasion for the advancement of a new program of distributing our excess bounty abroad.

# Lifting the Ceiling on Government Bonds

EXTENSION OF REMARKS

# HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I wish to call to the attention of my colleagues an editorial which appeared in the St. Louis Post-Dispatch on June 9, 1959, "Up With the Ceiling":

UP WITH THE CEILING

No matter how many speeches are made in Congress about greedy bankers and the delights of an easy money market, in the end it will be hard for House and Senate to find any practical alternative to the administration plan for lifting the interest ceiling on Government bonds.

As with the ancient dream of eating one's cake and having it too, the hope of simultaneously enjoying the best of two possible worlds has a strong grip on some Senators and Representatives. They would like to enjoy both the full employment of boom times and the low-interest rates of depression times. Who wouldn't? But up to now nobody has been able to figure out a safe way of doing both at the same time.

Easy credit is a consequence or expression of underemployed resources, and relatively tight money is the price that usually must be paid for good times. Though it is proper for the Government to do everything possible to mitigate the effects of tight money, making credit fairly available to all sectors of the economy, no way has yet been devised of generally depressing the price of credit during a boom without adding inflationary pressures.

Nor has anybody figured out a practical, noninflationary way by which the Government can segregate itself from the influences that affect credit for everybody else. When the Treasury borrows money, it must compete with other borrowers. If the other borrowers can and do pay higher interest rates than does the Government, the public in peacetime is not going to rush its money into Government securities no matter how many patriotic appeals are addressed to it.

These circumstances have now caught up with the Treasury to such an extent that more savings bonds are being cashed each month than are being bought. The price of outstanding Government bonds has fallen to the point where an investor can get a higher interest yield by buying Government issues already on the market than by subscribing to new issues at the present 3½-percent interest ceiling. Facing the need to refinance 76 billions worth of securities within the next few months, the Treasury cannot persuade long-term investors to tie up their money in Government bonds unless it can pay somewhat higher interest rates.

What are the alternatives? The Federal Reserve System might be ordered to support the price of Government bonds, as it did dur-

ing and after the war. But this is a proved way of creating inflationary pressures, since every dollar thus put into support buying adds something like \$6 to the money supply. Or the interest ceiling could be left where it is, thereby forcing the Treasury to refinance maturing long-term debt with short-term securities on which the interest ceiling does not apply. That, too, would be an engine of inflation—in effect, a disguised way of inflating the money supply at a time when it should be restrained.

Nobody likes the fact that removing the interest ceiling will increase the cost of carrying the public debt. But this factor has been exaggerated. It is true that the taxpayers now pay close to \$8 billion a year in interest on the debt as against only 5.7 billion 10 years ago. But it is also true that the cost of carrying the debt is now less than 11 percent of the total Federal budget as against 14 percent 10 years ago.

as against 14 percent 10 years ago.

We hope the administration does not jeopardize the strong case it can make for lifting the interest ceiling by overplaying the sanctity of a free-money market. A modern Government cannot leave itself at the mercy of irresponsible traders who seek only private gain, and modern voters will not permit it to do so. Government must influence credit just as it must influence other sectors of the economy on behalf of full employment and a justly shared prosperity. But it cannot change the facts of life by fiat, and it is a fact today that under the present interest ceiling people with money would rather put it into something else than Government bonds.

# Again Hits Curbs on Oil

EXTENSION OF REMARKS

### HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Littleton Courier, Littleton, N.H., of June 11, 1959, entitled "Again Hits Curbs on Oil":

AGAIN HITS CURBS ON OIL

The New England Council has fired off another salvo to Washington to express its continued opposition to President Elsenhower's restrictions on imports of Venezuelan residual oils.

Albert O. Merrill, manager of the council's industry department, pointed out in a letter to Charles Colson, staff aid to Senator Leverett Saltonstall, Republican, of Massachusetts, that New England oil prices usually decline at this time of year primarily because of seasonal demand factors.

It is the NEC's position that the residual oil import curbs will mean a boost in oil prices in the six-State area.

In speaking about the oil import restrictions, Colson told a recent New England Senators' conference that regional oil costs have gone down, not up.

have gone down, not up.

However, the council explained that the coming of fall and winter demands will see the price of oil climb to new highs in New England and the hike will be directly attributable to the administration's restrictions.

Merrill also noted that since New England uses a heavy percentage of Venezuelan oil the added difference between next winter's and last winter's price is expected to cost the regional economy millions of dollars.

"New Englanders sincerely hope that you and our (New England) delegation in Washington will bear this in mind when considering the cost of these restrictions to this region," Merrill said, "and that further that appropriate steps will be taken to remedy an unfair and unnecessary situation."

### Segregation or Discrimination

EXTENSION OF REMARKS

# HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 3, 1959

Mr. DAVIS of Georgia. Mr. Speaker, organizations such as the Georgia Council on Human Relations and the Commission on Civil Rights have been endeavoring to paint a beautiful picture of the integrated Washington schools by sending the school superintendent on expense-paid, speaking tours throughout the Nation. In spite of these efforts, the truth about the sorry mess here is getting out to the people anyway.

They know about it even as far away as California. The Los Angeles Times of May 27 carried an article by Rudolf Flesch, entitled "Segregation or Discrimination?" The article is as follows:

SEGREGATION OR DISCRIMINATION?

(By Rudolf Flesch)

Johnny Black can't read. He can't spell. He can't add, subtract, multiply, or divide. He knows no history, no geography, no literature, no science. In short, he's utterly ignorant.

Johnny Black is an 18-year-old Negro boy who lives in Washington, D.C. He's just graduated from a public high school. His ignorance is the result of 4 years of education in what is known as the fourth track.

What is the fourth track? It's the proud achievement of Dr. Carl Hansen, superintendent of Washington schools.

When the Washington schools were integrated in 1955, Dr. Hansen hit upon the bright idea of dividing all high school students into four tracks—an honors group, a college preparatory group, a general education group, and a basic education group.

The division was roughly by IQ. The first track got a specially enriched curriculum, the second got the regular academic course, the third got some watered-down mishmash, and the fourth apparently got nothing whatever.

At least it turned out after 3 years that their IQ's actually had dropped since they were freshmen. Their social concepts score had gone down from 16 to 10, their natural science score from 19 to 17 and their correctness of expression score from 20 to 14. In other words, their so-called education in the fourth track left them dumber than they were to begin with.

No special survey is needed to find out who these children are. Washington is now 53 percent Negro. The fourth tracks obviously are virtually all colored, the honors course is probably all white.

As any educator has known for many years, the IQ test is apt to favor children from cultured, well-to-do homes and to penalize children of poor minority groups. And as any educator also knows, the IQ invariably goes up whenever a child competes with brighter children in the same classroom.

Dr. Hansen has turned school integration in Washington into a mockery. He has taken the Negro children from their segregated, all-colored schools and put most of in fourth tracks-which means into educational slums.

I wonder whether Johnny Black's parents know what's been done to their boy. I won-der whether they realize that his 4 years at the fine integrated school have been a total waste-by actual tests.

And I wonder how Dr. Hansen feels about it all.

Occasionally he must cross the Mall and pass by the Lincoln Memorial.

I wonder whether he dares to look up.

# The Legacy of Our Youth

EXTENSION OF REMARKS

# HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. DADDARIO. Mr. Speaker, commencement exercises in West Hartford, Conn. recently, Brig. Gen. Louis H. Renfrow delivered an outstanding address to the pupils of the Robinson Junior School for Boys. Under leave to extend my remarks I include the text of this talk.

I should also like to note that General Renfrow pays a tribute in this speech to Connecticut's illustrious junior Sen-

THE LEGACY OF OUR YOUTH

(Commencement address for Robinson Junior School for Boys, Hartford, Conn., June 1959, by Brig. Gen. Louis H. Renfrow (retired))

Just 10 years ago to the month, I was accorded the privilege of coming to this fine American school, and addressing the first graduating class, composed of two young

In these 10 years, this school has taken its rightful place in the educational world.

Comdr. John Robinson has been a long-time personal friend, and I am so happy to come here today, and have a part in these commencement exercises.

Ten years ago, I said, in part:

"There is no phenomenon of our American way of life more inspiring than the annual commencement exercises in which our young men and women complete their course of study, and go out from institutions which have carefully nurtured the precepts of democracy."

I further said:

On occasions like this, there is not much of an original nature to be said to a body of young men who have successfully come through the years of a course of education and training

"This-rather-is a time for stock-taking

and review.

"You are the heirs of America.

"This is a day to examine your legacy, and to recognize, evaluate, and accept the responsibilities which go with it."

What I said then-holds true today.

The treasures that lie before you are rich,

satisfying and plentiful.

High adventures beckon-in science, in commerce, in further learning, and research; in the mellow earth from which come agriculture's bountiful outpourings, in public life and service, in the selfless service of the teacher, and in the healing hand of the medical arts.

Above all these, there is a greater, richer treasure—a wonderful heritage that is given to all men and women of these United States—American freedom. No money can buy it. All the gold, silver, and diamonds, in the world are worthless baubles beside it.

The multiple blessings of this great gift of freedom are manifest in every movement, every function of American life.

But you young men, who have just completed your first step in your education at this school, have had an unusual opportunity to enjoy this freedom.

There are too many spots left on earth today where, as in the United States, knowledge has been passed along from the older generations to the younger, untainted with propaganda, where there have been no bounds to limit ideas, no chains shackling intellect; and no lies distorting truth.

Here, as in hundreds, yes, thousands of other American schools, graduating young Americans at this time, there is a freedom of thought, freedom of speech, and freedom to

worship God as you please.

You have been taught by good teachers, born earlier, who as Americans believe our own system of government to be the best in the world, and well they might, for it has passed the test in the crucible of time, yet, you have been invited to examine all other systems and to form your own conclusions.

You live in a land where freedom's heartbeat is so strong and steady, that even those who wish to change our governmental system go unmolested, as long as they refrain

from violence, in their attempts.

Such misguided souls may preach their chosen doctrines as loudly as they please, so long as they do not propose to overthrow and destroy this Government by force.

You have been privileged to examine ideologies which the United States condemns.

You have been taught truthfully that all heroes are not necessarily Americans.

You have read, and been taught, that all the world's inventions since the Pilgrims landed at Plymouth Rock have not sprung from United States shores only.

Your American history books tell no stories about the development of a superior, or world-dominating race in America.

Your school reading sources compel no denunciation of wealth, but echo national leaders working constantly to lift the living level of the poor.

Your books call for no world conquest.

They advocate freedom for all the peoples

of this earth. The fundamentals of Christianity have

been given to you in this heritage with no admonition that in religion a Catholic, Jew, or Protestant, is better one than another.

The sound, free doctrine that all men are

equal in the sight of God, has been your teaching and your heritage.

You leave this school with the profound conviction that neither creed, nor the color of a man's skin, will condemn him, nor place him on a pedestal above others.

Your curriculum has been the learning of freedom and the love of equality among all

Today, as we are assembled in such happy surroundings, and with our families and friends here in West Hartford, Conn., we must not, and we shall not, forget the grave and sinister conditions that do exist in the Eastern and Western Worlds, beyond our

Today the hearts and minds of men, women, and children of these lands are gripped with fear and misgivings because of the things that are happening within the borders of their own countries.

Yet in our glorious demonstration of democracy in action there must be high hope, understanding, and prayerful belief that somehow, and not before it is too late, those persons to whom the mandate of leadership

has been entrusted will stay the hand of oppression by further solidifying the free-dom-loving peoples of the world in a common bond of friendship, mutual understanding, and trust.

The situation in the Berlin crisis and the present harassment by the Soviets at Geneva were both anticipated in a recent masterful, statesmanlike, and most timely address delineating the perilous situation that engulfs our Nation and the world.

This address was delivered on February 25, 1959, before the U.S. Senate by the illustrious junior Senator from Connecticut, the Hon-

orable THOMAS DODD.

A paragraph of this prophetic address illustrates its timeliness:

"Let us rather approach this date of May 27, 1959, as a united America, proud of our ideals and traditions, conscious of our great mission in the world, and confident that if we but act aright the hand of God will sustain us to the ultimate victory."

Would that I could bring a light and happy message that all is well in the world. But your daily press, radio, and television reports

belie such a message.

What use are noble, idealistic, and intelligent leaders if there are not those to follow them who are noble, idealistic, and intelligent?

In this modern and complex way of life we too often overlook the fact that our social and political heritage rests on our civiliza-

It is an acquired characteristic and has not had time to become fixed in our being and cannot be transmitted through heredity.

Each generation, each child of today, furnishes the same virgin and undeveloped soil for development as obtained thousands of years ago.

The fruits of literature, philosophy, and science must not only be preserved, but must be diligently digested by man thrice in each century to be maintained and to maintain civilized man.

Life is persistent—the hereditary characteristics of life are persistent.

It is our tragedy that man's social and political heritage is not permanent, for on this shifting, dependent, social, and political heritage rests civilization.

Destroy it, and you destroy social institutions, law, order, and liberty; education, culture, and refinement; faith, hope, and religion; sacrifice, charity, and patriotism.

You will have lost your guide and compass,

wind and sail, power and anchor.

A myriad of achievements, material and spiritual, a geologic age of advancement will have been blotted out, but man has never lost this social and political heritage.

Why be concerned about future loss? Because history presents too many examples of the rise, decline, and fall of nations who lost enough of their social and political

heritage to pass away.

Material prosperity, armies and navies, wealth and power, are weak instruments for maintaining civilization, and unless the people and their leaders remember and breathe life thrice each century into this thing called our social and political heritage, it will be lost.

We must not ignore or discard reason and truth; faith and trust; nor a score of such important parts of our lives that have been, and still are, beacon lights for man's guid-

ance upward.

History presents us with no horoscopes; no Gallup polls; nor does liberty, not logic, nor anything else that I know of, for man has always found a heavy veil before the future.

As long as we admit that we live by virtue of others having lived, as well as by our own merit, we know that we possess the present with its treasures, and its debts of the past.

Your destiny rests in the thoroughness of your training, and your own planning, and

the zeal and enthusiasm with which you carry out these plans.

Too often we, who have been in military service, hear from young people that they are unable to plan their future and that the present conditions make their future obscure and uncertain.

The American people are slowly learning to live with danger, as you will have to do. Living with danger requires a very different state of readiness, and a very different order of sacrifice, from merely rising up to meet a crists, disposing of it, and returning thereafter to our well-beloved way of

Living with danger is in itself a way of life; however little we may like it.

It can be endured only by those who have acquired mental and psychological attitudes quite alien to a life of calm serenity.

A free society is not possible, and has never been possible, without men willing to fight to gain it, and having gained it, been ready and willing to sacrifice to protect and keep it.

This is as true today as it was when we gained our independence as a nation.

When we sing our national anthem, or, as you and I stand at salute, as our flag is lowered at sundown, every American (in this atomic-hydrogen age) and, particularly, every one of the 21 million living veterans of our great Nation, know that the ramparts we now watch are those farflung places that have moved our horizons from the borders of our Nation to areas beyond the sea.

Yet, my young friends, your present situation is not new, nor different, for never have we been able, in my lifetime, and during three wars, to precisely predict what the future holds for any of us in exact terms, but has that not prevented all of us from planning, which plans may have had to be altered, but the mere planning has made such deviations and changes easier and more adjustable.

Is there an American who was not thrilled when he read of that marvelous scientific accomplishment of our atomic-powered submarines, the Nautilus and the Skate, when they submerged and traveled under the ice-cap of the North Pole?

That was the result of dreams, planning,

sacrifice, training and hard work.

Has it ever occurred to you, as you read of these great scientific and sociological advances, or studied the literary and scientific indings of the past, that these advances in our day were made possible by the sacrifices of those who biazed the trail of our democracy, or do you just take them for granted?

On the horizon of our daily lives there has been a constant threat to these wonderful and modern developments by those despots who are determined to turn the clock back to the absolute control of men's minds, activities and beliefs.

It is this ever-present threat to our way of life that has caused our Nation to invent and perfect instruments of defense—the atom and hydrogen devices.

If greedy, selfish and destructive men, loose in the world today, could be stopped in their aggressive activities, these new discoveries can, and will, be diverted and converted from destructive to constructive activities that will open great and wonderful areas of unlimited possibilities and happiness.

While it is still necessary to defend our way of life, and at the same time offer our assistance to any Nation, or people, who want to live peacefully in the family of Nations, it will require the loyalty and devotion of your generation and those to follow, who will be dedicated to the pioneer spirit of unselfish service to his fellow man.

Young men will be asked to be modern ploneers at a time when danger and uncer-

tainty seem to be lurking in every corner of the world.

My young friends—as you are about to enter into another phase of your life's work, and as this wonderful beginning you have enjoyed here at this fine school is to be expanded into areas of greater opportunities and wider horizons, may you never forget, for 1 minute, those men and women who have made possible every step in your advancement up the ladder of life. That you owe an unpaid debt to them, that can be discharged by your own worthwhile contributions to the development and advancement of a happier, healthier and more constructive way of life.

In a book, titled "What of the Night?" by

In a book, titled "What of the Night?" by Ernest L. Klein, you will find this illustrative statement which gives hope and encouragement to those who might otherwise become despondent and morose:

"It is most helpful to us to be able to shrink our tremendous problems, just a little, by remembering that events of monumental importance in the life of any generation, shrivel into microscopic insignificance in the eyes of history. \* \* \* For a thousand years in Thy sight, are but as yesterday, when it is past, as a watch in the night."

May I quote from an address by the Honorable Louis A. Johnson, former Secretary of Defense:

"The world often speaks today of our secret weapons. Here in the United States we have two secret weapons; weapons greater than all the atom or hydrogen devices; battleships; aircraft carriers; airplanes; rockets; missiles and guns. Best of all, our greatest weapons are safe from enemy destruction. No enemy can steal them away, and they need never wear out. Our secret weapons are enlightened American youth, and American freedom."

Keep that light of freedom burning

Keep that light of freedom burning brightly as you go on to other schools of learning, or into your life's work.

Be prepared to defend and protect this glorious land of yours and mine, as did those who courageously went out from so many schools in 1917, in 1941, and again

Turn a friendly, unafraid countenance to the rest of the world and to the future.

Be aware that the future, and our Nation's relations with the great family of nations on this earth, will soon rest in your hands, and the hands of those graduating, as you are, from other schools.

Be constantly on the alert and guard

Be constantly on the alert and guard against any threatening enemy, whether that enemy shall come from within, or without, this democracy.

Time is the ever-present factor with which you must reckon, and while there is still time, make every minute count in your dayto-day activities.

May God go with you in this glorious experience of your life yet to be lived.

#### Keenotes

EXTENSION OF REMARKS .

# HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 19, 1959

Mrs. KEE. Mr. Speaker, I ask unanimous consent to extend my remarks in the Appendix of the Record and include copy of my newsletter Keenotes which was released today:

#### KEENOTES

(By Representative ELIZABETH KEE)

Earlier in the year, soon after President Eisenhower submitted his \$77 billion budget to Congress, I expressed the belief that Congress would make substantial reductions in this recordbreaking peacetime budget.

The House has just about completed action on all appropriation bills and to date a total of \$1.3 billion has been cut from the President's requests. In addition, the House is likely to reduce the President's foreign aid budget by as much as \$500 million.

The House record on the 1960 budget should be an effective answer to those people who insist on calling the Democratic majority in Congress wild spenders. The Appropriations Committee is meeting the challenge in a responsible manner and without using the meat-ax approach that would sacrifice many programs and activities that are essential to the continued growth of the Nation.

There is still some doubt that the budget will be balanced even though Government revenue from business and personal income taxes should be substantially higher as a result of continued improvement in the economic picture. Any deficit will be much smaller than seemed likely earlier in the year.

LIFTING OF INTEREST CEILING TO TOUCH OFF
LONG DEBATE

The President's request for an increase in the statutory limitation on the interest the Government can pay on its long-term bonds is already causing considerable debate. The President says the increase is essential to enable the Treasury to sell bonds carrying an interest rate more in line with the current going rate.

Opponents contend the increase will touch off a general increase in interest rates and infiationary pressures. These people believe the needs of the Treasury can be met in other ways that will not be as harmful as an increase in the interest rate.

Another increase in the debt ceiling is also in the legislative mills. There is no question but what Congress will vote this. The present debt ceiling has just about been reached.

AGRICULTURE DEBATES EMPHASIZE NEED FOR MORE RESEARCH

During last week the House debated two agricultural bills—one prohibiting the support price for tobacco from increasing, and another to try to deal with the present wheat surplus. In both instances, it was apparent that production has outstripped consumption. The need is to find new markets and new uses for these commodities and all other farm products.

For this reason, I have strongly urged the passage of legislation to put added emphasis on research. The Department of Agriculture conducts an extensive research program now, but in my estimation more work needs to be done on the utilization phase.

The Department now has an exhibit on display in the patho of its building showing some of the progress to date. It is encouraging. USDA scientists are trying to find ways to greatly increase industrial uses of wheat, corn, and other cereal grains.

For example, corn is 70 percent starch

For example, corn is 70 percent starch and provides the most economical source of this material. Utilization research is developing products from starch with improved properties for present applications and in addition is working toward novel starch products for entirely new industrial applications.

If successful in these efforts, the scientists can open up a vast new market for corn that could absorb that part of the corn crop not needed for feed. Just think what it

would be to farmers, in terms of price, to have a vast new market for their products.

Price-support operations cost billions each year. The utilization research budget is less than \$100 million. It seems to me that the major emphasis should be on utilization research and not on price-support operations which only add to present surpluses.

# Paul Hancock: Man of the Year for Center Point, Ala.

EXTENSION OF REMARKS

# HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. HUDDLESTON. Mr. Speaker, this past week Mr. Paul Hancock, Sr., an outstanding citizen of my district, was selected as Man of the Year for the city of Center Point. This was a truly deserved recognition for Mr. Hancock's record of civic service and all of us in Jefferson County are quite proud that Mr. Hancock has been designated as recipient of the award.

Under leave heretofore granted, I am pleased to insert in the Congressional Record, an article which appeared in the newspaper the Progressive Ştar, published at Center Point, Ala., dealing with Mr. Hancock's selection:

PAUL HANCOCK: MAN OF THE YEAR

Now it can be told—Mr. Paul Hancock, Sr., resident for over 20 years in Center Point, has been chosen by the people as "The Man of the Year."

From such men as Jack Underwood, Doug Dedman, Jimmy Jones, Floyd Hubbard, Norman Faris, and Paul Hancock it's hard to select just one man as representing Mr. Center Point 1959. Few communities, if any, are fortunate enough to have so many civic minded men as these. We, the residents of Center Point, do indeed have a lot to be thankful for—among them, good civic leaders.

Paul Hancock, Sr., was born and raised in the Birmingham area. He started in business during the depression years when thousands upon thousands were unemployed. He moved his family to Center Point in 1938 and in 1941 his home was completely destroyed by fire. The home was uninsured. His present home now stands on the same location.

In 1947, Mr. Hancock moved his business to Center Point. He owns and operates the Paul Hancock Co., a firm engaged in the rental and sales of steel scaffolding and construction equipment. He has a branch office in Decatur, Ala. There are also agents in all principal cities of north Alabama and part of the Mississippi. He also owns and operates the Southern Building Supply and Hardware Co. and the Southern Engineering Co.

In the fhid-1940's Mr. Hancock gave, one year, more to the church than his business made. The following year his profits zoomed to tenfold what he had contributed to the church the year before.

Another wonderful gesture on behalf of Mr. Hancock, is that wherever and when possible, he hires handicapped people. One teenager in particular was hired out of Partlow State Mental Institute. The boy was on probation and in Paul Hancock's care for the first year. He improved to the point

that he was accepted into the Army and now enjoys a normal life.

He has a friend, a retired pastor, whom he helps financially every month.

He paid the first youth director of the Center Point Church a regular salary.

Paul Hancock equipment has moved every preacher, except one, that has been called to another charge from the Center Point Methodist Church. In some instances, upon arrival at the new destination the furniture was unloaded and the other preacher's loaded and moved to his new charge.

In January next year, Mr. Hancock will be elevated to Potentate of Zamora Temple. The largest Shrine temple in the Southeast, it has a membership of 9,500. The Shrine of North America maintains and supports 17 hospitals for crippled children. The Shrine has rehabilitated over 30,000 children. Their slogan "No man stands so erect as when he stoops to help a crippled child." The hospitals are free to all crippled children regardless of race, creed, or color.

He is a member of the Better Business bureau and a charter member of Masonic Order No. 872.

The Progressive Star, along with all the residents of Center Point, join together—
"We salute you, Paul Hancock, and thank you for what you have done for our community, for the contribution of your time and money that Center Point might be a better and cleaner place to raise our children, for the unselfishness you have shown, for the modesty that possesses you to be just—Paul Hancock."

# Let Us Live 1 Day at a Time

EXTENSION OF REMARKS

# HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 12, 1959

Mr. ADAIR. Mr. Speaker, Mr. Archie Keene, president of Indiana Technical College, Fort Wayne, Ind., recently presided at the graduation exercises for the class of 1959 of that institution. As a part of those exercises, he delivered a charge to the graduating class.

Because it contains such excellent advice and philosophy, I am including it herewith:

#### LET US LIVE 1 DAY AT A TIME

There are 2 days in every week about which you should not worry—2 days which should be kept free from fear and apprehension.

One of these days is yesterday with its mistakes and cares, its faults and blunders, its aches and pains. Yesterday has passed forever. All the money in the world cannot bring back yesterday. Beyond asking forgiveness of your God and of your fellow man you cannot undo a single act you performed. You cannot erase a single word you said. Yesterday is gone.

The other day you should not worry about is tomorrow with its possible adversities, its burdens, its large promise and perhaps poor performance. Tomorrow is also beyond your immediate control.

Tomorrow's sun will rise, either in splendor or behind a mask of clouds—but it will rise. Until it does, you have no stake in tomorrow, for it is as yet unborn. This leaves only one day—today. Any man can fight the battles of just one day. It is only when you and I add the burden of those

two awful eternities, yesterday and tomorrow—that we break down.

It is not the experience of today that drives men mad—it is remorse or bitterness for something which happened yesterday and the dread of what tomorrow may bring.

Let us, therefore, live 1 day at a time. As you live each day remember that the best thing to give your enemy is forgiveness; to an employer, service; to an opponent, tolerance; give your heart to a friend; set a good example for your children; revere your father and mother and so conduct yourself that they will always be proud of you; give to yourself the priceless heritage of self-respect, and finally give charity and understanding to all men.

# Loyal Civilian Force at Fort Campbell Hikes Production Despite Budget Cut

EXTENSION OF REMARKS

# HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I direct the attention of the House to a magnificent job being done at Fort Campbell, Ky., by the commander of the 101st Airborne Division, Maj. Gen. W. C. Westmoreland. The executive editor of the Nashville (Tenn.) Banner, Charles-Moss, has written a splendid story illustrating how production on this military base has been increased notwithstanding a budget cut. Mr. Moss, in his own inimitable fashion, has called to the attention of the thousands of readers of this great newspaper, the work of this outstanding military man. The story follows:

No Complacency Here—Loyal Civilian Force at Fort Campbell Hikes Production Despite Budget Cut

#### (By Charles Moss)

FORT CAMPBELL, KY.—When a Fort Campbell housewife calls a plumber, he not only doesn't forget the right pipe wrench, or plug, but takes a hammer and a saw, tools of the sheetmetal trade and even electric fixtures.

Why the extra hardware? Well, there might be a loose plank in the front porth floor. A gutter may be leaking or the electric stove may be acting up. And the man who was called as a plumber takes care of all the trouble.

Lost motion is eliminated. There is no duplication of personnel for work or travel and consequent vehicle depreciation. Costly man-hours are spent where they ought to be—on the job.

The result is high efficiency and a saving of money for the U.S. taxpayer.

How did it all come about? Congress probably deserves some indirect credit. Fort Campbell's budget was reduced.

The effect, higher efficiency on less money, not in wages, but overall operating funds, was engineered by Maj. Gen. W.C. Westmoreland, commander of the 101st Airborne Division and "mayor" so to speak, of Fort Campbell, the division's home base.

He not only commands the Screaming Eagles and sees that they must be ready to go anywhere in the world and fight any kind of enemy under any kind of conditions. He also is responsible for the proper functioning of a city of 25,000 souls, who mostly live in Government-owned houses. There must be schools for the children. Streets must be repaired, garbage collected. All the municipal services must be performed.

By whom? The answer is going to surprise many a texpayer who has always been under the impression that soldiers do everything there is to be done on an Army base, housekeeping and military.

#### SOLDIER TRAINING COMES FIRST

That is not true. When a soldler is at the home post, he trains. In his role as commander of the 101st, General Westmoreland is adamant on that military premise. His first duty is command. That includes the fundamental business of teaching paratroopers to kill the enemy without being killed themselves.

The Screaming Eagles train and train and train—like a football team, but their training knows no season. They hit the silk and run ground scrimmages day in and day out, the year round in rain and heat and cold and snow. Their games are played in des-

erts, mountains, and jungles.

Napoleon said a long time ago that an army marches on its stomach. But times have changed. The mobility of the 101st is a lot more complicated, particularly since it strikes from the air, and takes along all necessary equipment—from rifles to rockets and jeeps to tanks.

But if the soldiers are constantly training, who keeps all this materiel repaired and ready to go on a moment's notice?

Civilians.

And who does the housekeeping for the town?

Civilians.

The paratrooper, if he keeps fit to fight in an atomic age, doesn't have time to put a new engine in a plane and serve as a ladderman in the hometown fite department.

As it turns out then, there are two divisions at Fort Campbell—a military and a civilian, both indispensable, so far as the defense of the Nation is concerned. And both take a lot of money.

What happens when funds are cut? As usual, it's a problem for the general.

Perhaps there have been military posts where a budget cut would be met with the philosophy of the old army game, whereby training and maintenance would be allowed to coast down to the level of the reduction.

#### MORE PRODUCTION ON FEWER DOLLARS

But the man who commands the 101st did not win the two stars of a major general at the age of 42 by proficiency at the aforementioned army game.

When the budget problem came up he did just what all who know him predicted he would do. He came up with a plan to get more production on fewer dollars.

The maintenance of the fort as a mobile community is not a profit and loss operation. In other words, the general has no balance sheet by which he can gage the efficiency of his overall operation. But he saw no reason why the experience of large and successful business corporations could not be applied to operational problems at the post.

At Westmoreland's invitation several highly qualified industrial engineers came to study the procedures then in force. They made their recommendations.

Then the commander of Fort Campbell wrote a memorandum.

Its message was directed to private citizens who live on farms and in the near and not so nearby towns of Tennessee and Kentucky. They are the men and women who keep the tanks, trucks, planes, rocket carriers, guns—from side arms to artillery—radio and radar sets—all at peak performance

ready for the 101st to take into action anywhere on the globe at any time.

These men and women from Clarksville and Cadiz, Ashland City and Hopkinsville also come to Fort Campbell every day to run the laundry, teach school, patch parachutes, operate and maintain the telephone, power and water systems, not to mention maintenance of more than 2,000 buildings and residences. The number is increasing all the time with a public housing program underway. Also the fort is in an advance stage of conversion from a temporary to permanent base.

#### CIVILIAN WORKERS GET THE WORD

Civilians are doing all of this work and it was to them, through their supervisors, that the general delivered his request on the subject "Increased production."

This is what he said:

"The operating budget has been reduced this year and it is anticipated that there may be a further reduction during the next fiscal year. At the same time additional requirements have been imposed on the post. Our only solution to the problem is to increase productivity within each work area. By this I mean the productivity of each civilian employee and military man involved in our industrial and administrative activities. In short, we must increase our efficiency and effect the fullest utilization of our available manpower, funds and facilities."

"You are urged," he continued, "to evaluate your performance, review and analyze your responsibilities, take stock of your practices, and work with us to increase our man-hour productivity. As a first step in increasing our efficiency, an immediate goal of 10 percent increase in production is established without increase in work force. I know I can depend upon you to play an effective role in attaining this objective." That letter was dated March 7, 1959.

Since that time the production efficiency of Fort Campbell has increased not by 10 but by 15 percent. And it is in the process

of going higher.

How was it accomplished? First by frankness and looking facts in the face. Then, a ready willingness to eliminate inherited, cumbersome and smothering patterns of procedure, thereby releasing creative energies born of pride in workmanship and a dedicated sense of teamwork and mission.

The operation has come a long way since the General asked one of the visiting industrial engineers for a verdict after the first inspection.

"How thick skinned are you?" the engineer replied.

"Plenty," said Westmoreland.

"Well, said the expert, "the place is too clean."

"And what does that mean?" asked the man who wears two stars.

"It means," said the consultant, "that in the furniture shop there should be sawdust on the floor."

#### SAWDUST ON THE FLOOR

Soon there was enough sawdust on the floor for a barn dance—and other changes were made, including the launching of a promotion program: Operation High Gear. All over the base posters and bumper stickers proclaim that: "We back STRAC (Strategic Army Command) More: Production, Efficiency, Economy, Incentive, Less: Waste, Cost, Time, Backlog."

STRAC today is backed with enthusiasm and new procedures that involve:

Cross training: The ambidextrous plumber introduced at the beginning of the article is an example. In the Signal Department, which operates the telephone system for the post, the technician who repairs and rebuilds radar sets and radios can do the same thing for a camera. That department, incidentally, does this type work for National

Guard, Reserve and ROTC units in the State of Tennessee.

Consolidation: There formerly were four battery shops on the base with duplicated equipment and personnel. Now there is only one. The furniture shop (with sawdust on the floor) now adjoins the paint shop.

Dispersal: The versatile plumber, who acts also in the capacity of carpenter, tinner, and electrician, is served by roving supply vans assigned to various areas on the base. Specially marked repair trucks are given the

right-of-way in traffic.

Work measurement: Varicolored charts bloom on all office walls. In the absence of profit and loss statements they tell at a glance the production story as it relates both to the individual and the unit. The foreman has immediate control of his labor force. He knows the what and when of his manpower.

#### VISITING FOR EXPERIENCE

Off post training: Mechanical supervisors visited large private industrial plants. Telephone and electronics technicians went on training missions to the Bell Telephone Co. Fort Campbell meat cutters improved their technique by experience at Frostry Morn's large Clarksville packinghouse. Maintenance supervisors visited the General Electric appliance plant at Louisville. Thus "Operation Experience For Efficiency" spread through the various types of industry.

Awards for incentive and new ideas both to individuals and groups: Entirely new processes and time-saving procedures have been developed. Show business agents tell their applicants: "Don't call us. We'll call you." When a cash prize is won the general says: "Don't come to me. I'll come to you." The award is made at the workbench. The work

break is shorter that way.

All this and the resulting achievements is Operation High Gear, and Operation Success.

But it is more than that. It's an attitude, a state of mind, an activation of an awareness of a threat to the Nation. It is the opposite and ultimate extreme of national complacency. The outstanding production and the still climbing momentum would not have been gained by pressure or mere synthetic enthusiasm.

The workers are under civil service, with all its benefits and protection. Their leave program is more liberal than the vacation plan of the average American citizen. Fort Campbell pays the prevailing wage scale and there are the usual compensations for overtime.

#### WORLD COMMITMENTS AFFECT ALL

Finally, to put it another way—in the briefing room at Fort Campbell, a world map covers one wall. From the dot that is the post, thin ribbons radiate to countries all over the globe where the United States has commitments. They are the parts of the free world, infiltrated and threatened perhaps, but as yet unoccupied by the restless, ruthless tide that is the Sino-Soviet combine.

The map is only a picture and the ribbons are just bright silken streamers. But the varied patches of color represent segments of the earth inhabited by harassed or insecure populations. Staff officers of the 101st read that wall as a doctor reads a fever chart.

The spreading strings represent invisible but pulsing lines of sensitivity, electric with potential flashes spelling possible chaos and then commitment for the Fort Campbell troops, spearhead of the Strategic Army Command.

These electric beams of intuition from over the world penetrate all ranks, civilian, too, within the installation. And here is welded the relationship between fighting man and artisan. Here the citizen employees, men and women, identify themselves with the mission, and the destiny of the 101st Airborne Division. The future of every-American is tied to that same destiny, but few, beyond the bounds of the Military Establishment on the Tennessee-Kentucky border spare necessary time from the comforts of complacency to be aware of it. Civilian workers at the great base are aware of it. They know that to the perfection and efficiency of their handiwork is geared the Screaming Eagles' efficiency of movement, weaponry, and communication—often the difference between life and death, victory and defeat.

That knowledge, deep in the hearts of these men and women, who wear no uniform, but report dally to their tasks at Fort Campbell, is accepted as a privilege, worn as a badge, with pride and gratitude. Like the paratroopers they support—they, too, stand bravely at the sharp edge of reality.

That is why Operation High Gear is in high

gear-and gaining speed.

# A Bill To Provide Longevity Corrections

EXTENSION OF REMARKS

### HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. PELLY. Mr. Speaker, today I am introducing a bill to provide that employees of the U.S. postal service shall be eligible to receive four longevity steps after 10, 15, 20, and 25 years of service respectively. Under my bill, each step would provide a \$200 per annum increase and enactment of the bill is urgently needed in order that the loyalty of career postal employees may be recognized properly.

One of the objectives of my bill also is to insure that all types of Federal service shall be considered in determining eligibility for longevity. I can see no reason why an employee who serves 10 years in a position under the classification act and then transfers to the postal service should be denied longevity credit for the full period of his Federal career.

Mr. Speaker, let us direct our attention first to the amount of each longevity grade. When the longevity concept first was enacted into law in 1945, the vast majority of postal employees had a top automatic grade of \$2,700. Today, the top grade for that same overwhelmingly large percentage of postal employees is \$4,875. The postal clerks, letter carriers, and postal transportation clerks making up this segment of the postal family are underpaid today just as they were in 1945 when Public Law 134 was passed. Nevertheless, the salaries have almost doubled in the intervening period. Is it reasonable then to assume that the 1945 longevity payments should be static in the context of a doubled wage structure?

Because of this feature, my bill stipulates that each longevity grade shall be \$200 instead of \$100. In regard to clerks and carriers at first- and second-class post offices, the 1945 law stipulated that employees should advance through 11 salary steps beginning at \$1,700 annually and reaching \$2,700 annually.

law-section 12a-stipulated "that for such employees at post offices of the first class there shall be three additional grades; that is, grade 12, \$2,-800; grade 13, \$2,900; grade 14, \$3,000, and that employees who perform faithful and meritorious service shall be promoted to grade 12 after 3 years of such service in grade 11, shall be promoted to grade 13 after 5 years of such service in grade 12, and shall be promoted to grade 14 after 7 years of such service in grade 13." The same meritorious grade feature was applied by the law to employees of the Postal Transportation Service and other branches of the postal service.

In the fashion outlined, the law established the three, five, and seven rule which brought with it certain injustices that have never been completely removed, but which are now so remotely distant or so puzzlingly complicated as to demand a bold new type of correction. Accordingly, my bill proposes four longevity grades.

On May 3, 1950, Public Law 500 was approved. That law established three longevity promotional grades to be effective following 13, 18, and 25 years of postal service. The act also provided that persons who were earning credit under, the three, five, and seven rule would, provided that they had been in the highest automatic grade of their positions, retain promotion credits under the three, five, and seven concept. Thus, just 9 years ago a new standard formula was introduced. That formula sought unsuccessfully to correct the inequities of previous law.

Because my bill is related to a postal salary structure which even today is not wholly realistic, and because there can be no other relationship upon which such corrective action could possibly be based, the bill I am introducing cannot possibly overcome each and every instance of inequity. Nevertheless, my bill is designed to provide suitable recognition to long-term career employees. It is a moderate bill, and I hope very earnestly that it may be given swift approval by the House Committee on Post Office and Civil Service and thereafter quickly approved on the floor of the House.

#### John Foster Dulles

EXTENSION OF REMARKS

# HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. FORD. Mr. Speaker, under leave to extend my remarks I include two editorials from publications in my district on the death of John Foster Dulles. One entitled, "A Patriot To Remember" is from the Western Michigan Catholic of May 28, 1959 and the other, "John Foster Dulles" is from the columns of the Holland Evening Sentinel of May 25:

#### A PATRIOT TO REMEMBER (By Magr. Joseph C. Walen)

The many tributes paid to the last John Foster Dulles since his death Sunday combine to preserve for this country's history a detailed portrait of a great patriot.

His devotion to the United States drove him to work in his nation's behalf until he could no longer muster strength against cancer. He worked to the very, brave end. American citizens generally are not appre-

American citizens generally are not appreciative of the work of their public servants. In the extremely complicated negotiations involving Soviet Russia, Dulles showed fortitude in the face of both the blustery Soviets and the snide criticisms of some parlor pinks in this country. He carried on doggedly, assuredly, whether his work was appreciated or not.

Some of his enemies belittled what they called his "moralistic judgments" in the shaping of our foreign policy. He had the vision and the courage to say bluntly that morality must be a norm in international diplomacy as well as in personal lives, or communism will surely win out.

As much as any soldier who demonstrated his patriotism by dying on the battlefield, so John Foster Dulles has died for his country.

His life has been an example of loving his country, of living for it, and of dying for it. It will be tragic indeed if that life of service does not prod more Americans into taking an active interest in their Government at all levels.

John Foster Dulles is a patriot to remember.

#### JOHN FOSTER DULLES

The former Secretary of State of our great country died Sunday after a long and painful illness from the killer cancer.

Right up to the time of his death he was active in the cause of his country as consultant to the President after his resignation as Secretary of State.

John Foster Dulles is a name that is known all over the world. He will be remembered as the great Secretary of State of this country for a long time. For more than 6 years he served during the cold war and with the many problems all over the world this was no small job. John Foster Dulles traveled thousands of miles each week pouring oil on the troubled waters of the world.

Millions of lines of news have been and will be printed on his short term of a little more than three score and ten years on earth.

Just recently Macmillan, Churchill, Dulles, and President Eisenhower met in Washington and at the President's farm where there were talks about world conditions.

This proved to be a timely meeting as Dulles was failing from the disease at the time of the meeting and many people over the world were wondering just how long it would be before the end would come.

There have been many people and will be many who will mourn the passing of Dulles who will be buried at Arlington Wednesday.

But there were times in Dulles' career as Secretary of State when he was derided and reviled by the press and officialdom of friendly countries almost as savagely as he was pilloried in stock Communist vituperation. Often he was regarded as a man more likely to bring on a war than to maintain peace.

Yet in the months preceding his death, there was a tremendous change in public opinion. Nothing but words of tribute came his way. They were not the sympathetic expressions intended to console a dying man, but represented almost universal appreciation of methods he used in steering the shaky ship of freedom through a turbulent time.

We are only on this great earth a short time and there are so many good things that need doing. We think that perhaps this might have been in the mind of John Foster Dulles because he did not save himself in any way but kept on right up to the end.

# Washington Report

EXTENSION OF REMARKS

# HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following newsletter of June 13, 1959:

WASHINGTON REPORT

(By Congressman Bruce Alger, Fifth District, Texas, June 13, 1959)

The urge to spend money as the universal answer to any problem before us keeps reappearing: (1) The \$1 billion, 10-year Water Pollution Act to build sewage plants passed 254 to 142 (ALGER against) and added \$30 million to the budget for fiscal 1960. Providing Federal money for local projects in this way seems unwise to me. (2) The publie works appropriation bill (\$1,185 million) exactly equalled the budgeted amount, although projects were rearranged. Responsibly the Appropriations Committee eliminated and reduced requested expenditures for many projects. Members of Congress asked for 230 unbudgeted projects, costing \$2.4 billion. Obviously, many had to be cut. Still 24 unbudgeted projects were scheduled. The President's no new starts policy was disregarded. My suggestion is that we cut Way down on public works spending and get our financial house in order. For example, this is hardly the time for water lily eradication costing \$500,000.

The Tax Rate Extension Act of 1959, the excise tax and corporate rate (from 47 percent to 52 percent) increases, imposed to help finance the Korean war, represents a yearly Procedure showing how Congress continues laws originally called temporary and emergency in nature. It passed handily because these proceeds are necessary to pay Govern-ment bills. Those of us who have responsibly built a record of economy could consistently Vote for this tax reduction. Yet, we must not, through inflation resulting from Government spending beyond receipts, weaken the buying power of the dollar. So it was that even the economy-minded voted for the tax extension, forced to do so by the big spending programs of Congress supported by less fiscally concerned Members. Forgotten in the sock the corporation tax argument is the fact that corporation taxes are passed on to consumers. So it's the individual, the John Does, who pay, as usual. Corporation tax cuts would help individuals.

The tobacco price support bill brought another allegedly sick farm crop to Congress for more legislative doctoring. (The only crops in trouble are the ones Government tinkers with.) The tobacco trouble is threefold: (1) Government support formulas have falled to keep tobacco prices from rising, which brings us to, (2) increased competition of foreign tobacco producers and loss of market, and (3) further acreage allotment cuts now pending. The remedies offered us were: (1) The Agricultural Committee's Democrat plan (whose chairman is a tobacco farmer) of keeping 90 percent rigid support in effect under one of two parity formulas, or (2) the Republican 3-year freeze at the present level. Both seemed wrong to me, the Republican less

objectionable. On e Member's suggestions were indicative of the disfavor of some Members over the farm subsidies totaling over \$5 billion yearly, which have resulted in mountainous surpluses, staggering storage costs, double taxation of our people, and lost foreign markets. His suggestions (p. 9334 June 9 Congressional Record): (1) Get rid of farm support programs, (2) fire sale of \$9 billion surpluses, (3) use \$1 billion to relocate small and inefficient farmers who can't stay in business without price supports, (4) apply proceeds left to national debt reduction and more toward later tax cut. The Federal farm program is scandalous and immoral, it seems to me. The Democrat plan passed 250 to 149 (after defeating Republican).

The wheat program of 1960 and 1961, a second agriculture measure for the week, was even more incomprehensible. sented as the best solution for a bad situation (\$3.5 billion invested in deteriorating stored wheat and even more surplus coming), we were told no one liked the bill. The surpluses can't be marketed and cannot be given away. They keep piling up with construction of increased storage facilities barely keeping up. The solution offered was to cut acreage 25 percent but give back to the farmer one-third of his loss in stored wheat. Take with one hand, give back with the other. The bill passed, believe it or not. A Republican substitute bill to treat all wheat farmers equally permitting all to vote by referendum for a choice of programs which would cost the Government less, was defeated. My disappointment over Congress' failure to correct the ridiculous farm program overshadowed my appreciation for adoption of my request to permit a farmer to grow unrestricted what he wants when he uses it on his farm. There's another program about which the people should rise up in arms.

The President's requests concerning debt management, a debt limit increase and revised interest rates on Government indebtedness is the subject of the Ways and Means Committee's present hearings. The Secretary of the Treasury, Texan Bob Anderson, made it plain that refusing to raise the debt limit is as unrealistic as refusing to pay your debts after running up bills. Congress contracts to spend; the Treasury must pay. Also, that interest rates must be changed since, realistically, interest rates represent the price to be paid for money, a commodity in the market place subject to laws of supply and demand like any other commodity. I predict the simple natural economic laws will be hardly recognizable as they are misinterpreted or distorted before these hearings are completed. Behind all our fiscal problems is a simple solution, reduce Federal spending. Believe it or not, we now even have the big spending Congressmen suggesting yearly debt reduction to those of us who have been trying to trim expenses, while they, the big spenders, keep piling up this debt, which last year alone was \$13 billion.

Mass Deportation from Estonia, Latvia, and Lithuania

EXTENSION OF REMARKS

# HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. DADDARIO. Mr. Speaker, in 1940 a crime so gigantic that its full dimensions have never been grasped by the people of the world was committed in the Baltic nations of Estonia, Latvia, and Lithuania. I do not refer to the forced granting of military bases on the soil of these nations to the Union of Soviet Socialist Republics, although that was an act that history cannot condone. I refer principally to the mass deportation of many thousands of men, women, and children to Siberia following this occupation of the three Baltic nations.

The story of what happened in these nations has been detailed in past reports by a special committee of this House. The extent of the tragedy has been blurred by the secrecy that covers the punitive facility of the Soviet Union. But the indifference to family love, to nationality, to basic rights of human beings, is clear to be seen in the record.

It was in those days that Marshal Ivan Serov was hard at work signing deportation orders and seeing to it that people who might become embarrassing to the occupiers were sent away. Later he became the boss of security throughout the Soviet Union. He is something of an expert in the field of inhumanity. He organized the deportation of Caucasians and Crimeans in 1944, presumably using his experience with the Balts: he personally instituted the security policy systems in Poland and East Germany in 1945 and it was probably he who planned the invitation to Polish resistance leaders to be killed in 1944. He was in Hungary in 1956.

The United States has never recognized the forced incorporation of these three States into the Soviet Union. It is a matter of moral principle that we should remind the world of what was done there, and that we should insist that right must prevail. We should insist that this issue be placed on the agenda of the United Nations so that Soviet aggression and intervention in the domestic affairs of the Baltic nations, as in the east European nations and in the latest example of Chinese Communist intervention in Tibet be exposed and corrected.

Poison in Your Water-No. 118

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in the Quincy (III.) Herald Whig of October 12, 1958, entitled "Where Raw Sewage Pours Into Creek":

WHERE RAW SEWAGE POURS INTO CREEK

Raw sewage dumped into creeks, one of several conditions intended to be corrected by an extensive sewer rehabilitation and expansion program which voters will be asked to approve at a special election October 21, was inspected recently by Mayor Leo W. Lenane and county health officials, it was announced Friday.

Mayor Lenane, who probably knows more about the city's sewers than any living man, appointed a nonpartisan citizens committee a year and a half ago, and charged it with studying the sewer situation and recom-

mending a program.

Part of the need for such a program was indicated by Dr. Sederlin, director of the Adams County Health Department, who declared after his inspection of sewers with the mayor and Harold Jacobson: "Sewers are badly in need of repair, they are inadequate, cause sewage to back up into basements in all parts of the city, and are probably Quincy's most pressing problem."

Curtis and Cedar Creeks are being polluted by sewage which pours into them unimpeded. The situation, Dr. Sederlin said, is not only

undesirable but it is also illegal.

Sewage backing up into basements is a serious health hazard, Dr. Sederlin noted, and is caused by sewers of insufficient size and number.

By providing new sewers and rehabilitating old sewers, the problem of basement flooding

will be virtually solved, he said.

The citizens committee and the city council endorsed a program outlined by an engineering firm which made a careful survey of the existing system, and the committee is conducting a campaign to get voters to approve a \$6,810,000 general obligation bond issue. The estimated cost to the average property owner, over a 20-year period, is \$12 a year.

#### Foreign Aid Criterion

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include not only a most timely editorial on the Foreign Aid Appropriation and the reasons for such a worthwhile program but an article filled with practical reasoning which I feel will be most helpful to the Members of the Congress in voting an extension of the mutual aid program. This news item written by a guest writer, Joseph Lapid, Israeli newspaper columnist now serving temporarily on the staff of the Lynn Item, Lynn, Mass., appeared in that highly respected newspaper on Friday, June 12, 1959, entitled "Foreign Aid Criterion":

FOREIGN AID CRITERION

The Senate Foreign Relations Committee this week approved a \$5 billion, 5-year program for aid abroad.

This means that a part of each American's hard-earned money will be sent to a foreign country, a country he perhaps never heard about, a country he will probably never visit, a country that he, frankly, doesn't care about a bit.

All he can do is hope that Congress knows better. And then, he reasons that it is a humanitarian duty to help the poor, the less fortunate, wherever they are and whatever their race, religion, and nationality is.

But then again, the American reads in his newspapers that the U.N. delegate of this same country that U.S. money is helping voted in the Security Council against a U.S. proposal; that some members of benefiting country's government 'are anti-American left-wingers; that in the capital the walls are covered with slogans such as: "Joe, go

"Why should I give money to these people?" the American asks himself, Perhaps he will even write a letter to his Congressman, urging him to vote against the foreign aid program.

Still, things are not as simple as that. American foreign policy is directed toward one important aim: to fight off communism. Every political military and economic place is, and should be, measured against that aim.

One cannot say: "The devil with other countries, we will keep communism out of the United States." The United States, mighty as it is, couldn't stand alone against a world dominated by Moscow and Peiping. In order to keep communism away from the United States our Government must strive to keep the menace within its present boundaries, at least.

The only criterion that the foreign aid program should be judged by is: Does it help

to fight off communism?

And the answer, firmly and positively is: Yes, it does. What military aid means is very easy to comprehend: you strengthen the army of an anti-Communist country, you strengthen American military position in the world.

The question of economic foreign aid is more complex, but not less important.

First. It proves, by pure show of wealth, that the system that brings to it and is even able to share it with others, is economically

Second. Helping, for no visible rewards, other countries proves to the world that the United States is prepared to stand up to its ideals of humanity.

Third and most important: The dollar is the penicillin of communism. No propaganda, friendly persuasion is a weapon com-

parable in its effectiveness to the dollar.

The historical axiom of our times is:
Where the living standard of the people is decent, no communism exists.

Marx predicted that the first revolution of the proletariat would take place in England. He was wrong. Britain, with its relatively high standards, was never even endangered by a Red revolution.

Communism broke loose in Russia, where the Czar's regime kept millions of people in misery, and it took control of China, where hundreds of millions hungered for centuries.

Western Europe, shaken and half destroyed in World War II seemed to be after the war, an easy prey to the Communists. In France and Italy they were actually prepared to take

failed for one reason only: The Marshal plan, financed by the U.S. Government, wiped out poverty and with it com-

True, it cost a few billion dollars wasn't it worth the money? Imagine Khrushchev ruling Rome, Paris, and perhaps Wouldn't that cost the United London. States much more?

Dollars sent by the foreign aid program save human beings from hunger. They save American lives, too.

You Can Help Stop Inflation

EXTENSION OF REMARKS OF

# HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. DORN of New York. Mr. Speaker, the New York World-Telegram and Sun, in recognition of President Eisenhower's recent words on the absolute necessity of halting any inflation published the following editorial in its issue of June 11, 1959:

YOU CAN HELP STOP INFLATION

Suppose Congress passed a law providing that, hereafter, 50-cent pieces shall be called

You are getting \$100 a week. So now you would get 100 half-dollars. Your real wage would be cut in half.

To regain your former actual wage, you would have to have \$200 a week.

Congress has not passed any such law in so many words, but its legislative program over the last generation has had that same effect.

By spending more than the Government takes in, by deficit financing, by creating artificial credit, by running the printing presses, Congress has doubled the number of dollars. No matter what you call them, these dollars now are 50-cent pieces. Actually that's giving them two cents the best of it. In terms of 1939 "hard" money, the dollar now is worth but 48 cents.

This is monetary inflation.

If the process continues and there are 10 times as many dollars, the dollar then will be-no matter what you call it-a dime.

You will then need \$1000 a week to stay even with the \$100-a-week living standard you maintained when a dollar was a dollar.

There's nothing impossible, or even fanciful about this. It's a process familiar to history. The French franc, to choose one out of a hundred depreciated currencies, has been worth 20 cents within the memory of people now middle-aged. It is quoted today at a fifth of a cent. Given the same degree of depreciation, our dollar would be worth a penny.

French savings, pensions, and insurance funds went down the drain with the franc. It could happen to us. It already has happened in part.

Just how much it has happened was pungently demonstrated in the World-Tele-gram's recent "Inflation Is People" series by William Longgood. In realistic case histories, Mr. Longgood showed what the decline in the dollar's buying power means in terms of human hardship, privation and frustration.

Monetary inflation in the United States has cruelly reduced living standards among the elderly and others dependent on social security or private pensions. It threatens present unemployment, clouds the future for anyone trying to save for education or old age.

High-pressure lobbies, promoting the selfish interests of sections or groups, are responsible for big congressional spending which has required sky-high taxes which at that are insufficient to pay the bills.

The demagogic alibi of the spenders is that these billion-dollar appropriations are We do not bedemanded by the people. lieve it. We believe the people want progress within their means. We do not believe they want their wages taxed away or that they want what the Government leaves them destroyed by inflation.

This is a close issue in Congress, where the most that is proposed is a balanced budget with no idea of setting anything aside to pay oh the debt and restore value to the dollar.

We do not often suggest: Write your Congressman. But this is a case when the power of the lobbies-and the vote greed of demagog—must be counteracted by a firm showing of the real demands of the

So we urge that you write to your Congressmen-Representatives and Senators. Tell them what you think about inflation, how it is affecting your family's life—and what should be done to stop it. Tell them

you want them to stop the spending and stand up for an honest dollar.

The names, addresses-all the information you will need to write your representatives in Congress-are contained in a special message printed today by the World-Telegram as a public service.

#### No Maine Potatoes in Idaho?

EXTENSION OF REMARKS OF

# HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. JOHNSON of Wisconsin, Mr. Speaker, under leave to extend my reremarks, I would like to include in the RECORD a news story by Alfred D. Stedman, agricultural writer for the St. Paul Dispatch and Pioneer Press. St. Paul, Minn.

"East States Erect Egg Barriers" is but another example of the growing tend-ency of various parts of the country to set up trade barriers against the shipment of the wholesome and economical products of the Midwest. I would hate ot see this trend continue. If carried to its ultimate conclusion, we might well find ourselves in a situation where Maine potatoes would be kept out of Idaho: Florida oranges would be forbidden in California; Virginia apples would not be allowed in Washington.

I do not think it is fair for the 49 States to erect such trade barriers against the products of their sister States. That is why I have introduced legislation which would allow the free flow of high-quality milk in interstate commerce.

Mr. Stedman's article follows: EAST STATES ERECT EGG BARRIERS

(By Alfred D. Stedman)

Egg barriers are being put up by Atlantic Coast States to discourage sales in big city markets of high quality eggs being shipped there by the Midwest's family-type poultry farmers.

This newest chapter in the story of outside barriers against the Midwest's more economical farm products was brought to light by a Dispatch check Monday. The egg barriers take the same general line as that being taken by Atlantic seaboard milk walls, representing, falsely the Midwest contends, that their eggs like their milk are somehow superior in quality to ours.

The news of the new egg barriers was re-Ported by Roy Carlson, head of the poultry division of the Minnesota department of

agriculture.

As it came to light, farm prices of grade A large white eggs in Minnesota were officially reported as averaging 18 cents a dozen, their

lowest level since 1941.

But instead of Minnesota, where egg production has remained fairly stable, blame for smashing the egg market was placed on soar-ing production of huge "egg factories." These are operated by feed companies as outlets in their integrated feed marketing operations.

There seems no doubt," Mr. Carlson said, "that our family-type poultry farms, 82 percent of which have flocks of fewer than 800 layers, have greater stamina to withstand an egg price collapse like this than the huge industrialized 'egg factories' of the eastern seaboard." Several other Minnesota poultry authorities agreed.

The superior staying power of Minnesota's family-sized farms was attributed to these factors: lower costs of family labor than eastern hired labor; cheaper poultry feed, averaging perhaps \$10 a ton lower here than on the Atlantic coast; terrific costs of much of the eastern seaboard real estate occu-pied by poultry producers; the high egg production of Minnesota hens, which compares favorably with any; high quality of Minnesota eggs and efficient, modern, sanitary transportation of them to distant

Three different examples of State barriers against complete freedom of commerce in eggs were cited by Mr. Carlson.

New York State, he said, is starting this month to buy all eggs for New York State institutions from producers within the State regardless of more economical purchases that could be made of Midwest eggs.

A Florida State law now requires that cartons of eggs from outside that State must be labeled "imported." Minnesota egg shippers are required to buy and pay for and apply labels that Florida egg producers do not have to purchase or apply to their eggs.

New Jersey is allowing only home-laid eggs to qualify under a New Jersey consumer

labeling system.

None of these egg barriers goes to the lengths of actually excluding importation, however, as do the District of Columbia and other eastern seaboard markets with the help of the U.S. Government in excluding milk and cream from outside areas.

#### Platform of American Veterans Committee

EXTENSION OF REMARKS OF /

# HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. O'HARA of Illinois. Mr. Speaker, by request of Irvin Lechliter, executive director of American Veterans Committee, of which the brilliant, dedicated, and popular Chicagoan, William R. Ming, is chairman, I am extending my remarks to include the Veterans and Armed Forces Affair platform adopted by that organization at its 1959 convention on May 15-17, 1959, at Sackett Lake, Monticello, N.Y. This conforms with my practice of presenting objectively, and as a service to the Congress, on proper request, resolutions on national issues of organizations of recognized standing in which many of my constituents hold membership.

Here is the platform as furnished me by Mr. Lechliter which expresses the views of the delegates to the AVC convention:

VETERAN AND ARMED FORCES AFFAIRS I. VETERANS' BENEFITS

The American Veterans Committee has constantly reiterated, since its founding its fundamental belief that rehabilitation and integration of veterans into the community is the proper scope and purpose of a veterans program. The achievement of economic security for veterans through sound economic planning, for all citizens rather than through special grants or favors to veterans is basic AVC policy.

For many years, AVC has pointed out the need for a thorough review and reappraisal of this Nation's policies on veterans. AVC's current position on veterans policies is as follows:

1. We oppose bonuses and general pensions as being class legislation and unrelated to the real needs of individual veterans and tending to set veterans apart from their fellow citizens.

2. Two basic standards should be applied in evaluating veterans' benefits. They are:

a. For death or disability incurred in military service: Are the benefits sufficient to provide a decent standard of living for the veteran, his family or survivors, taking account of the veteran's ability and opportunity for gainful employment?

b. For all veterans who did not incur disability: Are the benefits so designed as to enable the veteran to readjust from military service to civilian life with minimum eco-

nomic loss?

3. Veterans' benefits should be administered without regard to race, creed, color, sex, or national origin. Since benefits are a Federal responsibility, uniform standards of administration and compensation should be applied throughout the Nation.

4. The present scale of compensation for disability, and for compensation to survivors, provides amounts which we believe are not commensurate with an adequate

standard of living.

5. Provision should be made to maintain automatically the purchasing power of the benefit dollar. Monetary benefits should be adjusted annually on the basis of the yearto-year change in the Bureau of Labor Statistics, Consumer Price Index.

6. We endorse the proposal of the Bradley Commission that special consideration should be given to disabilities rated at 10 and 20 percent to determine whether significant economic impairment exists. Consideration should be given to discharge of the Government's obligation in static cases rated at 10 and 20 percent by an appropriate lumpsum or short-term settlement.

7. We believe in some veterans' preference for positions in the Federal civil service. However, this consideration should be lim-

ited in three major respects:

a. No veteran should receive a position unless he is fully qualified to perform duties entailed.

b. Preference for nonhandicapped veterans should be limited to initial appointment only.

c. Absolute preference for nonhandicapped veterans should not be granted in any event. nor should any job be reserved for such vet-

erans exclusively.

8. We endorse the provision for mustering out pay as necessary to bridge the gap be-tween military service and civilian life.

9. We urge equalization of benefits, aimed at eliminating differences in the present treatment of veterans, widows, and orphans of World War I, World War II, and Korea.

II. VETERANS' HOUSING

AVC believes that steps must be taken to discourage the practice of discounting, and adding special charges on GI mortgages, during a tight money market. AVC urges that the Secretary of the Treasury invest up to 25 percent of national service life insurance premium reserves in VA guaranteed GI mortgages to provide if needed supplementary financing in this field.

At the same time, proper steps must be taken to insure that the administration of such financing by the purchases of GI mortgages with VA and Treasury funds will not serve to perpetuate discrimination against Negro home buyers under the FHA program.

AVC proposes the eventual integration of the veterans' housing program into the Federal Housing Administration to eliminate the duplication of administrative costs for both programs.

#### III. PEACETIME GI BILL OF RIGHTS

Experience with the World War GI bill of rights has given ample evidence of the value in increased productivity to the Nation and to the increased taxes to the Government of that law's education and training provisions.

AVC endorses a modified GI bill of rights for peacetime draftees and volunteers who have been on extended active duty. It is our belief that such men who enable our country to maintain peace and meet its commitments and responsibilities to our allies are entitled to basic readjustment benefits to enable them to return without distress to civilian life at the end of their service and become useful and productive members of their communities.

AVC is mindful of the concern of the Bradley Commission that the enactment of (too liberal postservice) benefits could serve as an inducement to men to leave the armed services and discourage enlistments for longer periods of time. We call for enact-ment of legislation entitled "Peacetime Exservicemen's Readjustment Benefits" modeled on the provisions of chapter 14 of title 38 of the United States Code (the Korean GI bill) with the major change that the ration of educational credits earned for months in service at the rate of 11/2 months' education to 1 of service. Thus, a peacetime ex-serviceman enrolled in a typical institution having a school year of 9 months could obtain 4 years of training and education by serving a minimum of 24 months. The benefits should not accrue to 6-month trainees or to anyone serving less than 12 months, unless separated at an earlier period for a service-connected disability. The provisions of such a law would apply retroactively to all servicemen on extended active service subsequent to January 31, 1955, and discharged under honorable conditions.

#### IV. GENERAL PENSIONS FOR NON-SERVICE-CON-NECTED DISABILITIES

We believe that general pension benefits should be eliminated entirely for World War II and Korean veterans due to the greatly expanded social security, public assistance, and veterans' benefits programs, to which World War I veterans and their dependents were not entitled. We endorse the recommendations of the Bradley Commission, to continue the general pension program for World War I veterans as the reserve line of economic defense.

AVC believes that the Government should rely on the social security program to the greatest possible extent in providing incomemaintenance benefits for veterans and non-veterans against some of the economic and medical hazards of life.

The VA non-service-connected pension program should be essentially a reserve line of economic defense for veterans and their dependents until such time as their minimum income requirements are met under OASI or through their own sources of income. Benefit and eligibility provisions of this program and OASI should be coordinated to eliminate overlapping and duplication of payments with pensions being reduced by OASI benefits rather than the present reversed situation.

#### V. SEGREGATION IN THE ARMED FORCES

AVC believes that any Reserve program, present and future, which does not completely revoke segregation in the Armed

Forces is incompatible with democratic ideals and frustrates the moral fiber of our society. It is essential for the future security of this Nation that our manpower resources be used for the defense of our way of life without regard to regional prejudices. We urge therefore, that an antisegregation amendment be added to the Reserve law, and that Congress prohibit racial segregation in any federally recognized and/or federally aided National Guard units.

We maintain that no assignments of any personnel should be made to overseas posts on the basis of segregation by "host nations."

#### VI. ARMED FORCES TRAINING

We owes the men of our Armed Services the best possible training to equip them for the rigors of combat under the most adverse conditions of weather, terrain, supply, and enemy action. While we support a training program which is rugged, disciplined, and challenging, we decry brutality, sadism, or lack of judgment in training.

# VII. MILITARY MANPOWER, RESERVE FORCES AND NATIONAL SECURITY

The world we live in, despite recent changes in the climate of international hostilities, with its emphasis on speed of operation and technical superiority, demands standing armed forces of sufficient size, training and equipment and organization to be immediately effective for defense and counterattack. No matter how effective the Reserve program of the future may be it is apparent that the Regular Armed Forces must remain our first line of defense. They must be of sufficient size and mobility for deployment anywhere on the globe within a minimum of time so that we may continue to provide when necessary, those forces needed for collective security under our international obligations in peripheral conflicts occurring in the strategic localities of the world. Reliance on strategic airpower and massive retaliation alone is not only insufficient in the long run but may weaken our military security and increase international tensions.

We believe that reservists and National Guardsmen should not suffer loss of job rights and privileges, and employment opportunities, because of their participation in Reserve or National Guard training.

#### VIII. UNIFORM CODE OF MILITARY JUSTICE

The Supreme Court has invalidated the provision of the Uniform Code of Military Justice with regard to the trial after discharge of exservicemen for offenses committed in service. We believe that exservicemen should not escape punishment for serious offenses committed while in service, but should be tried before civilian courts; and we urge Congress to enact legislation covering these situations. The legislation should be limited to crimes of the same degree of seriousness as felonies at common law. It should also grant such exservicemen the same rights to a preliminary hearing before removal from the Federal district of apprehension as persons apprehended under other law.

# LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer

as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

#### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer. plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

# RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

# PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

# Appendix

# Report of Board of Visitors to U.S. Naval Academy

EXTENSION OF REMARKS

# HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 16, 1959

Mr. RUSSELL. Mr. President, the report of the Board of Visitors to the U.S. Naval Academy is a matter of general interest to all our people. I ask unanimous consent that the report of the Board of Visitors to the Naval Academy for this year may be printed in the Appendix of the Record.

There being no objection, the report was ordered to be printed in the Record, as follows:

Report of the Board of Visitors to the U.S. Naval Academy, 1959

THE BOARD OF VISITORS TO THE U.S. NAVAL ACADEMY

Appointed by the President: Dr. Milton S. Eisenhower, president, the Johns Hopkins University, Baltimore, Md.; Capt. David S. H. Howard, U.S. Naval Reserve (retired), vice President and director, Charles Millar & Sons Co., Utica, N.Y.; Rev. Edmund P. Joyce, C.S.C., executive vice president, University of Notre Dame, Notre Dame, Ind.; Mr. William G. Saltonstall, principal, the Phillips Exeter Academy, Exeter, N.H.; Dr. Eric A. Walker, President, Pennsylvania State University, University Park, Pa.; Mr. Sidney J. Weinberg, Investment banker, New York City, N.Y.

Appointed by the Vice President: Senator J. Glenn Beall, of Maryland; Senator Spessard L. Holland, of Florida; Senator Leverett Saltonstall, of Massachusetts.

Appointed by the Speaker of the House: Representative H. Carl Andersen, Seventh District of Minnesota; Representative Daniel. B. Brewster, Second District of Maryland; Representative Harold C. Ostertag, 39th District of New York; Representative John J. Riley, Second District of South Carolina.

Ex officio members of the Board: Senator CLAIR ENGLE, of California; Representative GEORGE HUDDLESTON, JR., Ninth District of Alabama

ANNAPOLIS, Mb., April 17, 1959. THE PRESIDENT OF THE UNITED STATES:

Sir: The Board of Visitors to the U.S. Naval Academy convened at Annapolis on Monday, April 13, 1959, and continued its deliberations until Friday, April 17. Mr. William G. Saltonstall, principal, the Phillips Exeter Academy, Exeter, N.H., served as chairman, and designated Cmdr. George Grkovic, U.S. Navy, as Secretary and Cmdr. Frank A. Andrews, U.S. Navy, and Dr. William S. Shields, as assistant secretaries.

Members of the Board who signed this report participated in one or more meetings of the Board.

The Board decided that it would meet for 1 or 2 days in the fall of 1959 and that its subsequent annual meetings would be held in the fall of the year in order to obtain better member attendance at all sessions. The 1960 meeting of the Board was tentatively set for 5 days commencing on December 5. It is recommended that, commencing in 1960, appointments to the Board be made on a fiscal rather than calendar year basis.

The Board acted as a committee of the whole during all discussions and inspections.

The Board of Visitors has enjoyed the privilege of coming to the Naval Academy and inquiring into its method of operation and obtaining an insight into the problems of this national institution at a time when the entire Nation is concerned with the education of its youth. In this time of important advances in science and technology it is gratifying that the Naval Academy is alert to the need of reassessing its program to the end that midshipmen obtain the best possible education and training. The Board notes with approval the attention being given to a comprehensive study of the curriculum and to the strengthening of admissions procedures. The Board commends Rear Adm. Charles L. Melson, U.S. Navy, and his entire staff of naval officers and civilians, for the excellent work being done to produce well-trained officers of the Navy.

The Board found morale to be high and discipline to be adequately maintained.

Progress is being made in improvement of the Naval Academy's physical facilities. The Severn River landfill projects are more than half completed, the foundations for two new wings to Bancroft Hall—the midshipmen's dormitory—have been completed, and the contract for the construction of these additional wings has been let, with the anticipation they will be ready for occupancy in the fall of 1961. Improved maintenance of existing facilities is still a matter of great urgency. The Board is deeply concerned with the inadequacy of the housing and recreational facilities for the enlisted men at the Naval Academy.

As a result of its inquiries and inspections, the Board submits the following comments and recommendations:

#### ADMISSIONS

The Board is gratified by the increase in the number of candidates for admission to the Naval Academy and by the high college entrance examination board scores attained by those admitted and the careful attention given to the character and physical qualifications of candidates. The procedure which the Academy has developed for the selection of competitive candidates and which it has made available to Members of Congress for the selection of congressional nominees is regarded by the Board as a worthwhile step in the direction of a more comprehensive evaluation of the candidates' qualifications,

The Board endorses the strengthening of entrance requirements which the Academy is proposing. According to the projected plan, all candidates will be required to take college-board tests in order to qualify for admission. This step would eliminate the

method of qualifying on the basis of college certificate without examination and would impose uniform minimum standards on all candidates. This proposal is a result of the Academy's recent experience, which indicates that those candidates who have been admitted without qualifying on entrance examination have proven to be poorer academic risks than their classmates.

As a further measure to increase the academic quality of entering midshipmen, the Academy is also planning to request a lowering of the upper age limit for admission by 1 year, with special provision for time spent in military service. The proposal is to maintain the minimum age at 17 years on July 1 of the year of admission and to reduce the maximum age to require that a candidate not have reached his 21st birthday on July 1 of the year of admission, except that for those who have had 2 years of active military service the maximum age be 22. Not only would the academic quality of the entering class be improved through the elimination of an age group of traditionally higher attrition than the younger midshipmen, but a better social situation would result from having a lesser age spread within the brigade. The Board concurs in the desirability of reducing the maximum age for admission.

#### CIVILIAN FACULTY

The Board studied the question of adequate salaries for members of the Naval Academy's civilian faculty. In common with other colleges and universities, the Academy must face the problem of raising the economic status of the professional college teacher, who has in recent years not shared equitably in the general increase in purchasing power. The demand for qualified teachers, resulting from rising enrollments in the Nation's colleges, requires that the Academy keep pace with other institutions which are putting into effect improved salary scales designed to attract and retain capable faculties. This requirement is especially marked at the Academy because of the lack of such professional incentives as opportunities for research and consultant work. Some important fringe benefits commonly available at other colleges are not enjoyed by the civilian faculty of the Naval Academy. In particular, there is no provision for reduc-ing or remitting the college tuition or children of members of the faculty, nor is there any assistance provided in health and re-lated benefits. The faculty does participate in the excellent civil service retirement plan and in Government term insurance at low rates. However, the Naval Academy is not authorized to make available to its civilian faculty the use of the Academy's medical, dental, commissary and Navy exchange fa-cilities. In view of the special problems involved in providing fringe benefits to the Naval Academy's civilian faculty, it is the judgment of the Board that improvement of the faculty's economic status should be accomplished through increasing faculty sal-

If the salaries paid to the civilian faculty of the Naval Academy were on a 9-month basis, they would compare favorably with salaries in other colleges and universities; however, since the Naval Academy faculty is employed on a 12-month basis, the Board considers them too low. An increase of 20

<sup>&</sup>lt;sup>1</sup>The chairman of the Committee on Armed Services of the Senate and the chairman of the Committee on Armed Services of the House of Representatives, or their designees, are, by law, ex officio members of the Board.

percent over the next 2 years would be appropriate and reasonable and is recommended by the Board.

The Board would encourage the faculty to look into ways of engaging in research in view of the significance of such activity to professional development and its relevance to the proposed new curriculum. It is further recommended that the Academy render every possible assistance in this regard.

#### MORALE AND DISCIPLINE

Morale at the Naval Academy continues to be of the highest order and discipline is not a problem under the outstanding leadership of Capt. William F. Bringle, U.S. Navy, commandant of midshipmen, and his staff in the executive department.

#### PHYSICAL EDUCATION

Both varsity and intramural sports programs continue to be vigorous and varied. The completion of the Severn River landfills will provide additional space needed for athletic, recreational, and drill programs. These new fields will be available for use in the fall of 1960. The Navy-Marine Corps Memorial Stadium will be completed in September 1959 and the Navy-William and Mary football game on September 26 will dedicate this new facility. The cost of building and maintaining this stadium has been derived entirely from private contributions and athletic income.

#### MIDSHIPMEN'S FINANCIAL STATUS

The Board recognizes the need for some relief in the financial status of midshipmen; however, it does not recommend an increase in salary at this time, for it lacks knowledge of the financial status of the cadets in the other service academies. It does support the recent decision to use appropriated funds for the purchase of midshipmen's textbooks and bedding commencing with fiscal year 1961.

The Board recommends that the Department of Defense undertake a detailed study of the various perquisites provided to students at the service academies in order that comparable benefits be available to all.

#### PHYSICAL PLANT

The Board was pleased to find that a contract has recently been awarded for the construction of two additional wings to Bancroft Hall. The completion of these wings in the fall of 1961 will alleviate the crowded living conditions for midshipmen, which have been noted in previous Board reports. This new construction will not, however, correct the serious deficiencies of maintenance in the living spaces of the older wings, nor the deficiencies in arrangement of messing and service facilities in the basement of Bancroft Hall. A program for complete rehabilitation of existing Bancroft Hall structure is a necessity. The Board found that an engineering study has been requested by the superintendent in order to develop the scope of work to be performed in this program and to establish a phasing sequence for the necessary military construction projects to be submitted to the Congress. The Board rec-ommends aggressive action at this time to develop such a program which can commence immediately on completion of the new wings now under construction.

The satisfaction of the need for improved living conditions for the midshipmen having been resolved, the Board is compelled to remphasize the need for improving the wretched living conditions of the enlisted men presently quartered on two barracks ships. To the credit of the Naval Academy, a second barracks ship has been obtained since the Board's last visit which will alleviate the congestion on a temporary basis until a permanent enlisted barracks can be constructed. These men on shore duty are crowded into spaces which compare unfavorably with conditions found at sea. There

are no outdoor recreational areas, indoor gym, or adequate lounge spaces, the overall situation having a most depressing effect on morale. The Board feels strongly that the provision of a permanent enlisted barracks with a mess hall and adequate recreational facilities, including nearby playing fields, is a matter of immediate importance.

The state of disrepair and general inadequacy of the underground utilities which serve the Naval Academy continues to be an item of serious concern to the Board. Happily, however, the Board found that a project is being sponsored in the fiscal year 1960 military construction program which will eliminate most of the serious deficiencies which now exist. Approval of this project by the Congress will permit correction of this difficult situation.

The playing fields on the landfill now in progress are expected to be ready for play in the fall of 1960. On completion of this project, the needs of the Naval Academy for outdoor areas for the physical training program and recreational athletics will be satisfied for the first time in 20 years. To look at the landfill from another point of view, additional maintenance personnel will be required commencing this summer to maintain the grass and generally tend this additional area of 54 acres. The attemtps of the Naval Academy to provide for these personnel, and many others vitally needed, through the budget process is apparently being thwarted by reductions in requested funds, The 1958 Board stressed in the strongest poss ible terms the need for correction of the general downward trend in maintenance of the Naval Academy over the years. This Board most heartily endorses the comments of previous Boards on this alarming condi-The Board is convinced that a substantial increase in the annual maintenance and operation budget of the Naval Academy is long overdue. Such an increase in funds be forthcoming to permit improved maintenance and accomplishment of the multitude of repair projects now extant, which total over \$2,100,000.

The overall needs of the Naval Academy for new facilities other than those mentioned heretofore were reviewed by the Board. It is apparent that curriculum changes now in progress will require a searching review of facilities planning. The development of the Naval Academy over the years has been characterized by several periods of expansion with but one completely new development plan at the turn of the century. The 1900 plan provided the basic framework of careful site planning and monumental construction within which each successive expansion since that time has taken place. The Board is of the opinion that the needs of the present-day Academy for additional facilities should be reviewed and integrated in a meaningful master plan by a commission of educators and architect-engineers appointed for this express purpose.

ACADEMIC DEPARTMENTAL REORGANIZATION AND CURRICULUM REVIEW

The Naval Academy with the approval of the Secretary of the Navy will place a new departmental reorganization into effect on June 4, 1959. The effect of this organizational change is twofold. First, related academic departments wil be grouped into three major divisions; Science and engineering, social science and humanities, and naval science. A director will be assigned over each division with the responsibility for coordinating the teaching methodology and curriculum content of the departments in the division. The Commandant of Midshipmen will continue to be responsible for the military life of the midshipmen in Bancroft Hall and will in addition have the physical education department under his jurisdic-

tion. Second, the Academic Board of the Naval Academy will be reduced from 12 members to 5 members. The old Academic Board consisted of 10 department heads, the Commandant of Midshipmen, and the Superintendent. The new Board will consist of the three division Directors, the Commandant of Midshipmen, and the Superintendent.

The Board of Visitors believes that closer integration of course content should result in the three basic areas—science and engineering, social sciences and humanities, and naval science. In addition, the reduction of membership on the Academic Board should allow this group to carry on its business in a more effective manner.

The Naval Academy is also undergoing a review of its curriculum, concurrent with placing into effect the new academic or-ganization. The Board of Visitors was briefed on certain tentative changes which might be made in the curriculum. In addition the Board of Visitors was told that the new proposed curriculum will be reviewed in detail beginning on May 11, 1959, by a formal Curriculum Review Board convened by the Chief of Naval Personnel upon the request of the Superintendent. The membership of this Review Board will be: Dr. Richard G. Folsom, Chairman, President, Rensselaer Polytechnic Institute; Dr. Jesse W. Mason, dean of the Engineering College, Georgia Institute of Technology; Dr. George A. Gullette, head of the department of social studies North Carolina State College; Dr. Lawrence E. Kinsler, professor of physics, U.S. Naval Postgraduate School; Dr. James H. Potter, dean of graduate studies, Stevens Institute of Technology; Rear Adm. Horacio Rivero, Jr., Director, Long Range Objectives Group, Office of the Chief of Naval Operations; Capt. Frederick L. Ashworth, (rear admiral selectee), Director, Atomic Energy Division, Office of the Chief of Naval Opera-

The Board of Visitors has these comments to make concerning the review of the Naval Academy curriculum:

1. The tentative changes in curriculum suggested by the Naval Academy indicate a strong trend in course content toward basic principles and away from hardware details. The Board emphatically concurs with this thinking.

 The Board of Visitors endorses wholeheartedly the establishment of a Curriculum Review Board and notes that its members are men distinguished in their respective fields.

3. The Board of Visitors has not made during this visit a detailed study of curriculum, feeling that its comments can most appropriately be made after the Curriculum Review Board has completed its study. Hence, this Board will meet again in December 1959 for 1 or 2 days' study of the recommendations of the Curriculum Review Board.

The Board of Visitors wishes to express its appreciation to the Superintendent, Admiral Melson, and his associates for their hospitality and alert attention to the needs of the Board. The excellent cooperation received by the Board facilitated its work and rendered its visit most pleasant.

William G. Saltonstall; David S. H. Howard; Rev. Edmund P. Joyce, C.S.C.; John J. Riley; Harold C. Ostertag; Clair Engle; Spessard L. Holland; George Huddleston, Jr.; Eric A. Walker; Milton S. Eisenhower; Sidney J., Weinberg; J. Glenn Beall; Daniel Brewster; George Grkovic, Commander, U.S. Navy, Secretary to the Board of Visitors.

SUPPLEMENTAL STATEMENT: SENATORS SALTON\*
STALL, HOLLAND, BEALL, AND ENGLE

We have prepared the attached statement expressing some of the comments which

have been suggested to us by responsible persons interested in the Naval Academy.

These views we would like to include as a supplement to the Report of the Board of Visitors to the Naval Academy. We would hope the committee appointed to study the curriculum might consider these suggestions in connection with its report to the officials of the Naval Academy and for the benefit of the Board of Visitors.

SPESSARD L. HOLLAND

(For all four of the Senators named above). MAY 5, 1959.

SUPPLEMENTAL STATEMENT BY SENATORS SAL-TONSTALL, HOLLAND, BEALL, AND ENGLE, FOR ADDITION TO THE REPORT OF THE NAVAL ACADEMY BOARD OF VISITORS

1. (a) It has been suggested that the present age limitation for entrance to the Naval Academy be lowered even further. It has been demonstrated that the younger students have better scholastic records and are better motivated. We note with approval that the Naval Academy has already adopted the college entrance examination for scholastic entrance requirements, but even more stringent achievement tests might be considered.

(b) Some relaxation of rigid physical admission requirements might be considered. These may on occasion exclude otherwise

highly qualified candidates.

- 2. The curriculum has for many years devoted a substantial portion of time to practical courses and drills. It is suggested that a study be made to determine whether some of this time could be more profitably devoted to strengthening the intellectual capabilities of the midshipmen. Many items of equipment and machinery are used for practical training during the year, much of which can be covered during the summer training periods, thus leaving more opportunity for academic work. Evidence of the need for revision of the curriculum and higher academic standards is shown by the fact that a Naval Academy graduate must take 2 years of additional undergraduate studies in order to compete with his college graduate counterpart in science and engineering graduate fields.
- 3. It is suggested that increased emphasis should be placed on individual academic achievement by offering additional or optional courses to individuals whose academic attainment is outstanding.
- 4. It has been suggested that the Academy might find much benefit in making greater use of qualified civilian instructors of professional rank and less use of line naval officers. It has been suggested that exchange professors from leading engineering and scientific schools might be invited for limited periods at the Academy.
- 5. It has been suggested that too much of the midshipmen's time is used with routine military and administrative duties and his schedule is so rigid as to preclude added study hours, should an individual student wish to pursue his studies beyond the immediately prescribed course. Greater flexi-bility in the nonacademic schedule might well permit better individual academic development and encourage initiative and leadership.

"What Price Liberty?" Asks the Head of ACA

> EXTENSION OF REMARKS OF

# HON. KARL E. MUNDT

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. MUNDT. Mr. President, an edi-torial entitled "What Price Liberty" pub-

lished in the Cincinnati (Ohio) Enquirer of June 10, 1959, contains a challenge which all Americans should read.

Based on a recent speech in Cincinnati which Adm. Ben Moreell, the famed American who organized the Seabees in World War II, delivered before the Cincinnati chapter of Americans for Constitutional Action, this editorial emphasizes the ancient truism once again that "freedom is everybody's business." Ben Moreell is the national chairman of Americans for Constitutional Action.

Those who desire to keep America American and who want to have a part in maintaining national solvency and individual freedom in this great country will find food for thought and a challenge to their capacity for action in this thought-provoking editorial published in one of America's great newspapers.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

#### WHAT PRICE LIBERTY?

As government expands, the liberty of every one of us contracts. So consider this: The cost to the average American family of the Federal Government has risen more than 4,200 percent since 1910.

That is merely the cost. The degree to which it has grown in authority and control over our everyday affairs probably would far exceed 4,200 percent, if it were possible for

anyone to compute it.

During the last generation, principally, government has grown from a friendly campfire to a prairie fire, then a mighty forest fire-consuming our resources, endangering our very existence as a Republic.

And most of us, at a presumably safe distance, merely are sitting back and basking in the warmth of the conflagration.

The credo that, when you get something from Washington you are merely spending the other fellow's money, has been a fallacy prevalent in American thinking for all too many years now. Only recently are some people coming to comprehend—as they pay the highest taxes in history, and stand responsible for the highest public debt in history—that the money tree in Washington has roots that extend into everyone's pocketbook, everyone's earnings, everyone's income, and everyone's savings.

Meanwhile, the Government has become the tool of the special interests, not the servant of the whole people. What special interests? Any bloc, group, organization, or whatnot that can hold out the lure of po-

litical popularity.

This is not government as our Founding

Fathers conceived it.

Far from it. And getting further all the time, as each political party tries to out-promise the other, and as rival candidates contend to see which can buy more voters with their own money.

What can you, as an individual, do about it?

Well, it isn't a time to wring hands or shrug shoulders. After all, it's your Government that is turning into a monster, and your masters.

Nobody will save you from the promisers and the gimmes and the into-everything, and the gimmes and the into-everything, regulate-everything politicians and bureaucrats unless you help restore freedom of choice to the American people.

An inspiring example of what one person

can do is provided by Adm. Ben Moreell, U.S. Navy, retired, who organized the Seabees in World War II, a man of vast business and engineering background, former president and chairman of the board of the Jones & Laughlin Steel Corp.

Admiral Moreell, who was a task force member for the second Hoover Commission, by instinct is a doer. He is, to the core, a believer in what has been called the American way of life. He became convinced that our liberties were running out like a millrace with the almost unopposed tide toward a centralized socialistic state.

So he quit what might have been a life of relative ease, and he and others who shared his concern for America formed Americans for Constitutional Action.

In his words, "More than 700 years ago Dante said, 'The hottest places in hell are reserved for those who, in a period of moral crisis, maintain their neutrality."

Admiral Moreell spoke in Cincinnati last week, sounding a railying call for constitutionalists of all parties. An effective, aggressive speaker, he pointed out that the terms "liberal" and "conservative" have become undefinable in American political life today, and that party labels have lost much of their distinction. It is his aim to make the influence of constitutionalists felt-everywhere from Washington down to the individual precinct.

Arthur Radtke, president of the Cincinnati Air Conditioning Co., heads a local ACA committee. It is a volunteer organization strictly, but they can use, and need, contributions. Everyone who doesn't relish a Socialist state in America—and in the last analysis that includes almost all of usshould be thankful that this positive force is at work to preserve government in keeping with the spirit and letter of the Constitution.

If the task appears difficult, or hopeless, remember the meager beginning and the seemingly impossible odds against the formation of this type of government when kings held sway in the 1770's.

#### Additional Funds for Cancer Research

EXTENSION OF REMARKS OF

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. NEUBERGER. Mr. President, the Oregon Daily Emerald of May 29, 1959, published an informative and searching editorial on the urgent need of further funds for cancer research. The title of this editorial is "Congress Enters Cancer Fight." The Oregon Daily Emerald is the official student publication of the University of Oregon at Eugene. The editorial was published at a propitious time, just when many of us have been seeking additional support in appropriations for the research programs sponsored by the National Cancer Institute

We have high hopes that the Appropriations Subcommittee headed by the distinguished senior Senator from Alabama [Mr. Hill], who is one of our Nation's genuine leaders in pioneering for medical legislation, will soon report a bill which reflects substantial gains in this vital field.

Mr. President, I ask unanimous consent that the editorial from the Oregon Daily Emerald of May 29 be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS ENTERS CANCER FIGHT

As Newsweek phrased it, "The tragic list has been long." It can be headed by Secretary of State Dulles, followed by Gen. Nathan F. Twining, Senator Robert Taft, our own junior Senator Richard Neuberger and radio and TV star Arthur Godfrey.

All have been the victims of cancer; only

All have been the victims of cancer; only some have been fortunate in their battle for

recovery.

The tragic list, so consistently placing the name cancer before the Nation, has grown since 1939 at an increase of 30 percent a

Today's facts show that 2 out of 3 families will be afflicted by the disease, with 26 million persons now living in the United

States contracting cancer.

These increasing percentages emphasize that the time has been reached for a cancer breakthrough. The causes of and cure for cancer must be found, not just treatments for holding the disease. Such a crash program necessitates millions of dollars.

The American Cancer Society, through its fund drive program can no longer play the major role in financing this final all-out effort in breaking through the cancer barrier. The Government must take a greater role in footing the bill. Thus a bill was recently presented to Congress asking for a \$75 million cancer research investment.

Because of the list's growth it is logical to now expect such assistance from the Government; however, one can also explain the Government's concern by observing the Nation's response to the cancer society's appeal for donations.

Senator Neuserger reports that our total research investment, both Federal and private, falls to less than 2 percent of what we

spend on cigarettes.

At the same time, the American Cancer Society announces that 10 times as many cigarette smokers die from lung cancer as nonsmokers, and continues by stating that the lung cancer death rate among people who smoke two packs a day is roughly 60 times as high as the death rate of nonsmokers.

The public appears to have an ostrich attitude toward this dread killer. Maybe congressional interest and appropriations will help check cancer's growth.

# Agricultural Conference To Be Held at the University of Illinois Suggested by Illinois General Assemby

EXTENSION OF REMARKS

# HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. MACK of Illinois. Mr. Speaker, the House of Representatives of the State of Illinois recently passed a resolution suggesting that the President of the United States call a conference to be held at the university of Illinois to study the agriculture and surplus food problems. We all know that this is one of the major problems confronting our country and I strongly feel that such action should be taken.

Mr. Speaker, under leave to extend my remarks, I wish to include a copy of this resolution passed by the House of Representatives of the 71st General Assembly of the State of Illinois. The resolution is as follows: STATE OF ILLINOIS 71ST GENERAL ASSEMBLY HOUSE OF REPRESENTATIVES

HOUSE RESOLUTION 78

(Offered by Messrs. Simon, McCully and Clyde Lee)

Whereas, the agricultural problem in the United States is one of the major crises confronting our country; and

Whereas, at the same time three-fourths of the people of the world go to bed hungry each night; and

Whereas, this presents our country with a great moral and economic dilemma as well as a political problem, since communism grows and breeds in areas of human misery; Therefore, be it

Resolved, by the House of Representatives of the 71st General Assembly of the State of That we request the President of the United States to call a conference of a week or 10 days duration of people concerned with this great problem at Allerton House near the University of Illinois to study the agriculture and surplus food problems and if possible propose solutions to these most vexing problems; that the House suggests that such a conference be held in the late fall of 1959 and that among these who should be invited are the Secretary of Agriculture Ezra Taft Benson; former Secretary of Agriculture Charles Brannan; Congressional leaders interested in this problem such as Senator Everett Dirksen, Senator PAUL DOUGLAS, Senator George AIKEN, and Senator HUBERT HUMPHREY; several experts in the field of agricultural economics; several experts in the field of world trade, two or three representatives of each of the major national farm organizations; two or three representatives of the Protestant, Catholic and Jewish faiths; and such others as the President might designate. We believe that our country's abilities should be directed toward finding possible solutions to this moral and economic dilemma and feel that the President of the United States could perform a great service to the cause of peace and freedom by calling such a conference; and be it further

Resolved. That a copy of this resolution be forwarded by the Secretary of State to the President of the United States, Secretary of Agriculture Exra Taft Benson, and to all the members of the United States Senate and House of Representatives elected from Illiance.

Adopted by the House, May 19, 1959.
- PAUL POWELL.
Speaker, House of Representatives.

Clerk, House of Representatives.

Dixie Kennedy, of Bellaire, Tex., Wins \$5,000 College Scholarship

EXTENSION OF REMARKS

# HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 16, 1959

Mr. YARBOROUGH. Mr. President, a young Bellaire, Tex., high school graduate. Miss Geraldine (Dixie) Kennedy, daughter of Mr. and Mrs. William Kennedy, has been saving for more than a year to get money to go to college. Now she no longer has that worry. Miss Kennedy has been named national winner in the high school division of a \$5,000 scholarship in an essay contest

sponsored by the Underwood Typewriter

Mr. President, as a special recognition to this 18-year-old student who has brought credit to her school, Bellaire High School; her parents, Mr. and Mrs. William Kennedy; her teacher, Mrs. Margaret Bleil; and her State, I ask unanimous consent to have printed in the Appendix of the Record an article which appeared in the Bellaire Texan for Wednesday, March 11, 1959, entitled "Bellaire High Graduate Wins \$5,000 National Scholarship."

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

BELLAIRE HIGH GRADUATE WINS \$5,000 NATIONAL SCHOLARSHIP

A Bellaire High School graduate is \$5,000 richer today because her schoolteacher insisted she enter a national scholarship contest.

Geraldine (Dixie) Kennedy, 18-year-old graduate of Bellaire High School won first prize in her division in the \$81,450 nationwide scholarship-cash contest sponsored by

the Underwood Typewriter Co.

The contest was open to three divisions—college, high school, and junior high school. The three top winners in each of the divisions were awarded \$5,000 scholarships to a college of their choice plus an all-expense paid trip to New York City for each winner and their favorite teacher.

#### SHORTHAND TEACHER

The teacher responsible for Dixie's entrance into the contest was Mrs. Margaret Blell, who teaches shorthand and typing at Bellaire Senior High.

Only last year Mrs. Bleil's shorthand class won first place in a national contest.

It was in Mrs. Bleil's shorthand class that the Underwood contest was brought up. Mrs. Bleil obtained entry blanks for the entire class of 24. The contestants had to write in 100 words or less on the subject. "How a new portable typewriter could help improve my schoolwork."

Dixie, one of three daughters of Mr. and Mrs. William Kennedy of 5821 Indigo, is currently employed in the mailroom of the Transcontinental Gas Pipe Line Co.

COULDN'T BELIEVE IT

She was beside herself when informed that she had won first place in the Underwood contest.

"I can't believe it, I can't believe it," the petite blonde exclaimed while surrounded by happy Transcontinental Gas employees. "And to think I've been saving over a year

to go to college."

The Kennedys have an older daughter, 19-year-old Linda Louise in college at Texas Tech in Lubbock and simply could not have two girls in school at the same time. As a result, Dixie worked after school and got employment immediately following graduation so that she could save enough money to attend a college in September. She attended summer school this past year so that she could graduate in February in order to obtain a full-time job to aid her in entering college.

#### MAKES OWN CLOTHES

Dixie hopes to study retailing and fashion designing in college. She sews and makes all her clothes now.

"I had hoped to attend either North Texas State Teachers in Denton or Texas Tech." Dixle beamed. "But now with the \$5,000 scholarship, I think I'll shop around."

As for her trip to New York, which is an additional prize, Dixle and her teacher Mrs. Bleil, plan to go there when school lets out for the summer.

"I feel like I'm on cloud No. 9." Dixie kept repeating. "It's just wonderful."

# Reunification of Germany Is Not Likely in Near Future

EXTENSION OF REMARKS

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 16, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, an extremely informative article by Congressman Cornelius Gallacher, of New Jersey. As a member of the House Foreign Affairs Committee he re-recently visited Berlin and I think his observations on this subject hold considerable interest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REUNIFICATION OF GERMANY IS NOT LIKELY IN NEAR FUTURE

(By Congressman Cornelius E. Gallagher, member, Foreign Affairs Committee, House of Representatives)

The thing which Germans, East and West, want most they are least likely to achieve in the near future, or for many years to come. This thing that they want so desperately is reunification.

Germans talk constantly of the day when their country will be reunited, with Berlin once again its capital. This is a subject politicians warm to in every campaign speech. Officials talk of it and every German dreams of it. To speak against reunification in Germany would be like a politician anywhere else coming out against motherhood.

Yet every German knows in his heart and admits (but only to himself) that reunification in the foresecable future, if ever, is remote.

Reunification on terms agreeable to the Soviet could hardly be expected to be acceptable to the West.

East Germany is firmly planted in the Communist orbit. It has become in a few Years the greatest trading nation in the Soviet sphere and is the largest industrial chemical producer in the Communist world.

There is ample evidence that East Germany is slowly but surely being economically and militarily geared never again to fit back into the Western World. Russia is making tremendous investments in East German industry. This alone is evidence that the Soviet does not intend to relinquish its interest in East Germany.

There is every reason to believe that the Soviets are seeking to blot out of the minds of East Germans any hope of reunification. If they succeed in doing this, they will assure the development of East Germany as a permanent nation in the Communist bloc.

The investments of the Soviet Union in East Germany are now in excess of \$400 million. Many of the industrial plants which were dismantied by the Russians following World War II are now being shipped back to East Germany and reestablished. The Russians provide oil for the country's tremendous chemical industry through a pipeline running from Soviet oilfields.

Likewise, West Germany and other free nations have sizable investments in West Berlin and plans for further expansion of that city which is already one of the great industrial cities in Europe.

This continued industrial development of both East and West Germany actually works against the probability of reunification. At

the same time, it works against the probability of the Soviet going to war over the status in Berlin.

War is not a solution to the Berlin problem for Rusia, for it would mean disruption, if not abandonment of the industry in East Germany which is so important to the continued development of the entire Communist bloc.

Soviet leaders for years talked of reunification. In recent months, however, it has become clear that reunification is no longer in their plan.

Khrushchev said recently that there would be reunification only if the enlightened people, of course, are the hard-core Communist in East Germany. What the Russian Premier was saying, of course, was that there would be no free elections.

Since there is little likelihood of reunification, the West must seek the next best status for Berlin. This is a permanent agreement of status that will assure the existence of West Berlin as a free and prosperous city.

# Urban Renewal in Pittsburgh

EXTENSION OF REMARKS

# HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by J. Stanley Purnell, assistant to the president, T. Mellon & Sons, Pittsburgh, Pa., at a luncheon meeting of the real estate board of Greater Baltimore and the Fight-Blight Fund, Inc., Lord Baltimore Hotel, Baltimore, Md., February 27, 1959:

#### URBAN RENEWAL IN PITTSBURGH (By J. Stanley Purnell)

In these days, it is commonplace to say that we live in a time of change and to prophesy that greater changes are yet to come. One of the greatest changes, indeed, a veritable revolution in our economy, our politics and our ways of living, has come with the increasing urbanization of our society.

In 1850, 85 percent of the population lived in rural areas and only 15 percent in the cities. One hundred years later the exact reverse was true. The 1950 census found only 15 percent of the Nation's population on farms. The latest estimates indicate that this percentage has decreased to less than 12 percent. The trend continues. Last year a Rockefeller Fund study estimated that about 1 million people a year are leaving our farms and migrating to the cities; and the exodus shows no signs of abating.

With this mighty shift to an urban America, we must concentrate our national efforts on the opportunities and problems of our urban areas and their central cities.

When our record is finally written, the future historians may well consider most important our efforts to remake our cities so they mirror our aspirations, and give meaning to our way of life. Cities have always exemplified civilization. This is more than ever true in today's increasingly urban civilization.

Civic leadership everywhere is awakening to the realization that the city is not fulfilling its function. Men in every large city are asking these questions: What should be done? What can be done? But it is also good to note that these questions are beginning to be answered.

Today urban renewal is very much in the forefront of national and municipal affairs, and it shows every sign of remaining so. We now have a program that has achieved national acceptance. The questions now facing the Congress are not "Shall there be urban renewal?" but rather "How big shall this program be? How fast and how efficiently can the cities work at it?" I venture to say that any skepticism will soon change to a growing demand in every city that the program be permitted to proceed at full steam.

Actually, it seems to me we have no other choice. If America is to remain great, if our American cities are to become fit places in which families can live, grow, work, and play—if the American way of life is to be more than an empty slogan—then we must use urban renewal to remake our cities into communities of neighborhoods in which people will have all of the services and amenities that should go with our 20th century civilization. Neighborhoods which are not isolated islands set off by artificial barriers, but which are knit together and well related to cultural, commercial, and industrial centers.

As cities go, ours are comparatively young. Nevertheless, the aging process in inexorable and relentless. Some things improve with age—acquire a finer taste, a richer aroma, or assume a becoming grace. Not so with entire American cities.

I grant you some sections of Pittsburgh and Baltimore retain their original charm and serve as reminders of our past and our traditions. In our renewal plans we are increasing our efforts to preserve and point up these finer, older sections. Thus in Philadelphia, the area around Independence Hall is being restored as a unique part of the city and a hallowed national monument.

At the end of World War II, the outlook for Pittsburgh was very bleak indeed. The city was dirty, overworked steel mills were run down, and there had been a marked absence of new construction for many years. Blight had set in to an alarming degree. But, above all, civic pride was at a low ebb. Pittsburgh was not considered a good place in which to live and work. As one leader in the steel industry said, "Pittsburgh's outlook is dark. Certain mills are marked for abandonment; expansion is to take place in distant places, and it seems doubtful that Pittsburgh can ever hold her own in the steel world."

And then something remarkable occurred. A group of younger men with new vision and vigor, and far greater social consciousness than many of their predecessors, who had made their fortunes in the city and moved away, came into positions of leadership in our large corporations.

These younger officials and new executives, under the inspiring leadership of Mr. Richard K. Mellon and some of his closest friends, concluded that steps should be taken to restore Pittsburgh among the Nation's great cities. These men were stanch believers of the Jeffersonian philosophy of individual responsibility toward the community.

They were also the men, who in 1944 formed the Allegheny conference on community development, which became the guiding vehicle of the Pittsburgh renaissance. Under the leadership of the Allegheny conference, urban renewal and the Pittsburgh renaissance have been characterized by a high degree of cooperation between business and civic leaders and local government. Some of the accomplishments stemming from that cooperation may point up the main elements of the Pittsburgh story.

While not unique to Pittsburgh, two major problems have especially plagued us—air pollution and recurrent floods. Over the past 15 years, both have been considerably alleviated. Countywide legislation, plus the investment of more than \$250 million by private industry have established effective smoke control. The flood control program on the Allegheny and Monongahela Rivers and their tributaries has been largely completed. The \$100 million invested in this program has paid off in savings all through the Ohio Valley in recent years when high water has been held back to reduce the threat of devastating floods.

Our rivers, streams, and an abundant water supply are among the region's valuable natural resources. The elimination of pollution caused by emptying raw, untreated wastes and sewerage into the rivers and streams has been of major concern. To meet this problem, the Allegheny County Sanitary Authority completed at a cost of \$100 million a vast collector and disposal system which will be in full operation soon.

A multi-million-dollar construction program has been undertaken in the development of a medical center at the University of Pittsburgh—now one of the foremost of its kind anywhere.

Another phase of our renaissance has dealt with highways and parks. One section of our parkway, running through the heart of downtown Pittsburgh, and linking the Greater Pittsburgh Airport with the Pennsylvania Turnpike, cost more than \$100 million.

Redevelopment projects undertaken with the cooperation of the Urban Redevelopment Authority of Pittsburgh utilizing its power of eminent domain have provided a major part of the Pittsburgh renaissance. We have undertaken 10 such projects. Six of them have been carried out without Federal financial assistance. I believe this is more private redevelopment than has been carried out by any other city.

The State of Pennsylvania acquired 36

The State of Pennsylvania acquired 36 acres of commercial slums at the apex of the triangle. The area is being transformed into State Point Park, where 200 years ago the British and their colonial allies wrested control of the Ohio Valley from the French with the capture of Fort Duquesne.

Immediately adjacent to State Point Park. the Equitable Life Assurance Society built Gateway Center on land acquired from the Urban Redevelopment Authority of Pittsburgh. Three stainless steel skyscraper office buildings have been erected in a landscaped setting by Equitable. Today, con-struction is progressing on Gateway No. 4 a 22-story, \$15 million skyscraper, next to which a 750-car underground parking garage is being constructed. Two other new office buildings complete Gateway Center: A State of Pennsylvania Building and the Bell Telephone Co. headquarters for western Pennsylvania. The 22-story Pittsburgh-Hilton Hotel is nearing completion. Scheduled to open this fall, its gold anodized aluminum facade makes it a noteworthy addition to the Golden Triangle.

About 12,000 people daily enter Gateway Center. The completion of these new buildings will raise the total to 16,000.

In the early 1950's, the Mellon-United States Steel Building and the Alcoa Building were built at the base of the Golden Triangle. With a \$4 million grant from three foundations, the city acquired an entire block between these buildings. The land was cleared, and a delightful surface park, known as Mellon Square, was developed, with a six-level underground parking garage.

Thus, in about 10 years, more than one-fourth of the Golden Triangle was rebuilt through the redevelopment process. More than 55 major new buildings have been built or are under construction.

In addition to Gateway Center, private enterprise has carried out five other redevelopment projects in the city. The Jones & Laughlin Steel Corp. undertook the redevelopment and renewal of 120 acres of blighted industrial and residential areas on Pittsburgh's South Side. The land was acquired and cleared by the Urban Redevelopment Authority and sold to the corporation, which built 11 new open-hearth furnaces at an approximate cost of \$70 million. In 1947, before work started, tax assessments in the wards where the project is located amounted to \$18,937,700. Today, tax assessments have increased by more than \$10 million.

These Pittsburgh projects undertaken without Federal financial aid demonstrate that private enterprise can go far in redeveloping commercial and industrial areas in the city in cooperation with public redevelopment agencies. They also prove that such redevelopment can mean a handsome return on the public and private investment.

We in Pittsburgh are well aware, however, that our urban renewal program cannot be continued without Federal assistance. Three major projects now underway, and many more in early planning stages are dependent upon Federal ald under title I of the National Housing Act of 1949 as amended.

In today's situation, where the Federal Government has preempted the most productive and lucrative tax sources, cities necessarily and quite appropriately must turn to the Federal Government for aid. Assistance through the urban renewal process strengthens both the economy of the cities and of the Nation, and improves the standard of living and the taxpaying abilities of millions of Americans.

Few Federal investments have such a stimulating effect. The Urban Renewal Administration estimates conservatively that for every dollar in Federal grants \$5 in private and local funds are being invested in urban renewal projects.

Just as a few years ago the point of the Golden Triangle had become an ugly, deteriorated low-grade commercial area, so had the area adjacent to the base of the Triangle become a majodorous slum. But with Federal cooperation under title I of the National Housing Act, the Urban Redevelopment Authority acquired and cleared the 95-acre site known as the Lower Hill.

The Authority has invited prospective developers to submit proposals for the redevelopment of Lower Hill land for commercial and residential purposes. Proposals are scheduled to be opened this coming May.

Eight acres are available for commercial development, and 17 for residential purposes. All told, nearly 1 million square feet are involved. Major expressways and streets, and a huge auditorium and civic center will occupy the remaining 70 acres.

The Lower Hill project is the city's largest

The Lower Hill project is the city's largest and most spectacular renewal project yet undertaken. A feature of the \$20 million civic auditorium now under construction is its vast retractable dome of stainless steel, the only one of its kind in the world. The dome permits the building to be used as an open-air amphitheater in summer for shows under the stars, and a self-enclosed auditorium in the winter or during inclement weather in the summer. The mammoth structure will also serve as a sports arena, convention hall and exhibition center. Its seating capacity will range from 7,500 to 14,000, according to the event. The building is scheduled for completion early in 1961.

Several weeks ago, a Pittsburgh foundation announced that it would put up \$1 million to reserve 10 acres of land in the project area for a cultural center, if no buyers come forward by 1981 to acquire the land for such cultural purposes as an art museum, symphony and opera house and playhouse.

Over the years, a number of groups had worked at this problem, but effective action

was impossible without a top-level, properly supported coordinating agency. The Allegheny conference on community development endorsed the need for the formation of Action-Housing Inc.

of Action-Housing, Inc.

Until we started the dramatic Lower Hill redevelopment project, the job of renewing Pittsburgh's blighted residential neighborhoods had scarcely been touched, nor had we fully realized the urgency of developing an adequate supply of housing for families displaced by governmental activities.

It soon became apparent that a comprehensive program designed to halt the further spread of slums and blight in our community, matched by an equally comprehensive program to increase the supply of privately financed sales and rental housing for middle-income families was an absolute necessity.

It was also evident that urban renewal and public works programs would displace thousands of families from their homes. It is estimated that some 5,000 families face displacement in urban renewal project areas to be cleared in the county. During the next 10 years, these same programs will result in the displacement of additional thousands of families.

It is certainly no secret that slum clearance, urban renewal and related programs, necessary as they are to the revitalization and growth of our cities, nevertheless tend to reduce, rather than increase the housing supply.

We know that a piecemeal attack on slums and blight is ineffective; that a random assault on slum pockets in one section of the city will only push the slums into other areas—unless we have a comprehensive plan for attacking the entire problem of urban decay.

At the time of its formation 16 months ago, Action-Housing, Inc., set for itself a truly impressive objective—to devise with other community agencies and organizations a program of housing and urban renewal which will eliminate the slums and blighted areas in Allegheny County in 20 years—and then to see that the program is carried out.

Action-Housing's primary objective is not to build houses, or develop urban renewal projects, but rather to cause housing and sound urban planning to be produced through private enterprise and appropriate public agencies.

The attainment of this objective will require concerted action by the entire community. Let me illustrate. About one-quarter of the people in Allegheny County live in conditions we propose to eliminate. The 1950 census showed some 120,000 substandard dwelling units in the county. While there has been some upgrading of the housing supply since 1950, we think that based on current city and county planning department estimates, about 50,000 dwellings must be demolished. According to that census, Pittsburgh had proportionately more substandard housing than any northern city in the Nation.

From the outset, Action-Housing, Inc., has worked to help mobilize all community resources toward solving the housing problem.

To do this, it set about to create wide public understanding of these problems, and to work toward practical solutions. It sponsored two pliot projects. One in Spring Hall Gardens, the first section 221 (National Housing Act) rental housing project in the State and the second in the Nation. Four members of the Action-Housing, Inc., board of directors and its counsel are incorporators of the \$134 million 209-unit development for displaced families. Apartments in Spring Hill Gardens will rent for \$75, \$85, and \$95 a month for one, two, and three bedrooms, respectively, all utilities included except electricity.

The second demonstration was the rehabilitation and sale of a single house, also under section 221. This was undertaken with the full cooperation of the Greater Pittsburgh Board of Realtors, the Home Builders Association of Metropolitan Pittsburgh, and other local business and civic organizations.

During the past year, Action-Housing, Inc. brought to Pittsburgh more than 80 specialists from all over the Nation to participate in eight breifing sessions and meetings on various aspects of housing and urban renewal. A veritable "Who's Who" of local and National Government officials, labor leaders, builders, bankers, financiers, building material suppliers, and representatives of civic and minority groups attended those sessions.

Those meetings served more than just a general educational purpose—vital as that may be. To cite but one example—the January 1958 Pittsburgh round table on "What Must Be Done To Make Moderate Rental Housing Work in a Typical City Like Pittsburgh"-underscored the nationwide need for new sources of equity capital for housing for middle income families. Our cosponsors for this round table were national Action and House and Home magazine.

Subsequent to the round table, Action-Housing, Inc. initiated extensive studies into the feasibility of a development fund which would provide such capital in Pittsburgh. After consultation with leaders in the housing industry, we prepared a draft prospectus for creating a Pittsburgh development fund to supply intermediate equity capital for the construction of nonsubsidized private sales and rental housing for middle income families, as well as funds for rehabilitating existing houses. The prospectus is now receiving top-level consideration.

We are also aware that any overall treatment of the community's present housing problem, as well as its future housing needs must be based on valid data. To that end, Action-Housing, Inc. has prepared a prospectus for setting up a real property inventory in Allegheny County. Among other things, the inventory would provide proper information for developing a housing market analysis.

If the housing problem and the problem of the deteriorating neighborhood is to be successfully met we believe that pioneering work must be done in three major areas: (1) housing design and techniques; (2) human motivation; and (3) economics and finance.

I have already referred to our use of section 221 financing and the importance we place on obtaining new sources of equity capital. Reliable estimates of the costs and benefits of the total renewal program for Allegheny County are urgently needed.
Action-Housing, Inc., proposes to join with
other civic community development organtzations and interested public agencies in preparing a detailed appraisal of the requirements of the total program, and of the resources which can be marshalled to meet them in the 20-year period set forth in our objective.

More important perhaps than the eco-nomics of the situation-more important than the technology-are the motives and aspirations of the people who live in the large older deteriorating neighborhoods which lie between the city center and the newer residential areas. Effective rehabilitation of these areas depends upon the voluntary action of thousands of homeowners and residents. Our ability to raise their sights and improve their morale may hold the key to success or failure of the entire renewal

We recognize the strategic role of neighborhood participation through citizen councils in urban renewal areas, and have taken the lead in forming these councils. The first such group, the East Liberty Citizens Re-The first newal Council of Action-Housing, Inc., was organized last month in East Liberty, where Pittsburgh's first renewal project involving residential rehabilitation will be carried out over the next few years in a 250-acre area. Next month, one of the leading specialists in the field of citizen participation in urban renewal is joining our staff. He will devote his time to working with the East Liberty group and other neighborhood councils.

This review does not fully describe the complete program of Action-Housing, Inc. We believe that in Pittsburgh, as in every other major American city, the problems of housing and neighborhood renewal can be met only through a comprehensive approach. If our program seems staggeringly ambi-tious, it only matches the scope of the problem. A piecemeal effort would invite inevi-table failure. Pittsburgh cannot afford failure.

Pittsburgh showed the Nation and the world that it was able to overcome the stagnation that it faced 15 years ago. Our ren-aissance is not finished—and we have very strong convictions that when it is, Pittsburgh may well be that first completely renewed and livable city in America.

# Urban Renewal and Redevelopment Program

EXTENSION OF REMARKS OF

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I have been exceedingly pleased in recent days to see concrete examples of what the urban renewal and redevelopment program can accomplish in our cities and communties. The unequalled opportunities which this program presents in terms of rebuilding old sites, improving residential conditions and entirely replacing areas heretofore known as blight areas, have revitalized civic pride to an outstanding degree.

The enthusiasm this program has engendered can be noted in two editorials in New Jersey newspapers. One editorial is from the Trentonian of Friday, June 12. Here is a call to the local citizens to join in the wonderful plans being formulated for the emergence of a dream city. In another section of the State, there appears an editoral in the Newark Star-Ledger of June 15, which describes as breathtaking the great plans which will change the whole character of one of New Jersey's prominent cities.

These two editorials, I believe, give evidence of a reawakening and rebirth of cities. Urban renewal holds tremendous promise for future growth and develop-

I ask unanimous consent to have these two editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, [From the Trentonian, June 12, 1959] LET'S GO

You, Mr. Average Citizen of Trenton, N.J., know what "Case City" looks like. Would you like to know what "Case City"

can look like in 10, 15, 25 years from now?

We can tell you, because now it's all down on paper. Three hundred of your civic, business, and governmental leaders learned what is in store for your city last night at the report meeting of the Greater Trenton Council.

And what they learned is the dream city which was discussed in the famous "Case City" magazine article headed "Nightmare or Dream?" and to which reference is made in other articles on this page today.

The dream city will come about through a series of major steps in Trenton's urban renewal program. The first is known as project 1, and covers the area bounded roughly by State Street, Warren Street, the Belvidere Division of the Pennsylvania Railroad, and the Trenton Freeway.

You know what that area is like now. Here's what it will become: Most of the area between Perry and State Streets will be an office building-retail shopping complex; a civic center for future city buildings will be centered about a plaza or park connected to the shopping complex by a pedestrian mall; Battle Monument Park will be extended one block south to tie in with the new commercial complex; the north side of Perry Street will be cleared to make way for new churches and general business use.

Project 2 will cover the west side of the central business district in the area bounded by Calhoun Street, Pennington Avenue, Willow and State Streets. The area be-tween Spring and Hanover Streets will be redeveloped for new high rise apartments; the area south of Hanover will be for office and semipublic uses; small parks and walkways will be placed along the Canal Feeder.

Project 3 will be located mainly north of Pennington Avenue and is bounded generally by Pennington Avenue, Calhoun Street, the proposed inner loop of the circulation system previously announced, and Princeton Avenue. Predominantly, this area will be devoted to row housing and garden apartments, served by a nearby shopping area. The land south of Pennington Avenue may be devoted to light industrial use.

Project 4 covers the area bounded by East Front Street, Stockton Street, Groenwood Avenue, and South Broad Street. The domi-Avenue, and South Broad Street. nant feature would be the conversion of Assunpink Creek into a beautiful stream enhanced by tree-lined walks along its

And these four areas would surround a central business area bounded by State, Warren, Perry, and Armory Streets, which would feature pedestrian malls and plazas where shopping could be done without ever crossing a street; where major parking garages and public transportation centers would be easily accessible; and where the city's merchants could command the attention of the huge Greater Trenton metro-politan area that is now growing before our eves.

This, then, is the dream. The dedicated members of the Greater Trenton Council and our city officials have started to turn it into reality. The answer to "Case City has taken form.

Let's go.

[From the Newark Star-Ledger, June 15, 1959]

#### TOP PRIORITY

The proposal to rebuild 160 acres in the heart of Newark, described as one of the largest redevelopment programs in the Nation, is a little breathtaking.

It would replace a deteriorated and deteriorating area with a complex modern apartment houses, recreation areas, and commercial buildings. Even the streets would be realined and widened where necessary to prevent traffic congestion.

It would change the whole character of the city and undoubtedly would become a model of other citles facing a deterioration

similar to that of Newark.

Jack Parker, the Long Island builder who has proposed this major facelifting, says Newark is "more prime" for redevelopment than any other city on the east coast.

Newark's prime asset is its location. The

advantages of geography are something that cannot be taken away from Newark and that cannot be supplied to other cities. But this asset—as well as many others possessed by the city—is worthless if it is not utilized.

The Parker plan, coupled with other re-development plans already in the works, would indeed make Newark a new city. It is now up to the city to examine the offer carefully—but expeditiously—and decide whether it meets the specifications.

Mayor Carlin already has called the proj-

ect "very exciting" and the plan "we were looking forward to."

The city council must make the next move. It must initiate the steps necessary to start acquiring and clearing the land. There are, of course, many problems to be considered. But redevelopment is the prime problem confronting Newark, and any serious offer should get the immediate atten-tion of the council. Parker would like an answer to his offer within 60 to 90 days. This means acting without delay-but there should be no delay, since redevelopment is the top-priority item.

#### Youth Conservation Corps

EXTENSION OF REMARKS OF

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. NEUBERGER. Mr. President, the special Labor and Public Welfare subcommittee presided over by the able senior Senator from West Virginia [Mr. RANDOLPH] last week reported favorably to the full committee a bill which holds vast significance for the development of two very different but vital portions of our Nation's wealth: our natural resources of timber, soil and water, and our human resources found in the youth of our cities and towns.

The bill to which I refer is S. 812, introduced by the able senior Senator from Minnesota [Mr. Humphrey]. I am pleased to be a cosponsor of this measure, which would authorize establishment of a Youth Conservation Corps based on the highly successful Civilian Conservation Corps of the New Deal in the 1930's, and I was happy to join my distinguished colleagues from the Pacific Northwest, the two Senators from Washington [Mr. Magnuson and Mr. Jackson] and the junior Senator from Idaho [Mr. CHURCH], in a statement presented to the subcommittee in support of S. 812.

Mr. President, the great President Franklin Delano Roosevelt was a dedicated conservationist. His achievements

in other fields, foreign and domestic, sometimes tend to cause us to forget that. like the other illustrious Roosevelt who served in the White House, FDR was vitally concerned with our great bounty of outdoor wealth-and did something to protect it for wise use through future generations.

The introduction of S. 812 has stirred the enthusiasm of many people in my State who remember the Civilian Conservation Corps as one of FDR's most important conservation programs.

We today can still follow some of the 137,000 miles of trails and roads or camp at picnic grounds built by the youths of the CCC a quarter of a century ago. Our valuable timber resources are more valuable today because of the 21/2 million acres of trees which were seeded by the

But more than these tangible reminders of the natural resource conservation values of this program, we in Oregon and in many other States can count among our most respected citizens many who came to the West with the CCC. Some came from broken homes, from the streets and alleys of crowded eastern

"It was just the right thing for some tough guys from the big city," one former CCC man told an Oregon editor recently. "There are 12 or 14 of us in and near Pendleton now and all of the fellows have made good. They came out of New York and New Jersey, and if they hadn't had the opportunity to leave there, I'm afraid it would have been a different story.'

Recollection of the conservation and development of human resources achieved through the CCC is one of the reasons for enthusiasm for the establishment of a Youth Conservation Corps ex-

pressed in my State.

In order that the Senate may have the benefit of the cogent comments of some of the supporters of S. 812 in Oregon, I ask unanimous consent that I may have printed in the Appendix of the RECORD editorials from the Pendleton East Oregonian, the Astorian Budget, and the Medford Mail Tribune, together with pertinent letters and resolutions from various individuals and organizations.

There being no objection, the editorials, letters, and resolutions were ordered to be printed in the RECORD, as follows:

[From the East Oregonian, Pendleton, Oreg., Jan. 9, 1959

#### HE THINKS IT'S A WINNER

Social workers and law enforcement officers haven't admitted it, but the latest statistics on the spread of juvenile delin-quency are cold, hard proof that the problem is as yet too much for them. causes of juvenile delinquency can be pretty well defined but searches for a cure seem inevitably to get on to dead end streets.

This problem is costing the Nation bil-lions of dollars. Because it is no one can say that every possible remedy should not be tried, no matter how pointless some may seem. And not all are devoid of hope.

One of the best approaches to the problem, in our judgment, is proposed by Senator Hubert Humphrey. He explains it in the current issue of Harper's magazine.

Senator HUMPHREY would have a Youth Conservation Corps which would provide

employment for youth of 16 years and older. They would be assigned to conservation projects in the forests, on waterways, and on farmlands. It would be very much like the Civilian Conservation Corps which was activated in the depression years of the thirties with the wholehearted approval of Members of both parties in the Congress. Senator HUMPHREY's program would have a two-fold purpose, conserving the natural resources of the country and saving the Nation's youth.

After reading this article we talked with a young man who is employed here as a pressman. He came to Oregon with CCC in 1937. He was from a big city in the east as were most of the boys who came to Oregon with him. With obvious pride, he told us, "There are 12 or 14 of us in and near Pendleton now and all of the fellows have made good. They came out of New York and New Jersey and if they hadn't had the opportunity to leave there I'm afraid it would have been a different story.

We asked about the delinquency factor in those days. "Say," he said, "most of those guys were tough. We had gang fights in the CCC camp here in the beginning. Every guy wanted to show how tough he was. But it wasn't very long before it all got straightened out. Everybody liked his job. We realized that there wasn't any point to trying to prove how tough we were-that it didn't make any difference in this new setup. It was just the right thing for some tough guys from the big city."

The pressman thinks Senator HUMPBREY'S idea is a winner. He would make one pro-vision that the Senator hasn't. He would first of all enlist boys for the Youth Con-servation Corps out of the slum areas of the big cities. "They are the fellows who the big cities. "They are the fellows who need help. The situation that many of those boys face is almost hopeless. Get them into the YCC first. Broaden the program go get others later."

This conversation convinced us that Senator HUMPHREY'S plan merits the serious consideration of the Eisenhower administration and the Congress. It seems so much better than many remedies that, if they were successful, could not accomplish as

[From the Astorian Budget, Astoria, Oreg., Jan. 16, 1959]

# REVIVAL OF CCC?

A couple of Oregon newspapers, the Pendleton East Oregonian and the Medford Mail-Tribune, have been talking about an idea recently plugged by U.S. Senator Hu-BERT HUMPHREY-revival of the Civilian Conservation Corps of depression years or something like it.

The idea would be to take boys from the slum areas of big eastern cities-boys who might be headed for juvenile delinquency and careers as hoodlums-and make men of them by teaching hard work and self reliance in the outdoors.

The CCC was one of the best of the relief agencies of the depression.

It took young men who had hopeless life prospects in hard-hit areas, brought them into the western woods to work at various improvement projects, and made good men of a lot of them.

Many present-day valuable citizens of northwest communities came to these parts in the first place as CCC workers. The East Oregonian interviewed one near Pendleton. We have several fine Clatsop citizens whom we gained that way.

Revival of the CCC could be a fine character building project. It could also provide valuable public works: the planting of Clatsop Plains sand dunes is a fine example of what was achieved by the old CCC.

A new CCC would be expensive and would be hard to justify if jobs are available in private enterprise for young men. Also such a project should not be on the order of a reform school for juvenile offenders. That would place a stigma upon its members that would tend to defeat the purpose of character building.

[From the Medford (Oreg.) Mail Tribune, Jan. 14, 1959]

A NEW "CCC"?

A couple of years ago, after a jaunt into the woods with a group of foresters and outdoorsmen, we reported here on a discussion we'd heard about the possibility of forming something like the Civilian Conservation Corps of pre-World War II days.

Several of the men in the party had had experience with the boys who came west to take over the barracks camps, bulld roads and trails, construct forest recreation fa-cilities, do reforestation work, build firebreaks, and fight fires, and generally effect a double rehabilitation-that of the forests and that of themselves.

Frequently these lads were the products of the slums of the east, and often were tough cookies themselves—boys who today would be called juvenile delinquents.

A rather amazing percentage of them, if we are rightly informed, went on from the CCC into constructive, useful lives.

How much credit the corps can take for this record is, of course, subject to debate. But many men who watched the tough boys from the streets of New York or Chicago change gradually into men who knew something of the outdoors, something of life, something of their fellow men, and some-thing of responsibility, will swear that it was the turning point in more lives than a

The possibility of reviving the CCC or something like it has been broached every so often since the war.

The latest to do so is Senator HUBERT HUMPHREY of Minnesota, who advocates a Youth Conservation Corps, to provide employment for boys of 16 or over.

After reading HUMPHREY's proposal, Bud Forrester of the Pendleton East Oregonian talked to one of that newspapers' employees who came to Oregon with the CCC in 1937, who stayed, and who became a responsible citizen. He told Bud:

"There are 12 or 14 of us in and near Pendleton now and all of the fellows have made good. They came out of New York and New Jersey and if they hadn't had the opportunity to leave there I'm afraid it would have been a different story.

". . . Most of those guys were tough. We had gong fights in the CCC camp here In the beginning. Every guy wanted to show how tough he was. But it wasn't very long before it all got straightened out. Everybody like his job. We realized that there wasn't any point in trying to prove how tough we were—that it didn't make any difference in this new setup. It was just the right thing for some tough guys from the big city."

And he added that he thought Senator HUMPHEEY should add one provision to his proposal, that the boys enlisted in a YCC should first of all come from the slum areas of big cities. He said:

"They are the fellows who need help. The situation that many of those boys face is almost hopeless. Get them into the YCC first. Broaden the program later."

The proposal, on a national scale, is simifor young men's work camps in Oregon, except that the latter would enlist youngsters who had gotten into trouble, or were headed that way.

Such an organization wouldn't end juvenile delinquency overnight, or in any length of time, for the causes are too deep-seated in our society. But it would solve a lot of problems, particularly in the area of the tough guys who really shouldn't be sent to prison, nor yet should be set loose again with a wrist slap.

The costs of such a program would not be negligible, but when compared to the Federal military budget, say, they would amount to probably a tiny fraction of that total. And who could calculate the good that

would come out of it?

It would include the construction of Federal forest access roads, which are so badly needed to get out overripe timber; it would speed up the rehabilitation and construction of forest service and national park recreational facilities now so badly behind the demand, and it would provide the resources for much other work which would benefit the Nation on its Federal lands-work now going begging for lack of budget and personnel.

But most of all it would provide a place for young men to get into a relatively wholesome atmosphere, to gain self-respect, to learn the merits of a hard day's work.

YCC has much to be said for it.—E. A.

LETTER TO THE EDITOR OF THE MEDFORD MAIL TRIBUNE, MEDFORD, OREG., MAY 15, 1959

LIKE YCC IDEA

To the EDITOR: I read that Interior Secretary Fred Seaton had written a letter opposing the revival of the pre-World War II Civilian Conservation Corps. Personally I think Fred Seaton is way off in his attitude.

I put in 1 year in one of those camps 20 years ago. And I've never regretted doing so. I usually vote a Republican ticket but I do consider the CCC one of the best programs ever to have been started. I do, however, have one thing to say in regard to administration of the program, leave the Army and Navy out of it, and with it the practice of honorable and dishonorable discharges. I favor a simple hire and fire arrangement such as is used in industry. Allow each man an allotment for clothing and allow him to purchase such clothing as he prefers to use. I also oppose the requirement that he give his life history. I'd OK a requirement that he tell of the past 2 years but no more than that. Also for infraction of rules a system similiar to a jury and judge be used, nothing resembling a court martial would be permitted.

I have given considerable thought to the system in use at present and how it might be improved. In place of our Department of Agriculture we should have a Department of Conservation, this would include the CCC, Oregon and California lands, Games and Fisheries, Soil Conservation Service, and other programs connected with conservation of our natural resources.

I do believe, that of all the programs started and used during the Roosevelt administrations and since, the Civilian Conservation Corps one of the best, in the lasting results. FLOYD R. MCCABE

Butte Falls, Oreg.

OREGON JUVENILE COUNCIL, Portland, Oreg., Jan. 22, 1959.

Hon. RICHARD L. NEUBERGER, U.S. Senate, Washington, D.C.

DEAR MR. NEUBERGER: Your Interest in social legislation is noted with favor by the members of the Oregon Juvenile Council.

The following resolution was adopted at

the last meeting of our organization:

Whereas the problems of dependency and juvenile delinquency are growing rapidly;

Whereas the schools are taking a more realistic approach on discipline and expulsion from school; and

Whereas idle boys will in many instances eventually become problems in their respective communities: Be it

Resolved, That the Oregon Juvenile Council petitions the Congress of the United States of America to bring onto the floor of Congress the bill dealing with the youth conservation corps; and be it further

Resolved, That copies of this resolution be sent to each and all Members in Congress dealing with youth conservation corps

Be assured of our continued support. We shall be pleased to hear from you as to any further action we may take to assist you.

Yours very truly, The OREGON JUVENILE COUNCIL, RONALD E. MCKENZIE, President. George Turner, Chairman, Legislative Committee.

COUNTY COURT OF POLK COUNTY, Dallas, Oreg., March 3, 1959.

Senator RICHARD NEUBIRGEI U.S. Senate, Washington, D.C.

DEAR SIR: I am writing you in regard to the Youth Conservation Corps bill that has been introduced to the Senate by Senator HUMPHREY, and I am very happy to learn that you and Senator Mosse have cosponsored this bill. As I am juvenile judge in this county, working with young people from day to day, I realize the importance of this bill. It is necessary for me from time to time to send boys over to our school at Woodburn-for no other reason than we do not have a place for predelinquents to send

I have just read an article in the January issue of Harper's magazine, one which you no doubt have read. It brings back to mind the many projects that were undertaken under the old CCC program during the depression.

I am writing similar letters to all Members of the Oregon delegation to Congress trying to enlist their support to insure the passage of this bill. I offer you my fullest coopera-tion, on a local level, in any way possible to bring whatever pressure is necessary to assist you in putting this bill over. Just to throw in an extra thought, I have had many years of experience in forestry road building and at the present time I am on the roads committee of the Oregon land grant countles. I do not feel the YCC would be an expensive project considering the good that would be accomplished with our youth program. As far as materials and supplies are concerned, I believe the camp could be supported with material and food from surplus Government stocks on hand at the present time.

The need for such a camp is growing rapidly as we have a greater number of youngsters in the 16-year-age group who are quitting school. The greater percentage of them are from broken homes. They are not necessarily below average mentally but they are not interested in school-they like manual labor-something with their hands.

If this bill goes through I would like to see an emergency clause attached so some headway could be made this summer toward getting these camps in operation. I would like to have the number of this bill and also a copy if possible.

Very truly yours.

C. M. BARNHART, County Judge.

MARCH 18, 1959.

Senator RICHARD NEUBERGER, Senate Office Building, Washington, D.C.

DEAR SENATOR: I understand that you are jointly sponsoring with Senator HUMPHREY a bill to establish a Youth Conservation Corp. As a member of the Governor's Committee on Economic Opportunities for Youth for this State, I endorse wholeheartedly this proposed legislation and hope that you will be able to see this legislation through this session of Congress.

Our studies show a marked growing need for such an organization. There are hundreds and hundreds of youth who drop out of high school because of their academic inability and general attitudes who find it impossible to get employment but who should be employed to keep from becoming a costly delinquent and a public charge.

Sincerely.

OREGON AFL-CIO, Portland, Oreg., May 27, 1959.

Hon. RICHARD NEUBERGER, Senate Office Building, Washington, D.C.

My DEAR Mr. NEUBERGER: I merely wanted to advise you that the Oregon AFL-CIO is

in support of Senate bill 812.

The subject matter of this bill was debated at length at the 1953 convention of the Oregon AFL-CIO, and the majority of the delegates were very much in favor of establishing a Youth Conservation Corps. We think such legislation is in the best interest of the young people who are unable to find employment due to our economic conditions, while at the same time doing constructive work that will be of benefit to the Nation.

Sincerely,

GEORGE BROWN, Director, Political Education Department.

ASSOCIATION OF OREGON COUNTIES. Salem, Oreg., May 13, 1959.

Hon. RICHARD NEUBERGER, Senate Office Building, Washington, D.C.

DEAR SIR: At its last annual meeting, the Association of Oregon Counties adopted the attached resolution which endorses the proposal to create a Youth Conservation Corps. This proposal is before the present Congress as S. 812 and is in the Senate Committee on Labor and Public Welfare. It is my understanding that a hearing was held on this bill Monday, May 11.

Many of our county courts have jurisdiction over juvenile matters and almost all of our counties are dependent to some extent upon revenues derived from the management of public lands. Thus the counties of Oregon would be doubly benefited by pass-

age of S. 812.

As the attached resolution states, there is a growing number of boys who have been taken from school and who find it difficult to obtain employment through normal channels. It may be further observed that if more boys could be given such a construc-tive work experience the schools might be able to provide a higher level of educational experience for those who remain.

The association would be pleased to submit any additional information which you may require to indicate the effect which passage of this bill would have on county government in Oregon.

Sincerely yours,
KENNETH C. TOLLENAAR, Executive Secretary.

Whereas the problems of dependency and juvenile delinquency are growing rapidly;

Whereas the schools are taking a more realistic approach on discipline and expulsion from schools; and

Whereas idle boys will in many instances eventually become problems in their respective communities; be it

Resolved, That the Association of Oregon Counties petition the Congress of the United States of America to bring onto the floor of Congress the bill dealing with the Youth

Conservation Corps; and be it further Resolved, That copies of this resolution be sent to the Oregon delegation in Washington, D.C. and to each and all Members in Congress dealing with this Youth Conservation Corps bill.

# DeWitt Clinton Alumni Fight Juvenile Delinquency

EXTENSION OF REMARKS

# HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. JAVITS. Mr. President, the alumni of DeWitt Clinton High School, the Bronx, New York City, are taking affirmative and effective action to help in the struggle against juvenile delinquency and to give to deserving young people an opportunity to achieve the wholesome goals for which they strive. I have in my hand an excerpt from the January 1959 issue of the DeWitt Clinton Alumni Bulletin describing this program, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT THE DE WITT CLINTON ALUMNI ASSO-CIATION IS DOING FOR THE PRESENT GEN-ERATION OF CLINTON STUDENTS

EDUCATIONAL LEADERSHIP WEEKENDS

In 1951, after years of deep thought, planning, and preparation the alumni association started its project with the above name. About four times in the course of the school year from 30 to 60 boys were taken to the Hudson Guild Farm in Andover, N.J., for an educational weekend. Over the years more than 1,000 boys have been invited to these weekends. It was felt that by sleeping, living, playing, and discussing together it would be possible, perhaps, to get at the roots of what makes the younger generation of Clinton students click. The newspapers and other media play up the problems of juvenile delinquency, the best generation, the underachiever, the detached child, and other characteristics that apparently have no firm foundation in something concrete that could be attacked successfully by the school, the home, the church, and the government.

It was felt that if the boys had an opportunity to discuss their problems with other boys and with some friendly faculty and alumni people, perhaps the could talk out their secret storms and stresses that were bothering them. If they found out that their problems were universal and shared by others there was a possibility of lessening the tensions that seem to grip all young people today. All kinds of students are taken on these weekends. Discipline problems, boys who could do better but didn't, boys who had everything but did not share anything with anyone else, boys interested in the fast buck, and groups interested in following various professions such as dentistry, medicine, law, engineering, and such.

A definite program is worked out with a minimum of five buzz sessions, where all discussions are led and participated in by

the boys. The faculty members and the alumni listen and at times participate. There is never adult domination or anything that would make a student clam up. One topic will illustrate the type of thinking the boys and student discussion leaders tackled. How much freedom should an adolescent have in relationship to his home, school, and community? One would be sur-prised indeed at some of the thoughts these boys have concerning parents, teachers, policemen, and others. In a brief summary such as this it can only be said that after several buzz sessions of give and take most of the boys felt the sense of belonging and went home with a feeling that they must give as well as take. This was a new ex-perience for many of them. The students flock to extracurricular activities after a weekend and, although graduated, they never forget the weekend and never will. A group of 100 boys, spread over three weekends, drew up a code of conduct and ethics, the preamble of which stated, "In order to be a member of a community, a person must be aware of the rights of his fellowmen and his responsibilities toward them." In March 1958, the topic of the buzz sessions was the sputnik versus the Explorer or as it was developed the trained man versus the trained man with an education. I can't write further about these weekends without expanding this brief to unwieldy lengths. I must emphasize, so that there will be no misunderstanding, that these weekends were boy run, student leaders were trained at one weekend to become discussion leaders at the next one. Each boy was himself—he unfolded and grew—he was completely unaware of differences of race, color, religion, scholastic ability, and so forth. The carry-over was terrific. In passing, I should like to say that many States, cities, and indi-vidual schools are trying this weekend (and sometimes much longer) method of educa-tion. Everywhere the reports are enthu-siastically favorable. In this city some schools and general organizations have tried this experiment as a result of the De Witt Clinton project and have found it works so well that it is repeated as often as money will allow.

Although the alumni association supports this program financially, it is planned for and run by the school under the supervision of Principal Degnan. The boys are selected from the current student body by faculty members—the supervisory personnel at the weekends is from the school. All faculty members are welcome. Of course this is as it should be. However, interested alumni-Colonel DiGiacomo, Ben Mitler, Howie Glickstein, Paul Marks-attend most of the weekends and are very impressed with the value of the project and the necessity for continuing it. Dr. Miriam Goldberg of the Psychology Department of Teachers College has not only attended some of the weekends but has arranged for a group of Clinton boys to go to the farm. This weekend was held in conjunction with the New York City Board of Education, Division of Vocational and Educational Guidance. This weekend was financed entirely by the sponsoring parties. Other similar weekends are in the offing. Dr. Goldberg has been very enthusiastic about the results so far attained and the future possibilities of the program. Partially as a result of the success of those affairs, Director Guernsey was selected to run an experiment on the campus of Cornell University during the summer of 1954. A group of outstanding high school juniors were exposed to the values of group living, etc., on a college campus. The undertaking was such a success that it has been continued and expanded by the Teluride Association. This is mentioned because of the hope that the De Witt Clinton

Alumni Association will continue and expand

its project.

Money, money, money. This is what makes the educational weekends possible. Each Weekend costs about \$1,000 under the present setup. The parents are asked to contribute to the association if they can afford it and they feel that their boys benefited. It costs about \$15 per boy for food, lodging, transportation, and incidentals. The parents usually cover about one-fifth of the cost. The rest is underwritten by the alumni associa-tion, which depends entirely upon voluntary contributions. Foundations have been approached without success, mainly because they feel the project is akin to camping and they cannot aid such endeavors. No weekends are held or planned during the summer months. This is a part of the regular school program and it is felt that it should be supported by all municipal and private groups sincerely interested in placing the current generation on the path toward true Americanism—opportunity for all and dis-crimination for none. Alumnf, citizens, friends—you are all invited to see this program in action. The board of education and superintendents have approved the idea and the specific project but have been unable to get any money appropriated for it.

SCHOLARSHIPS AND OTHER FORMS OF AID

The Alumni Association appropriates approximately \$1,500 per year in the form of scholarships to Clinton graduates. The amount, perforce, is limited by the resources available. These scholars are selected by the principal and the faculty as the most deserving on the basis of scholarship, service, character, service to the school and community, need, and promise of future con-tributions to society. In addition to these regular contributions, the Association from time to time answers special pleas brought to its attention. For example in 1958 it gave \$200 to a senior in Michigan (former Clinton graduate) who would have had to drop out of school otherwise. In the same vein, \$100 was awarded to a sophomore at Dartmouth, who found the rising cost of a college education Just a slight bit more than his parents could meet. Once again money—money.
In the school at the present time there is

a special experimental class in biology. It is studying the techniques of research and experimentation. Most of its equipment, animals, and instruments were supplied by the famous Sloan-Kettering Institute. necessary concommitants, such as food for the animals and certain pieces of equipment Were lacking. It is a very simple thing to say that the board of education should supply these things. In a huge system such as ours this is impossible. The Alumni Asso-clation granted \$125 to keep this project going until June. Money-money.

In addition the Alumni Association has spent freely of its meager funds to send boys to the Shawnee Leadership Camp, the National Conference of Christians and Jews, Boys State, etc. Money.

The purpose of this brief report on the efforts of the De Witt Clinton Alumni Assoclation to bring to the current generation the real cornerstones on which democracy rests, as well as to get it to carry the torch that the association has held so high, is to try to interest individuals and organizations with money to make a direct contribution to help carry on and expand the work. Those familiar with it know its value. Without money it must end. Can the most fabulous country. State and city let its kids down? A thousand times no-especially as long as there is money to be had.

IRWIN S. "DOC" GUERNSET.

Faculty Coordinator and Director of the Educational Leadership Project. Needed: One Military Service

EXTENSION OF REMARKS

# HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. ENGLE. Mr. President, deep at the root of our present controversy concerning the air defense of the United States lies an issue of grave significance. I speak, of course, of the lack of a proper decision-making system in our Department of Defense. Over the years various incidents have been called to our attention to emphasize this point. The present conflict between the Army and the Air Force over the Nike-Hercules and the Bomarc is merely another such symptom. Solving this particular problem will not eradicate the cause thereof.

How long is the Congress going to continue to avoid its legislative responsibility of establishing a Defense Department which will give us a truly military decision in such vital matters as weapons systems and the air defense of this

Mr. President, the internal rivalry of the Army, Air Force, and Navy is beginning to spill over the Congress and the country as a whole. As an example, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Los Angeles Times dated June 10, 1959, which particularly emphasizes that beyond any settlement of present disagreements is the critical need for further reorganization.

There being no objection, the editorial was ordered to be printed in the RECORD,

[From the Los Angeles Times, June 10, 1959]

THE PENTAGON BATTLE STILL RAGES

Despite its Gilbert and Sullivan overtones, the battle of the Pentagon is no comic opera conflict. The budgetary and jurisdictional battles among the Air Force, Army, and Navy have gone dangerously beyond mere service rivairies.

#### SERIOUS SKIRMISH

The most recent skirmish, involving the Army Nike-Hercules and Air Force Bomarc missiles, is in many ways the most serious for it demonstrates that the efforts at unification and reorganization of the military establishment since World War II have fallen short of the mark.

Moreover, while the Army and Air Force argued over the two antiaircraft missiles, Congressmen instead of generals were making technical decisions as to weapons and strategy. Senate and House committees also disagreed as to which missile should be deemphasized but it was Congress, not the Defense Department, that requested a master plan of air defense requirements for the next 3 or 4 years.

The overall plan is an important step, for it forces reconsideration of not only the Nike-Hercules and Bomarc but also the more basic questions of the kinds of weapons and strategic doctrine to guard against enemy missile instead of manned-bomber attack.

#### SUPREMACY AT STAKE

Already, however, the Joint Chiefs of Staff are reported still split on whether the budgetary nod should go to presently operational Nike-Hercules or to the Bomarc, which has a longer range but is still not operational. Basis of the dispute is not so much the two missiles, which are to a degree complementary, but rather which service will prevail.

The bitter bickering that erupted with the Air Force-Navy dispute in 1949 and continued through the recent Thor-Jupiter ruckus is still with us. It underlies the attempts of the Air Force to take over the Navy's Polaris missile submarines, the Army-Air Force argument over the development of the Nike-Zeus antimissile missile, and, above all, in the dis-

agreement over preparation for limited war. It is, as military theorist Henry Kissinger wrote, "the problem that has haunted American military thinking since World War II. Its dilemma can be defined as the conflict between the quest for absolute answers and the risks of the nuclear age, between the realization that we have become infinitely vulnerable and our rebellion against it."

"The long-range airplane, the ballistic missile, and the incomparable destructiveness of weapons have almost obliterated the traditional boundaries among the services. • • Each new weapon has led to a bitter wrangle as to who should control it. • • • And in each instance the doctrinal issue was evaded by permitting each service to develop its own weapons, even if it duplicated the efforts of a sister service.

#### DOCTRINAL PROBLEM

"Such a solution is costly. It also defers coming to grips with the doctrinal problem until some crisis brooks no further confusion or until some other pressures bring the interservice dispute into the open."

The crisis of Soviet power and the pressures of increasing weapon cost and complexity have brought the Pentagon dispute

into the open.

The decision must be made by the Secretary of Defense, and Neil McElroy can make no greater contribution to his Nation than by settling interservice strife.

Gen. Maxwell D. Taylor, retiring as Army Chief of Staff with the scars of numerous budget cuts, acknowledged this week that Pentagon rivalry can only be ended by "com-petent authority," i.e., the Defense Secretary. But beyond any settlement of present dis-

agreements is the critical need for further reorganization. Under the present system, each of McElroy's successors will have to do battle with generals and admirals defending tradition in the nuclear age.

There is no such bickering among Kremlin military leaders.

#### Capital Budgeting

EXTENSION OF REMARKS OF

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES. Tuesday, June 16, 1959

Mr. NEUBERGER. Mr. President, in the June 12, 1959, issue of the Portland Oregonian, there appeared an excellent editorial entitled "Capital Budgeting."

The editorial points out the illogic of including in computation of the national debt sums representing self-liquidating projects which are really investments. Adoption of a capital budget, it points out, would give some meaning to talk about balancing the budget.

I am happy to be a cosponsor of S. 1244, introduced on March 2, 1959, by my colleague from Oregon, which would establish a capital budget. I am also pleased to join today in cosponsoring a bill which would recognize this principle in connection with current consideration of the national debt ceiling. This proposal is a sensible and desirable reform.

I ask unanimous consent that the Oregonian editorial to which I referred be printed in the Appendix of the

RECORD:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAPITAL BUDGETING

The U.S. Treasury wants more flexibility in the matter of interest rates for bonds to compete successfully with private issues. The President's message to Congress Monday asked elimination of the 3.26 percent interest rate limit on savings bonds and the 4½ percent interest rate ceiling on new issues of Treasury bonds, plus increases in the temporary limit of the public debt from \$288 billion to \$295 billion and the regular limit from \$283 billion to \$288 billion.

The Treasury is in trouble in its bond offerings and the President said the public debt must be managed so as to safeguard

the public credit.

At the same time, the President raised his January estimate of the interest cost of the national debt from \$8 billion for fiscal 1980 to \$8½ billion, due to increased interest rates on Federal borrowing.

The requested increases in the temporary and permanent debt ceilings again raise the question of why the administration and Congress persistently have declined to adopt capital budgeting. This would not reduce the total debt, nor the interest costs. But it would, at least, separate self-liquidating projects, which are really investments, from wholly tax-supported expenditures, like those for national defense. It would give some meaning to talk about balancing the budget.

Senator WAYNE L. MORSE, Democrat of Oregon, has had bills for capital budgeting since 1947 and the idea has been advanced by others. This newspaper has favored the idea for a long time, one reason being to get the Federal power program out from under the shadow of such misleading national advertising as that of the private utilities: e.g., "How Public Power Adds to Your Tax Burden" (Time magazine, June 1).

"Under my bill," says Senator Morse, "there would appear along with the present budget figures, a breakdown showing which outlays are reimbursable, that is, which are self-liquidating and tax-producing. These would include mortgages, direct loans that are to be repaid, the dams that repay themselves from power revenues, forest access roads that make possible increased sales of timber from Federal forests, and similar capital or wealth-producing investments.

\* \* If a capital investment increases the Nation's productive wealth by adding to our assets, then it makes no sense to carry that asset as a liability on the operating side of the Federal budget. Such assets are as good as money in the bank, and really are offsets against an equal amount of national debt."

It should be noted, in this respect, that the bill recently introduced by Senator Richard L. Neuberger, Democrat, of Oregon, to provide revenue bond financing for additions to the Columbia River power system specifically exempts these bonds from the national debt. This is a primary and sensible first step toward capital budgeting for the Federal Government.

Citation From St. Bonaventure University to Samuel F. Pryor

EXTENSION OF REMARKS

# HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tucsday, June 16, 1959

Mr. DODD. Mr. President, the distinguished junior Senator from New York had the privilege the other day of introducing to this body remarks made by Samuel F. Pryor at commencement exercises at St. Bonaventure University. It is altogether fitting that the Senator from New York do this inasmuch as the famous Franciscan school is located in upstate New York and the Senator's long and continuing interest in this institution is a matter of record.

However, I should like to bring to the attention of the Senate, Mr. President, a citation from St. Bonaventure to Mr. Pryor. This citation is unique in so many respects that it deserves the at-

tention of every Senator.

Sam Pryor is more than a constituent of mine; he is a good friend and an invaluable resident of Connecticut. While we walk opposite sides of the political street Sam Pryor is as equally devoted to his party as I am to mine. His accomplishments, not only in politics, but in community service have been outstanding. In his capacity as vice president of Pan American World Airways he has toured the world many times over, thus making his observations to the St. Bonaventure graduates even more important.

Not generally known is the fact that Sam Pryor holds the enviable distinction of being a knight commander in the Order of St. Sylvester, an honor conferred upon him by the late Pope Pius XII—the highest honor which can come to a Protestant.

Mr. President, I ask unanimous consent that the citation from St. Bonaventure University to Mr. Samuel F. Pryor be printed in the Appendix of the

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION TO SAMUEL F. PRYOR, JR.

Very Reverend Father President, it is my great pleasure to present in the name of the School of Business of St. Bonaventure University for the honorary degree, doctor of commercial science, a brilliant and distinguished air transportation executive, whose professional and personal achievements have won for him honors from the President of our beloved country and from His Holiness, the Supreme Pontiff.

A bachelor of philosophy from Yale University with intercollegiate fame as a light-weight boxer, our candidate began his business career in 1922 as a district sales manager for Remington Arms. After 17 years with the American Brake Shoe & Foundry Co. and vice president of its subsidiary, Seven Wheel Co., he joined air transportation in 1941.

He is, at present, vice president, assistant to the president, and a member of the executive committee and of the board of directors of Pan American World Airways. Included in his business activities are positions as director and member of the executive and finance committees of Hertz Corp.; director of Greenwich, Conn. Trust Co.; chairman of the executive committee and director of the Vanadium Corp. of America; and chairman of the board of directors for Philpryor Corp. and for the Middle East American Oil Co.

A Navy veteran of World War I, a second lieutenant in the U.S. Marine Corps Reserve from 1926 to 1940, during World War II he headed Pan American's airport development program and directed the construction of 50 strategic airbases in 16 countries in South America and Africa. The successful location of these bases proved a most vital factor in the successful military campaigns of our country and our allies. In recognition of this outstanding contribution to our Nation, President Truman awarded on April 15, 1946, the Medal of Merit to our candidate.

Successfully and happily integrated into the professional life of a business executive are the family, community, and civic duties of our candidate. He delights in the gatherings of his five and eight grandchildren at his home in Field Point Park, Greenwich, Conn. He is a director of the Boys Club of America and a captain in the historic Connecticut Governor's Foot Guard.

Upon acceptance of his position with Pan American World Airways in 1941 he resigned active positions in both the State and National organizations of the Republican Party; he retains however, a deep and lasting interest in national and international affairs.

Permeating our candidate's wide range of interests and activities and lending them a great inspirational value is a dedication to moral and religious excellence. In recognition of our candidate's outstanding contributions and especially of the high ethical standards which motivate him, though not of the Catholic faith, he received the singular honor of being named a knight commander of the Order St. Sylvester at the Vatican on April 22, 1950, from the late supreme pontiff, His Holiness Pope Plus XII.

Very reverend father president, I recommend that St. Bonaventure University, in humble imitation of the President of the United States and of his holiness, Pope Pius XII, confer, in recognition and warm admiration of his professional achievements, invaluable service to our country and inspirational leadership and personal life, the honorary degree, doctor of commercial science, on Mr. Samuel F. Pryor, Jr.

# Capitol Page School Salutatorian Steven L. Cymrot Speaks

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. MULTER. Mr. Speaker, commencement exercises are always happy events which gladden hearts of many people. The commencement exercises held last evening of the class of 1959 of the Capitol Page School made many persons proud. I take this time to record the pride of New York State, New York City, and, particularly of my congressional district, at this happy event.

Steven Cymrot, who graduated last evening, was appointed as a page from my district. He did honor to all of usto the school, to the Congress, to his city, state, and country. His accomplishments were marked by his selection as the class salutatorian. As a prelude to the brilliant future which we wish for him, I give to you his own assessment thereof as contained in his remarks to the graduating class last evening. They are as follows:

Distinguished guests, parents, teachers, and friends, it is my honor, as salutatorian of the class of 1959 of the Capitol Page School, to welcome you officially to our commencement exercises.

The class of 1959 is a small one, only 17 in number. We represent 14 States and the District of Columbia. Our homes range from New York to California, Minnesota to Texas, and Illinois to New Mexico; from the big cities of New York and Chicago to the towns of Apache and Pineville.

Three of our members began as freshman at the Page School, and four of us were here for but one semester. The other 10 members of the class were with us for be-

tween I and 3 years.

During our stay in Congress, we have heard addresses by the leaders and heads of state of many nations. We have also been privileged to hear our own President and other notable Americans. We worked daily with the leaders of today as they made the laws which govern us. Now we go forth to prepare to become the leaders of tomorrow.

As we stop tonight and look back over the years we have spent in the Nation's Capital, it is difficult to appreciate fully the unique opportunities that we have had. It is the old story of the proverblal forest with its view blocking trees. We are too close to the experience to realize what we have gained.

We came to Washington with preconceived ideas about government and politics. Most of these ideas were based on hearsay, parental opinion, and textbook principles. After spending some time observing the actual processes of government and hearing the advocates of various political philosophies express their views, we have come closer to a true picture of the problems with which the Nation and the world are confronted.

Most of us will be leaving Washington shortly, heading back to our homes and then to college. But, what are our immediate feelings about our stay in the Capital? We remember getting up before dawn to go to school; studying in our corner of the Library of Congress; and going to our jobs on the Hill. We think of the time spent on the floor of the House or Senate, listening to the either heated or lifeless debate. We can remember leaving work late in the afternoon and spending our evenings doing homework before going to bed in preparation for a repetition of the process the next day.

But, the most important things are not what we remember now, but the memories which will stay with us; memories of the great statesmen and politicians with whom We worked; memories of our jobs on the Hill; and memories of the Capitol Page School. Most of all, we have the friendships which we have made here, and which will last us the rest of our lives. We will look back at this period as one of significant education and development.

This graduation night will also become a part of us. We will look at it as the culmination of our experience as pages and the beginning of the walk down life's road.

I want to thank you on behalf of my fellow graduates for attending our commencement exercises, and I hope that this night may mean as much to you, as it does to all of us.

I thank you.

# United States-Latin American Relations

EXTENSION OF REMARKS OF

# HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. DIGGS. Mr. Speaker, on May 11, 1959, the Subcommittee on Inter-American Affairs, of the House Foreign Affairs Committee, issued an important and enlightening report on U.S. relations with Latin America. The report not only thoroughly and objectively analyzes Latin American grievances against the United States, but points up the very often overlooked background and conflicts of interest which have given rise to these inter-American tensions. I think, for example, that it would certainly give clearer understanding to U.S. citizens, in the midst of the controversies about U.S. alleged support of Latin American dictators to know this fact: That it is the policy of the United States, as it is of all American Republics. to maintain official relations with all Western Hemisphere governments, whether the peoples of Latin America consider the governments good or bad. This policy is the result of resolution of the Ninth International Conference of American States to which all countries were signatory.

The subcommittee makes, in its report, a number of heartening and realistic recommendations proposing to revise. modify, and expand policies and programs of inter-American relations. They include: A modified attitude toward Latin American dictators; increased reliance on the Organization of American States; a revised military aid program, covering both military armaments grants and military training, but proposing a gradual reduction of military armaments grants with the ultimate goal of termination of the program; encouragement of more nongovernmental, people-to-people activities: expansion of binational center program; and, very important, sustained news coverage of Latin American developments by the news media.

In this connection, I would like to call to the attention of the Members of this body an article which appeared in the New York Times, of May 16, entitled "United States-Latin Relations Take on a New Look." It is an encouraging account of steps that have been taken by the United States and Latin America to set its relationships on a realistic basis of mutual goodwill:

UNITED STATES-LATIN RELATIONS TAKE ON A "NEW LOOK"

(By Tad Szulc)

PANAMA, May 16 .- All this month, Latin America's governments and their economists have been busily reviewing blueprints and schemes designed to propel this vast region, seething with poignant poverty and bitter frustration, into bright future of new hopes and decent human welfare.

There is nothing novel in these aspirations. Latin America's tremendous population explosion of the midcentury is only rendering them more urgent than ever. But the work in this month of May, climaxing preparations of a full year, has the new accent of seriousness and realism that somehow has been heretofore lacking in the approach to the hemisphere's development problems

This new emphasis was as noticeable at the Inter-American Economic Conference in Buenos Aires last week as it is at the current meeting here of the United Nations Economic Commission for Latin America (ECLA). A new set of U.S. attitudes, and also the growing influence of ECLA's professional pioneering thinking in such fields as a Latin-American common market, have helped to fashion the new approach.

And for the first time in a long while. Washington has ceased to be the scapegoat

of all ills.

#### PATIENCE ESVISAGED

What seems to have happened, in effect, is that the majority of Latin-American governments is becoming convinced that proper road to successful development and the solution of basic economic and social problems lies in patient, long-range planning, rather than in dramatic, sweeping programs that presume a touch of magic.

Since the end of World War II. Latin America has had its mind set on a magic wand. It saw such a wand in the form of massive financial aid from the United States. The reasoning was that the wand had been at work in Europe with the Marshall plan and then in Asia through other U.S. pro-

Why then, it was asked here, could it not be waved over the lands of Latin America. the United States oldest friend and most constant ally? It never was; and because of this, resentments against the United States

swept the hemisphere.

The Truman and Eisenhower administrations were successively accused of neglect of Latin America. Despite the financial aid that kept trickling into the region from Washington, this was largely true for a long time in many important ways, while the Latin American Governments, doing what they could themselves, engaged in hectic de-velopment schemes of their own, often harming and distorting their economies.

#### POPULATION PRESSURE

One result of this situation was that the growth of national product in Latin America is slower now than it was a decade ago and is lagging alarmingly behind the rate of population increase.

The United States, not prepared to take a hand in a comprehensive, integrated or even rational approach to Latin America's basic difficulties, frequently compounded these faults through loans, big and small, that as often as not were made in the name

of political expediency.

U.S. officials concerned with Latin America had a tendency to look away when assistance was sought on the basic problems of raw materials and their prices. They kept assuring the Latin Americans that good administration and better use of private investments would lead the hemisphere out of the deep woods of confused economy and out of the jungles of nature. Atop all this, Washington occasionally surprised Latin America with seemingly cavalier measures that had the effect of shaking the local economies and setting off troublesome psy-chological and political reactions.

The imposition of higher tariffs and import restrictions on metals produced in Latin

America were cases in point.

#### THE NIXON TRIP

Added to political resentments prevailing at the time, these steps played a part in triggering the incidents that marred the South American trip of Vice President Nixon just a year ago.

Actually, the U.S. approach to Latin America began changing slowly even before Mr. Nixon took off for his now famous voyage. The dramatic impact of the incidents surrounding him evidently had the effect of quickening the execution of this new U.S. policy.

Beginning early last year, the U.S. Government, largely on the initiative of Thomas C. Mann, the Assistant Secretary of State for Economic Affairs, started interesting itself in Latin America's real troubles. For the first time, the United States sat down with Latin Americans to look for a way of solving the almost hopeless problem of vast coffee surpluses and falling prices, a problem vitally affecting 15 Latin American Republics.

Although itself not a party to the agreement, the United States helped work out last year a pact of Latin American producers aimed at keeping percentages of coffee production off the market and it acted as honest broker in efforts to bring African producers into the group.

This year, Mr. Mann is again seeking to construct a world coffee pact. Negotiations are resuming in Washington with great optimism that a new system based on export quotas will be worked out.

In the long run, this approach by the United States-duplicated in the case of certain metals—may be worth more to Latin America than just another loan of \$100 million or \$200 million.

Washington policymakers are also learn-ing about public relations in Latin America. For example, before acting last month on the exemption of Canada from the U.S. oil import restrictions, President Eisenhower wrote an unpublicized private letter to Venezuela's President Romulo Betancourt, informing him of the move and explaining it. The result was that oil-producing Venezuela did not explode in a new wave of resentments, although her own exports are affected by the situation.

Last June, President Juscelino Kubitschek of Brazil wrote President Elsenhower a letter proposing an Operation Pan-America, designed to end what the Brazilian called the festering sore of underdevelopment. The implication of the proposal, at least as read Washington, was that Dr. Kubitschek wanted some form of Marshall plan for the hemisphere, although he denied this was his intention.

#### TWINTY AGAINST ONE

Yet at the Washington conference last fall of the Committee of Twenty-one that was set up to pursue Dr. Kubitschek's proposalthe United States for evident political reasons had to go along despite many private reservations-a Brazilian delegate vociferdemanded immense investments of U.S. funds for hemisphere development. He wound up his speech with the inelegant hint that Latin America might turn to the Soviet Union if the United States failed to deliver the goods.

Conference jokesters spoke of a committee of twenty against one, in illustration of Latin America's front against the United States.

But as the work of the committee went into the New Year-and after the United States agreed to the creation of the billiondollar Inter-American Bank and promised to subscribe 45 percent of the stock-the mood began to change.

A measure of the new mood-some Latin American cynics called it resignation-was the fact that the demand by Premier Fidel Castro of Cuba for the United States to provide \$30 billion in 10 years for hemisphere development found such a cool reception among the delegations that it had to be withdrawn.

Here in Panama, at the crossroads of the Western Hemisphere, delegates from the Latin-American nations have been discussing all week the revolutionary plan of pre-

paring a regional Common Market.
Yesterday, the United Nations Commission's Secretary General Raul Prebisch, an outspoken Argentine economist, told them some hard truths, such as that the hemisphere will develop properly only with wellplanned, long-range measures like the Common Market and not just with huge foreign loans and high prices for export commodi-

#### A NEW LOOK

The Buenos Aires and Panama attitudes seem the beginning of a new look at economic and social progress in the Americas.

Before concrete results are reached, immense obstacles of national pride and selfishness and of vested economic interests must be overcome.

Nationalistic pressures in many republics oppose cooperative plans as outlined in Buenos Aires and Panama. There are gov-ernments that seek to use the lever of new inter-American economic cooperation to extract considerable private loans for them-selves from the United States. Much suspicion of Washington's good intentions still persists.

But good progress is being made. Five Central American states are completing measures for the own Common Market, and subregional groups of states in South America are going ahead with studies of free-trading zones. Realism is slowly replacing the drama of vast wishful thinking.

Oregon's Outstanding Participation in International Study Programs of American Field Service

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. NEUBERGER. Mr. President, under the American Field Service program of international scholarships, exchange students from friendly foreign nations have attended high schools in the United States as members of the senior class. In return, so that the exchange may be consummated, junior class American students go to live abroad with foreign families during the summer months.

This program has made a great and growing contribution to international understanding and friendship. To know somebody personally makes it harder to feel unreasoning enmity toward him, and so it is with the peoples of different nations.

OREGON LEADS OTHER STATES IN AMERICAN FIELD SERVICE PROGRAM

I am proud, Mr. President, of the marvelous record which the State of Oregon has made in the operation of the American Field Service program of international scholarships. No State in all the Union has a higher degree of participation in relation to its population.

Washington, D.C., has recently been host to 45 outstanding high school juniors from Oregon, who visited here en route to the European and Latin American nations, where they will spend the summer under the auspices of the American Field Service.

They traveled across the continent by train, aboard the Northern Pacific's famous North Coast Limited, seeing the mountain passes and river valleys traveled by Lewis and Clark, the first of all westbound Americans to carry our flag to the Pacific Northwest. And they toured the historic Capitol Building under the auspices of Charles H. Mitchelmore, my student intern who is a recent graduate of the University of Oregon.

It was my privilege to usher these wellinformed and thoughtful young men and women into the Old Supreme Court Chamber, where I answered questions from them for some 35 minutes. Their inquiries showed careful teaching and preparation in their schools. ranged over a realm as wide as the United Nations, the Kennedy-Ervin labor-reform bill, agricultural policies, right-towork legislation, the vice presidential ambitions of Oregon's Governor Hatfield. a balanced Federal budget, and Federal aid to schools. I only wish there had been more time in which to extend so fruitful a discussion.

FRIENDLY TIES ESTABLISHED WITH OTHER LANDS

I firmly believe that we shall cement our ties with other nations to that degree in which we establish successfully people-to-people contacts. How can these American youngsters ever wish to make war against another country when they have lived with families in that country? And how can such families ever harbor ill-will toward America when they have taken to their roof and boardand to their hearts-45 high school juniors from one of America's 49 States, namely Oregon?

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the high schools, the names, and the identifications of the 45 Oregon students who are going abroad this week under the sponsorship of the American Field Service, as well as the foreign country which each of them will visit until school begins again in September.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

#### Solano Reclamation Project

EXTENSION OF REMARKS OF.

### HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. ENGLE. Mr. President, another example of what can be accomplished by diligent local effort and unanimity of local support is afforded in a resolution with respect to the Solano reclamation project which was adopted by the California State Senate. Construction of the Solano project was started 6 years ago. The first water was delivered a few days ago.

I should like to join in commendation of the people of Solano County, as well as the officials of the county, its cities, and the Solano Irrigation District, as expressed in the resolution sponsored by

State Senator Luther E. Gibson of Vallejo. I ask unanimous consent that an article entitled "Senate Congratulates County on New Irrigation Project,' published in the Vallejo Times-Herald of May 14, be printed in the Appendix of

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATE CONGRATULATES COUNTY ON NEW IRRIGATION PROJECT

Senate Concurrent Resolution 78, a measure introduced by State Senator Luther E. Gibson which congratulates Solano County, its cities, the Solano Irrigation District, and the people of the county on the memorable occasion of the first delivery of water from Monticello Dam was passed unanimously yesterday by the California Senate.

The resolution, which was adopted without reference to committee at Senator Gibson's request, now goes to the assembly.

In urging approval of the resolution, Senator Gibson paid tribute to the numerous persons in Solano County who worked over a period of 22 years to bring the Solano (Monticello Dam) project to fruition. First delivery of water from the project is

scheduled today.

The text of the resolution is as follows: "Whereas the first delivery of water to the lands of Solano County from the Solano project of the U.S. Bureau of Reclamation (the principal features of which are more commonly known as the Monticello Dam) will occur on May 15, 1959; and

"Whereas this project provides a reservoir storage capacity of 1,600,000 acre-feet and will furnish supplementary irrigation water to 60,000 acres of Solano County farmlands, and municipal and industrial water for the cities and military installations of that county; and

"Whereas the people of Solano County first organized the Solano County Water Council in 1937 to seek a new source of water for their area and following surveys by the Bureau of Reclamation, agreed upon the Monticello project in 1945, and commenced a concerted effort to secure its authorization and construction; and

Whereas, the approval of the State of California was given to this project through the personal efforts of Chief Justice of the United States (then Governor of California), Earl Warren, and the initial approval of the Congress was largely obtained through the efforts of former U.S. Senator William F. Knowland and U.S. Senator (then Representative) CLAIR ENGLE; and

"Whereas the project was given formal authorization in 1949 by a finding of feasibility by the Secretary of the Interior, received its first appropriation in 1949 and first construction appropriation in 1952, and concurrence in authorization was recommended by committee of both Houses of the Congress in 1953; and

Whereas construction was commenced in September 1953, when ground was broken for the dam by Gov. Earl Warren and State Senator Luther E. Gibson, work on the main dam (which has a height of 304 feet, and a length at its crest of 1,000 feet) was completed in 1957 in time to prevent serious flooding in the area downstream, including the city of Winters, and the total project was completed in 1959 at a cost of \$37,200,-000: and

"Whereas the first loan of its kind was extended by the United States to the Solano Irrigation District for construction of the irrigation distribution system in an additional amount of \$12,300,000 and the first unit of that system has been completed: Now, therefore, be it

"Resolved by the Senate of the State of

California (the Assembly there of concurring), That the legislature does extend its congratulations to the County of Solano, the cities of that county, the Solano Irriga-tion District, and the people of Solano County on the memorable occasion of the first delivery of water from the Monticello Dam; and be it further

"Resolved, That the secretary of the senate is directed to transmit copies of this resolution to the board of supervisors of Solano County, the city councils of cities of Benicia, Dixon, Fairfield, Rio Vista. Suisun, Vacaville, and Vallejo, and the board of directors of the Solano Irrigation Dis-

A British View on the Dollar in the World Economy

> EXTENSION OF REMARKS OF

# HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. JAVITS. Mr. President, the outflow of U.S. gold reserves-still more than half the world's total-and the diminution in the value of the dollar are matters of concern not only here in the United States, but to our free world allies as well. The dollar, along with the pound sterling, is an international as well as a national medium of exchange.

I have here an article from the June 7. 1959, issue of the Observer, published in London. It will be noted that in addition to the concern expressed regarding the maintenance of the strength of the dollar, there is a realization that U.S. policies regarding foreign imports and the extension of credits and movement of moneys abroad are in fact most liberal and not restrictive in nature, as has sometimes been believed abroad-and even at home. There runs through the appended article, too, a realization that our responsibilities of world financial and economic leadership must be shared by our friends in the free world.

The Observer article points up the growing realization that the economic interdependence of the free world demands the cooperation of other nations with the United States in helping the United States carry the heavy burden of the peace leadership of the free world which by common consent its productive capability and resources have caused it to assume. The Observer article bespeaks a maturity of thought abroad-that any threat to the dollar is viewed as a common threat to the whole free world.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Observer, June 7, 1959] THE NATION'S BUSINESS-DOLLAR ON DEFENSIVE

(By Alan Day)

A great deal too much play has been made recently with the idea of the weakness of the dollar.

Obviously, there is a strong temptation for us in Britain to take pleasure when sterling's international rival is under pressure while sterling is standing very well in world esteem. But it would be wise to restrain any tendency to chortle at our friend's misfortunes; if they were really to become serious, the effects on us would be very unpleasant.

Fortunately, there is no reason to think

that the dollar is at present under any real pressure. Naturally, one is a little suspicious when the Secretary of the United States Treasury makes a solemn declaration that the dollar will not be devalued-the whole thing is too reminiscent of sterling in 1949. But sometimes such statements should be taken at their face value—and this is such

#### GOOD CREDITOR

As far as the flows of payments into and out of the United States are concerned, the current position is one which we should all regard as encouraging. America is playing the role of a good creditor which we have so long demanded of her, by lending abroad and making grants to poor countries. At the same time, she is importing on an immense scale—because she provides the most pros-perous and one of the most wide-open markets in the world.

A great deal is heard of American tariffs and import restrictions, but the fact is that her policies are remarkably liberal. Many of her tariffs, particularly on industrial goods, are low by the standards of the advanced industrial countries-as an example, cars pay 10 percent going into the United States compared with about 20 percent in Germany and 30 percent in France and Britain.

#### LOSING RESERVES

The average incidence of the American tariff on all foreign goods is almost certainly not appreciably higher, and may be sub-stantially lower, than that of the United Kingdom. And protection of American manufacturing industry by quotas is so rare as to make headline news-whereas we and other European countries still protect many sensitive industries in this way, even though there are no longer any real balanceof-payments reasons for doing it.

Even so, it can be argued, America is losing reserves and cannot go on doing so forever. At the latest count, her gold reserves were only slightly above the \$20 billion mark, and if recent rates of decline continue, they will fall below that level within a few weeks.

#### A LUXURY

Of this total something like \$12 billion of America's gold reserves are tied, in that they are required by law as backing for the internal currency circulation. This requirement is a luxury that Britain has long for-gone, and in 1945 the American authorities found no difficulty in reducing the required backing from 40 percent to 25 percent of the currency circulation. Compulsory gold-backing for a currency is, in fact, a primitive survival; the value of money derives not from its gold content but from its acceptability and depends on its being sufficiently scarce not to lose its value.

All the same, even if the American legal reserve is regarded as sacrosanct, the United States still has enough free reserves to pay out 60 percent of her overseas short-term liabilities. This compares very favorably with Britain, who would use up the whole of her gold reserve if she had to pay out only 33 percent of her sterling liabilities.

#### THREE CHOICES

The fact remains, however, that America cannot allow an indefinite decline in the ratio between her reserves and short-term liabilities-which would happen if her present balance-of-payments deficit were to continue indefinitely. If she chose to deal with the problem by reducing this deficit, various steps would be open to her.

She could cut her aid to other countriesand certainly it is arguable that the \$1 billion which went in 1958 to Western Europe (other than Greece and Turkey) is not particularly justifiable. She could cut imports; a really liberal policy would do the rest of the world much harm. And in the last analysis she could devalue.

That, however is such a remote contingency that it should not be taken seriouslyexcept insofar as one should bear in mind that a dollar devaluation in terms of gold would almost certainly entail an equivalent sterling devaluation. When our average pay-ments surplus is still well below the £350-£400 million annual rate which we need for safety, any upward valuation of sterling in relation to any major currency would be very dangerous. And as the National Institute of Economic and Social Research recently pointed out, the evidence of recent years is that both American and British prices of manufactured exports have risen relatively to other countries' prices. Sterling and the dollar must hang together; we cannot hope to let the dollar hang separately.

The worrying thing, however, is that the time may be coming when the world's dependence on the dollar and sterling as international currencies may put them both under real strain. Prof. Robert Triffin, in an article in the latest issue of the Quarterly Review of the Banca Nazionale del Lavoro, has argued convincingly that the world's normal need for increased supplies of international currency over the next decade are likely to exceed current gold production by \$5 to \$15 billion.

#### RISK OF STRAINS

To close this gap by further extension of the use of dollars or sterling as ways of holding reserves would dangerously lower the ratio of Britain's and America's reserves to their short-term liabilities. He sees the 50 percent expansion of the quotas of the International Monetary Fund as a movement in the right direction, but far more comprehensive measures are needed if a return to a widespread system of controls is to be avoided.

The most promising line of approach he sees lies in a true internationalization of the world's foreign currency reserves. This would remove the risk of strains on center countries such as America and Britain, arising from the international use of their national currencies, which develop when there is speculation against dollars or sterling. In a truly international system, there would be a single international currency, so that arbitrary shifts between gold, dollars, and sterling would not take place.

#### FROM EXPERIENCE

Triffin's own detailed solution will be developed in the next issue of the Review; but the line of thought that will deal with the problems he sees is clear enough. This is for the artificial creation of a truly international currency which would be perfectly substitutable for gold. Such a movement in this direction of artificially creating currency which is acceptable throughout the world economy is simply an application on the in-ternational scale of the monetary developments of the last century on the national scale, through the development of central banking and paper money. And in the fact that it builds on past experience lies much of the attractiveness of this next step in the movement toward a sophisticated international currency system.

#### Welfare Dilemma

EXTENSION OF REMARKS OF

# HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. THURMOND. Mr. President, the operation of the public relief system in the United States touches on many of the major economic and social problems of our day. It is a matter that needs continual study and review by the Congress. A most interesting and serious article on the operation of this program in New York City was recently published in the Wall Street Journal.

I ask unanimous consent that the article by Edwin A. Roberts, Jr., entitled, "Welfare Dilemma," published in the June 9, 1959 edition of the Wall Street Journal, be printed in the Appendix of the RECORD

There being no objection, the article was ordered to be printed in the REC-ORD. as follows:

WELFARE DILEMMA: IN AIDING FATHERLESS CHILD, IT SPURS ILLEGITIMACY

(By Edwin A. Roberts, Jr.)

New York .- Critics of the public relief system in the United States believe that in one area particularly the quality of mercy shows signs of strain.

This is the division known as aid to dependent children, a program that costs U.S. taxpayers \$815 million annually and which will soon pass the billion-dollar mark. It is the second most expensive relief category (old age assistance is first at \$1.8 billion) and by far the fastest growing. There are now 2,092,000 children in the United States receiving aid to dependent children support; about 20 percent of these were born out of wedlock. But this national figure fails to show the extent of illegitimacy in those places where it is an acute problem-a problem that accounts for most of the attacks on aid to dependent children.

Established under the Social Security Act of 1935, aid to dependent children was originally intended to provide for youngsters who were fatherless due to death or desertion. In recent years, however, it has been depicted as a contributing factor to the sharp rise in the number of unwed mothers because, its critics charge it helps encourage illicit sex behavior through eliminating the financial burden that ordinarily would follow an illegitimate birth.

#### GOTHAM'S PROBLEM

The aid to dependent children problem is nowhere greater than in New York City. which spends \$84 million a year caring for 200,000 mothers and children. This cost is shared by all U.S. taxpayers who, through the Federal Government, pay \$42 million of the total. The State and city each contribute \$21 million.

The average monthly aid to dependent children payment is \$156.60 per case. It is given to any youngster under 16, or under 18 if he is still in school, whose parents (usually just the mother) are unable to provide for him.

Of the 150,000 aid to dependent children in New York, some 40 percent are illegitimate, and 34 percent of the 50,000 mothers are unwed. And 80 percent of the aid to dependent children illegitimate children are reported to be in so-called repeater families—that is, the mother has two or more illegitimate offsprings. The "repeaters" are the chief target of aid to dependent children critics.

There are, of course, thousands of aid to dependent children cases in New York involving only the most deserving unfortunates: Widows with young children, mothers whose husbands become mentally or physically disabled, and mothers who have been deserted and left without resources. The community responsibility in such cases is clear. It is less clear, however, in instances where the relief client purposely becomes an aid to dependent children parasite. A Brooklyn grand jury is currently investigating this aspect of public relief and several women have already been sent to juil.

aspect of public relief and several women have already been sent to jull.

There are two principal types of aid to dependent children chiselers. One is the mother who knows where her deserter husband is but doesn't want him back (the husband is usually satisfied with this, too). The other is the unmarried woman who regularly produces children but denies knowledge of the father or fathers. The man in this case sometimes chips in on expenses and claims his illegitimate offspring as income tax exemptions while the mother collects aid to

dependent children money.

Welfare investigators are sometimes aware of these situations and raid apartments at night to catch the father. The raiders almost always find some man. Social workers smile ruefully as they recall surprised men in pajames loudly asserting they were "just visiting"; others sometimes risk their necks with hasty escapes.

#### REPEAT PERFORMANCE

But even when the men are caught, the welfare people have a difficult time proving who is the father of which child. Often a man will freely admit he's the father and the family will be dropped from the relief rolls. A short time later, however, the mother will notify welfare that he has disappeared and the whole process starts all over again.

One solution that has been considered, but rarely adopted, in various sections of the country is to bar mothers with more than one illegitimate child from the relief rolls. Most sociologists agree that these "repeaters" are practically incorrigible. But the problem here is that society's sympathy is with the children and no one is anxious to penalize a youngster for the misbehaylor of parents.

Whenever possible aid to dependent children under such influences are placed either in institutions or in foster homes. When left with their "repeater" mothers they often do not get much benefit from the money disbursed in their behalf. Social workers, when out of earshot of their superiors, tell of "aid to dependent children parties" that are common in some poor neighborhoods: When the mother foceives the monthly check for her child or children, her first stop is the liquor store; and then there is a celebration, which may land the mother back in her original predicament.

The welfare employee, knowing his client is misbehaving, is impeded by real fear of getting too tough with some of the reliefers. One mother, for instance, who became angry at a social worker, purposely starved her children, had them committed to a hospital suffering from malnutrition, and the welfare agent on the case was fired.

There is, unfortunately, another side to this coin. Because the Welfare Department finds it difficult to keep fully staffed, it has been forced to hire some substandard personnel. A few such male employees have demanded favors of aid-to-dependent-children mothers and, if the women refuse, the agents cut off their relief checks. Meanwhile, the conscientious caseworker often

gets bogged down in redtape. There are dozens of forms to fill out and one employee declared it was possible for him to have to complete 186 in a single day.

The sid-to-dependent-children problem is compounded for New York because there is no minimum residence law to put a check on newcomers to the city who immediately apply for relief.

Take the case of Maria R., of Puerto Rico, for example. With two children in tow she stepped from the airliner at Idlewild Airport and walked over to a policeman. Half in tears, she said she expected to meet her husband but he hadn't shown up. Her husband's name was the Spanish equivalent of John Smith, she didn't know where he lived, and she had no money. Yes, she said, the children were hers.

Within a matter of hours the woman and the youngsters were put on the New York City relief rolls. Soon after, they were installed in a \$55-a-month flat in Manhattan's upper West Side and began receiving about \$60 a week in welfare checks.

#### SUPPORTED INDEFINITELY

Maria may have told the truth, but social workers say the odds are against it. More likely, they say, Maria decided one day in Puerto Rico that life would be better in New York. Knowing her aid to dependent children and being unmarried, she went to a neighbor in her village who had many children. Maria borrowed two of these, raised the plane fare from relatives, and came north. She will now be supported indefinitely and in comparative comfort by U.S. tax-pavers.

White acknowledging that such things happen, the Commonwealth of Puerto Rico contends that only 15 percent of the Puerto Ricans who come to New York ever go on relief. Social workers say this figure is low.

But certainly the Puerto Ricans have no monopoly when it comes to welfare maneuvering on the New York City front. Scores of other women, usually single and pregnant, skirt the raised eyebrows at home by moving to New York to have their bables while receiving welfare aid. And southern Negroes, many with relatives in New York, come north in droves, especially when the employment situation is rumored to be good.

One cannot study aid to dependent children and illegitimacy very long before it becomes clear that the trend reflects some other great socioeconomic problems of our day. Henry L. McCarthy, New York City welfare commissioner, has estimated that 83 percent of the children receiving aid to dependent children assistance are Negroes and Puerto Elcans, and one good reason for this is that Negro and Puerto Rican children have almost no chance of being adopted. White youngsters, by comparison, have a 70 percent chance. This same high percentage of nonwhites on the aid to dependent children rolls is found in almost every section of the country, largely for the same reason.

In New York City, the total number of white children decreased 5 percent between 1920 and 1950. During the same span, the nonwhite juvenile population rose 350 percent. Sociologists say this has happened because New York administrations have adopted policles calculated to force middle-income families to the suburbs and, they add, most nonwhites are at the low end of the pay scale.

Whatever the reason, New York City faces ever greater social problems, and these problems are at least in part the problems of the whole Nation. As one welfare critic put it: "There are thousands of people who be lieve the world owes them a living, and in aid to dependent children they see a good way to collect."

#### Northwest Power Intertie

EXTENSION OF REMARKS

# HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 16, 1959

Mr. ENGLE. Mr. President, I am pleased to note that the current studies of the potential mutual benefits of an electric power intertile between the power systems of the Pacific Northwest and California, which I initiated by my request of February 12 to the chairman of the Senate Committee on Interior and Insular Affairs, are proving to be a vehicle of healthy Federal-State cooperation as well as interstate cooperation on the Pacific coast.

The Senate Subcommittee on Irrigation and Reclamation held hearings on April 8 and 9 and the full Committee on Interior and Insular Affairs adopted a strong resolution on May 19 proposing cooperative studies of the benefits which might be derived from hooking together the Federal power systems of the Pacific Northwest and northern California. The State legislature and Gov. Pat Brown of California as well as Gov. Albert D. Rosellini of Washington and Gov. Mark O. Hatfield of Oregon now all have taken steps to advance this cooperative movement.

Most recently, during the convention of the American Public Power Association in Seattle, Gov. Rosellini made a very progressive statement on the subject. The APPA also adopted a resolution endorsing a Federal intertie. I ask unanimous consent that there be printed in the Appendix of the Record an article from the Seattle Times of May 27 entitled "State Will Join Power Study" and resolution No. 11 adopted by the American Public Power Association at its convention in Seattle.

There being no objection, the article and resolution were ordered to be printed in the Record, as follows:

[From the Seattle Times, May 27, 1959]

STATE WILL JOIN POWER STUDY

Washington will join Oregon and California in a study of a proposed tie line between Bonneville Power Administration and California systems, Governor Rosellini sald today.

Washington's Governor indicated that pending the study he is reserving judgment on the plan.

Rosellini addressed a luncheon session of the American Public Power Association at the Olympic Hotel.

#### WASTE FORESEEN

"If 1960 is a median water year," Rosellini said, "the Northwest will waste water capable of generating 12 billion kilowatt-hours of electricity. This is equivalent to one-fourth of our present production."

Announcing that he had joined the California and Oregon Governors in a joint study of the proposed sale of "wasted energy" to California, Rosellini added:

"I feel that if proper safeguards can be obtained for Northwest power users an intertie might provide substantial benefits to

both regions. Certainly a project that promises to keep rates low by marketing a wasted resource merits detailed study."

BUSINESSMEN INTERESTED

Rosellini said public-power development had made this State No. 1 in low-cost power, a position formerly held by Oregon.

a position formerly held by Oregon.

The Governor said that in his recent industrial-promotion trip to Eastern cities he found power rates here of particular interest to businessmen.

Complete use of this region's undeveloped hydroelectric resources, including the Canadian part of the Columbia River system, also is important, Rosellini said.

"When underdevelopment occurs, such as at Hells Canyon, we are definitely harmed,"

the Governor said.

#### RESOLUTION No. 11

Whereas the development of the hydroelectric resources of the Pacific Northwest has necessarily resulted in the present and future availability of a large quantity of surplus nonfirm power due to seasonal and annual variations in stream flows; and

Whereas the lack of an ample market for northwest surplus power has resulted and will continue to result in an undesirable waste of low cost energy and a serious eco-

nomic loss to the region; and

Whereas preliminary studies indicate the financial and engineering feasibility of high voltage transmission lines interconnecting the Federal power systems in the Northwest and California for the utilization of northwest surplus nonfirm power on a fuel re-

placement basis; and

Whereas the Senate Committee on Interior and Insular Affairs has requested a comprehensive study by Bonneville Power Administration in cooperation with the U.S. Bureau of Reclamation and in consultation with Pacific Coast States, the Federal Power Commission and representatives of public and private utilities, on the feasibility and desirability of a high voltage interconnection between the Federal power systems in the Northwest and California, and to suspend all negotiations for any interconnections or sale of surplus power until Congress has had the opportunity to consider and act on the resulting study: Now, therefore, be it Resolved, That the American Public Power

Resolved, That the American Public Power Association endorses the construction of an interconnection between the Federal power systems of the Northwest and California which will be a common carrier of sufficient capacity to ensure obtaining the optimum benefits and which will ensure that the use of the line will be limited to the interchange of exportable surplus power for which there is no market in the region of origin at the time of export; and be it further

Resolved, That the association commends the Senate Committee on Interior and Insular Affairs for requesting the study.

#### Future Business Leaders of America

EXTENSION OF REMARKS

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 16, 1959

Mr. WILEY. Mr. President, today in the face of competition from abroad and serious problems at home, our economic system is facing real challenges.

As in the past, I am confident that private enterprise—founded upon the ingenuity, competitive spirit and maximum freedom allowable within our governmental system—will successfully meet the challenges.

To do so, however, as well as to promote maximum progress and to strengthen our enterprise system itself, it is extremely important that we imbue the youth of America with the spirit and the knowledge of the working principles and rewards of a strong, free economy.

Currently, the United Business Education Association, a department of the National Education Association, is sponsoring a constructive conference here in Washington. The conference, scheduled for June 14–16, is to be attended by approximately 800 high school and college students from Wisconsin and other States throughout the country. The purpose of the program is to train future business leaders of America.

Overall, the FBLA, which has chartered over 2,000 chapters in high schools and colleges all over the Nation, represents a most worthy and constructive effort to provide our free enterprise system with business leaders for the future.

To illustrate the fine principles and objectives of the FBLA program, I ask unanimous consent to have printed in the Appendix of the Record a statement of the creed and purposes of the FBLA.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

#### PURPOSES OF THE FBLA

The Future Business Leaders of America organization, composed of young adults in high schools and colleges, seeks to:

Develop competent, aggressive business leadership.

Strengthen the confidence of young men and women in themselves and their work.

Create more interest and understanding in the intelligent choice of business occupations.

Encourage members in the development of individual projects and in establishing themselves in business.

Encourage members to improve the home and community.

Participate in worthy undertakings for the

Participate in worthy undertakings for the improvement of business and the community.

Develop character, prepare for useful citizenship, and foster patriotism.

Participate in cooperative effort. Encourage and practice thrift.

Encourage improvement in scholarship and promote school loyalty.

Provide and encourage the development of organized recreational activities.

Improve and establish standards for en-

Improve and establish standards for entrance upon store and office occupations.

#### Poison in Your Water-No. 119

EXTENSION OF REMARKS

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 16, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional. Record an article appearing in the Wilmington (Del.) Journal-Every Evening of December 28, 1957, entitled

"Chestertown Ordered To Stop Puttir.3 Raw Sewage in River":

CHESTERTOWN ORDERED TO STOP PUTTING RAW SEWAGE IN RIVER

CHESTERTOWN, MD., December 28.—Citing a menace to public health the Maryland State Board of Health has ordered Chestertown to stop discharging untreated sewage in the Chester River. The order is the first official action taken by the State against the town's program of bypassing the chlorination process during the winter months.

Mayor Philip G. Wilmer, out of town for

Mayor Philip G. Wilmer, out of town for the holidays, was not available for comment but the superintendent of the water and sewage system estimated it would cost some \$10,000 to winterize the treatment plant.

The action against the town was taken on the recommendation of Robert M. Brown, chief of the bureau of environmental hygiene. He said unofficial warnings had previously been given but these had been ignored by town authorities.

The Chestertown sewage treatment plant went into operation in 1940 and the practice of bypassing the digesting tank during the winter months has been followed since, according to Medford E. Capel, water and sewage system engineer.

Mr. Capel said the plant was designed for use in southern parts of the country and was not practical for use in areas where prolonged spells of freezing weather are common. He said the normal procedure was to stop the chlorination operation in mid-November and resume it in mid-March. These dates, he said might be varied, according to weather conditions.

The engineer said the wintertime operation endangered a \$2,200 meter used in the chlorination process because it was susceptible to freezing as was a 6-inch pipeline inside the digesting tank. The latter has frozen in the past, he said, causing trouble and expense.

The order, addressed to the mayor and council and signed by Dr. Perry F. Prather, chairman of the health board, said: "I am this 20th day of December, 1957, ordered by the State board of health, by virtue of the power conferred upon it by the General Assembly of Maryland, that you immediately proceed to place in continuous operation the sewage treatment plant in Chestertown, including uninterrupted chlorination of the sewage. The absence of this operation and continuous chlorination of the sewage at the Chestertown sewage treatment plant is a menace to public health."

# Contracts Between the Steel Companies and the Union

EXTENSION OF REMARKS

# HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. HOLLAND. Mr. Speaker, I feel that the Members of the House should have an opportunity to read the reply of David J. McDonald, president of the United Steelworkers of America, to the steel corporations in an exchange of letters pertaining to the contract existing between the steel companies and the union.

I think it contains information which should be brought to the attention of every Member of this House. It sheds a true light on the conditions as they now exist:

JUNE 11, 1959.

UNITED STATES STEEL CORP., BETHLEHEM STEEL CO., REPUBLIC STEEL CORP., JONES & LAUGHLIN STEEL CORP., THE YOUNGSTOWN SHEET & TUBE CO., INLAND STEEL CO., ARMCO STEEL CORP., GREAT LAKES STEEL CORP. KAISER STEEL CORP., THE COLORADO FUEL & IRON CORP., WHEELING STEEL CORP., ALLEGHENY LUDLUM STEEL CORP.

GENTLEMEN: Yesterday you handed me a letter in which you set forth, in writing, for the first time, certain proposals to which you had alluded generally in our subcommittee meetings. You also expressed your opinion of the local union representatives who are charged with the duty of negotiating with

your companies.

Your letter confirms, without any possibility of equivocation, the conclusion which the members of the union's negotiating team had already reached—that you are deter-mined to destroy the individual rights which have been carefully and painstakingly developed under our contracts and that you have nothing but contempt for your employees. Your intentions, as are now plain, are to eliminate the substance from our collective agreements. You appear to be willing to permit the union to continue to exist, but only at the price of converting it into a company union and eliminating the protections for our members which we have so painfully obtained over the past 20 years.

I now turn to the specific items contained

in your letter of June 10.

You charge that it is the union which has falled to bargain in good faith. The record of negotiations speaks for itself. As to which of us has failed to bargain, I will stand on your own description of the situation. The union, you say, has raised upward of 250 Issues upon which it proposes discussions, while not insisting that any one of them constitutes a fixed demand. You, on the other hand, have had one position—which You label a proposal—that we negotiate nothing. You appear to believe that a desire to discuss problems in the hope of finding mutually acceptable solutions does not constitute good faith bargaining but that a fixed insistence that no negotiations take place does. Nonsense.

II

Your letter now goes beyond your previous insistence that the union extend the 1956 agreements without change except for the elimination of the annual wage increase provisions and the provisions for adjustments to reflect changes in the cost of living. As an alternate method of reaching agreement you now propose certain changes in our collective bargaining provisions dealing with individual rights. These changes, you assert, will generate new economic progress Which can be shared with the employees and the public. I fail to comprehend the reason why the very considerable economic progress which you have made in the past 3 years without sacrificing individual rights is to be held exclusively by the companies and not to be shared with the employees or anyone else. You are, nevertheless, entitled to an answer on each of your eight proposals:

1. You propose to modify our contractual language so as to enable you to make the improvements or changes you desire in the interests of greater efficiency and economy. Otherwise phrased, what this means is that You want to eliminate any employee rights which may exist under our present contracts which in any way restrict you in your endeavor to speed up operations and to wring

from each worker something more than the last possible ounce of productive effort. You propose to destroy seniority, eliminate established practices and wipe out the hard-won individual protections upon which individ-

ual workers have learned to rely.
Our answer to this proposal is that the
United Steelworkers of America is not a com-

pany union.

2. You propose to reinforce our present contract prohibitions against wildcat strikes, slowdowns and other interference with producting during the term of our collective bargaining agreements. As you know, our contracts already contain ironclad no-strike guarantees which are far more stringent than those in effect in most other industries and which have been rigorously enforced by the international union. Your request for further provisions along this line can only be intended to vest in you the right to inflict unwarranted punishments upon your employees with no effective recourse.

Our answer to this proposal is that the United Steelworkers of America is not a com-

pany union.

3. You ask that we recognize the functions of management to develop incentives. and establish sound standards. Again, our present contracts do recognize that it is a function of management to develop incentives and do not prevent management from developing standards in connection with those incentives so long as such incentives provide fair, just, ad equitable compensation and do not actually result in a reduction of earnings for the employees involved. Your request for a change must mean either that you are unwilling to continue the provision that incentives be fair, just and equitable, or that you propose to cut the earnings of employees under established incentive plans. Or perhaps you desire to impose incentive standards without incentive pay.

Our answer to any of such suggestions is that the United Steelworkers of America is

not a company union.

4. You propose to clarify the right of the companies to change work schedules. The companies now have broad rights to change work schedules, as you well know. Those rights are subject only to the limitation that proper notice be given to the affected employees so that they may adjust their own schedules to meet your needs. And even where you violate the provisions with regard to notice to the employees, our present contracts permit you to proceed with that violation subject to the payment of penalties to the affected employees in only a limited number of cases. What you propose is to ignore entirely the interests of the employees in knowing when they are to work and when they are not to work, and to vest in your-selves the unilateral right to make workers come and go without advance notice, as it may suit your requirements.

Our answer to this proposal is that the United Steelworkers of America is not a company union.

5. You propose (a) to add additional requirements for the receipt of vacations and (b) to enlarge the period for scheduling vacations. The first part of your proposal would impose a doublebarreled qualification on the receipt of vacations, requiring a specified amount of work both in the year before the vacation and in the year in which the vacation occurs. This is obviously im-proper, as the companies themselves recog-nized when they suggested in 1956 the elim-ination of the provision which you now propose to reinsert even though no complaint against the 1956 provision had been heard from any company prior to this letter.

The second portion of your proposal further evidences your basic view that the rights of employees should be totally sub-ordinated to the whims of the companies. You already have the right to schedule va-

cations without the consent of the employees during 6 of the 12 months of the year in the case of United States Steel, and of even longer periods in the case of other companies. You have the further right to schedule vacations at any time with the consent of the individual employee. Your suggestion that your rights in this area be further enlarged is obviously unacceptable.

Our answer to both of these proposals is that the United Steelworkers of America is

not a company union.

6. You propose to eliminate what you say is the overlapping or duplication of benefits under the provisions relating to severance allowance, SUB, insurance, and pensions. This is a mystifying proposal, since all of the programs you specifically mention already contain provisions against duplication. If what you mean is that retired workers on pension should lose the right which they now have to continue insurance protection at their own cost, or that an unemployed worker receiving SUB should be deprived of the already inadequate 30-day continuation of his life insurance coverage during his layoff, then our answer must be that the United Steelworkers of America is not a company union.

7. You ask that we simplify the procedure for establishment of seniority units. Un-der our present agreements existing units are preserved and new units are established by mutual agreement at the local plant level; in the event such agreement cannot be reached as to new jobs, you have the right to place the job in an appropriate unit, subject to the grievance procedure. In the light of the general tenure of your other proposals, your proposal for changing this procedure can only mean that you want to simplify it by vesting in the company the unilateral right to determine and revise seniority units. The determination of seniority units, as you know, is vital tothe job protection of workers who have spent long years in your service. To place those protections at your tender and unreviewable mercies is obviously unthinkable.

Our answer to this proposal is that the United Steelworkers of America is not a

company union.

8. Your final proposal is that we simplify and clarify contract language. With this objective we certainly agree. In the light of your specific proposals for simplification and clarification, however, we must assume that what you mean by simplification and clarification is virtual elimination. True, this would make it simpler. There is no simpler contract that one which gives employees no rights.

TIL

The third major subject of your letter concerns the method by which negotiations are to be conducted. You correctly state are to be conducted. that we propose to call in the local union representatives so that they may participate in negotiations with each of the companies, You characterize this move, however, as "a diversionary publicity-seeking tactic." Never before have the spokesmen for this industry so insulted the duly designated members of the negotiating committees which are charged with the primary responsibility for executing the various agreements. These are the men who work in your mills and have been duly selected through the union's established procedures. Your assertion that participation by these men in the negotia-tions is not directed at developing agreements is totally false, and symptomizes your disdain for the opinions, as well as rights, of the men who make steel.

Whether you like it or not, the union will be represented in the negotiations with each of the companies, beginning Tuesday, June 16, by these duly designated committees. We acknowledge your right to be represented by any persons you choose so long as you comply with your legal obligation to bargain with the union in good faith and to be represented in that bargaining by individuals who are both authorized and competent to deal with the problems within the areas of contract discussion at each of these companies.

If, in addition to the meetings of the full negotiating committee meetings, you desire to continue concurrently the meetings of a subcommittee consisting of 4 representatives of the union and 4 representatives of the 12 companies, we are also prepared to continue that form of negotiation. As we have repeatedly stated, we have a single purpose: To achieve a fair and peaceful settlement. To that end, we are pre-pared to bargain collectively in good faith through any device which has any prospect through any devices of achieving success.

Very truly yours,

DAVID J. McDONALD,

Prest

President. I. W. ABEL, Secretary-Treasurer. HOWARD R. HAGUE, Vice President.

ARTHUR J. GOLDBERG, General Counsel.

#### Educational Pendulum Swings Again

EXTENSION OF REMARKS

# HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Tuesday, June 16, 1959

Mr. THURMOND. Mr. President, the Greenville News, of Greenville, S.C., under the direction of a courageous publisher, Mr. Roger C. Peace, and the able editor, Mr. Wayne W. Freeman, regularly and continually provides objective and responsible leadership for its readers. This objective analysis on public issues is well demonstrated in an editorial published on June 9 entitled, "Educational Pendulum Swings Again."

I ask unanimous consent that this splendid editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Greenville News, June 9, 1959] EDUCATIONAL PENDULUM SWINGS AGAIN

At long last, the pendulum of theory and techniques in American education is swinging in another direction.

After many years of progressive principles, fathered by the late John Dewey and considerably distorted by his successors at Columbia University, a reaction has developed and is now sweeping the country.

This was inevitable. Even if the progressives' program had been as well founded as they themselves thought in the beginning it was bound to be diluted and exaggerated in the hands of men of lesser talents.

What began as an attempt to bring demorracy into play in education ended in almost complete anarchy. It may have been unwise to set arbitrary standards and to punish those who could not meet them through no fault of their own, but it was even less wise to abandon all standards whatsoever.

We are pleased by the emergence of a counteraction to the degenerated progressive theory. But we are concerned about a concomitant trend.

Events have combined to make education the most publicized facet of our lives. The public eye is on the public schoolhouse today as never before, drawn there by such divergent causes as the race problem, the astounding scientific successes of Soviet Russia and by the collapse of the progressive system Itself.

The greatest danger now is that we shall go too far with the neoclassical theories just as the progressives went too far with their

And the danger is made even greater by the fact that the surge in the new direction may be accompanied by elements which will make adjustments and corrections far more difficult than they have been in the past.

By this we mean Federal aid and Federal control of education.

It is impossible to conceive of any meaningful program of Federal aid to education which does not carry with it some measure of Federal control. Certainly no other sizable program receives Federal participation without a degree of Federal supervision. And once established, it tends to grow.

That degree of control is bound to broaden and grow stronger in the case of education. For remember, education is now seen as the Nation's first line of defense, our greatest weapon in the battle to preserve democracy. How, then, can the Federal Government fail to bend its every effort to a constant supervision and direction of every phase of this, its prime weapon for self-preservation?

As the Navy sets specifications for its ships, the Air Force for its jet airplanes, and the Army for its field equipment, so the Federal Government will have to establish specifications, and rigid ones at that, for its own system of education.

It is easy enough to say that these specifications and standards will be subject to the review and scrutiny of the general pub-lic, but the cold fact of the matter is that this is most unlikely. The general public knows little about the conflicting theories of education and the prevailing standards are likely to be set by experts of whose activities they have little knowledge and, consequently, even less control.

A Federal Department of Education, if it were established, would quickly become the cat's-paw of the professional educators and not the servant of the people. And the record of the professionals of the past is not such as to make this an encouraging

One of the reasons the Progressives failed so dismally was that they insisted on conformity with their schemes in all circum-That they did no more harm than they did was chiefly due to the fact that they were not able to force universal acceptance of their plans.

Is the conformity of the new vogues in education any better than that of the old? How shall we learn until it is too late?

The Chinese Communists, in a momentary aberration, decreed a new program under the glowing title, "let a thousand flowers bloom." By this they meant to allow some bloom." By this they meant to allow some relaxation of the dull hand of totalitarianism and the flowering of new and even opposed ideas.

But as any experienced dictator could have told the Red bosses, individuality has a way of expressing itself in ways embarrassing to dictators. And so the lid was quickly clamped on again.

And so will the lid of conformity be clamped on the youth of America if the Federal aid to education program is adopted. The flowers of individual talent which bloomed under locally devised and locally supervised school systems will fade and die, victims of a cold-war panic and a centralized state.

Annual Flag Day Program Sponsored by Altoona, Pa., Lodge No. 102, Benevolent and Protective Order of Elks, June 13, 1959, City Hall, Altoona, Pa.

EXTENSION OF REMARKS

# HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. VAN ZANDT. Mr. Speaker, the annual observance of Flag Day has grown in importance each year due to the untiring efforts since 1907 of the Benevolent and Protective Order of Elks to arouse public interest and proper recognition of a national holiday promoting appreciation and respect for the full meaning

On June 13, 1959, it was my privilege to join with my fellow members of Altoona, Pa., Lodge No. 102, Benevolent and Protective Order of Elks, in an interesting program in celebration of Flag Day and to deliver the principal address which follows:

ADDRESS DELIVERED BY JAMES E. VAN ZANDT. MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE FLAG DAY EXERCISES AT CITY HALL, ALTOONA, PA., JUNE 13, 1959. P.M., SPONSORED BY ALTOONA LODGE NO. 102, BENEVOLENT AND PROTECTIVE ORDER OF

It is an honor to join with my brother Elks of Altoona Lodge No. 102 in celebrating the 182d anniversary of the birth of Old

For years the Benevolent and Protective Order of Elks has displayed leadership in urging that appropriate exercises be held on Flag Day as a means of focusing special attention on the blessings we enjoy as citizens of this great Republic.

We owe a debt of gratitude to Elks lodges everywhere for awakening our patriotic impulses which—unfortunately with respect to the Stars and Stripes—give evidence of being

We need a revival of the spirit of good oldfashioned Americanism as a means of restoring the spine-tingling, blood-stirring thrill when our flag passes by in a parade—or when we glimpse it flying proudly against the clear blue sky on a sunny day—or majestically ascending heavenward at a public cere-

Frankly, we need to arouse ourselves from the lethargy that engulfs us and leaves us prone to ignore the beauty and splendor of our flag.

This year's celebration of Flag Day marks the last time on such an occasion we will gaze at the 48-star emblem of our Nation.

On the morning of July 4 of this year the new 49-star flag—indicative of the admission to the Union of Alaska—will become our official emblem following ceremonies at Inde-pendence Hall in Philadelphia.

The new 49-star flag is destined to have a short span of life for it is anticipated that by July 4, 1960, another glorious star will be added to our star-spangled banner because of the final approval of statehood for the Territory of Hawaii.

It has always been a pleasure to me to discuss the great traditions of our national

I suppose this is the reaction of every patriot in every land.

And yet there is something unique about such a discussion when conducted by Americans, in view of their highly individualistic background and national characteristics.

It is traditional for Americans to play down certain of our traditions, to a large extent.

As a people devoted to the cause of peace from the beginning of our entrance into the family of nations, we have tended to emphasize a desire for international cooperation, in contrast to boasting of our own great national achievements

Yet it is not possible nor, for that matter, advisable to altogether neglect our record of national success, and for that reason we periodically call attention to it through patriotic celebration.

Our record as a people is indeed remarkable

Not only have we arisen in less than two centuries from national infancy to international predominance, but have done so with only the slightest occasional setback, and with the most extraordinary exhibition of drive and fortitude.

As a result, the Stars and Stripes now holds an exalted place among the national banners of the world and our national might is either admired or grudgingly respected by

every other nation on earth.

To those who can comprehend only tangible factors, the accomplishments of the United States are explainable in mathematical terms. We have a vast and fertile land area, we have a large population, and favorable weather conditions; and added together they can be said to equal the full sum of our greatness.

But somehow this seems to me an incom-Plete account of America-a woefully incomplete account.

A nation is not a mathematical computation, but a living organism, and, like all living organisms, is motivated by many currents and impulses wholly unrelated to mathematical considerations.

Admittedly, the wealth of our soil and mineral deposits, and our great network of rivers and harbors, have been of invaluable assistance in advancing our development on this continent.

In those respects, the United States has

been extremely fortunate.

But, on the other hand, our national history clearly reveals the powerful, impatient, and wholly inextinguishable urge of the American people to fully exploit their opportunities whenever they arise and, despite all deterrents, to forge ahead with the program at an amazing rate of speed.

And this spirit has nothing whatsoever to

do with mathematics.

Throughout all history there is abundant evidence that national spirit results from something other than numerical advantages.

Take, for instance, the case of Rome, which expanded from the size of a mere city to eventually overrun the entire Mediterranean area.

At the height of her power, certainly, Rome's advantages were numerous.

But when the march to greatness began, she was outnumbered by many of her enemies; and when, for example, the Romans met in combat with mighty Carthage, the task was undertaken against the greatest seapower of the age, by a people generally regarded as landlubbers.

Yet ultimately Carthage fell, not once, but three times, the victim of Roman nationalistic spirit that transcended all other

considerations.

The same can be said of the ancient Hebrews under the leadership of the Maccabee, who time and again met the great legions of the Greek Empire in mortal combat, outnumbered and outarmored, and yet for years repelled invasion after invasion, to maintain their national independence in the face of apparently insurmountable odds.

And in more recent times we have the examples of Sweden, whose small army, under King Gustavus Adolphus, devastated the Russian horde in 1617; and Finland, which did the same in 1939, briefly, before finally succumbing.

Nor is the world soon to forget the extraordinary accomplishments of the raggle-taggle French Revolutionary Army, against all the great military powers of Europe, or the French soldiers of World War I who piled into taxicabs and raced out to stop the onrushing German Army of Kaiser Wilhelm at the gates of Paris, and then with the cooperation of the British and ourselves, drove the enemy from French soil.

In every one of these instances, intangible forces played a major part.

In every one a spirit was kindled that could not be overcome by mere numerical superiority.

In each, nationalistic zeal was the prime factor.

In dealing with intangible factors, it is not easy to explain how or why things occur.

Indeed, that is what makes them intan-

But we can consider certain of the elements involved.

And in every instance of the development of ardent nationalistic feeling, since the days of Roman conquest, national flags or their equivalent have been prominently in evidence

There is something bewilderingly and unexplainably powerful about a flag, either in battle or flying from a schoolhouse in the midst of a peaceful country village.

It radiates a pride and hope and a grandeur that even the cynical find hard to resist.

There is no ignoring its influence, for to do so would be like disregarding the de-structive tendencies of a hurricane or the life-giving effects of sunlight on a wheat-

Anyone who has gone out to battle under the American flag can tell you-or try to tell you-the confidence inspired by its gallant appearance.

Yet somehow words are not enough.

When one's life hangs in the balance in the midst of an enemy infantry attack or a barrage fired from an enemy battleship, it is a common experience to momentarily think of self and to forget all the patriotic oratory ever spoken.

But the mere sight of the American flag at such a moment can restore confidence and determination, whereas an hour's worth of

oratory would prove fruitless.

It is as though the American flag were some sort of history book, military marching band, orator, and colorful pageant, all rolled into one, so powerful is its effect in time of crisis.

Nor in good times is this effectiveness in any way diminished, for when peace and prosperity bless the land the flag takes on a new meaning.

Instead of crying out hope to the troubled, it seems to take on an air of warning to the complacent, alerting all Americans to present and future dangers.

So impressive are the wonders of our flag that unorganized elements in American society began-early in our history-to call for its recognition in the form of an official day of reverence.

Yet, it was not until after the Civil Warwhen sectionalism was largely submerged by national feelings—that actually steps were taken toward launching an organized campaign for the establishment of a national flag day.

A distinguished patriot, Dr. Bernard J. Cigrand, conceived the plan and formed an organization in 1894, on the assumption that respect for the flag was deserving of more than offhand, occasional notice.

His efforts were untiring, and under his direction the organized advocates of pa-

triotic demonstration worked diligently for the accomplishment of their goal.

But changes in the popular mind are slow at taking place, and for many decades flag remained unrecognized-in this official sense-though quietly revered by the masses of American citizens.

In the meantime, however, numerous new influences were brought to bear on public opinion, in such a way as to bolster and reinforce the patriotic American temperament.

As American youth went out under the Stars and Stripes again and again to fight for this great Republic and the supppression of despotism, the American people began to adopt a new attitude toward their flag.

Assuredly, it was still the symbol of our Nation's eternal hope for peace.

In addition, it had earned a phenomenal record in the military sense; and further failure to honor such a record was deemed intolerable.

With this in mind, Congress passed the National Flag Day bill in 1949, in honor of the flag's adoption by the Continental Congress, June 14, 1777, and from that date we have celebrated this occasion with typically American enthusiasm.

Few congressional actions have received such a universally positive response from the American people, and I am willing to hazard a guess as to why.

It all comes back to our Nation's trials and tribulations, and their solution through the magnificent zeal of the American people.

Our triumphs in both war and peace have been the marvel of the past 2 centuries, and have drawn the applause of free peoples everywhere.

With an Army composed almost exclusively of volunteers we confounded some of England's greatest military minds in our war of independence and repeated the same trick in the War of 1812, even defeating the pride of the British army-the Duke of Wellington's own troops—in the historic battle of New Orleans.

Against the Mexicans in 1846, we sent our youth into combat-to emerge triumphantly once again-thereby extending the national domain in an unbroken chain from the Atlantic to the Pacific.

And demonstrating the resilience so typical of the American character, we emerged from our own Civil War to overwhelm the last vestige of Spanish tyranny in the new world in the 1890's, and assumed the role of international leadership which we have never since relinquished,

Since then it has been necessary times for American boys to serve the interests of humanity on foreign shores, against the combined might of all the despotic powers that have arisen to plague 20th century civilization.

And in every case the American flag has earned added respect in lands where previously it was known only in the vaguest

But not through warfare alone has this banner gained its fame.

Millions the world over have come to respect it as an outstanding symbol of the industrial revolution; as the symbol of mass-production and the consequent elimination of mass poverty.

Today we stand as the bulwark, both in the military and economic sense, which the weaker nations of the world must rely for strength.

And as a symbol of this strength our flag is held in many foreign lands with almost the same admiration as it receives on these

It is symbolic of a free republic-of victory-of truth-of fair play and man's eternal efforts to tame the elements and develop a practical and logical world out of the chaos of the past.

At least that is part of the what our flag symbolizes.

The rest cannot be spoken of in words, but only felt by the heart.

In conclusion, it is my hope that Flag Day 1959 will serve to further strengthen our faith and admiration in the greatest Republic in the history of civilized governments.

Since the Declaration of Independence has been described as the heart of America, the Constitution its backbone, and the flag the soul of America—we should all join with the Benevolent and Protective Order of Elks—which since 1907 has been promoting love of country and greater respect for the emblem of our Nation through these annual Flag Day programs in tribute to Oid Glory—for it represents under one glorious banner the enduring ideals of this great Republic.

Individually and collectively, we can succeed in reviving proper recognition of the Stars and Stripes which symbolizes the countless blessings we enjoy from our priceless heritage as free people.

On this Flag Day, 1959, as we give a loving and parting salute to our 48-star emblem soon to be replaced by a 49-star-studded flag, let us resolve that as a united nation we will meet all challenges to America with full faith and confidence.

We can give real meaning to this Fag Day resolution by recognizing and discharging our responsibilities as American citizens with courage, perseverence and true patriotic fervor, thus making Old Glory more meaningful to posterity and giving added assurance that:

"The star spangled banner in triumph shall wave.

O'er the land of the free and the home of the brave."

# Tribute to Rear Adm. George J. Dufek for His Service in Antarctica

EXTENSION OF REMARKS

### HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 16, 1959

Mr. ENGLE. Mr. President, Rear Adm. George J. Dufek turned over his command of the U.S. Naval Support Force in Antarctica on April 16 to Rear Adm. David M. Tyree, in ceremonies aboard the Navy icebreaker Glacier. I worked with Admiral Dufek in that command, and I was also a close associate and friend of his predecessor, Admiral Byrd.

The New York Times, in an editorial in its April 19 issue, pays appropriate tribute to Admiral Dufek for his outstanding service to the Nation in the Antarctica, and I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 19, 1959]
ADMIRALS OF THE ICE

From the icy blue-white reaches of Antarctica a man and a ship came to play roles last week in ceremonies that meant their parting. Aboard the Navy Icebreaker Glacier, Rear Adm. George J. Dufek, for 4 years the commander of the U.S. Naval Sup-

port Force in Antarctica, turned over his command to Rear Adm. David M. Tyree, on April 16, 1959.

Both Admiral Dufek and the Glacier, his flagship, are Antarctic veterans. Admiral Dufek directed three successive expeditions to Antarctica in support of the U.S. program of research and exploration under the International Geophysical Year that ended last December 31.

A big, bluff, direct man, George Dufek has been going down to the ice since 1939 when, as a lieutenant, he volunteered to serve in an expedition to Antarctica under the late Rear Adm. Richard E. Byrd. He was the first American to set foot at the South Pole and at the same time—1956—the first person ever to land at the pole by airplane. He took risks, surviving two dangerous plunges into freezing Antarctic waters.

For many persons involved with that inhospitable, frozen southern continent, George Dufek is linked inseparably with the Antarctic. It is to be hoped that Admiral Dufek, one of the most distinguished polar explorers of his time, will continue to contribute his knowledge to the further exploration and development of Antarctica. To Admiral Dufek we say: well done. To his successor, Admiral Tyree, we wish the best

#### An American Salesman

EXTENSION OF REMARKS

# HON, EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, chairman of the board of the Coca-Cola Export Corp. before a joint meeting of the Iola Area Civic Clubs held at Iola, Kans., on June 11, 1959:

#### AN AMERICAN SALESMAN

The 20th century has proudly embraced the title of the scientific age. However, in somewhat contradictory postures, it has proclaimed its humility-but with all the heraldry of pomp and circumstance. It has stated, and with truth, that science can only begin to measure how a small fragment of this great universe works. It admits it has discovered but a few of the miracles presented by the commonplace. Thus the laws of gravity were working before Newton discovered them only 400 years ago. His great contribution was the insight that they were both universal and invariable and, since they were then predictable, could be put to man's use. Useful they have been, to such an extent that based on their material accomplishment a new and false religion of science worshipers has arisen. But it does not take a scientist to know that as man increases the diameter of his knowledge he also increases the circumference of his ig-The discovery of wireless, norance. example, illuminated a whole world of electronics, of which we were completely ignorant. In homlier terms, the great discovery of Columbus, in fact, notified the world that there were vast new continents of which it was entirely ignorant. Accordingly, the modesty of the new age could well be based on the problems unsolved, the vast realms unexplored which stand before it It might well, in appraising man's role in his new estate, ponder that it took man 7,000 years of civilization to discover that the laws of gravity were scientifically measurable and that such discovery took place because an apple dropped on one thinking head. As an American philosopher has remarked, how it works, man has discovered, why it works, God, alone, knows. Yet, out of a few puny insights which he has converted to his own material comforts almost laughable voices are raised, proclaiming man's awe of his own remarkable talents. Indeed, the London Observer recently, and somewhat slyly, noted that the whole bent of modern scientific philosophy seemed to be a determined attempt to confer an honorary degree in mathematics upon God.

It seems to me entirely timely to note that science created neither the apple, the tree, nor the man by which this discovery came into effect and, as of last report, was still completely incapable of producing, let alone reproducing, any one of the three. Let us not, in our mad rush to measure the sun by spectroscope and the stars by light erase the beauty of the sunset, and the magnificence of the heavens, and the greatest miracle of all the gift of our senses by which we can witness the glory of the universe and its Creator. Indeed, I am here encouraged to make a prediction: As certainly as the history of man during the first 2,000 years of the Christian era could not be confined to a balance sheet, neither in the next 2,000 years will it be limited to the slide rule in the laboratory. Man has, in part, discovered the uses of his brain. He has yet to discover, and he must to survive, the vast inner recesses and reserves of his heart; his capacity to love his own kind.

I have been at great pains to delineate the limitations of science because, in precisely the contradiction of which I have accused it, I now intend to rely so heavily upon it. Scientific method represents one of the truly great advances of man's great tool, his own culture. To examine carefully, to note the phenomena, and then to speculate about it is a technique which has revolutionized man's approach to his own environment. He can now locate his geographical position in the globe within 2 feet; he can detect many marauders within his own bloodstream in 10 minutes, and annihilate them within 3 hours. And all of this he has done by searching for the miracle in the commonplace. Why should it not apply to our function as sales executives? After all, what is more commonplace than a sale? In that case, is it not a scientific miracle, and does not scientific method apply? My answer is in the most affirmative positive: A sale is indeed a miracle, a compounded miracle of civilization, and the laws of science do apply and most emphatically.

A sale is defined as an exchange of goods for money, just that simply. But, to begin at the beginning, as the scientific method insists, what other animal in the face of the globe buys and sells? The answer, of course, is none. Now, then, it is scientifically established that the completion of a sale is a distinguishing mark between humanity and the beasts. Now, still employing scientific method, does man's experience sustain this theory? The answer is almost astounding: the great archeologists are almost unanimous in saying that man developed his accounting, his writing and his navigation as essentials to his necessity to trade. hieroglyphics of Egypt, the cuneiform writing of Mesopotamia, the invention of coinage by the Lydians and the emerging Aramaic alphabet were developed because of the compulsion to trade.

Now, to pursue the thesis scientifically, what is this compulsion, this basic human drive to trade? Recently in a London newspaper this was answered by a most ingenious advertisement, by one of Great Britain's major insurance companies. It was headed

simply, "Facts: over 5 million clocks were sold in Great Britain during 1957, yet not one of the purchasers wanted a clock—what they wanted was the correct time." In short, a sale is a basic process of civilization, and of man's civilization alone, by which a human need is filled.

And now, I should like to offer my own hypothesis. I think it may be fairly argued from the foregoing that rate and amount of sales, quality, variety, availability of product are as much the measure of a civilization as the measurement of the pulse and rate and content of the blood is to the human body. For example, one need merely cite an Amazon jungle tribe or an Eskimo village in comparison with Fifth or Michigan Avenues, Bond Street, or the Rue Vendome.

Now, to follow further, why have sales at these high points of civilization so exceeded those in the more backward areas? Because, the world's great merchants, long before the scientists had discovered the tremendous benefits to mankind from unearthing the predictable phases of nature, these great merchants, these great civilizers, had introduced certainty into their own conduct. They standardized their product, another way of saying that the purchaser could purchase sight unseen and get exactly what he was bargaining for, and thereby base his own future conduct on the future conduct of another man. And, further, the product was not only stamped, on its own merit, it bore the endorsement of the good character of its seller—in fact, a warranty of goods, backed by the honor of the merchant.

Now it is an absolute fact that there were great merchants long, long before there were great scientists. Will Durant, for example, estimates that inter-island trade in the old Athenian Empire, by sail and by oar, exceeded a present day evaluation of over \$200 million. Now, is this not a miracle, and is it not based on a great discovery? Again, the answer is yes, because the great merchants, and not the great scientists made that greatest of all discoveries of which civilization itself stands monument: the foundation of which is a promise made and a promise kept, and the pinnacle of which is the common, everyday miracle, the sale. Behind the mere statistics of its monetary value is the whole drama of man's own show—civilization itself.

Now, having placed such emphasis on certainty it seems to me that I, in all fairness, must accept the challenge of naming future probabilities. This I shall attempt to do on the basis of previous fact and experience, but I am aware, as indeed is every executive here this evening, that selection of general policy is also a demonstration of private faith.

I believe this civilization and, more particularly, the American economy will continue to expand, to expand beyond our most optimistic conjectures. I cite here, in sup-port, the fact that our population increases in numbers by a State the size of Maryland each year, a city the size of Richmond, Va., each month. Yet, I count this population expansion as the least of the extending factors. Far greater is the impact of our educational system. You may be sure that the needs of 50 American high-school graduates Will far exceed those of a thousand children of nomad tribes. To educate a man is not only to increase his usefulness it means also to increase his needs. For example, there were 6 symphony orchestras in the United States in 1920; there are more than 120 today. As to variation of needs, each valid expression of the American cultural scene, the Sadler Wells Ballet and the New York Yankees, had about equal box-office receipts last year.

My whole point of the need and response of this growing economy is in, what to me, is a most, most remarkable fact: 55 percent of the American people earn their living in industries which did not exist in 1900. Now, I have said that a sale is that single most

important ceremony of civilization, by which man fills his need. I dare to go one step further—it is the index of his civic morality, as the bloodstream is to his bodily health. In its broadest sense, therefore, sales is a matter of deepest public concern. There can be no doubt of the strength of our producing mechanism, industrial America can and will double its product. The problem is not the great aortus, the torrential strength of the industrial heart of the Nation, Niagaras of civilization as they leave the factory doors. The problem is the delivery of that force to the capillaries, the millions and millions of store counters of America, and from there into the homes and use of the American people. Should anything stop that all-important capillary flow those tiny, single-sale transactions of final sale from counter to home, a thrombosis of the whole body politic would result. Back on itself would go the throttled bloodstream to eventually still the throb of the great industrial heart of the Nation.

From this, you will gather that I do not fear inflation nearly as much as I fear failure of consumer purchasing power. In this, you are correct. In my opinion, department store sales, carloadings and employment are far better barometers of the economic health of the country than either the stock market or the Federal Reserve discount rate. Woe be to us when they decline sharply, because compound circulatory collapse is not far off. As the London adver-tisement pointed out, it is not the desire to purchase a clock which motivates the sale; it is necessity of telling the time. It is not only the common humanity of keeping an American family intact which should guide our employment policies; it is the necessity of the purchasing power of that family in the market which keeps our system going. I repeat, I do not fear inflation; let us not take counsel of our fears. Had our ancestors done so we could still be 13 small, disunited colonies, hugging the Atlantic seaboard. As they were daring pioneers let us be daring merchandisers.

I am aware, of course, that our system is under attack. By that same token, I believe that we should fortify and reassert our ways, not abandon them. If democracy is choice and choice is democracy then the greatest demonstration of democracy today is the counter of the American store. Here the finest products in the world, by the finest names in the land, stand in true humility before the one person for which they all exist, the American consumer. No person in the history of man has wider choice of variety and quality of product. When communism can duplicate that array in the counters of Moscow it will begin to achieve the respect of man. But, as Sir Winston Churchill pointed out, they fear our friendship more than our enmity. And why? Because there is no possible answer to free enterprise offering a free people free choice in an open and competitive market.

Though the headlines are more spectacular, I assure you the race is not of the rocket to the moon but of good useful products to the common man's home. The essential challenge is not to which scientist's brain will come a new complicated formula, but which system will arrive first at the needs of the human heart.

In this struggle I am encouraged to believe that the forces with which we are alled, indeed, of which we are the spokesmen, have been the most potent forces in the rise of man. Need I remind you, for example, that Columbus' discovery of a new Western World was only incidental to his primary objective—to reestablish an old line of trade to the East. When in 1453 the Turks interrupted the old caravan trails the forces they had arrested searched out three new continents.

In a new age, I have heard much in defamation of us who in effect still maintain these old expressions of civilization. But, happily, there is the beginning of an appreciation of the crucial role of the merchant and salesman in the fabric of the 20th century, as witness now, the elevation of business as a profession in the appearance of advanced schools of business administration.

Now I have always pitied a man who despised the way he earned his living or the community from which he came. A man who is not proud of his job ought to have pride enough to quit it. I have mentioned that the good name of a company is the guarantee of the product which it sells, Now I go one step further. No sales organization can even begin to function unless the good name of the salesman and the good name of the company are united in supporting the good name of the product. As no wave ever rises very high, or for very long, above the sea of which it is a part no man, no company and no product can for long maintain a position above its own basic integrity. In the final analysis, its sales volume is merely the measuring method of the confidence of its customers in all three.

From this, it may be gathered that I believe that the salesman is at least as important in our civilization as any of the other professions. The fact is, I do and, therefore, I hope you will not deem me immodest when I tell you that the proudest title I ever bore is the one I am carrying right now, Jim Farley, American salesman.

# Should Labor Participate in Politics?

EXTENSION OF REMARKS

#### HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following scholarship winning essays of Richard Novak, Mechanics Arts High School, St. Paul, Minn., and Patricia Lamson, of Our

Lady of Peace High School.

Each year the St. Paul AFL—CIO
Trades and Labor Assembly grants two
college scholarship awards to outstanding and deserving high school seniors.
Through programs like this, the labor
movement in St. Paul calls attention to
the long and significant role it has
played in developing and contributing
to the growth of the Greater St. Paul
community.

In conjunction with the applications for scholarship awards each participant is required to write a short essay on a subject selected because of its current national interest. The topic for this year was "Should Labor Participate in Politics?"

#### (By Richard Novak)

Should labor participate in politics?
Personally, I think that labor should participate in politics. The reason is evident.
In America, industrialism has risen very

quickly.

In fact, before the Civil War, industrialism was only a weak force which had its head-quarters along the eastern coast of the United States. Yet it was already beginning to grow.

One of the main factors of the Civil War was this industrial question. The South possessed an agrarian economy which opposed the industrial economy of the North.

Following the Civil War, however, industrialism became the dominating factor in American life. But industrialism expanded so quickly that the Government could not keep pace with it.

Soon troubles began to cloud the horizon: Depressions became a regular factor—two in Grant's term alone—and strikes and riots broke out in all sections of the country.

It became evident that the country would not survive this struggle, unless certain restrictions were placed upon the industrial powers.

A limit had to be set on the amount and type of speculating to be done; regulations had to be established on how and when strikes could take place; and above all, limits had to be imposed on the power of the capitalists themselves—antitrust laws had to be established.

Thus it was not a matter of deciding whether or not labor should participate in politics; it was a matter of deciding how they should participate. The matter was settled beyond a doubt that labor must be a participant and an important one.

Today the same problem remains. The same interests are still in opposition: capital and labor.

The capitalists still maintain the upper hand. They have the means by which to employ lobbyists. These lobbyists work in behalf of the capitalist's interests. He does everything in his power to get bills passed, decisions made, and services rendered which will serve the interests of the capitalist.

The workingman, however, does not have the means by which to procure a lobbyist to serve his interests. He must rely on the ethical responsibility of the legislator.

Thus, we have the answer to the question "should labor participate in politics?"

Only through the power of organization will the workingman gain the rights that the capitalist possesses, the right to equal representation.

As it stands now, the capitalist has the greater share of representation because of the power of his lobbyist.

Organized labor would take the place of the lobbyist for the workingman. It would guarantee equal representation to the workingman.

No bill is passed today without the "pressure" of the lobbyist being applied to the legislative body. The labor unions would give the workingman the benefits of this "pressure." The unions would assure the workingman of his share of the "breaks" in the Nation's legislative proceedings.

the Nation's legislative proceedings.

Labor would supply the necessary force with which the workingman can effectively fight for his rights.

The capitalist has his lobbyist. Why shouldn't the workingman have his?

It is about time the workingman is given this benefit. He needs someone to fight for his interests in Congress also.

The labor unions can give him this power. The only way to fight force is with force.

### (By Patricia Lamson)

Is there a legitimate place for labor unions in the political life of the United States? In theory, yes.

Labor unions in politics are, of course pressure groups and pressure groups are the means through which the ordinary citizen brings his influence to bear on the government.

They, therefore, serve a legitimate purpose in a democracy and it would be wrong to abolish them.

Furthermore, if farmers and manufacturers through their organizations have the

right to form lobbles—as they do—it is only just that laborers through their unions have the same right.

But the question remains: In practice have labor unions benefited the people of the United States through political action?

An unbiased look at the history of our country will definitely show that unions have worked for the common good ever since their incention.

They have been quite successful in improving the lot of the workingman in particular and have been instrumental in securing legislation to improve social conditions in general.

Unions have consistently striven for better working conditions, higher wages and shorter working hours for all.

Among resulting reforms are the laws concerning industrial health and safety, workmen's compensation, abolition of child labor, the minimum wage, the maximum number of hours to be worked and unemployment compensation.

These laws have benefited not only union members but most of the workers in America.

Unions have not confined their interest to the improvement of work conditions. They have been interested in and have been successful in promoting the general welfare in the fields of free public education, slum clearance and social security.

In short, unions have helped raise the standard of living in the United States.

In addition to these benefits, the unions are endeavoring to inform the workers of the effect and meaning of various measures which are put to their vote.

As long as they limit themselves to education and do not try actually to control the individual worker's vote, they are doing the Nation a favor because informed voters are the best voters.

It is possible that the interest of any group may sometimes conflict with the national interest, and the labor group is strong enough to constitute a danger to the free democratic government.

But labor leaders have pledged themselves to support the national interest instead of their group purposes in this event.

The unions repeatedly insist that they are interested in the common good and that their proposals are not selfishly devised to promote their own ends.

Unions believe that what helps the workingman and his union helps the Nation as a whole.

As long as this remains their creed and they use proper means and refrain from influencing legislation in areas in which they are not concerned, they have the right to influence the lawmakers of the Nation in order to promote their own class good and the common good.

#### House Concurrent Resolution 200

EXTENSION OF REMARKS

# HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the Record, I include in connection with House Concurrent Resolution 200, which I introduced and which is presently pending in the House Committee on Foreign Affairs, a telegram from Merrill G. Hastings, publisher of National Skiing News magazine:

Representative Francis E. Dorn, Representative of New York, House of Representatives, Washington, D.C.:

National Skling News magazine, America's largest winters sports publication, endorses your stand against free world discrimination by International Olympic Committee and President Avery Brundage of Chicago for their unprecedented disqualification of free Chinese athletes in favor of recognizing only Red China's exclusive entry into 1960 Olympic Games.

MERRILL G. HASTINGS, Jr. Publisher.

# New Starts for Flood Control Would Be Economical

EXTENSION OF REMARKS

# HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. GEORGE. Mr. Speaker, because thriving communities contribute to the economic growth of this Nation, it is important that the Congress consider the need—actually, the necessity—of allowing new starts on the approved Kansas projects for Kaw Valley reservoirs. To drag our feet is to prolong the time, and create greater opportunity for more lives and property to be destroyed by devastating floods.

The flood protection works at Lawrence, Kans., are seriously needed to protect that university city.

Fort Scott, which would be a thriving city had the dam on the Marmaton River been started years ago, has now dwindled to something less than 10,000 in population. Because of the fear of floods, which frequently occur several times a year, and because of the lack of water for industrial use when floods are not rampaging through the city. commercial and business establishments have bypassed Fort Scott. Were a new start approved, the enterprising people of Fort Scott would gain new hope and would contribute to a sound and growing national economy by developing Fort Scott into a prosperious and expanding community.

The slap taken by the House Appropriations Committee at the administration's "no new start" policy was indeed justified.

Mr. Speaker, an editorial appeared in the Kansas City Times of Tuesday, June 9, in which was pointed out the importance of obtaining new starts on flood control projects in the Kaw Valley. I include this editorial as part of my remarks:

Time for Action on Dams in the Kaw

No tax money could be saved by delaying the Kaw Valley reservoirs. Congress is committed to the Kaw Valley program for flood control and water storage. A delay of a year would simply prolong the big gamble with fate.

Today the Kaw Valley is exposed to the same kind of losses that it suffered in 1951.

In the intervening 8 years construction has been started only on the Tuttle Creek Dam. It is regarded as the No. 1 dam in the Kaw Valley plan but it will control only one tributary of the Kaw. A flood control pro-gram must cover all the main sources of

danger.

Hope for more action depends on the enate. The House subcommittee showed interest in reservoirs for reclamation pur-Poses but it has ignored the proposed flood control dams in the Kaw Valley. It isn't a case of serious opposition. If the Scnate votes money to start one or two Kaw Valley dams the House may go along.

The advocates of a good program are making the main drive to start the Wilson Dam on the Saline River and the Milford Dam on the Republican. These two, com-bined with Tuttle Creek, could reduce the flood threat for the greater part of the Kaw Valley. Since such projects start slowly only a million dollars are requested for each dam. This would include the money needed to complete planning as well as make the construction start.

Metropolitan Kansas City is particularly interested in the Perry Dam on the Delaware River near Lawrence. It will be close enough to the metropolitan area to give a maximum dollar return in flood control and water storage. And it will be a great recrea-tional attraction. If Milford and Wilson can be started this year, Perry should not be far

behind.

The cost of starting two reservoirs wouldn't be a drop in the budget bucket. Assuming the same argument could be made for some other dams across the country the total cost for starts would still be small. The Kaw Valley is almost in a class by itself. It has an unusual record of costly floods and it has been the victim of most conspicuous

If Congress intends to go through with its river control obligations presumably it will set up a reasonable priority system and push ahead. It would be naive to wait for a reduction in other Government costs that may not come in 5 years or 20 years. There is no doubt about the cost of indefinite delays.

#### What About Oil Industry Profits?

EXTENSION OF REMARKS

# HON. PAGE BELCHER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following article entitled, "What About Oil Industry Profits?" which appeared in the Tulsa World, June 6, 1959:

[From the Tulsa Daily World, June 6, 1959] WHAT ABOUT OIL INDUSTRY PROFITS?

For about 35 years a favorite political football in Congress has been the 271/2 percent tax-depletion allowance on crude oil

production.

One would think that most of our Representatives on Capitol Hill should have, by now, realized the wisdom, fairness, and necessity of this tax provision. It does not seem to be the case. Once again Congress is planning a full-scale review of the meas-

Opponents of tax-depletion, particularly the so-called ultra liberals and followers of the Americans for Democratic Action (a parlous political pack) keep parroting the unjustifiable claim that the oil industry is in a special privilege class and reaping unconscionable profits.

Different bases such as net worth, assets, book value, sales, etc., are used for measuring an industry's rate of return. The Federal Government's financial statistics use the rate of profit on stockholders' equity as a basis for comparing rates of profit of the respective industries. Reports of the Fed-Trade Commission, the Securities and Exchange Commission, and the Chase Manhattan Bank show, clearly, that the rate of return in the domestic petroleum industry is lower than most other major industries

The comparative rate of the major industries (1955-56-57) show:
major industries (1955-66-57) show:
trucks, 16.34; other transportation (aircraft, vessels, etc.), 15.10; stone, clay, glass, 14.25; chemicals, 14.04; iron and steel, 12.54; electrical machinery, 12.07; average all manufacturing, 11.92; other machinery, 11.21; paper, 10.70; fabricated metal products, 10; petroleum, 9.97; food, 8.94; textile mill products, 5.23.

Funds retained through percentage depletion are included in the earnings upon which the rate of return for the domestic petroleum industry is based. Also, the domestic petroleum industry's rate of return, in addition to being lower than most other major industries, is below the 11.92 percent average of all manufacturing industries. Measured by any yardstick, the industry's earnings are not excessive.

Actual experience over a long period of years has proved the wisdom of the percentage depletion. It has enabled the industry to supply this Nation with constantly increasing quantities of oil and gas at reasonable prices, while at the same time earning no more than a moderate return on invest-

To place the depletion provision in its true perspective, consider this: the domestic petroleum producing industry has consistently spent approximately three times as much as it receives in depletion in finding and devel-

oping new oil and gas reserves.

If the depletion allowance is eliminated the price of gasoline to consumers would be increased by about 5 cents a gallon, because without increased prices, industry earnings and the money it could borrow would not be sufficient to provide the funds required to carry on the exploration and constant search for new oil reserves. They are vital to our energy needs as well as to protect the national security.

# Rank and File Urged To Participate in Union Meetings

EXTENSION OF REMARKS OF

# HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to insert the following letter I have received from a man who has been a member of the Teamsters Union for over 20 years. Understandably so, I am keeping his name and local affiliation anonymous. His solution to union corruption and labor racketeering is very well founded. He calls for a full-time participation by the rank and file members in all the affairs of their union. His idea of having management take an interest in urging union members to participate fully in their union is most commendable. I would certaily recommend to our colleagues the text of his letter:

JANUARY 9, 1959.

DEAR MR. BENTLEY: In reply to your question about organized labor. I have a very deep and sincere conviction that most of America's labor racketeering and corruption in labor problems can be eliminated if the rank and file members of our unions can be led to realize how important it is for them to attend all of their union meetings and vote on issues that come up from time to time. This is especially important each year at election of officers. You know sir, it has been my experience over the last 22 years that I have been a member of the Teamsters Union that in many ways the average union member is his own worst enemy. It seems that as long as he has a full stomach and a steady job and a pretty good contract with his boss and enough money to pay his bills and things are going along pretty smoothly, he will probably say, "Oh phooy. should I bother going down to the union meeting? All I ever hear is a lot of arguing." But, little does he seem to realize that if the discussion is within the tradition of American democracy, what he is witness-ing is American union members exercising their American right to open discussion. does not seem to realize that his staying away from the meetings and not voting on issues which could be very important to the future economic welfare of himself and his family only opens the door to unscrupulous men who can dictate the policies of the local union through a very small group of individuals whose votes many times do not express the wishes of the majority. I be-lieve that when a majority of the locals members attend their meetings regularly the chances of dishonest people being elected to office are almost eliminated. I have a very great deal of faith in the average rank and file union member's ability to decide for himself and to vote for honesty and Christian decency, but the problem of how to persuade him, or her to show up at our monthly meetings has greatly disturbed honest leaders in organized labor for many years, and is today, I believe, the very reason that we are experiencing misunderstanding, alleged dishonesty and corruption, and generally poor public-labor relationship (news-paper propaganda) not withstanding. But Mister Congressman, as serious as this problem is, and I believe it is serious to the point of hurting America's future economy, and as long as it has been with us. It can be licked. First we must realize that by al-lowing dishonest people to be elected to office on the local union level we are also allowing dishonesty to pyramid up through the State level, and from there to the conference level right up to the international level which can do a great deal of damage, not only to the individual union member himself, but also to the man, or the company who employees him. Then it is important for management and management organizations to realize that organized labor is here to stay, and that they can play a very important role in helping to put and keep honesty in organized labor. I believe that a concentrated program by Govern-ment management, and organized labor working together to encourage individual union members to attend their union meeting regularly and to exercise their duty to vote, especially at election of officers, would do more good towards bringing alleged dishonesty and corruption and racketeering to an end in America than all of the Federal and State laws that we could think of, out-

side of outright dictatorship. There are many ways in which this program could be conducted. Just one small way which comes to my mind is by bulletins with pictures such as we see in factories throughout the country for plant safety being placed in conspicuous places throughout the plant with slogans such as, "Keep your union free with democracy," and "Attend your meetings and vote." This is only one very small way to help encourage our members to attend their meetings, but coming from their employer it's importance should not be underestimated. I have been a member of \* \* \* and up to this time I have never met one union member who had been intimidated by a union officer or who was to my knowledge afraid to express his opinion publicly or privately once he could be persuaded to leave his comfortable chair at home after a nice big Sunday dinner, (Our regular monthly meetings are the \* \*) This is to allow all members in our local to attend. All of our elections are by secret ballot. (This I thought you would like to know especially after the President's message to Congress.) I am very grateful to you for your interest in my opinion, and I am happy to have had this opportunity to express myself to you.

Thank you very much.
P.S.—I hope you will please excuse the errors in spelling and the bad typing, as I borrowed my daughter's typewriter for this letter to you because I wanted to get all of the words on the one page. As I had no help from any source, not even from my family, in putting my thoughts in writing, there are many errors in spelling but the thoughts and opinions expresed are my own. If you wish, you will have no trouble checking my honestry and sincerity and my religious

background.

#### Poison in Your Water-No. 120

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 16, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Congressional Record an article appearing in the Seattle (Wash.) Post-Intelligencer of

May 20, 1958, entitled "Pollution To Close Two City Beaches":

POLLUTION TO CLOSE TWO CITY BEACHES: GOLDEN GARDENS, MATTHEWS BAN

Two of Seattle's beaches will be closed to swimming—and Green Lake also may be barred to bathers—this summer because of pollution, the Seattle Park Department reported vesterday.

ported yesterday.
Paul V. Brown, superintendent, told the
Post-Intelligencer that both Matthews
Beach and Golden Gardens will definitely
be closed when the supervised swimming

season starts June 6.

No swimming signs already have been

posted at the two areas.

Although Green Lake's two beaches now also have no swimming signs posted, Brown said it will be "late this month," before it can be determined if the lake is clean enough for bathing.

enough for bathing.

Green Lake's pollution is caused by backup resulting from the Ravenna Boulevard

cave-in last November.

"We are taking a daily bacteria count at Green Lake and the count is more favorable than we anticipated," Brown said. "However, I cannot predict at this time if the

water will be safe for swimming on June 6—the day lifeguards start working at the city's beaches."

Brown said the park department, the Seattle-King County Health Department and the city engineering department will make a joint decision on whether or not Green Lake's beaches—two of the city's most popular areas—will be opened.

Brown pointed out that persons are now swimming in Green Lake in violation of park and health department regulations.

"We can't afford to police the area all of the time and no arrests have yet been made," Brown said, "But violators are subject to arrest and, of course, are endangering their own health."

The beaches that will be open include Madrona, Madison, Seward, Pritchard, Alki and Mount Baker, Colman Pool also will be open.

#### Paris

SPEECH

# HON, LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

(Mr. WOLF asked and was given permission to address the House for 1 minute.)

Mr. WOLF. Mr. Speaker, I had the good fortune to represent my committee-the Science and Astronautics Committee-and the Congress of the United States during the last 4 days at the 23d International Aeronautical Salon de Paris—an international convention where some 20 major countries were represented. The thing that impressed me the most, and I cannot help but report this back, was that in the shadow of the great cargo carrying plane of the American Air Force stood two Russian planes. This was the total Russian display for the free world-two aircraft. In contrast to the two Russian aircraft, America is presenting a complete range of air technology, its great air and space program for the peaceful use of outer space, its medical technology in the entire military and peaceful field, and its missiles for the free world. I know the people of the European nations who visited this great air show could not help but see the great contrast between the attempts of America to demonstrate their desire to give their knowledge for freedom and peace to the world as compared to Russia, who they know are doing great things in technology, but who sent only two military aircraft to the show to prove their desire for peace and freedom

It was significant that many of our great independent companies had complete displays at this show. It was obvious to anyone visiting the show that America is eager and willing to share with the world its great technology.

Many new ideas also were presented in the field of aerial and space travel by other countries. Later this week I intend to present a more complete report of the 23d Paris Aviation Show.

(Mr. WOLF asked and was given permission to revise and extend his remarks.)

Time for a Change

EXTENSION OF REMARKS

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

M. PORTER. Mr. Speaker, until he found it necessary to leave his homeland to avoid imprisonment a year ago, Juan Manuel Kindelan played an important role in the democratically formed opposition to the Spanish Government. He personifies the attitude of the new generations who have grown up in Spain since the civil war. Dr. Kindelan deplored the U.S. contribution to the perpetuation of the Franco regime. feels there may still be time to restore the good will the Spaniards felt once toward the country of Roosevelt and Lincoln. His recommendations are identical to those made by another opponent of Franco, the respected and very distinguished Salvador de Madariaga.

Under leave to extend my remarks in the Record, I include Dr. Kindelan's article, "Talks With Americans," which appeared in the May 15, 1959, issue of Iberica:

TALKS WITH AMERICANS

(By Juan Manuel Kendelan)

In March I was invited by Iberica to make a stopover in the United States on my way back to Paris after having attended the International Students' Conference in Lima as the representative of the Spanish University students. In the belief that some of the impressions that I formed during my stay in New York and Washington at that time might be of interest, I have tried to formulate them in as brief and concise a way as possible.

Iberica fulfills a constant service of information about internal developments in Spain. Hoping to contribute to this informative service, we took advantage of my stay in the United States in order to convey to a series of persons the ideas and aspirations of the Spanish youth of today, who for 3 years now regard themselves as being completely divorced from the Franco regime. As a member of this new generation and one who has left Spain only recently, and who has been personally involved in all the university developments and many of the political developments of the past few years, I felt that I was in a good position to speak for the youth of Spain about Spanish problems in general and Spain's relations with the United States in particular.

I will begin by saying, frankly, that my first impression of the Americans with whom I came in contact was one of their lack of knowledge about Spanish affairs. This, perhaps, is not surprising when one considers the fluid and confusing nature of the present situation in Spain, which is difficult for informed Spaniards themselves to evaluate. However, I think that in general there are two overriding factors which provoke interest in and concern about Spain in America: One, an awareness of a situation of unrest and political instability, and, two, the conviction that U.S. military installations on Spanish territory are of vital importance.

As far as I was concerned, I made every effort to be as objective and dispassionate in my presentations as possible. I tried to convey to my listeners an idea of the real awakening in Spain, which is making progress in spite of the innumerable obstacles

in its path; an awakening which was initiated by the rebellion of the youth and which has been reflected in very diverse subsequent manifestations such as strikes, renewed repressions, intellectual ferment, literary rebirth, etc., which along with the gravity of the present economic situation and the growing number of anti-Francoists, even among the rightists, suggests an end of the regime in the not too distant future.

One of the most pertinent themes for discussion in America was the role of the U.S. economic aid to Franco; its contribution to the perpetuation of the Franco regime, and the attitude of the Spanish people toward it.

I felt obliged to warn of the strong and growing anti-Americanism in Spain, and to point out that this phenomenon was occuring in a country which had been very cordially disposed toward the United States in the post-World War II years because of the triumph over Hitler, Roosevelt's personality, and America's position as champion of democracy in general. It is interesting to re-call that on more than one occasion Falangists set upon and beat up Spaniards leaving some function or other at the Casa Americana in Madrid during that period. Later the lack of will of the democracies to Put an end to the Spanish dictatorship became apparent, and then, finally, the signing of the U.S.-Franco Pact of 1953 marked the beginning of signs of hostility on the part of the Spanish people toward the United States. This hostility has been on the increase ever since, as the impression that the dictator was in fact being supported by America gained ground. In addition, after the passage of a few years we noted the existence of another form of aid which contributes effectively to the development of this anti-American sentiment. We find this in the attitude of the present American Ambassador in Madrid, for instance, in the Voice of America broadcasts and in many other aspects of America's presence in Spain Which we need not enumerate here.

The dangers pregnant in this situation to the future relations between the United States and Spain, whenever public opinion will once again carry weight in the latter country, are obvious. It might even be that such good relations would turn out to be impossible, in spite of the mutual interest in them and the good will of the future

Spanish leaders.

My listeners, who tended to agree with this point of view, almost invariably brought up three specific lines of inquiry: One, the present and future status of the American bases; two, communism in Spain, and, three, the existing alternatives to a change of regime.

With respect to the first point, seemed to have concluded that without Franco there could be no bases in our country. I countered by reminding them that the United States has bases in many nations that do not have dictatorial regimes, especially in Europe, and that, on the other hand, every responsible political group and person in Spain, with the exception of the Communists, of course, recognize the importance of maintaining good relations with the United States and the future need for American aid, and that hence no one would object, in principle, to the presence of American bases. But on the other hand a new treaty would have to be drawn up to supplant the present one which was signed Franco. All of this, of course, as long as the state of public opinion over America's support of Franco should not have reached the point at which popular bitterness would preclude all negotiation.

With respect to inquiries concerning the spread of communism in Spain I could only say that the Franco dictatorship, and America's policy of collaboration with it,

are the best allies that the Communist Party has in Spain, where its traditional following is small.

As to the lack of an alternative to replace the present regime, this was the most serious reason which my interlocutors brought up in justification of U.S. support of Franco. The lack of unity of the opposition disconcerts them, but on the other hand they do not seem to realize that by artificially prolonging the political life of the dictator out of a fear of what may ensue, they are merely making the transition, when it finally comes, all the more dangerous.

In general I encountered great cordiality and understanding, but great uncertainty also. This friendliness was reflected in the fact that it was an American, for example, who suggested to me the comparison that the American Embassy in Madrid today is, in the eyes of the Spanish people, to a certain extent what the German Embassy was during World War II. A harsh comparison, no doubt, but there is something to it.

On several occasions the following question was posed: "What would you do, with respect to Spain, were you the Secretary of

State of the United States?"

Naturally I felt presumptuous to be replying to such a question, however I tried to do so sincerely and dispassionately, saying that, in my opinion, to be both realistic and foresighted American policy should be based on the recognition of two facts: one, that Franco is not eternal and, two, that America has alienated the sympathies of the Spanish people and of the men who could one day succeed to power. With these factors in mind, I would suggest that American diplomacy in Spain be oriented in two directions: the first should be towards the initiation of a policy of gradual "disengagement" from the Franco regime similar to that being implemented by the Spanish Church itself, for which it must surely be a far more difficult and complex operation. disengagement operation should consist, in the first place, in a cessation of all economic aid not specifically stipulated in the U.S.-Spanish Pacts; an exchange of the present United States Ambassador in Spain for one less identified with the regime who could be in closer touch with the life of the people; a cessation of all Voice of America broadcasts on the official Spanish radio, and a suppression of all other activities on the part of American diplomatic representatives in Spain which might convey an impression of undue identification of aims with those of the Franco dictatorship.

The second, more delicate and difficult orientation, would be toward the maintenance of behind-the-scenes contacts with the various sectors of the Spanish opposition, thereby keeping a more constant touch on the political pulse of the nation. Given the complicated and peculiar situation of Spanish politics today, the only way to be adequately informed is to be up to date on the attitudes and movements of the six or eight main groups or forces which, within Spain and without, represent something on the political scene, past and future. I very much doubt that the United States is well-informed as to the activities of these groups

was frequently asked if it wasn't beneficial to the country, in spite of Franco. To this I invariably replied that on the contrary, it had merely injected an artificial life into the Spanish economy, permitting the regime to continue its precarious existence and postponing the solution of the country's basic problems.

In considering the problem of Spain from Washington, I realized that, after all, Spain is only one of many areas in the complex and extensive panorama of American inter-

ests in the world. But it is an important point, if only because of its geographic location and the fact that it is approaching a grave internal crisis. The recent developments in another area of vital importance, Spanish America, have opened the eyes of many Americans and has reminded them of the somewhat similar situation in Spain, though at times these comparisons have been carried too far

In any case, in my humble opinion the United States needs a more positive foreign policy which would aim at solving problems before they build up to a crisis, and which would anticipate Russian policy insofar as is possible. Such a policy should be applied to specific areas, and Spain is one of them. There one can not statically await developments, later to try to patch things up as best one can; future events should be foreseen, and appropriate measures taken in time.

For Spaniards, American influence today and tomorrow is a fact, whether we like it or not. Therefore it is important for us to try to inform Americans in general about our problems and convince those Americans who are able to understand our point of view. Perhaps there still is time to restore goodwill among Spaniards toward the country of Lincoln and Roosevelt. Let us all hope so.

Governor Lawrence Speaks at the Dedication Services at the Albert Einstein Medical Center

EXTENSION OF REMARKS

# HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. TOLL. Mr. Speaker, I had the privilege to be present on Sunday, June 15, 1959, when two great new facilities to serve the hospital and medical needs of the people of the Delaware Valley were dedicated in my congressional district in Philadelphia. They are located in the northern division of the Albert Einstein Medical Center, York and Tabor Roads.

These new facilities are the 9-story, 460-bed, medical-surgical building, and the 5-story Paley Clinic Building for outpatients and laboratory examinations. Together they represent an investment of \$8.500,000, nearly all of which was raised in the Philadelphia area from individual contributions.

The participants represented the greatest philanthropic and civic agencies in the city. The guest speakers included: Gov. David L. Lawrence of Pennsylvania; Senator Hugh Scott of Pennsylvania; Robert K. Gray, secretary to the President's Cabinet; Samuel H. Daroff, chairman of the board of trustees of the Albert Einstein Medical Center; Paul J. Johnson, president of the Einstein Medical Center; Abraham L. Freedman, Esq., president of the Federation of Jewish Agencies; and Dr. Pascal L. Lucchesi, executive vice president and medical director of the Einstein Medical Center.

Mr. Gustave G. Amsterdam presided, and Albert M. Greenfield introduced the Governor of Pennsylvania. The remarks by the Governor, Hon. David L. Lawrence, were so appealing and so appropriate that I commend them to the attention of the Members of the House. They were as follows:

REMARKS BY HON. DAVID L. LAWRENCE, GOV-ERNOR OF PENNSYLVANIA, AT DEDICATION OF EINSTEIN MEDICAL CENTER, PHILADEL-PHIA, PA., JUNE 14, 1959

They tell the story that one of the con-querors of India, when challenged in the British Parliament as to his enrichment from the treasures of the East, replied to his critics that he was astonished at his own moderation.

I must warn you that I, too, have been sorely tempted, in an academic season where institution after institution has been kind enough to bestow an honorary degree upon the Governor of Pennsylvania

You are escaping a doctor's dissertation by

a very narrow margin.

I have been made a doctor three times within a week, and with very little encouragement, I might very well bring these pro-ceedings to a climax by performing an appendectomy in the medical-surgical building which we will formally dedicate a few

minutes from now.

But, obviously, despite these doctorates, I cannot tell you anything about the Albert Einstein Medical Center and its Medical-Surgical and Paley Clinic Buildings that you do not already know, far better and in

greater depth than I do.

The officers and trustees of the center, their coworkers in the community, an expert staff, generous and public-spirited contributors, a humane philosophy rooted in the religious teachings of a faith that has al-ways stressed the brotherhood of man, the miraculous advances in the science of healing—all of these people, all of these things, are the proper focus of your attention today.

My role, it seems to me, is essentially a

ceremonial one.

I am here, I take it, because it is right for the Governor of the Commonwealth to say to you that in these new buildings and their services, the Albert Einstein Medical Center is making a contribution to our society for which your fellow citizens are grateful.

I am here to acknowledge a debt, a debt which our society owes to private philanthropy and to the sense of humanity which inspires it; to stress again the fact that our complex pattern of civilization requires the most intricate jointure of individual, of community, and of governmental action.

Our structure is strong when each element complements the other-when each of us in his private life, when each of us in his civic when each of us in his governmental life brings the best that is in him to our life together.

We have great prospects before us-greater than we dream of, enmeshed as we must be in the daily obligations of our livelihoods.

I think for a moment of the revolution in man's thought and man's capacity that will forever be associated with the name your institution bears, that of Albert Einstein.

It was not so long ago that the Einstein theory was the basis of much popular humor. It was incomprehensible and, therefore, funny. The universe of modern mathematics, of atomic science, of outer space was something that we knew only in the wildest fiction. Today, in less than a generation, our lives are being shaped by a power which 20 years ago seemed to be forever beyond man's grasp.

We know it principally as a power to

destroy.

Our children and their children will know It as a power to construct.

And there are the prospects that come to us in medical research—in the line that leads from Pasteur to Salk and to the great names, still unknown to us, of the years to come

The parents and grandparents of many of us here today knew the hospital not as a place of healing but as a place of death. Medicine in their time was all but helpless.

Long ago, an English physician and phi-losopher, Sir Thomas Browne, had discounted man's life on earth. He counted the world, he wrote, "Not an inn but a hospital; and a place not to live but to die in."

What an enormous change in these few recent pages from the long book of human history; what a fortunate people, what a

blessed age is ours.

To look back again in history, there was a time when it seemed beyond question that the human race would multiply itself faster than it could increase its resources of foodthat our ultimate fate was malnutrition and starvation. It is still true that in large areas of the world, population does press hard against the food supply, as in India and in

But to balance the disasters of such primitive societies, we have our own experience which shows that scientific progress and technological achievement can move so quickly that our food supply actually outruns our capacity to consume—that we have an economic problem in our surpluses.

One final look to the past.

Karl Marx was sure-on the basis of the society he knew-that we were certain to have class warfare in every industrialized country; that wealth was bound to concentrate in fewer and fewer hands, and that the great masses of the people were bound, under the rules of the game, to become poorer and poorer each year.

We have learned that what seemed likely in Victorian England is not at all true in our own times; we have learned to democratize wealth, to achieve constantly rising living standards, to spread the benefits of an industrial society and a competitive economy so that the general level of comfort and security follows a consistent upward trend.

I am citing these reminders not as shreds of erudition clinging to the cap and gown I have been wearing in academic processions, but as examples of how fast our rate of progress has become; how we have con-founded dire predictions; how we have increased our capabilities to ranges far beyond the reach of any previous generation.

The point it all makes is that we should not be timid, that we should not be fearful, that we should indeed move forward in every phase of our existence with all deliberate

We cannot become a standstill nation.

Very clearly, our people do not intend us to do so.

Our population is increasing at the rate of almost 3 million a year.

There are almost 20 million more Americans than there were when President Eisenhower was inaugurated in 1953. (May I quickly add, as a Democrat, that I think it has been a nonpartisan achievement.)

You may remember that when Samuel Gompers, the founder of the American Federation of Labor, was asked "What were labor's aims?" he replied with a single word,

It seems to me that as we view the future, and ask ourselves, what are America's aims, we must use the same word, "More."

We will need more of everything: productivity in the factory and the farm, more goods in the shops, more services of every hind, more transportation, more education, more schools, more teachers, more research, more conservation of water and land, more housing, more public health protection, more medical care, more physicians, more nurses, more of everything.

I would hope we can also have a complementary less—less tension in the world, less race discrimination, less city slums and fewer pockets of rural poverty, less disease.

But substantially, we must build this country as we have never built before.

And it seems to me, that we cannot have one rate of building, one rate of construc-tion and expansion, for the private part of the economy—a rapid rate as we all wish it to be-while we have a slowdown, a drag. a deceleration in the community and public parts of the economy.

In my judgment, we will soon find that we can't have one without the other.

We worry, rightly, about inflation, about expanding the money supply, about the price level, about confidence in the dollar.

But I think we must worry equally about the supply of trained people who will carry on the functions of our life together, about the level of our health and welfare services; about the confidence we can have in the human and physical resources of America as they are tested against the strains which the future will bring to bear on them.

You knew that you needed this Medical-Surgical Building and the Paley Clinic

Building.

You went straightway and built them; and the region which they serve, the people they will help, are the richer for them.

will become an invaluable part of this Einstein Medical Center, which in its turn, helps to make Philadelphia one of the medical wonders of the world.

As a public officer, I am doing my best to see to it that Pennsylvania takes its cue

from you.

We know what we need in this State what we need in mental health, in public health services, in economic development, in urban renewal, in highway construction, in public education, in community colleges, in the expansion of the State-aided universities and medical schools, in State parks, in the control and development of our rivers. in aid to the private hospitals, in a score of areas where the public service is essential to a prosperous private economy.

We know all right-but we have a strange reluctance to pay for what we need.

I was told recently of a legislative leader in a State-not Pennsylvania-who wa shown a report on the deplorable public schools in his district.

The legislator readily admitted the condi-

"Oh, we need them, certainly we need them," he said. "Only we don't want 'em."

His constituents, he felt, wanted a saving in their taxes more than they wanted a decent education for their children.

I would hope that we in Pennsylvania can do better than that. I would hope that we can estimate our needs and determine that we can't afford not to meet our responsibilities.

The future will be what we make it.

Our State has competitors, friendly rivals, 49 of them. Our Nation and our whole sys tem of life has a competitor, a hostile rival. who would like to bury us.

Neither in State nor Nation can we afford to slip behind, to fail.

You have proved here today how one group of men and women can make a significant a major-contribution to the welfare and the strength of our society.

May I assure you that I will go back to Harrisburg—back to the problems, back to the work, back to the hard realities that are politics and the high hopes that are the true reward for the daily grind of politics—that I will go back today inspired and reinvigor ated by your example.

# Admiral Rickover Tells How To Improve American Schools

EXTENSION OF REMARKS OF.

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES. Monday, June 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I Wish to include a very interesting article which outlines the views of Admiral Rickover on points of controversy in American education. The article ap-Deared in the Machinist for June 18. 1959:

ADMIRAL RICKOVER TELLS HOW TO IMPROVE AMERICAN SCHOOLS

Vice Adm. Hyman G. Rickover, in a re-cent book, "Education and Freedom," criticized the so-called progressive methods used by American teachers today, based on the theories of John Dewey. Since then the "father of the Nautilus" has been quoted almost as much for his views on education as for his thinking on nuclear-powered submarines. Recently, 350 newspaper reporters interviewed Admiral Rickover, the Assistant Chief for Nuclear Propulsion in the Navy's Bureau of Ships, at the National Press Club in Washington, D.C. Among the questions Admiral Rickover answered were these, bearing on points of controversy in American education:

Question: Do you feel that educators are beginning to improve the school programs a result of considerable constructive

criticism?

Answer: Whether criticisms are construc-Answer: Whether criticisms to the receiving end. Educators in this country are not yet alive to the situation. You have quite a peculiar situation. In politics, you have two parties, Democrats and Republicans. In publishing, you have opposite newspapers; even in theology you have opposite claims as to how one it to achieve salvation. But in education, there is only one union, only one party. All criticism is stopped from within and resented from without. We do not have the best brains in this country running our educational system, particularly in secondary schools.

Today, Dewey is God, the National Education Association is his prophet and all the teachers colleges are his disciples. philosophy has been broadcast throughout our land for 40 years. The trouble is not Only with teachers, it also includes parents.

We live in an era when it is very easy to get food and clothing. These things come to us almost naturally, and so we believe that things of the mind can come that easily, too.

I think this is the most serious problem

that faces the United States.

I can imagine a newspaper announcement that the Russians had organized a unit to be able to send a man to hell first. next morning there would be two or three Federal agencies around, budget figures, public relations staffs, pounding on the halls of Congress saying, "We can't let them beat us to it."

Question: Are you afraid of Federal aid to education?

Answer: We have Federal aid to education right now. We have had it for a long time. The first time we had it was in 1862. in the throes of the Civil War, Congress Passed the Morell Act for grants to State colleges. We had the Smith-Hughes Act of 1917 which gave aid for vocational training. ing, we had the Defense Act of the last year. So we have it.

I made a study of the Federalist papers to find out if anything was ever said during the Constitutional Convention about Federal aid to education. Nothing at all was said about education because there was no free education at the time.

I see no reason why we can enact Federal legislation which tells you what you can put in your mouth but not what you can put in your head. I am not afraid of it. I think that every boy or girl in this country whether he comes from Mississippi, Georgia or California or New York should have an equal opportunity to get the best education

he possibly can.
We have 57,000 school boards in the United States. How can you possibly make sure that everybody gets a good education that way? It's undemocratic because you don't give everyone the same opportunity. How can you find in the normal small community enough people to man a school board that have the requisite background to understand what a proper education should be?

Now we are not the first country that has been up against what we are facing now, where the Russians are beating us to an education. It has happened in the last 100 years to many other countries.

First, it happened to Prussia. battle of Austerlitz they decided to completely revise their educational system. They put Von Humboldt, statesman, in charge and he revamped the entire system.

The next one was England. You may remember they had this big scientific exposition in England in 1850 and the British won nearly all the prizes for industrial excel-lence. But in 1867, when they had the next exposition in Paris the English got very few. And that was a real shock to the British and they changed over their educational system.

They were faced with about the same problem we have here. Education was controlled by the church and they had to devise a system where the national government gave help but still autonomy was maintained locally, and they did that by two very simple expedients. One, the English will never give a shilling to any district unless it complies with certain rules that the national government lays down.

Second, they have a corps of competent inspectors attached to their Ministry of Ed-

The next country that was faced with that was the French after their defeat in 1871. They drastically revised their school system and adopted the Prussian system.

And the last country was the Russians. The Russians started off after the Revolution. They adopted many of the Dewey ideas. After about 10 or 15 years of that they threw the whole kit and caboodle in the wastepaper basket and adopted the Western European system.

We must look into our system, too. very significant that no other country in the world has adopted the Dewey system except the countries like the Philippines and some Near East countries that have had a lot of advice from so-called educators in the United States.

Communists in Greater Lawrence, Mass

EXTENSION OF REMARKS

# HON. THOMAS J. LANE-

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I

wish to include an editorial which appeared in the Lawrence Daily Eagle, Lawrence, Mass., on June 11, 1959:

COMMUNISTS IN GREATER LAWRENCE

Revelation this week that there were 15 Communist cells operating in the Lawrence area as recently as the beginning of last year, and that there are probably more today, comes as a mild shock. The hue and cry about communism is strong as ever, but somehow the mind identifies that insidious social cancer as foreign to these shores, something that exists in Russia and Red China. something that has only an indirect bearing on our own lives and futures. If the mind even considers the problem of communism, lulled as the mind is by the hazy thought that our Federal Government is taking care of things in that direction, it is hardly ever with the view that its evil could be boiling and bubbling below the surface of our local affairs:

And yet, we shouldn't be surprised at all. Surely today there can be very few people not acquainted with the real meaning and designs of communism. Surely there are very few people unaware that its ultimate aim is not, as those trying to sell it would have them believe, a movement for the betterment of mankind, but a secret, devious worldwide conspiracy to gather the world into the arms of the Russian dictatorship. Communism is imperialism, with its end really the same as that, say, of Nazi Ger-many. Its means to the end might differnot guns, necessarily, but secrecy, subtlety, subversion—so that Russia will rule the entire world.

For a multiplicity of misguided reasons. many of them incomprehensible to most of us, there are some Americans who will sell their birthright to work for this foreign power, Russia. These people, in simplest terms, are traitors, no less so than Benedict Arnold or Tokyo Rose. Whatever their avowed motivation in working for communism (Russia), they are actually agents of a foreign power. And by direction of the Red schemers to whom they have sold their lives and their honor, they are located everywhere throughout the country, working below the surface, for the most part, like so many termites, to undermine our American way of life.

So why should there not be some agents of the Kremlin right in Greater Lawrence?

In the classic sense, we might presume that our community is too unimportant in the grand scheme of world affairs to be bothered with. Yes, we have our defense plants working on classified material, but these are not necessarily a magnet for homegrown Communists (agents of Russia). But our community is not unimportant, because Greater Lawrence has roughly 130,000 people living within its boundaries. And it is their minds that the agents of the Kremlin

Communists in Greater Lawrence, even so few as 75 to 100, cannot be shrugged off lightly. Numbers never meant anything in the master plan of this evil conspiracy. tiny minority of Russians scooped their country into the Communist bag over 40 years ago. And it has been the few who conquered the many, for Russia, in every country that has fallen under Communist domination since that time. A few dedi-cated and secret Communists (agents of Russia) in our local schools, our media of communication, our clubs and organizations, our local governments, our unions, and even our churches, can wreak an awful havoc almost without anyone noticing a thing.

No, it should come as no surprise that there are some of these wretched individuals working among us, spreading their poison, their treachery, bent on the destruction of the freedom our forefathers won for us. Let none of us be fools enough to think that what is happening all over the world cannot happen here.

## Fairness to Metropolitan Areas

EXTENSION OF REMARKS

# HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. MADDEN. Mr. Speaker, I wish to commend the Bureau of the Budget for the progressive policy which it has initiated in designating metropolitan area districts throughout the United States. Unfortunately, in the past, large metropolitan areas located in adjoining States have completely lost their business and industrial identity and have been attached to adjoining larger metropolitan areas to which they have no similarity of industrial business, governmental, or civic geography.

In separating the Calumet region, industrial district from the Chicago metropolitan area, this governmental Bureau has taken a step in encouraging expansion and civic growth for the Calu-

met region in Indiana.

The following is an editorial from the Gary Post-Tribune which further commends the Bureau for this long-delayed change in policy:

[From the Gary Post-Tribune, June 4, 1959] THE GARY METROPOLITAN AREA

Designation of Lake and Porter counties as separate metropolitan district-to be known as the Gary-Hammond-East Chicago metropolitan area-is one of the most favorable developments for local business in many years.

In the past, statistics about northwest Indiana business and economic conditions were swallowed up within those for the Chicago

There were seven metropolitan areas in Indiana previously, according to the Census Bureau, but northwest Indiana didn't rate.

There were metropolitan statistics for Indianapolis, South Bend, Fort Wayne, Evansville, Terre Haute, Anderson, and Muncie, but there were none for this area, even though Gary is the second largest Hoosier city and Lake is the second most populous county.

Now the situation is changed. We'll get

credit for our steel production and our oil refining, for the tremendous tonnage of our lake ports. The Census Bureau will compile full details on important economic information about Lake and Porter counties.

The two-county area will rank among the first 50 metropolitan areas of the Nation in

population.

At present it apparently would rank 48th, among the 192 metropolitan areas in the Nation. There is the good prospect that the 1960 census will move it even higher.

Moreover, the next decade is likely to see it step up several more places since a considerable development in Porter County can be confidently predicted during the 60's.

Indeed, by 1970 the urban area should extend unbroken from the Illinois line around the lakefront to the Michigan

boundary. Ten years from now, a change annual meetings of the DAR, which are the in the official metropolitan area may be subject of widespread newspaper coverage made to include at least a part of La Porte County.

A number of organizations and individ-uals had a share in inducing the Federal Committee on Standard Metropolitan Areas to make the change in our status. It was not an easy matter, for bureaucracy is resistant to change, even when the existing situation is clearly shown to be wrong.

A great deal of the credit for bringing about the revision should go to the Gary Chamber of Commerce which spearheaded the movement. The Post-Tribune is happy to have been associated with the endeavor It will be of much economic benefit to the

community.
Chicago interests are aroused by Washington's action, quite naturally, and the Association of Commerce and industry there has fired off a protest. It contends that "statistical continuity" is being destroyed.

That is true, but it is not the whole truth. The statistics of the past have been phony. The Washington committee has decided that correct statistics are more important than

continuity of phony statistics.

What Chicago is really concerned about is that it may drop into third place nationally so far as population is concerned, and will drop a number of notches in industrial ratings. It no longer will get credit for Lake County's production, but it never should have. This is an area all its own, and it is now to come into its own.

Annual Flag Day Luncheon, of the Col. John Proctor Chapter, Daughters of the American Revolution, June 13, 1959, Penn-Alto Hotel, Altoona, Pa.

> EXTENSION OF REMARKS OF

# HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. VAN ZANDT. Mr. Speaker, on June 13, 1959, it was my pleasure to attend the annual Flag Day luncheon the Col. John Proctor Chapter, Daughters of the American Revolution, held at the Penn-Alto Hotel, Altoona, Pa., at which time I delivered the following address:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE ANNUAL FLAG DAY LUNCHEON OF THE COL. JOHN PROCTOR CHAPTER, DAUGHTERS OF THE AMERICAN REVOLUTION, AT THE PENN-ALTO HOTEL, ALTOONA, PA., JUNE 13, 1959

It is a pleasure to have been invited to attend your annual Flag Day luncheon and to participate in the program on such a patriotic occasion.

The Daughters of the American Revolution have an enviable record in the field of patriotic endeavors since the local chapters throughout the Nation stand as mighty sentinels at farflung listening posts.

Such a vigilant attitude has placed the DAR in the front line of our Nation's defense against sinister elements in our midst who are bent upon destroying our cherished ideals as embodied in the American way of life.

From a vantage point in Washington, D.C., it has been my pleasure to follow closely the in the Nation's Capital.

This annual congress of delegates focuses the attention of the Nation on the activities of the DAR in the field of patriotism-for the agenda each year reveals the interest taken in issues that have a direct bearing on the security of the Nation.

It is to the everlasting credit of the Daughters of the American Revolution that the organization has the reputation of meeting controversial issues head on instead of adopting the alternative of dodging a showdown with forces harboring ideas alien to our form of government.

The annual observance of Flag Day provides another means of taking inventory of the manifold blessing we enjoy as citizens of the greatest Republic in the history of civilized governments.

This annual Flag Day luncheon is a fitting complement to Altoona's public observance of one of the Nation's most important patriotic holidays.

By this program, you are joining with local lodge No. 102 of the Benevolent and Protective Order of Elks whose Flag Day program begins in front of city hall at 3 p.m., in emphasizing the importance of showing love and proper respect for the flag of our country and the ideals it represents.

Since the theme of the DAR for 1959-80 is "Faith of Our Fathers Living Still," Flag Day is an appropriate occasion for stressing that our spiritual and material progress as a na-tion are symbolized by our allegiance to the

Star-Spangled Banner.

A banner which exacts from us in our daily lives the type of conduct that will serve to teach and inspire the moral character and the spiritual truths and vigor-which have been the foundation stones of this great Republic.

This 1959 Flag Day observance is the last time that public tribute will be paid to the 48-star flag.

On the morning of July 4, 1959, at appropriate ceremonies in Independence Hall-Philadelphia, Old Glory—with Alaska as the 49th star—will be officially unfurled.

On July 4, 1960, it is expected that through the admission to the Union of the Territory of Hawaii, the Stars and Stripes will be flung to the breeze displaying 50 white stars in a blue field.

It is interesting to recall that when the Star-Spangled Banner was first flown at the head of the Continental Army, Gen. George Washington described its symbolism as fol-

We take the stars from heaven, the red from our mother country, separating it by white stripes, thus showing that we separated from her and the white stripes shall go down to posterity representing liberty."

In addition to the description by General Washington we all recall that portion of the song alluding to Betsy Ross, Philadelphia needlewoman who made the first Star-Spangled Banner:

"She took some red for the blood they shed, some white for purity, some stars so bright from the sky overhead, some blue for loyalty.

Therefore, as we proudly gaze at our flag the red proclaims the courage which Americans have always shown in shedding their blood in the defense of liberty and freedom.

The white stripes signify purity of ideals and the liberty purchased and preserved for us by American patriots since 1776.

Finally the blue in our flag stands for loyalty.

Yes, it is the blue of the heavens, the true blue—that symbolizes the intense loyalty and deathless courage of the millions of Americans who have been loyal to this Nation through sacrifice and even death When the security of the Nation demanded it of them.

During these troubled days with the world in constant turmoll loyalty to flag and country is the golden badge of real Americanism.

It has been truly said that "loyalty means liberty" and since loyalty is everybody's job, It behooves all red-blooded Americans maintain a vigilant attitude and to speak out in no uncertain terms against the danger of subversive forces within and the peril of international gangsterism without.

We should heed the admonition of Mr. David Sarnoff, chairman of the board of directors of the Radio Corp. of America, who said in speaking of loyalty in an address on Veterans' Day 1958, "Loyalty to our country is loyalty to ourselves."

To Mr. Sarnoff's timely advice I should like to add that what we need as a people in providing inspiration and strength is a double-barrelled dose of good old fashioned patriotism

To many people in the United States patriotism has become outdated and nationalistic.

The custom of displaying the Stars and Stripes proudly before the home on national holidays is almost a thing of the past.

Today the Communists of America as well as of the world are working harder than ever to bring America under the spell of the Kremlin dictators.

Only recently a top American official said that more espionage agents are at work in America today than any time in our history.

On Red May Day in the Red Square of Moscow Nikita Khrushchev praised the Communist world and spread the Communist propaganda of the day.

His statements were publicized throughout the universe and carried on the front

pages of the world press.

As usual the American people and our goal of world peace were held up to ridicule, by

the Kremlin's No. 1 propagandist.

Mind you, even in the face of the Kremlin's brutal attacks on our Government and way of life, we have some Americans who are content to sit idly by and call patriotism outdated and nationalistic.

Yes, this same group are the ones who say we should not worry about the Com-

munists and the cold war.

They urge that we ignore the constant efforts of the Communists to destroy us as a nation.

In trying to achieve the goal of universal Peace, it is a significant and deplorable fact that Russia as a government lacks national integrity as evidenced by her long record of broken premises.

These misguided Americans in our midst refuse to realize that the Russians by their clever and deceitful manner will keep us involved in this cold war as long as they

have the power to do so.

Regardless of the fact that the Kremlin considers America its number one enemy, still strive diligently and honestly to achieve a just and lasting peace.

Today there are more demands for American-Soviet talks and at the moment We are represented at another Geneva Conference in a sincere effort to obtain a just

and durable peace among all nations.
Unfortunately, the odds are 13 to 1 that every Soviet promise will be broken, and to justify this statement let me remind you that in 1943 four pacts with Russia were signed by an American President—and all Were broken.

In 1945 six pacts were signed with Russia and five were violated.

In 1955 President Eisenhower traveled to Geneva to meet the Russians and the trip was fruitless.

In addition, between American and Soviet foreign ministers there have been 426 days of talks since 1943 with these results:

(A) In 1943 three pacts signed and all of them violated by Russia.

(B) In 1945 and 1946 a total of 11 pacts were signed and only one was kept.

(C) In 1947, one pact was signed and Russia violated it.

In the field of disarmament, nearly 500 meetings have been held and nothing has been settled as yet.

In fact, the Soviets keep asking us back their terms for another round of socalled conferences.

Thus we see the Communist mentality and the utter lack of integrity on the part of the Kremlin.

The present threat to world peace over Berlin so carefully played up by the Russians should answer those smug Americans who think patriotism is outmoded, and who prefer to ignore the fact that we are the number one enemy of ruthless com-munism whose lack of integrity is evident by the long list of broken promises.

Involved as we are in a cold war that from the standpoint of cost could destroy us economically the time for unity has come in meeting the challenge of the Kremlin.

As David Sarnoff said in comparing a cold and a hot war, "We can freeze to death as well as burn to death."

This need for national unity must rise above partisan politics-for every American must stand shoulder to shoulder to let the Red rulers and the world know we are standing firmly against Communist aggression that has plagued the world for 40 years.

In seeking national unity we have a strong alley in Flag Day because it kindles the fires of patriotism by counteracting the false propaganda of the masters of the Kremlin.

We cannot afford to sit back and bask in past glories but rather make our voices heard around the world—shouting that we are free, loyal, and united Americans— ready to fight, if necessary, to defend the American heritage that has made this country a giant among free nations.

Let us pray that Flag Day will inspire, strengthen, and unite us as a Nation so that all of us will receive that double-barreled dose of good old-fashioned patriotism so urgently needed in reviving respect for flag and country.

Such a brand of patriotism will give us a keener and deeper appreciation of our American system of Government and those who founded and preserved it.

It will continue to inspire us to keep faith

with those illustrious Americans who since the founding of this Republic have given their lives on the altar of freedom,

After all when we as Americans realize the true value of our blessings-then we will give full time to promoting an unadulterated type of real love of country.

By working together to protect, preserve, and to promote American ideals we repay our debt as a Nation to the American way of life that has done more, for more people than any form of government yet devised.

One of the most inspiring features of Flag Day programs is the participation of proud Americans whose ancestry may be traced to foreign lands yet who appreciate the precious blessings they enjoy as American citizens.

In fact, Flag Day definitely provides a time for all of us to examine and restate in terms of today's needs the rights and responsibilities of American citizenship.

Also, it should awaken us to a state of continual alertness to the causes which would undermine our Nation.

Furthermore, this appreciation of our

American citizenship will be stimulated throughout the year by individual and collective effort to learn more of the history and ideals of our great American heritage of liberty and freedom.

As I conclude, let me leave this thought

with you.

Today we are hearing a lot about the socalled wave of hysteria and fear resulting from the efforts to ferret out Communists and subversive elements in every walk of

Let me assure you that we have nothing to fear as a Nation if every American worthy of the name will measure up to the high standards of citizenship as embodied in the type of Americanism exemplified by our forefathers and defended to this day on the field of battle by succeeding generations.

In short, these are perilous times, for the Soviet challenge to the American way of life was never more real-or of a more

definite threat.

Therefore, on this Flag Day of 1959 let heed the stern admonition of George Washington when he said that in times of dire emergency we should make certain that we put only Americans on guard.

If we heed the advice of the Father of our Country and meet our responsibilities as citizens of this great Republic—we will be making our flag even more meaningful to those who are to follow after us. Then, indeed, "the Star-Spangled Ban-

ner in triumph shall wave, o'er the land of the free and the home of the brave."

## Run of the News

EXTENSION OF REMARKS

## HON. DALE ALFORD

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. ALFORD. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD I include a column of one of the outstanding conservative writers in our country. He is Mr. Karr Shannon, author of the Run of the News column published daily in the leading newspaper of my State, the Arkansas Democrat at Little Rock. This article appeared Sunday, June 14, 1959, and is as follows:

CAN AMERICA BE SAVED?

There's a certain man in Little Rock who has called me at my home for years. He is a businessman and highly intelligent, despite the fact that he is a regular reader of my column. We have had many phone conversations, all beneficial—to me. This man is practical, and he talks sense. He is not an optimist; he has too much gumption for that. But he is one of the few persons who is gravely concerned about the governmental status quo.

He used to ask this question: "How can this country be saved?" And this one: "Can this country be saved?" With things growing from bad to worse, he called the other night and asked: "Is the country worth saving?"

I believe America is worth saving, and can be saved. But it cannot be saved if the current trend is not stopped-and soon. Here are some things that started us on the road to ruin, are increasing the speed, and, if not checked, can bring the United States of America to a definite, disastrous end within a few years.

IGNORE LESSONS OF HISTORY

We ignore the lessons of history, the principles of plain arithmetic and the fundamentals of natural laws.

We have forward-looking aspirations with backward-looking errors. We refuse to recoginze the errors because their cure and cause of collapse in other times are so ancient. In short, we're so simple as to think it can't happen to us.

We have forgotten the old-fashioned characteristics of individual liberty and thrift.

We have the silly notion that all change is progress just because it's change; that anything new is beneficial, that it is at least worth trying.

We are foolish enough to believe that we can spend ourselves into prosperity with nothing to show for it but bigger and bigger debts—nationally, stately, locally and individually.

#### DEFICIT SPENDING

We continue to maintain the philosophy of deficit spending, despite the fact that it undermines the Nation's credit, enhances inflation and eventually will reduce our dollars to doughnuts.

We perpetuate the blight of punitive taxation that deliberately penalizes success, thwarts ambition and stunts the impulse to economic adventure and expansion.

We have too much government in business and far too little business in government.

We stand still for labor racketeers and goons to run over the people roughshod. In some areas they are literally running things to suit their own evil designs, buying their way in and out of everything, and controlling the electorate by pressure or stealth.

Mr. Speaker, in our State we are fortunate to have the finest of loyal and patriotic Americans in the labor movement and they are on record as being unalterably opposed to racketeering in labor or management.

#### COURT USURPS POWERS

There is an unwholesome, downright dangerous disregard for the Federal Constitution, more especially in the high echelons of government.

We stand by—complacently—while the U.S. Supreme Court disregards the powers of the other two departments of government, snubs the Constitution and legal precedent, flouts the will of the people, and rules, by judicial flat, manifold functions of government down to, and including, the erstwhile sovereign school districts.

We are squandering billions of dollars abroad under the guise of buying friendship and rehabilitating downtrodden nations, many of which are financially more stable than the United States and think less and less of us as we give them more and more.

#### GAME FOR JUVENILES

We are playing a multi-billion-dollar game of "darts" into outer space, shooting at the moon and other celestial objects. And all for what?

We are rapidly ascending the status of a bankrupt utopia that must be rescued from communism.

We laughed at the California ham-andegg schemes back in the late 1930's; we considered them fantastic brews of wishful thinking. Now we've got 'em—and they're much worse and more costly and socialistic than anything the California messiahs ever proposed.

Call the critics McCarthyites, label their charges as "red herrings," but many departments of Government are crawling with Communists. They're gaining a foothold. And we look the other way.

These are the main things that placed the United States on the road to ruin, and are

perpetuating and increasing the speed toward the downfall of a great Republic. The only way to save the country is to stop these causes. If they can't be stopped, if the current trend continues unabated, then the time will come when America won't be worth saving.

# Direct Mail: A Direct Result of Improvement Through the Ages

EXTENSION OF REMARKS

# HON, CHARLES O. PORTER

OF OFFICEN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article, "Romance of the Mails," from the Postmaster's Gazette. It points out how the economy of an area or a nation can benefit by the post office:

#### ROMANCE OF THE MAILS

Man has communicated with man over large distances since the earliest dawns of time. At first there were no personal messages—wish-you-were-here type sentiments from a vacationing friend. Rather, they were important news items about villages and tribes; often told of life and death matters.

Perhaps it was a quiver of arrows—war. Or maybe a pipe was sent as an offer of peace. A pillar of smoke meant that strangers were nearby; ominous booms from a tom-tom warned of danger.

Pigeons conveyed messages since an early Chinese era when letters were rolled into tiny cylinders and placed by the bird's middle tail feather. Bells and whistles were also attached to ward off birds of prey.

Signal fires, familiar to anyone who has watched a TV western, are still a device of Australian aborigines. In Europe, fires announced invasions or victories long after there were improved means of communication. For example, lighted beacons spread the news throughout England that Spaniards were sighted at sea in 1888.

The first letter carriers were messengers rather than postmen; they went directly from sender to receiver. Olympic speedsters were known to cross great areas in short time. The champion of these are Philonides of Greece who once covered 60 miles in 9 hours.

Later, when relay systems were set up over greater distances, the idea of the "post" man, situated at a relay post, evolved. At each station there was a fresh horse and carrier; the mail went through faster and easier. Thus did the postman enter civilization and enrich our language as a descriptive word.

These systems were, at first, set up by kings to convey their own personal messages. Attempts at private letterwriting were looked upon suspiciously; postal routes were carefully watched by agents of the potentates. Great intrigues evolved, especially in the Persian, Egyptian, and Arab Caliphates.

#### POPULAR MAIL COMES

By 1653, the world was ready for its first attempt at popular mail. Count deVillayer obtained royal consent; set up 11 mail boxes and promised 3 collections and deliveries daily in Paris. But vandals spoiled his effort. They leaped into mail carriages to intercept messages, and often filled mail boxes with litter.

Less than 30 years later, England tried the

same plan; 400 receiving offices were spread over London, with 4 to 12 collections daily. Cost was only 1 penny; letters were insured up to 12 pounds at no extra charge.

Across the Atlantic, colonial Americans turned to their coffee houses when seeking mail from overseas. As ocean vessels docked, crowds thronged to these unofficial post offices; letters were dumped on a table and great scrambles often ensued.

The mails grew as did everything else here. There were early problems, roads were bad, weather conditions unbearable. As the frontier movement spread, the need for communication grew even greater. Men had settled in the West; yearned for news from old friends, family, and important items concerning business. There was tremendous competition as companies vied for a Government contract.

Finally, the Central Overland California & Pike's Peak Express Co. won out, and the celebrated Pony Express was in business.

Swift mounts stationed at 10- to 15-mile intervals across wild lands helped our country grow. Often, the hardy, diminutive riders (they were sized much as present-day jockeys) had to go past several posts as Indians slaughtered the standby riders.

But the venture was a success—greatly idolized throughout America in the early 1860's. But in 1866 railways from East and West met; the need for a pony express was no more.

#### A VIVID LESSON IN INTEGRITY

Our postal history since has been a vivid lesson in integrity and devotion. After the great railroads shortened our distance between coasts, airmail was to evolve in the earlier part of our century. Ex-military plots braved terrible weather conditions to establish an air postal service.

These hardy aviators flew in surplus craft of World War I; had no instruments to guide them, yet did a miraculous job. Today, streamlined jets serve in what has been a constantly improved effort to bring us closer to friends and associates at other locales.

Yet another mail idea has evolved in recent years; as streamlined in concept and value as the jets which streak across our skies. It's the great boon of business mail, a veritable wooing of the consumer dollar on an individual advertising effort. It's grown at an extremely fast rate to the point where it rivals television as an advertising medium, and, incidentally, provides \$272 million of revenue to the Post Office Department each year.

Direct mail is geared to get business traffic, to build reputation, to pronounce policies, to sell products and services, announce new credit facilities, report openings of new departments, spur any special event important to business.

The reason it's come such a long way so fast? It simply gets preferred attention for preferred groups; promotion to a direct market. This preselection of audience concentrates advertising where the selling is best, a very sound business principle.

What's more, there's a real opportunity to create eye-catching copy and illustration, which is a delight to the public. Many of the direct mail ads have already reflected great ingenuity in art, with clever wording. You'll see interestingly shaped missives, multicolored ads, strikingly illustrated brochures, all spurring sales as well or better than other methods of advertising.

We've come a long way since the early tom toms and messenger runners of Olympian fame. The history of mail has been a history of civilization. As man improved his breed he realized the need for cooperation; for system. Direct mail and jet service may be the latest, but it's certain that more improvements are yet to come.

## The Unsuccessful Revolution in Hungary

EXTENSION OF REMARKS

# HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. DADDARIO. Mr. Speaker, June 17 marks the first anniversary of an announcement that shocked the world. It was the blatant announcement that Imre Nagy and other leaders of Hungary had been put to death, 18 months after the unsuccessful revolution in Hungary that sought to throw out the Soviet tyrant and his puppets.

One of the men executed was Maj. Gen. Pal Maleter, who had been elected Minister of National Defense of the Hungarian Government. When Soviet troops moved in, General Maleter was invited to discuss the arrangements for their withdrawal at Soviet headquarters. He was seized, despite a safe conduct, and not heard from again until the an-

nouncement of his death.

Imre Nagy had been the civilian head of his state. He was one who had compromised with communism early in his life, but the record shows that when he was faced with a decision, he sided with his people and with Hungary's traditions. He had served briefly as prime minister once before 1956 but had sought too liberal a regime and so was replaced. When it became evident that the Hungarian Communist Party could not cap the rebellion welling within the people, the rulers turned to Imre Nagy as a safety valve, to represent the feelings of Hungary. In many ways he has been compared to Gomulka, in Poland, who could speak for his people's national aspirations and whom the people trusted.

But Imre Nagy, once given power, chose not to be a puppet. He believed in Hungary. He announced that his government would readmit the opposi-

tion parties.

The Hungarian revolution had gone too far. The Soviet troops began to move to retrieve control for the puppets they wanted. The Hungarian defense minister was lured into a trap. Suddenly the gains of freedom began to slip away. Imre Nagy took refuge in the Yugoslay Embassy.

Sanctuary is a great privilege and responsibility among civilized nations. The Hungarian Government that had been handpicked to carry out Soviet orders did not dare raid the Yugoslav Quarters to get Nagy. But it tried to persuade him and his party to come out. Finally, under a guarantee of safe conduct, Nagy consented to leave.

Within a few yards of the Embassy, the Soviet moved in and swiftly arrested these men. The guarantee of safe conduct was worthless. The Hungarian puppets did not dare protest it to their superiors, and their superiors proved once again how little reliance can be placed on a Communist promise.

But then there was a long pause. It was no secret that Nagy and Maleter and their companions were in Hungarian prisons, although the regime sought to cover it up, and talked of freedom of movement, and of visits abroad. The ominous sign came when one of the party was announced to have died in prison during questioning.

Apparently Imre Nagy and Pal Maleter refused to confess to the appropriate crimes, and so the Soviets could not afford to stage a public show trial. Janos Kadar talked almost insistently of keeping his word about no retribution. Then, on the fifth anniversary of the Berlin uprisings, and in the context of a Russian attempt to discipline Tito in Yugoslavia, came the blunt, brutal announcement: They had been executed. No details.

The Nagy case, apparently in the light of the Soviet mentality, was intended to make a point in blood to the Yugoslav regime. Hungary itself was a point in blood to the entire civilized world. That blood should not be allowed to fade away as the world negotiates with the Russians at Geneva or elsewhere.

Amending Mutual Security Act of 1954

SPEECH

OF

## HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. TABER, Mr. Speaker, I had hoped when this bill came in that it would be in such shape that anyone believing in preserving the liberties of the United States of America might support it. When you have delegations of power such as are contained in this bill-and I call to witness one on page 7, lines 16 to 20, and over on pages 12 and 13, where they give authority to transfer out of the military funds, which is really the only place that protects the United States in the bill, where they have authority to draw out of that fund 30 percent-why, any opponent of the bill could say that that was definite proof that the Committee on Foreign Affairs thought that the \$1,440,000,000 was too large. I do not like that approach because that \$1,440 million is the heart of the bill.

Then in lines 7 to 13 there is another wide-open appropriations, no limit to it whatever, no amount indicating a total absence of responsibility. Then we go over to page 13, lines 14 to 23 and we find another wide-open appropriation, without limit.

The only way this country is going to be able to preserve its liberties is by not making appropriations beyond a year at a time. Those are the things we really need to do and that we must do if we are going to preserve the liberties of the people of the United States.

I hope when this bill is ready for amendment, amendments will be adopted

that will make this a respectable bill instead of a menace to the liberties of the people of the United States.

## Let's Not Miss the Bus

EXTENSION OF REMARKS

OF

## HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following editorial from the June 12 issue of the Washington Evening Star:

LET'S NOT MISS THE BUS

The witnesses have had their say, and the fate of the union reform bill now rests in the unpredictable hands of the House Labor Committee. What manner of bill, if any, will finally emerge from the committee is anyone's guess. But one thing is certain—this is the last chance. If the bus is missed now it will not come by again at this session of Congress.

One of the witnesses on the last day was Senator McClellan, whose rackets committee has exposed a free-wheeling corruption within certain unions which literally cries out for reform. He told the House committee that if Congress fails to enact a reform bill at this session then "God save the country." He also condemned the AFL-CIO leadership for opposing the bill in the form in which it passed the Senate.

There is room for difference of opinion with respect to this testimony from the Arkansas Senator. If Congress flunks this test, the American people are not going to put up forever with corrupt, oppressive unions. And if this Congress will not do its job, the voters in time will choose a Congress which will do it.

There is also reason, in our opinion, for some understanding of the AFL-CIO position. George Meany indorsed the Kennedy bill in its original form. We believe that he and his associates recognize and support the need for reform. In terms of union politics, however, they are in a difficult position. Their opposition to the measure in the form in which it passed the Senate may be dictated by a genuine concern as to the direction in which this reform cat will finally jump. To say the least, no good purpose would be served if the position of men like George Meany were to be undermined in favor of the Hoffas.

If this is granted, however, the fact remains that Senator McClellan was right on at least one major point. The honest men in labor cannot deal effectively with corruption in unions which they do not control. Hoffa and his Teamsters were expelled by the AFL-CIO, but this has served only to raise the prospect that Hoffa's position, in combination with other transport unions, may be strengthened. There is nothing, really, that the AFL-CIO can do about it. If the threat raised by corrupt, gangsterinfested unions is to be knocked down, Congress must do the job. The courts may help, but only Congress can really do it. This is why we hope that an effective labor bill will be enacted at this session-even if it has to be done over the opposition of men like George Meany.

The Housing Act of 1959; An Investment in the Future of America

EXTENSION OF REMARKS

## HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. FRIEDEL. Mr. Speaker, the Housing Act of 1959—S. 57— which has passed both Houses of this Congress is now in conference. The conferees on this measure are all able, well qualified men, who I am certain, are aware of the importance of this legislation.

There is a fear among many who are interested in this legislation that if it passes in its present form it will receive a Presidential veto. This fear is based on the label of "budget buster" which has been attached to the housing bill. However, a study of the measure soon removes this label.

This measure is a mark of faith and confidence in the future of our great Nation. It is truly an investment in the future of America.

The Monday, June 1, issue of the Evening Sun newspaper of Baltimore, Md., carries a letter from Mr. Hans Froelicher, Jr., of that city and an editorial entitled "Urban Renewal Money."

Mr. Froelicher was for many years head of Friends School in Baltimore and is now associated with the nationally famous Baltimore Urban Renewal Program. He has been active for a great many years in the civic life and affairs of our city and his ability is widely recognized and respected.

As. Mr. Froelicher points out, labels of the housing bill as a "budget buster" seem to ignore a number of pertinent facts. All this talk about the cost of the bill and its alleged inflationary impact are a smoke screen by those who object to the housing bill in principle.

I earnestly recommend that each Member of this 86th Congress read Mr. Froelicher's letter. What is applicable to Baltimore is applicable to every major city in the country in this case.

Mr. Froelicher's letter and the Evening Sun editorial follow:

## URBAN RENEWAL MONEY

SIR: As a person who has been a close student of Baltimore's housing history, I am alarmed at the possibility that this history may stop in the making if S. 57, just passed by the House, is killed by a Presidential veto. This is to kill the goose which can and must lay the golden egg. We are that goose and not Uncle Sam.

Labels of this bill as a "budget buster" seem to ignore a number of pertinent facts. The total additional new expenditures during fiscal 1960 resulting from enactment of S. 57 would be less than \$100 million. This is only thirteen hundredths of 1 percent of the Federal budget proposed by the administration. Moreover, only \$7.5 million of this \$97.5 million amount for fiscal 1960 is in the form of grants. The rest would all be for loans fully reimbursable to the Federal Government.

Our economy has long passed the era when today's expenditures must pay off by return mail. Our whole private enterprise system is founded on the vision of men who

are accustomed to thinking and planning in terms of the future. In the retooling of a great automobile plant big business ventures huge sums of money. The security for this investment is not income in hand or even in sight; it is the income which is envisioned. The greater imprudence is not to follow vision. The crux of the matter is not: "Will it pay?" It is rather the determination: "We figured this; we will see to it that it pays."

I make this point because it is impossible to evaluate expenditures for urban renewal in terms of the immediate present. They must be considered in terms of the ultimate goal—revitalization of our cities, now in precipitate decline, so that they will become enduring, producing assets—each structure for itself, each city cluster for its tax revenues.

Since cities have become our principal place of business and our principal places of living, a national policy is needed including a national invitation to plan ahead. Such invitation, if it is to be genuine, must be supported by a national source of grants and loans in aid.

Sometimes I think the President forgets (and the Sunpapers, too) that urban renewal means, inevitably, that private citizens and private industry must spend huge sums of their own money in order to accomplish lasting renewal. My own guess is that the minimum private spending will amount to five (or even ten) times all the loans and grants and tax moratoriums which might be needed. We, personally and privately, are the geese to lay the golden eggs. For the Federal Government not to recognize this and not help us just enough is fiscal error—is golden-egg-laying-goose assassination.

This is not a patchwork quilt sort of job, that can be achieved by a modest expenditure this year and another small expenditure when and if funds are allotted. This is a job that requires scheduling and sequence, with some security about the availability of funds in the future.

Urban renewal is well advanced in Baltimore as elsewhere in this country. To cut off, or provide only token, funds now would be inviting disaster for Baltimore's valiant efforts to renew and revitalize this city for the benefit of all its citizens.

HANS FROELICHER, Jr.

BALTIMORE, May 28.

## URBAN RENEWAL MONEY

Mr. Hans Froelicher, writing in the Forum today, expresses a fear widely held. The present conflict over Federal housing legislation may result in no action at all, imperiling urban renewal plans already under way in many communities. With some of Mr. Froelicher's points The Evening Sun is in complete agreement. And it would indeed be unfortunate if the Federal Government should, by default, renege on the joint Federal-local programs which it has encouraged the cities to undertake.

The fact remains, however, that Congress didn't pass a housing bill last year because so much politics got into it that neither the advocates of a conservative bill nor the supporters of more generous legislation won. The same danger threatens this year. The House and Senate have passed bills which authorize significantly higher levels of expenditure than the President seems likely to accept. It is true, as our correspondent points out, that the bill recently passed by the House would have relatively little impact on actual expenditures in the fiscal year 1960. To this extent, the critics' characterization of the measure as a "budget buster" may be somewhat misleading.

Nevertheless, the impact of the authorizations included in the House bill over the very near future would be significant. The

administration asked for authorization totaling some \$1,600,000,000 for a great variety of housing activities, including urban renewal, spread over a period of 6 years. The House measure provides for \$2,100,000,000 spread over only 3 years. In short, it asks the Federal Government to put out money at an average rate which is about 160 percent higher than the White House proposes. And few suppose that once this rate of spending starts it will be abruptly halted.

This is the "budget-busting" aspect of the bill. This is what may invite a Presidential veto. And the result could well be what both The Evening Sun and our correspondent fear—a further slowdown in the housing programs, including urban renewal, for

which the bill provides.

## Poison in Your Water-No. 121

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in the Norfolk (Va.) Ledger-Dispatch and Portsmouth Star of May 1, 1958, entitled "Danger of Land Pollution From Sewage Seen Growing."

The article follows:

POLICIES ELASTICIZED—DANGER OF LAND POL-LUTION FROM SEWAGE SEEN GROWING

Norrolk.—Policies of the Hampton Roads Sanitation District Commission are being elasticized as expanding suburbs become more and more anxious to tie in with the sewage disposal system.

The present policy requires the commission to provide sewage disposal only to prevent pollution of the waters of the Hamp-

ton Roads area.

Many of the new suburbs do not threaten local waters in this respect, it was pointed out at the commission's monthly meeting Wednesday afternoon. However, land pollution is a growing danger.

The commission voted to establish a revolving fund for engineering costs on new projects undertaken in cooperation with cities and counties in the commission's district on both sides of Hampton Roads. A study of the situation will be made by commission officials before any funds are spent on lines connecting new areas with sewage disposal plants operated by the commission.

The Oakdale Farms suburb is pushing for connections with the commission's lines, spokesmen for residents pointing out that the pollution problem there is becoming menacing from a health standpoint. Other suburban areas are also seeking trunk extensions.

The commission may cooperate with the city of Norfolk in establishing new trunk lines, with the city paying the cost of the work and the commission handling the engineering end of the projects and the disposal problem. A lease-purchase agreement on the trunk lines is being considered.

The new budget was presented by Col. Charles B. Borland, general manager, who was complimented on it by E. T. Gresham, commission chairman. The budget shows a decrease of \$63,371 under last year's recommended appropriations. The new operating budget of \$1,297,965 is lower, he explained.

because of the closing of the City Hall Avenue and Atlantic Street pumping station (now incorporated in the commission's new pumping station-office building) and the transfer from the operating budget to the improvement fund budget of certain items.

Borland said he expected revenue in the coming fiscal year will be \$1,577,000, an in-

crease over this year of \$32,000.

# Cross Country With the On to Oregon Cavalcade—IV

EXTENSION OF REMARKS

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Drain, Oreg., Enterprise. It is the fourth installment of the daily account of the on to Oregon cavalcade by Rudy Roudebaugh of Drain. It appeared in the May 21 issue:

WAGON DRIVER TOO BUSY AT LEXINGTON

(Day by day account as seen from the spring seat of 16-foot covered wagon traveling toward Oregon and driven by Rudy Roudebaugh.)

May 10: My brother, Wayne and his wife, all of the chamber of commerce, school and teammates Roger Young and John Ozan and lots of relatives were here visiting. On Sunday there were 6,000 to 7,000 people here.

May 11, 5:05 a.m.: Went out to harness my horses, Daze got a new shoe on her left rear foot. 7:02: We are on our way to Kearney. Linda, seventh grade: Phyllis, eighth grade: and Gary Haxton, fifth grade, are riding with me from Minden to Kearney today. Sandy soil, must be close to the Platte River. 8:58: Dropped over in Platte Valley. 9:30: At Newark—Kearney 10 miles away. 10:07: Arrived in Fort Kearney, now a State park. One of the girls who is riding with us is driving the wagon today. There are some good looking farms around here. 10:58: Stopped for a rest. Everybody got mail but me. Guess you could call it a mail stop. 11:04: We are going again. On gravel road all morning. 11:25: Back on paved road. North of Kearney.

The sun has been shining all day, with a little wind. Dan and Daze ate and drank good today. I just talked on the radio and let all my friends know that I am here. We are just about to cross the river. 12:59: On our way across the river, 1:04: Old Daze bit me again today, right on the left side of I was a bit mad for a minute. The old Platte River has a lot of water in it. The Saddle Club of Kearney came up to meet us on the north side of the Platte. Also the Kearney Rustlers. At 1:21: arrived at Kearney. 1:40: We are waiting for a train on the south side of the railroad in about the center of town, 2:26; We arrived at camp called Tent City, about 1 mile out of Kearney. About 21 miles we made today.

May 12: About 2 a.m. came rain and hail. 7 a.m.: All hooked up and ready to roll from Tent City. Had a 10-minute wait for one of the wagons. Lots of friends and relatives visited. 6:23: Starting to rain again. Wagons stop traffic at Odessa. 9:03: Elm Creek 6 miles away (population 800). Arrived at 10:32. 11:20: At Overton, Stopped to feed

and rest and have lunch. 12:16 and we are on our way after lunch. 2:19: We arrive at camp the west side of Overton. We made 23 miles today. Seems like all of Lexington has come out. We are all going in to Lexington tonight. I will mail newspapers about the banquet.

May 13: Now at Overton where I played football twice. 5: Wayne, my brother, left Lexington for camp from a big celebration. So sorry you (his wife) were not here. 7:22 left Darr for Cozad and arrived at 8:55 (pop-

ulation 2,090).

May 14: We had coffee and doughnuts from Chamber of Commerce of Cozad. We are on our way again. Seen so many friends. 9:48: On our way again. 12:45: Stopped for lunch. Dan and Daze drank good today and up on their toes all day. I have met so many friends. Mr. Young and his family have been with me for about 2 days. About 1 and we are heading west. Lots of fun the last 2 days. Janell is still at her grandmothers. We are at Willow Island. The best remark I've heard in the last 4 days was when a little boy raised his hand and said, "When I grow up I want to be just like Ray Roudebaugh." Gothenburg (population 2,910). Had a little celebration here. Ar-Roudebaugh." rived at camp at 3:43. Went out from Gothenburg to Midway station on the Oregon Trail, which was a pony express and trading post.

May 15, 7 a.m.: Ready to roll. We were camped between Dawson and Lincoln County. Have two boys riding with me this morning. Danny Wilbur and Harold Booth, both seventh graders. The sun is shining, no wind. Went down to 25 degrees last night. Frost covered ground this morning. 7:06: Here we go west. Wayne, my brother, is riding with me today. 8:40: Buttermilk Hill. 9:26: Arrived in Brady. 9:48: Left Brady. I picked up some newspapers to send home. 10:45: At Schroll. 11:04: Pulled up to feed and eat. 12:15: On our way, 1:24: At Maxwell (population 350). 1:39: Arrived at camp about 3 miles out of Maxwell. Camped at Lemmon Ranch. I have my wagon greased and my brother is ready to He will bring Janell back next weekend.

## Parallels of South Africa Race Crisis

EXTENSION OF REMARKS

# HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. DIGGS. Mr. Speaker, a South African-born professor of law at the University of Capetown, Denis V. Cowen, is the author of an article called, "Cry, the Divided Country," which was published in the May 17, 1959, edition of the New York Times. I call this article to the attention of the Members of this body because of the parallels it points up in South African history and its present crisis in relations between white and nonwhite races to the history and present crisis in race relations in the United States. It is an important account. tersely told, by one who "sees his country plunging toward tragedy unless his fellow whites change their course and resolve to admit Negroes to equality in a nonracial democracy."

One of the first sharp parallels of situation which cannot be missed in reading Professor Cowen's account is the fact

that apartheid means, for some white South Africans and the majority of nonwhites, domination by white over black. For others, it means a more sophisticated doctrine of separate development and nonintegration. Of course, this is true of racial discrimination in the United States. It has its two definitions of objectives; the policy of separate but equal, like apartheid, proposing the promotion of the separate development of the races in their own geographical areas and differentiation between the races wherever their paths cross, and wherever they are brought together by economic necessity. Just as Mr. Cowen points out that there are those in South Africa who claim apartheid was not meant to create horizontal segregationwith all whites on top and all Negroes on the bottom-but a sort of vertical segregation with each race developing within its own sphere, so there are those who make such assertion with regard to the doctrine of separate but equal as known in the United States. The point is, however, that "separate but equal" has been tried and both United States history and South African history conclusively establish that there is no such thing in matters of individual rights and justice and the privileges and immunities of citizenship. The failure of the theory arises from the very nature of segregation which contradicts the meaning of citizen-one enjoying the freedom and privileges of a member of the state or as a national. Separation, which is synonymous in meaning with segregation, cuts off one body of citizens from the so-called main body of citizens and such segregation accomplishes absolutely no purpose for its initiators unless it is to make a difference in treatment or favor of the initiating group as compared with the other. The object of apartheid in South Africa, or discrimination and segregation in the United States, or the doctrine of racial purity in a Nazi stronghold is, of course, the coarse truth: domination of one group over another because of race, religion, or national origin. It results in brutal denials of rights and opportunities and even the accord of common human dignity.

I wish it were possible for the pictures which accompanied this article to be also inserted in the Record that the parallels to certain violences and almost exact duplication of other instances of violences that have occurred, particularly and recently in some of the Southern States of this land of ours, might be noted and stir within conscience-endowed people the overwhelming fear and horror it ought.

The fact that this article calls to attention that apartheid is leaving a toll on the civil liberties of whites as well as nonwhites has its clear-cut parallels in the examples we have of the loss of the right by thousands of white schoolchildren to the opportunity of education and the loss by individual teachers and school board members of the rights of freedom of speech and association and the potential and actual loss of the right to vote by many white persons caught in segregationists' efforts to purge the polls of Negro voters.

One of the greatest ironies of segregation of the races is, as Professor Cowen points out, that "at the heart of every formulation of apartheid lies a belief that if Western civilization is to survive, the separate identity of the white man must be preserved and he must remain the sole trustee and guardian of that civilization." He reminds us, the professor, that even as long ago as Lincoln's day in the United States that President observed that the number of mulattoes was proportionately greater in the slave than in the free States. And this remains a fact, for anyone who would visit the South of the United States to observe, that where the rights of citizenship are most violently crushed in regard to nonwhite peoples, there is the greatest mixture of white and nonwhite races. In South Africa, there are approximately 3 million whites or Europeans; there are approximately 1½ million "coloreds"—persons of mixed white and nonwhite blood.

Again, the parallel that in South Africa there are those who advocate a policy of gradualism as "a practical method of advancing toward the ideal of nonracial democracy." "But," Pro-fessor Cowen observes, "in the light of what has been done in Africa in the name of gradualism, the chances of its acceptance by blacks are slight." In the light of the American Negro's long history of peaceful seeking, under law, of the rights of citizenship; in the light of the intimidations, bombings, lynchings, hardened voting restrictions which seek to prevent and deter him from the accord and exercise of the full rights of citizenship, there is no realism in the hope that the Negro will longer accept a policy of gradualism.

"If the white man fails," Professor Cowen warns, "he will have only himself to blame. And let him not blindly imagine that the implications of his failure will be confined to some parts of Africa alone; his failure will leave a legacy of hatred and turmoil that will harden the hearts of men of color throughout the whole world." I wonder how many more warnings must be given in our own land before we hear and see that the very citadel of Western demoratic civilization is helping to pack such an explosive Pandora's box of ills as will utterly destroy itself.

CRY, THE DIVIDED COUNTRY (By Denis V. Cowen)

At the root of much of the existing tension throughout Africa lies the fact that basic human freedoms and rights have been denied to the overwhelming majority of its 220 million people, 98 percent of whom are nonwhite.

In those areas—Ghana, for example—where white men have not put down roots in any significant numbers, demands for self-government have been increasingly powerful, insistent and successful. Political control in these places is passing rapidly from European into African hands.

But in areas like South Africa and the Central African Federation, where white men have settled extensively, the loosening of imperial bonds has meant the passing of power into the hands of the white settlers, who now have to face serious demands from the nonwhite people to share it. And these

demands are becoming increasingly more radical and less amenable to compromise.

Where white men have settled, they have used African labor and western technology and skills to develop industry, commerce, and agriculture to a high degree. At the same time, they have kept in their grasp both economic power and political control. Indeed, the color of a man's skin has in large measure determined the extent to which he might enjoy basic human freedoms, political rights and economic advantages—for the most part to the striking disadvantage of the nonwhite peoples. But as their educational standards rise, and their understanding of western democracy increases, the nonwhites increasingly resent and challenge this position. And for the whites, directing policy, the great question has now become: To what extent, if any, is it right, to what extent is it possible, to discriminate between the in-habitants of Africa in the enjoyment of basic human rights, on the ground of skin color or ethnic origin?

Several kinds of answers have been put forward by white men in attempts to meet this challenge; and the one I shall deal with first is the policy of apartheid, which is now being followed in the Union of South Africa. I believe this policy, as we have seen it operate, is doomed to disastrous failure.

Apartheid is the policy which put the present South African Government in power in 1948 and has kept it there ever since. Whereas before 1948, racially discriminatory policies were empirical and sporadic and, above all, left the way open for eventual integration, we now have to face a far more calculated and systematic plan of separation of the races.

Using the official classification, the races of South Africa may be put into four broad groups. The Bantu (or Africans, or Natives, as they are officially called) are the largest group, numbering approximately 10 million. Rather less than half of them live a more or less tribal life in reserves which occupy about 14 percent of the total land area. The rest live and work outside the reserves on the farms or in the cities. Those who live outside the reserves are in close contact with Western civilization, and many of them have acquired Western values and have adopted a Western way of life.

The second largest group are the whites (or Europeans, as they are often called). They number approximately 3 million. The third group comprises, Asians, of whom there are about half a million. And finally there are the colored people, of whom there are roughly 1,500,000 living mostly in the Cape of Good Hope. (The term "colored" is confined, in South Africa, to persons of mixed white and nonwhite blood.)

Apartheid means different things to different people. For some white South Africans, and the majority of nonwhites, it means domination by white over black (baasskap). For others—perhaps a majority of the whites—it is a more sophisticated doctrine of separate development and non-integration.

In this latter category, the upholders of apartheld argue broadly as follows: The nonwhites outnumber the whites by roughly four to one; they are, on the whole, at a lower level of civilization, and were they allowed the same rights, they would eventually swamp the whites. This would lead either to black domination of whites, or to the gradual disapearance of the white race, as such, in a society of mixed blood. And, in either event—so the argument runs—civilization as the whites know it today would disappear. Therefore, if civilization is to be kept pure, the races should be kept apart, and encouraged to go forward along their own lines of development on the basis of separate cultures and traditions.

It is what I have called the more sophisticated policy of separate development, rather than baasskap, that is the official policy of the South African Government. Whether it is equally sophisticated in its practical effects is quite another matter. But whatever differences there may be between these two approaches—domination and separation—there lies at the heart of every formulation of apartheid a belief that if Western civilization is to survive in South Africa, the separate identity of the white man must be preserved, and he must remain the sole trustee and guardian of that civilization. In short, whiteness and Western civilization are equated. This idea, I am thoroughly convinced, is both fallacious and dangerous.

The implementation of the Union Government's apartheld policy has both a positive and a negative aspect; positively, it involves the promotion of the separate development of the races in their own geographical areas; and negatively, it involves differentiation between the races wherever their paths cross, and wherever they are brought together by economic necessity.

economic necessity.

Hitherto we have seen at work mainly the negative aspects of the policy, namely legislation designed to differentiate between the races and keep them apart—separate transport facilities; separate housing areas; separate schools, down to a separate, more tribal curriculum, designed to fit Africans into their proper place in society; and separate so-called universities.

The whites may own as much land as they like; the nonwhites, outside the reserves, none. The white workers may strike; the African workers are not allowed to do so.

The white workers are protected in their jobs and encouraged to become skilled; the nonwhite workers are not. And, let me add, in effecting this separation, the doctrine of "separate but equal," which was tried and abandoned in the United States as not good enough, was in South Africa tried and thrown overboard by act of Parliament because it proved too expensive.

The impact of apartheid on the general body of the common law has been disastrous. There is nothing in South Africa comparable to the Bill of Rights and constitutional guarantees which are familiar in American government. Fundamental human rights and freedoms are left in South Africa, as in England, to the ordinary or common law of the land, and to the courts. They may therefore, be extended or reduced by the decision of Parliament, in whose jurisdiction they lie; and they are not placed beyond the reach of ordinary Parliamentary majorities.

Chapter and verse are in the statute book to prove how each and every one of the freedoms and rights vouchsafed by the common law has been eroded by legislative action. Freedom from arbitrary arrest and detention without court sanction; the presumption of innocence; freedom of association, of assembly, of movement; freedom to use one's skill according to one's capacity, and to enjoy the benefits of collective bargaining and the strike; even freedom of speech and of religious worship—all these freedoms have been either obliterated or seriously impaired for the nonwhites. At the same time apartheid is leaving a toll on the civil liberties of the whites as well.

Can these inroads on freedom, these injuries to human dignity, possibly be justified by the positive aspects or aspiration of apartheid?

Under the Union Government's plan, it is envisaged that the territory which has been set aside for African reserves will in time form several small African communities, called Bantustans, each allocated to the main tribes, and enjoying a measure of autonomy. At the same time—and this in my view is a cardinal objection—a majority of the nonwhites will remain as workers in the

white areas without any political rights, on the pretext that they will have rights in the Bantustans to come, although they will never live there. Moreover, it is envisaged that even by the year 2000 there will still be 6 million nonwhites living and working in the white areas.

The majority of the population of South Africa, the nonwhites, do not desire apartheid. They do not like it as an ideal; many thousands whose tribal ties have been completely broken, and who have become thoroughly Westernized, do not wish to be relegated to the more primitive tribal structures which are being prepared for them, and of which they know little. Neither do the nonwhites like the practical effects Which the doctrine of separation and differentiation have produced.

Moreover, all the elaborate schemes and theories about separate racial and cultural development seem to ignore the existence of one-seventh of the population—the coloreds and the Asians. The 1,500,000 coloreds have no culture apart from the whites', norlet it be faced—have they any separate racial origin; indeed, not a few are as white as many whites and certainly no less civilized. Nor have we have told how fair treatment is to be meted out to the half-million Asians. Are we to have our own miniature Pakistan and India to accommodate the cultural differences of the Moslems and Hindus?

All this makes it difficult to resist the conclusion that a whole way of civilized life is being corrupted in South Africa in the determined pursuit of an impracticable ideal against the wishes of the majority of the

To the extent that apartheid might one day (under the spur of conscience) come to mean a policy of fair and total territorial partition, with full rights for each group, it is in abstract theory a solution which could morally justified. Indeed, sometimes when I see the travail of the United States in making integration a reality, and when I think of the different proportions of the South African population, I am almost tempted to believe that total partition or separation might be the only way of establishing peaceful race-relations in South Africa, despite my own strong preference for the way of integration.

But this solution postulates a fair partition, with full rights for both sides. And I think that in South Africa such a partition would present very great obstacles. First, who will do the partitioning? Will there be full and free consultation of all groups in its planning? Can South Africa's economy sustain a fair partition? If a nonwhite labor force is to be used in the so-called white area, what political rights will the nonwhites be allowed to enjoy? And how will the gold, diamond and other mines and natural wealth of the country be divided?

What will happen? To the extent that apartheid continues to mean a policy of domination by a white minority, under the guise of separate development, it cannot possibly succeed; for a minority cannot indefinitely suppress a majority. One can only pray that we in South Africa will be spared another Algeria or Indonesia. But as long as the whites-who in terms of the existing Political structure are the determining force—cleave to the dangerous illusion that they alone are the guardians of a civiliza-tion which cannot be shared on equal terms with all human beings irrespective of race, color or creed, then, in my view, there can in the long run (whether that be 5, 10 or 20 years) be only one possible fate for South Africa-complete tragedy.

Let me now turn to another proposed solution to which many whites have pinned their hopes. In the Central African Federation and in Kenya, the white man denies that color, as such, is an insuperable bar

to the advantages of life. He reminds us that he has brought with him, and tried to maintain, a high tradition of civilization. He stresses present differences in the cultural and economic attainments of whites and nonwhites; and, pointing to the vastness of African numbers, he claims that a premature recognition of full equality in all relevant fields would lead to the obliteration or severe dilution of the white man's positive contribution. He claims to be prepared to give equal rights to all civilized men; he contends that the existing discriminations are not inflexible, and may lead, in the fullness of time, to complete equality.

People who hold these views tend to speak of white leadership, and describe their policy as "partnership in a multiracial democracy." But a partnership is an agreement; it presupposes consent, and in this regard the Central African Federation started on the wrong foot; for the majority of the nonwhites did not-and still probably do not-want the sore of partnership they were given.

Again, it is an odd sort of partnership when one of the partners (the whites) wishes to retain power in such a way that it can determine the extent of the other partner's (the blacks') share in the benefits.

But my main objection to the partnership analogy is that a partnership presuppose the separate identity of the partners; and when the idea is transferred to race relations, it involves a broad color-group distinction which is wide open to abuse. This raises which is wide open to abuse. the whole question of the validity of group divisions and protections.

Let me say immediately that I am not opposed to the idea of discrimination as such. A discriminating man is universally admired, and rightly so, precisely because he bases his judgment of people and things on individual merit. Indeed, what is needed not absence of discrimination, but more discriminating discrimination. The fundamental objection which I have to color differentiation is that it is indiscriminate and blunt edged. It works injustice to people who are as intelligent, good and worthy as any others, and coarsens the fiber of those who enforce it.

My second objection is based on what seems to me to be a very practical ground. A division into groups will work (whatever the philosophical merits of the provided that not only those within the group, but also those excluded from it, accept the division as sound. It is on this basis that the protections accorded by some constitutions to religious minorities frequently work out well. But, by the same token, a blunt-edged division into white and nonwhite is not acceptable to the overwhelming majority of the nonwhites of Africa.

My third objection is that group divi-sions—whether one seeks to justify them as minority protections or in some other waytend to perpetuate themselves when institutionalized and given legal recognition; and I am deeply convinced that there is no health in any policy which seeks to per-petuate the existence of the white man as a privileged minority anywhere in Africa.

I now come to the most precarlous part of my task. I am not a crystal-gazer, and in any event African crystals are often dark, but I would suggest that if the white man wishes to remain in Africa, and to live there in peace, he must bring himself forthwith to accept a policy whose object is a nonracial democracy in which all men irrespective of race, color, or creed, are equally entitled to share in the basic human freedoms and political and economic rights in what Jefferson described succinctly as "life, liberty, and the pursuit of happiness."

This path will assuredly be a hard one.

Quite apart from the profound psychological adjustments which white men in Africa will be called on to make, they will also have to make sacrifices. For example, in education, if there is to be integration at the school level, the rate of progress may have to be tempered to allow for the inferior op-portunities enjoyed in the past by the nonwhites.

Again, white men will have to face the risk—if indeed it be a risk—that given power, the blacks will retaliate in kind and do as they have been done by. Such fears were often expressed in Jamaica before the nonwhites took over; and there they have proved groundless. But be this as it may, we are here concerned with a risk which eventually cannot be avoided-and the path of wisdom is to minimize it, now.

Then, too, the white man will have to come to terms with his fears that equality of opportunity and of political and economic rights will in time lead to a mixed society. On this I should like to say two things.

First, it does not follow that equal social, political and economic rights for both white and nonwhite people must inevitably lead to As Lincoln once observed in miscegnation. the course of his debates with Douglas, the number of mulattoes was proportionately greater in the slave than in the free States. Secondly, if with the passage of time a mixed society should come to be regarded as acceptable by our descendants, we have neltheir right nor reason to interfere with their free choice.

I realize very clearly that to put forward the ideal of a nonracial democracy is one thing; to bring it about quite another. And in this regard the crucial question, as I see it, is one of time and timing. How quickly may one wisely and practically advance to ward the ideal? How much time is left to achieve the ideal?

These are the most difficult questions of all. There is plainly much to be said in theory in favor of a policy of gradualism, and even more to be said in its favor as a matter of practical politics. Abraham Lincoln him-self, I believe, favored gradualism as a practical method of advance toward an ideal. But, in the light of what has been done in Africa in the name of gradualism, the chances of its acceptance by the blacks are slight. Indeed, I would say that growing distrust between black and white in Africafor which the whites must bear much responsibility-is one of the great tragedies of the continent

Having said this, however, I believe that there is just one small hope left for gradualism. If, by the grace of God, white men can bend their stubbornness and commit themselves genuinely and irrevocably to the ideal of nonracial democracy, then I believe that nonwhites in Africa might still accept some policy of gradualism, and perhaps be glad of it. But there are three conditions.

First, and this is the crux, there must be an immediate, irrevocable, and explicit committal to the ideal. Then, there must be an immediate and dedicated effort toward raising the standards and opportunities of the nonwhites to fit more of them as soon as possible for the responsibilities of nonracial democracy.

And, thirdly, if there are to be minority color-group protections as distinct from individual protections-which gradualism implies-then it is essential to realize with clarity that they can only be a temporary means to achieve an ultimate end. They must not be allowed to perpetuate differences, and so should be strictly limited in duration; and, while they operate, every effort should be made to make them redundant by raising the standard of nonwhite education, skills, and well-being.

I am aware that the ultimate difficulty

lies perhaps in changing the white man's

heart. But I would repeat what I have said before—self-interest, no less than a regard for moral decency, must persuade white men in Africa that they have a place there only in a nonracial democracy under a rule of law which has tamed power and outlawed irrational privilege, arbitrariness, and ca-

If the white man fails, he will have only himself to blame. And let him not blindly imagine that the implications of his failure will be confined to some parts of Africa alone; his failure will leave a legacy of hatred and turmoil that will harden the hearts of men of color throughout the whole

Veterans' Pension Act of 1959

SPEECH

# HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, I have grave reservations over a number of provisions contained in H.R. 7650, the Veterans' Pension Act of 1959, and also have doubts over the basic policy considerations involved in this legislation.

I am aware of the extensive study of the nonservice-connection pension system which has been undertaken over the past several years by the Veterans' Affairs Committee. I am also aware that the bill before us today contains important improvements over the original bill, H.R. 6432, as submitted by the administration.

As the distinguished chairman of the committee, the gentleman from Texas [Mr. Teaguel has pointed out, 80 percent of all single veterans on the pension rolls would receive an increase; 62 percent of all married veterans on the pension rolls would receive an increase; 70 percent of all widows and orphans on the pension rolls would receive an increase, so that altogether some 854,-000 pensioners, or 70 percent of the to-tal, would receive increases under this bill.

It is obvious that these increases are necessary and long overdue, since the last increase in pension rates was almost 7 years ago. Since that time the cost-of-living index has risen by more than 10 points, while medical care has risen more than 30 points.

Other provisions of the bill have long been advocated and are worthy of support. They include the section giving widows and orphans of veterans of World War II and the Korean conflict the same eligibility for pension bene-fits as now applies to dependents of World War I veterans. According to the committee report this will provide pensions to some 206,000 World War II and Korean veterans' widows and orphans during the first year.

The present income limitations of \$1,400 for single veterans and \$2,700 for veterans with dependents would be raised to \$1,800 and \$3,000 under the sliding-scale formula established in this

Mr. Speaker, while the bill does contain needed liberalizing provisions, it also contains a number of extremely questionable sections which I feel require adequate debate and consideration on the House floor. Unfortunately, there has been little opportunity for House Members to study the report prior to the consideration of this measure today. Under the suspension-of-the-rules procedure, debate is limited and, of course, no amendments can be offered by any Member to eliminate objectionable features of the bill or to improve it in any

Since this is strictly a "take it or leave it" proposition, every Member seriously concerned over the future operation of the veterans' pension system faces a dilemma in trying to weigh the short-range benefits of this bill against the long-range policy changes which it makes in the existing program.

I have already mentioned the generally meritorious provisions of H.R. 7650. But we must also examine the other sections of the bill which must be weighed and evaluated.

The adoption of the sliding-scale for-mula or "need" test in the payment of non-service-connected disability pensions marks a historic departure from our traditional concept of veterans' pensions. It was a basic recommendation of the so-called Bradley Commission of several years ago. I am fearful that, once the basic pension policy is changed, efforts to curtail other essential veterans' programs may follow.

Another provision of H.R. 7650 would count not only the veterans' outside income but also half of the annual income of the veteran's wife, or \$1,200, whichever is greater, in the determination of pension eligibility.

Still another provision of the bill would repeal the exclusion of railroad retirement benefits from the definition of "income" for veterans' pension purposes. This amendment was added to the Railroad Retirement bill only last month. While it affects only a relatively few veterans, I do not feel that it is proper for the House to accept this provision one month and then to repeal it

Enactment of this bill would again ignore the basic needs for a separate pension program for veterans of World War I based on age and service. The bill would also prohibit the waiver of benefits from other sources considered as "income," except for very limited exceptions.

Of course, the "savings provision" of H.R. 7650 provides that no person now on the pension rolls or placed on the rolls before July 1, 1960, the effective date of this Act, shall have his pension reduced or shall be removed from the rolls because of the enactment of this legislation. This provision permits current pensioners to exercise an option on whether they want to be covered by the new formula contained in this bill or to continue to receive their pension under existing law.

However, the new formula would be mandatory for those found eligible for pensions after July 1, 1960, thus creating a double standard in the treatment of veterans, widows and orphans.

Despite several worthwhile provisions in this bill, after weighing the good and the bad, I cannot, in good conscience, support H.R. 7650 because of its many inequitable features and the basic policy change it would make in the existing veterans' pension program.

New Horizons in Education

EXTENSION OF REMARKS OF

# HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks, I wish to include a timely editorial from the Detroit News. It pertains to a unique approach for accomplishing what education must do if man is to keep apace with the fastmoving world in which we live. Wayne State University's plan for general education, beginning next fall, is designed to stimulate students to think for themselves, express themselves effectively with regard to their learning, relate their findings to the changing world about them, and develop their own creative geniuses.

All of us are vitally concerned about the depth and quality of our educational programs in the United States. The News editorial aptly reflects the pride Detroiters have in this bold new approach to an old problem. I am particularly proud because I am an alumnus of the university, which is located within the district I am privileged to represent in the Congress of the United States. It is a pleasure to share the article with my colleagues and others through this me-

The editorial follows:

MONTEITH COLLEGE-FORD GRANT TO WAYNE From an outsider the plan for Wayne State University's new college of general educa-tion draws two gasps: Enthusiasm for the breadth of the undertaking that could change all our ideas of what college is for. and even what education is for; and a corresponding doubt that teachers can be found to teach successfully what so few of us ever learned.

This is to say that the challenge of Monteith College opening to, its first freshman class of 320 next fall is vast for all concerned, even though the idea behind it is as old as education itself. The idea is this: An educated man is one possessed of fundamental knowledge and understanding of his own cultural heritage and able to think and express himself constructively about it-

Science in a few hundred years has so widened the universe of things to know that even the best filled mind confronts ever larger continents of ignorance. The fron-tiers swarm with specialists who know a lot about something, but almost nothing about almost everything.

Between these specialists there is frighteningly little contact. Fewer and fewer people are able to relate their findings. It is as though map makers devoted their lives to defining islands and isthmuses but never got together to draw the world.

General education is an attempt to develop minds that can make contacts. As a first step to break down barriers, Monteith will abolish the conventional fields of study and the conventional college course. Instead it will develop three main avenues of investigation into man and his world: Mañ and science, man and society, man and the arts. By a tutorial system students will be first guided down these avenues and then left free to stroll and explore.

Man and science, for instance, will progressively discuss historically the problems and methods of science as well as some of its key concepts. The main object will be to demonstrate as concretely and variously as possible the scientific approach to truth. At the same time the student will be considering how artists and politicians have sought

their kinds of truth.

In the fourth year the whole man is to be put together again in what the college calls a senior colloquium which is to consist of a comparative study of the United States and Russia as whole civilizations. Since the object here is to use the background and methods previously acquired to illuminate our own culture it seems a pity not to choose an Asian country—India for instance—as a foll which would present a true cultural alternative to our way of life rather than merely a political foe. There would also be some honor in becoming the first American college to recognize that the world has an East as well as a West.

To work out its experiment, Wayne has wisely decided to recruit an entirely new staff, three senior professors who will give a reduced schedule of lectures and 23 young tutors who will do the crucial conference work with students in the effort to get them not only to memorize facts but to think about them. Here, of course, is where the

program succeeds or fails.

For a young teacher the opportunity is immense, but could be dismaying. No man can know as much as ideally he ought to know. In art, for instance, he must discuss music, painting and poetry with equal understanding. In social science he must know the techniques of psychology as well as the content of world history.

The difficulty is not primarily that we have no teachers ready trained in breadth (a deficiency that Monteith will in part try to remedy): general education means nothing if it is a process merely of conveying more general and hence less accurate and useful information. The meaningful task is creative, to discover fresh comparisons between facts, to put together fresh generalizations, to develop fresh perspectives.

This obviously must be the task of the teacher quite as much as of the student, or there will be no worthwhile stimulus at work. In short the new staff ideally will be students themselves—students of philosophy really, encouraging (rather than training) men and women who understand what it means to

think and how to go about it.

The Monteith idea, so viewed, is exciting business to be stirring in our own backyard. We wish it well with the pride of Detroiters and the humility of human beings still dependent for any future at all on that old-fashioned and often neglected machine atop the spinal column.

Oceonography: Key to National Survival

EXTENSION OF REMARKS

# HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 16, 1959

Mr. OLIVER. Mr. Speaker, our expert scientists in the field of oceanog-

raphy have advised that our country's future welfare and very survival depends upon the acquisition of more knowledge about the oceans which occupy over two-thirds of the earth's surface. The National Academy of Science's committee on oceanography, recognizing the immediate necessity of coping with this problem, has formulated a minimum 10-year program designed to enable our country to meet the many challenges in the scientific struggle to unlock the secrets of the ocean depths. Adoption of this program is a must in view of the desperate cold war struggle in which we are now engaged.

Although oceanography has received less glamourous consideration than outer space exploration, nevertheless, the vital importance of this field in military strategy and scientific progress is well recognized. Military experts have indicated that they consider the undersea threat to our security more insidious than the airborne and space threat. In addition, searching our oceans for additional sources of food, for mineral resources, for methods of improving our oceanic travel routes, and simply to learn about the unknown of the ocean is vital to our national future.

The following article, taken from the New York Times magazine of June 14, reveals the broad scope of our unexplored oceanic frontier:

PORTRAIT OF THE PLANET "OCEANUS"
(By James Dugan)

The National Academy of Sciences recently took some soundings in the oceans—or rather in oceanography, the study of the oceans. "The problems to be solved concerning the oceans are clearly more urgent than those of space," said the report of the academy's committee under Prof. Harrison Brown, of the California Institute of Technology. "We know less about many regions of the ocean than we know about the lunar surface."

A retired submariner, Vice Adm. C. B. Momsen, put it even stronger. "We've all gone a little crazy about this outer-space business," he said. "The ocean is the place where we should be putting our efforts in order to provide for future generations,"

Seventy-one percent of the earth's surface is covered by water. An observer, looking at our predominantly blue-green orb from another planet would hardly call it earth, but more likely "Oceanus." This most abundant element is also the most magical. All land animals ascended from the sea, including homo saplens, who crawled out of it in the form of some persistent and adaptable fish; our ears are vestiges of its gill slits. The oceans create climate and weather, and while separating nations, unite mankind under their domination.

The most important movement in nature is the epic journey of water molecules. Among the incalculable trillions of water molecules, no two—even though they start out together—complete the same itinerary. One may be drawn from the sea by the sun, join a snowflake, he buried in a glacler, become part of an avalanche and melt into a river, return to the sea, be transported by deep currents, rise again to fall in monsoon rains sweeping a parched desert, there to evaporate in the morning sun and return at night as dew upon the sands.

Another, water molecule may sink deep into the earth, find a river, turn a hydroelectric turbine, detour into an irrigation canal and, teamed with the sun, build cells of plants and men before it slides again into

the sea, or conceivably into the water jacket of a nuclear submarine reactor.

The ocean is a reservoir of 324 million cubic miles of these molecules, ever in motion, always rearing untold hosts of animals. If all the continents and mountains were buildozed flat, the earth would be covered by water more than 12,000 feet deep. This grand volume of living space, this dark, evershifting immensity, has an aspect of impenetrability.

Sea and air are divided by a viscous curtain; on one side there is an air pressure of 14 pounds per square inch which holds our watery fiesh together; beneath the curtain is an element weighing 800 times as much as air, utterly dark a few fathoms down, and with pressures that increase an additional 14 pounds, or 1 atmosphere, every 33 feet on the way down. A naked man would be pulped about 3,000 feet down, and for all dives beyond 600 feet he must be encased in armor. Yet, we know that many animals live in the deeps at pressures of 15,000 pounds per square inch.

As a life environment, the sea is a sort of land turned upside down. The sunlit pastures are at the top, where the water is saturated with tiny drifting vegetables without roots—phytoplankton—and equally minute animals—zooplankton. The athletic animals come up to graze in this fertile prairie and become links in extensive food chains, formed roughly along the lines suggested in Shakespeare's "Pericles":

"Third Fisherman: Master, I marvel how

the fishes live in the sea.

"First Fisherman: Why, as we do a-land: the great ones eat up the little ones."

The chains extend to the abyss. The most amazing fact about this inverted life pyramid is that only 2 percent of the nutritive matter ends up in swimming fish. The rest falls to the invertebrates: pulsing jellyfish, darting shrimp, fixed colonies of coral polyps and crawlers and diggers of the floor. Animals without backbones make up 90 percent of the ocean population. The longest known invertebrate is the marine flatworm, lineus longissimus, which grows to a length of 80 feet.

There are about 30,000 known species of marine life and more than a hundred new ones are discovered each year. For nearly a century marine biologists have been at work helping the commercial fishermen. They have learned more about the food chains of fish like the cod and herring than is known of the nutritional history of any land animal.

In the other main branch of sea science, physical oceanography, there are enormous unanswered questions. The nature of the bottom, the circulation of the deep currents, and the chemistry of the water are poorly understood. We know that the sea floor has mountain chains, volcanoes, canyons, hills, and plains like those of the land, but the process of charting them is only now emerging from a state like that of the blind men and the elephant. A hundred years ago a brilliant U.S. Navy lieutenant, Matthew Maury, compiled the first bottom contour chart of the North Atlantic from random soundings, reported in ships' logs. The immediate practical result was to determine the best course for the first transatlantic telegraph cables.

With the advent of echo-sounding in the last 20 years, the Atlantic hydrographic chart is being revised continuously and nuclear submarines are now charting the Arctic basin under the ice. Yet, wast areas of the Pacific are unmapped and the Indian Ocean has hardly been touched. We know that several depressions in the floor are deeper than Mount Everest is high, but we cannot be sure that we have found the deepest one.

Consider the abyssal valley called the Marianas Trench, lying west of Guam. In 1951 the British Challenger expedition sounded 35,640 feet at one place in the trench. In 1957 the Soviet ship Vitiaz ship Vitiaz sounded 300 feet deeper at another place near by, and this year the Russian vessel found

a spot 225 feet deeper than that.

The French Navy is now building an abyssal bathyscaph to take three men to the floor of the Marianas Trench. What will be discovered by the hydronauts who finally reach the bottom of the world? This is a layman's way of putting the question, for no scientist will predict what he is going to discover. First, it seems certain that no human observers will ever get closer to the core of the earth than the men who attain the bottom of the Marianas Trench. The world's deepest land shaft accessible to men is the Champion Reef gold mine in India, which is only 9,811 feet deep.

The depthmen will have a unique opportunity to learn something of the creation and makeup of the earth. They will take down gravity meters to test the theory of isostacy-that the elevations of the earth's surface are compensated by the greater density and strength of the undercrust. Thus Mount Everest would be the thickest nodule on the crust, balanced by a weight equal to Everest's beneath it, and the Marianas Trench would be the thinnest point in

the rocky envelope of the globe.

The new bathyscaph crew will measure cosmic rav penetration of the sea, radioactivity, and the age of the water in the abyss. Water age is based on how long it has lain in one place and this can be determined by trapping a sample and subjecting it to carbon 14 dating. If the deepwater molecules have not been moving in the sea, air and earth cycle for, say 50,000 years, their or-ganic radiocarbon content will be correspondingly low.

The observers in the big bathyscaph may also make still and motion pictures of the trench, take water and sedimentatal temperatures, and perhaps sight no one knows what living creatures in that perpetual night.

Quite serious scientists like Sir Alister Hardy of Oxford do not rule out the possibility that there are sea monsters to be discovered and proved. A few years ago a dozen free divers working in a wreck a hundred feet under the Red Sea, several times sighted a wrasse 20 feet long. This is a common vegetarian species never before found more than 3 feet long.

It was also recently noted that the existence of a species of eel larva many times the size of the common European and American eel larva may furnish a basis for recurrent stories of sea serpents. The mature form of this larva has not been discovered but it could produce an adult eel of sea serpent dimensions.

One aspect of oceanography that has fallen into neglect is simply that of identifying fish—or taxonomy. It is considered dull work to catalog fish. One of the greatest taxonomists is J. L. B. Smith, of South Africa, the discoverer of the fabulous coela-This big fighting brute was brought up by fishermen in East Africa and aroused the curiosity of the curator of a provincial museum, who sent a sketch of it to Smith. He instantly identified it as a coelacanth, a species believed extinct for 60 million years. Somewhere in his files, Smith recalled seeing the animal as an empty fossil split from a rock.

The sovereign seas have many more revalations in store, if we are able to go after them. Many weathers of the world are born in the long swells of the Pacific by an intimate interaction of sea and air. On land there is a specialization call micrometeorology, which pries into the weather a few inches from the ground, but almost no work has been done on the film of spray in the great oceanic reaches.

Almost everything we know-or believe we know-about the sea is open at both ends. The questions themselves may be wrong and many of the answers are under challenge. Take the sacred theory of photosynthesis, which holds that the growth of all vegetation, and consequently of animals, depends on the action of the sun on carbon dioxide and water. What of the marine animals of the abyss, which never see the faintest ray of sunlight? Their existence has always been explained by supposing they eat dead organic matter falling from the level of light. Is this true?

A French zoologist, Professor Brouardel, has preliminary evidence that some marine animals thrive in the blackness without any discernible action of photosynthesis. It will take him years of the most painstaking instrument-building, campaigns at sea, and every concelvable cross-check to establish the doubt. Only if these negative results are valid will he be able to formulate the question: how do they live, if not by photosynthesis? Then the study can begin.

Unable to see the underwater world until recently, oceanographers have relied on blind, static groping into the depths. They lowered dredges, bathythermographs, cameras, water bottles, coring pipes, and cur-

rent meters.

Today depth-groping is becoming more mobile and it is acquiring more eyes, both human and photographic. Continuous recording instruments from a ship under way are able to bring up data from a long strip of the sea. No artificial eyes in the sea will ever be better than man's own, but, while vehicles are being built for him to roam the abyss, some spectacular new cameras are already scouting the watery terra incognita.

Electronic flash cameras, such as those built by Prof. Harold Edgerton, of M.I.T., have made thousands of stills in depths down to 6 miles. Underwater television chains, transmitting through a wire to the surface, cannot go nearly as deep as that, because of the weight of electrical cable required. But some form of motion picture seems the best medium, short of human observation.

Edgerton and Capt. Jacques-Yves Cous-teau, sponsored by the National Geographic Society, have successfully tested a traveling automatic movie camera, to be dragged across the floor at great depth. It takes 1,600 feet of 35-mm color movies by electronic flashes synchronized with the shutter openings. The roving camera reveals the nature of the terrain and surprises bottom-dwelling animals which may not hold still for snapshots.

Although the present state of knowledge about the sea calls for pure investigations, without an end in view, there are many challenges for applied science—the sort that sets out to invent something. One thing we have got to invent in short order is a way to increase the food harvest from the sea. There are nearly 3 billion of us alive now and there may be 4 billion in 20 years. Farming can't feed everyone now and it certainly will not be able to supply the increment.

We not only must find more fish-by pushing the trawling fleets into the open sea off the shallow continental shelves, where they now operate on only 10 percent of the ocean surface-but also have got to eat more species of fish. A possible asset lies in edible sea worms-highly efficient manufacturers of protein-which are eaten in large quantities in China. Perhaps they could be prepared in some fashion suitable to Western palates.

Some biologists are looking for a "pig of the sea" that could manufacture protein as efficiently as an Iowa hog. This sea porker might be domesticated in underwater piggerics consisting of concrete mazes or jet-tisoned street cars. The difficulty here is to find a species that could be so demesticated. Perhaps candidates could be found among some of the sedentary coastal fishes, such as rockfish or groupers.

The U.S. Navy is very much concerned with physical oceanography, especially the extraordinary sound-conducting layers of the ocean, which, if understood, could aid in the detection of submarines. A half-pound dynamite explosion at a classified depth, for example, has been detected 3,000 miles away by an underwater hydrophone. If the Navy could learn why and manipulate this conductivity in countering enemy submarines, there would be fewer wrinkled brows in the antisubmarine warfare branch.

Conversely, greater knowledge of the tracks of deep currents and the differing temperature and salinity layers of the subsurface could help submarines avoid detection. A submarine commander who understood how to use these deep currents could shut down all engines and drift away from attack. And since temperature and salinity affect the buoyancy of the steel bubble that is a submarine, he could float safely on thermoclines deep below.

Another unexplained phenomenon is a horizontal smokescreen below the surface that can completely hide a submarine from sonar probes. It is known as the deep scat-tering layer. The DSL has been found in all oceans at depths ranging from 150 to 3,000 feet, but not all the time and not necessarily in the same area on 2 consecutive days. Something in midwater interferes with the high-frequency pings and scatters them to form a heavy trace on the sonar graph, often obscuring the true bottom as well as objects beneath the layer.

The DSL sometimes rises toward the surface at night and goes down in the morning. Is it a dense animal population which deflects the sonar? Several dozen men have passed through heavily indicated DSL's in bathyscaphs and electronic flash cameras have been lowered into DSL's hundreds of times. Sometimes they saw clouds of shrimps and diatoms in the mysterious layer, sometimes nothing.

The water itself is vital to the future of the race. Present and looming fresh-water shortages around the world can be met only by going where the water is and taking the salt out of it for irrigation, industry, and human use. Not too far in the future science will crack the water atom for nuclear energy and, before then, power will be coming from harnessing the tides and thermal

exchanges under water.

Offshore mining is becoming a commonplace in the oil and sulfur industries. Carrying this further, plans are being made for a dramatic project—an effort to bore a hole through the earth's crust under the sea near Puerto Rico. This will involve drilling first through a layer of sediment beneath several miles of water, then through the "Moho" (an abbreviation for the Mohorovicic Discontinuity, so named for the Yugoslav scientist who identified it), which is believed to be the lower part of the earth's crust.

Several plants are now producing magnesium from sea water, and in Texas a magnesium plant utilizes precipitate made from seashells dredged in Galveston Bay. is probably no end to the minerals that will be mined from the ocean floor or extracted from sea water when the processes are worked out. The water contains them all-

The sea is the limitless realm of inner space. It is our last dependency, as the crowding globe rolls on,

#### OCEANUS

The sea was the chief mystery of the earliest civilization; in pre-Homeric times the Greeks ordained as their primordial god, Oceanus, the father of all. He sat at the uttermost west of the world, stroking his

long white beard with his red crab claws, watching the struggle of men against nature. Jason, leader of the Argonauts, was probably the first navigator who sailed purely to study the sea. The Golden Fleece may have been the silky yellow byssus of the Pinna nobilis clam, the filaments it extrudes to anchor itself to the sea floor.

Classic navigators have often been led on by curiosity about the sea itself, as well as the lands across it. Capt. James Cook took depth soundings during his circumnavigations; Charles Darwin went to sea on the Beagle as a geologist. His masterpieces of reason, on the formation of coral reefs and the origin of species by natural selection, derive from the university of the oceans.

The first general scientific exploration of the oceans began in 1872 with the crulse of H. M. S. Challenger, which carried a bold, inquisitive Canadian named Jack Murray as a student assistant. He became Sir John Murray, editor of the Challenger Reports, 50 thick quarto volumes that are the basic archives of ocean science.

A Bill To Provide Emergency Relief to Family Farm Poultry and Egg Producers

EXTENSION OF REMARKS

## HON. CHARLES H. BROWN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. BROWN of Missouri. Mr. Speaker, one of our great American industries—the poultry industry—is in the grips of an economic hurricane that is whipping and lashing the big and the small, the efficient and the inefficient, destroying some \$600 million worth of purchasing power and some \$50 million to \$60 million worth of Federal income tax revenues, cutting a path of broken hearts and bankruptcy from coast to coast.

Fair-minded people who understand this disaster are agreed that immediate disaster relief must be provided to thousands of poultrymen, or else. Government has provided similar relief to beef and hog producers, vegetable and fruit growers, and others in similar catastrophes in recent years past.

Secretary of Agriculture Benson has spent some \$230 million during the past 6 years to help combat economic disaster in the livestock industry; some \$34 million for fruit, and \$31 million for vegetable producers' economic recessions.

Right now, the Secretary is engaging in a powdered egg purchase program, allegedly designed to relieve the suffering accompanying the present economic disaster in the poultry industry.

But, in my opinion, the way the Secretary is going about this is a deplorable waste of the taxpayer's money. Stemming this vast economic storm by purchasing powdered, or even shell eggs is like trying to lower an ocean tide by dipping salt water with a teaspoon.

The money should be spent on buying the hens that lay the eggs, not the eggs themselves. Every hen converted to roasting chicken would remove some 10 to 16 dozen eggs from the present oversupply of eggs. The Secretary could buy the hen for not more than \$1. At 30 cents a dozen, the eggs from the hen would cost \$3 to \$4. And the frozen or canned chicken is wanted and needed for the school lunch program and for export marketing, while powdered eggs are not in such demand.

I have hoped against hope that the Secretary of Agriculture would change his mind and replace this egg purchase program with a sounder, more effective remedy. But apparently, he has no such intentions. So, today, I have introduced a bill which would direct the Secretary to change from egg-purchasing to a more constructive and effective hen-removal program.

This is an emergency measure, not designed to attack the long-range problems of the poultry industry. It is a measure to provide emergency relief to family farm poultry and egg producers.

It provides first, a fowl-purchase program to help alleviate the problems of the egg producers; second, a new school lunch discount program to help schools encourage more use of poultry meat in school lunch programs; and, third, a new CCC policy to encourage more utilization of poultry meat in foreign trade.

I regret very much that any Member of Congress ever has to write a bill directing any executive department to do what they are authorized to do and have the funds to do, anyway. But, apparently, this is the only alternative with the present Secretary of Agriculture. Either we spell out what he should do and how he should do it, or he'll waste the taxpayer's money on ineffective and expensive brainstorms.

I invite the consideration of the Congress to the legislation introduced today, a draft of which follows:

A BILL TO PROVIDE EMERGENCY RELIEF TO FAMILY FARM POULTRY AND EGG PRODUCERS, AND FOR OTHER PURPOSES

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Emergency-Poultry Purchase Act".

SEC. 2. For the purposes of this Act-

- (a) The term "Secretary" means the Secretary of Agriculture.
- (b) The term "laying hens" means healthy hens in actual use for the commercial production of eggs.
- (c) The term "started pullets" means healthy pullets more than 27 days old and less than 365 days old intended as replacement fowl for laying flocks.
- (d) The term "hatching eggs" means fertilized eggs which are intended for and capable of being commercially hatched.
- (e) The term "official establishment" means any establishment as determined by the Secretary at which inspection of the slaughter of poultry, or the processing of poultry products, is maintained under the authority of the Poultry Products Inspection Act.

Sec. 3. (a) The Secretary, by the means and subject to the limitations and conditions set forth in subsections (b) through (f) of this section, shall purchase within 91 days after the date of enactment of this Act—

(1) not less than 15 million nor more than 20 million laying hens,

(2) not less than 10 million nor more than 20 million pullets, and

(3) not less than 30 million nor more than 36 million hatching eggs.

(b) In making the purchases authorized in subsection (a), and in holding and disposing of the commodities so purchased, the Secretary shall act through the Commodity Credit Corporation.

(c) The purchases authorized in paragraphs (1) and (2) of subsection (a) shall be made on behalf of the Commodity Credit Corporation by such official establishments as the Secretary may designate as agents of the Commodity Credit Corporation for such purpose.

(d) The purchases authorized in paragraph (3) of subsection (a) shall be made on behalf of the Commodity Credit Corporation by such egg dealers as the Secretary may designate as agents of the Commodity Credit Corporation for such purpose.

(e) No purchase shall be made pursuant

to paragraph (1) of subsection (a) unless—
(1) such purchase is made at a price of

(1) such purchase is made at a price of not less than 20 cents per pound, live weight, and

(2) the seller from whom such purchase is to be made certifies, at such time and in such manner and form as the Secretary may prescribe, that the laying hens to be thus purchased constitute not less than 20 percent of all the laying hens owned by such seller at the time of certification.

(f) No purchase shall be made pursuant to paragraph (3) of subsection (a) unless—

(1) such purchase is made at a price not less than the average price of hatching eggs in the calendar year 1958, as determined by the Secretary, and
(2) the seller from whom such purchase

(2) the seller from whom such purchase is to be made certifies, at such time and in such manner and form as the Secretary may prescribe, that the hatching eggs to be thus purchased constitute not less than 50 percent of the seller's production of hatching eggs for such period of time as the Secretary may prescribe.

SEC. 4. The Secretary shall, from funds of the Commodity Credit Corporation, through the facilities of the Commodity Credit Corporation pay to the appropriate financial agent of each public school and each nonprofit private school in any place subject to the jurisdiction of the United States one-half of all funds expended by or on behalf of such school for poultry meat (including turkey meat), not exceeding six pounds per student, for consumption by students at such school during the period beginning July 1, 1959, and ending June 30, 1960. Such payment shall be made only upon application to the Secretary in such form, and substantiated in such manner, as he may determine.

SEC. 5. The Secretary shall, within one year after the date of enactment of this Act, purchase through the facilities of the Commodity Credit Corporation dressed broilers and turkeys to the value of \$10 million. The Secretary shall dispose of the broilers and turkeys so purchased by sales made pursuant to agreements entered into under the Agricultural Trade Development and Assistance Act of 1954.

SEC. 6. The second sentence of section 32 of the Act of August 24, 1935, entitled "An Act to amend the Agricultural Adjustment Act, and for other purposes" (7 U.S.C. 612c) is amended (1) by striking out "and (3)" and inserting in lieu thereof "(3)", and (2) by adding immediately before the period at the end thereof the following"; and (4) carry out the purposes of the Emergency Poultry Purchase Act".

Src. 7. Notwithstanding any other provision of law, the Commodity Credit Corporation shall make no purchases of eggs otherwise than as specified in section 3 of this Act during the period ending 91 days after the date of enactment of this Act.

Veterans of America Are Stabbed in the Backs by H.R. 7650

SPEECH

## HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

The House had under consideration the bill (H.R. 7650) modifying the pension program for veterans of World War I, World War II, and the Korean conflict and their widows and children.

Mr. OLIVER. Mr. Speaker, during the 40-minute debate under the gag rule when the veterans' pensions program was being crucified by H.R. 7650, I voted against the bill.

I was 1 of 34 Members who stood up to be counted on the division vote. I am as proud of that vote as any that I have made in this session of the 86th Congress. However, any personal satisfaction that I experienced because of my individual contribution to opposition to H.R. 7650 is far outweighed by my feeling of depression that the House has now established a yardstick for future veterans pensions which is an insult to those who served and will serve our Nation in times of military need. The House by its action in accepting H.R. 7650 with only 40 minutes of debate and without opportunity for amendments has in effect pauperized all veterans who will desperately need pensions in the near

The House action in this implementation of the Bradley Commission report of several years ago has authorized and directed the Veterans' Administration to become a final arbiter in family squabbles which will develop because of the requirement that 50 percent of spouse's income shall be computed in the income eligibility requirement. It is not difficult to foresee in the near future that thousands of decisions will of necessity have to be made by the Administration in/determining whether a spouse's income is available as income to the veteran.

For these reasons and because I feel as I have always felt that veterans pensions should be granted as the Nation's recognition for military service in time of war rather than as a miserable pittance to be given begrudgingly to keep a veteran off the welfare relief rolls, I shall always consider the action of the House on H.R. 7650 as a stab in the back of veterans' rights and precedents established over the many years of the Nation's history.

It also seems bitterly ironic to me that on the same day that this stab in the back was executed, within minutes of the final vote on the same, the House should be considering an authorization bill of \$3.6 billion for the mutual security or foreign aid bill of 1960. On the one hand, the House repudiates the historical precedents under which veterans of America have been given pension recognition for their military service, while on the other hand the House, without any substantial opposition, for the most

part, prepares to stretch our budget to spend billions of dollars to improve living standards of millions of people in foreign areas thousands of miles removed from us.

To supplement these observations, Mr. Speaker, I am including, herewith, the statement which I made for the consideration of the Veterans' Affairs Committee when H.R. 6432 and subsequently H.R. 7650 were being acted upon:

TESTIMONY BY THE HONORABLE JAMES C. OLI-VER, MEMBER OF CONGRESS, FIRST DISTRICT, MAINE, IN SUPPORT OF A \$100-A-MONTH PENSION TO CERTAIN WORLD WAR I VETERANS OVER 60 YEARS OF AGE, BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE, JUNE 9, 1959

Mr. Chairman, I appreciate the opportunity which you and your committee have extended to me, to make a statement in support of H.R. 4523, which was introduced by me in the interest of veterans of World War I. I also appreciate this opportunity to place my viewpoint before the committee with reference to H.R. 6432, which contains the recommendations of the Veterans' Administration concerning veterans' benefits in general.

First, let me state my position with ref-erence to my bill in the interest of World War I veterans who are over 60 years of age and whose income is less than \$2,400 a year if single and \$3,800 a year if married. This bill, as you know, would authorize a monthly pension of \$100 to take effect at 60 years of age. It is identical to H.R. 1181, introduced by our distinguished colleague from Pennsylvania [Mr. VAN ZANDT].

I would like to say in passing, Mr. Chairman, that during the 75th Congress, I was a member of this great committee which has consistently acted constructively in the interest of veterans of all wars. I know that the problems that confront the members of this committee today are difficult and the decisions, which have to be made, carry with them great responsibility for each and every one of you. It is my feeling, having been a veteran of World Wars I and II, that I can speak with some understanding of the public treatment which has been extended to veterans of both world wars. I know that this committee, during the past several years, has had a complete appreciation of the difference in treatment which has been extended to World War I veterans in contrast to the most generous legislation for the deserving veterans of World War II.

Just to briefly mention the benefits received during the nearly 18 years after each World War in terms of comparison, I respectfully call to your attention that up to June 30, 1958, the per capita benefits paid to World War II veterans totaled \$3,900 while during the same period of time; namely, 18 years after World War I, all benefits paid to the veterans of that war totaled \$1,480 per capita. This comparison is not made in the spirit of criticism, but merely to call attention to the existing facts; namely, comparable treatment has not been accorded to World War I veterans. As a further comparison, there was no GI insurance, no educational bill of rights, no home or business loans provided for World War I veterans as was the case of the veterans of World War II. Severance pay for the veterans of World War I was limited to \$60 which certainly could never be considered as an adequate recognition of the military service during the period of war which was rendered by my comrades in World

It is not my intention to belabor the situation which we all know currently exists in connection with the desperate financial needs of World War I veterans. Their average age is now 65 and they, in too many instances, find themselves with no adequate means of

support. The economic problems of people generally over 65 years of age are well understood: and, this is true whether such individuals are in the veterans' classification or otherwise. But, we do owe our wartime veterans, it seems to me, Mr. Chairman, a responsibility to provide that the precedent which has been established in enacting age pension benefits for veterans of all previous wars may be extended in a similar manner to the veterans of World War I. The Bureau of the Budget, the Veterans' Administration, and those who are opposed to this legisla-tion, use figures to discredit the legislation on the basis that such pension payments would ruin America economically. The Veterans' Administration's cold statistics do not, in any way, reflect the economic benefits which would accrue as a result of pension payments being distributed in every small community of this Nation through the enactment of this legislation.

I hesitate to call attention to an observation which is too often made although warranted: If we can afford to finance activities all over the world in order to step up the living standards of less fortunate people, we should be more determined to extend to our own people, especially our veterans, the consideration which would improve their living standards as well. The basic philosophyin this legislation which I propose, in my opinion is: (1) that the precedents to which I referred above justify similar action for World War I veterans; (2) the cost of the pro-gram will automatically be liquidated by the increased activity in our economy resulting from these pension payments; (3) the people of America cannot afford to ignore the economic needs of our soldier citizens who have served in times of military conflict when our Nation's security has been periled. Americans have not been ungrateful in the past and have always generously authorized veterans' benefits. There should be no exception today to a similar approach when the needs are so obvious.

These observations of mine, Mr. Chairman, are not new. As a matter of fact, there is nothing new that can be said on this subject. The issue is clear. Veterans of all wars

should be treated equally.

If I may encroach further upon your time, I would like to take this opportunity to express briefly, my opposition to H.R. 6432 as it is presently written and now under consideration by this able committee. The concept of need upon which this legislation is based. in my opinion, is not the proper concept for veterans' legislation. It is the familiar approach developed by the Bradley Commission some years ago and now comes to us dressed up in rather attractive phraseology emanating more or less I would expect, from the Madison Avenue advertising technique. also recall that in the early thirties, the Economy Act so-called was directed primarily at veterans' benefits. Veterans' benefits have always been the first target of the arbitrary economizers. It is true, unfortunately, that there have been abuses in the matter of veterans' benefits. It is also true that there have been bank embezzlements and many other phases of daily activity which we do not like. Yet, we don't tear down the whole structure because of the action of a few which discredit policies based on merit and justice with which we are in accord. I think that iAmericans generally feel that veterans' benefits have been and should continue to be granted as a matter of recognition for military service in times of conflict. The basic philosophy of H.R. 6432 would transform veterans' benefits into a needs concept. This would extinguish in this one approach, a great American tradition based upon the gratitude of the people of America for those who have unselfishly served their Nation. Therefore, I oppose H.R. 6432 and I ask the members of this committee to do the same.

I wish to make one other point, Mr. Chairman, and then I shall conclude. H.R. 6432 would establish the income of wives as a qualifying factor in pension benefits to be paid to veterans. It seems to me that this is a cruel concept, since a veteran would be forced to subordinate his economic independence and his personal dignity. If he ran short of funds during any part of the month while waiting for his decreased pension payment, he would be forced to rather abjectly ask for tide-over pennies or dollars from his wife, who, because of her own independent income, would find herself in a controlling position. This may seem to be a rather superficial observation, but it isn't difficult to envision the many difficult family situations which would arise from such a stultifying combination of circumstances. Such a possibility is not in the interests of any veteran and it is not in the best interests of the country. Such a possible and even probable complication is reason enough, in my opinion, to oppose the basic needs concept of the Veterans' Administration proposal. I hope that this committee will decide to reject this attempt to de-crease veterans' benefits and to demean the veterans. I thank you again, Mr. Chairman, for the opportunity to present these observations.

## H.R. 3. Regarding the Preemption Doctrine, Will Produce Chaos Instead of Clarification

EXTENSION OF REMARKS OF

## HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks I include a thoughtful editorial from the Boston Herald of Friday, June 12, 1959, on the subject of H.R. 3, the preemption bill .

STATES RIGHTS REVOLT

We are glad that the House Republican policy committee is above rubber stamping administration proposals. But we wish it had found a better issue on which to demonstrate its independence.

The 33-member committee has endorsed the so-called States rights bill, simed at curbing the power of the Supreme Court to overturn State legislation, despite the fact that the administration has called the measure "the most hazardous" before Congress The committee should have thought twice

before taking the step.

The chief purpose of the States rights bill is to reverse the Supreme Court's decision in the Steve Nelson case. This case, which was decided in 1956, declared that the Federal Government had preempted the field of sedition control and that State laws in this field were no longer enforceable. (A clarify-ing opinion this week said that the States could punish sedition against themselves, but not against the Federal Government). Reversing this finding would be within Congress' rights, because it was presumably a congressional act (the Smith Act) that preempted the field in the first place

But the bill goes beyond this and attempts to set up a general rule for the court to follow in other cases.

"No act of Congress," the offending section says, "shall be construed as indicating an intent on the part of Congress to occupy the field in which the act operates to the ex-

clusion of all State laws on the same subject matter, unless such act contains an express provision to that effect, or unless there is a direct and positive conflict between such act and a State law so that the two cannot be reconciled or consistently stand together.

This language, if it were to become law, would be extremely mischlevous because it would invite the relitigation of every case that has raised the preemption issue in the past. And as a guide to future decision it provides little for the court to go on that it does not already have.

If Congress doesn't like the result of the Steve Nelson case, it can reverse it, although we think even that step would be unwise. It can also resolve to make its own intentions clear in future legislation which overlaps State law. But it should not try to write general rules for the court. The effect, as the administration says, will be most hazardous.

The House Republican Policy Committee has endorsed a bill which will produce chaos instead of clarification. It should clarify its own thinking.

## Inflation

EXTENSION OF REMARKS

## HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. COLLIER. Mr. Speaker, I, like many of my colleagues, have received thousands of letters from my constituents in the past few months which reflect the deep and growing concern of all the people of this Nation over the serious trend of inflation caused by excessive Government spending.

The City Club of Chicago, a nonpartisan civic center for Chicago and its suburbs, has prepared a statement of views, which lists the causes and effects of inflation and concludes with a recommendation for a comprehensive report which can lead to integrated action against this threat to our country.

This seems to be a very sound approach to this very serious problem of the devaluation of the American dollar and I, therefore, would like to call the attention of my colleagues to the following statement:

#### INFLATION

The possibility of creeping inflation with resulting higher living costs poses a grave threat to the economy and general welfare of our country. Inflation reduces the pur-chasing power of the dollar because of a rise in the price level. To the millions of people who have saved and sacrificed in order to establish a measure of security for their declining years, the effect of such inflation is serious and often disastrous. Inflation adds an entirely undesirable risk to business enterprise.

Because of the many world crises in recent years and because of the general level of prosperity enjoyed by the American people, we are only now becoming aware of the latent dangers of inflation to our economy. The American people should be alerted to these dangers. The City Club of Chicago endorses current steps to analyze the situation with a view of pointing the way toward a remedy.

The causes and effects of inflation are numerous and so intertwined that the whole

problem, with its many ramifications, must be considered as a unit. Some of the complexity of the problem of inflation is reflected in the variety of possible causes which have been mentioned in public discussions of this problem, and occasionally in These have included such matters

1. Widespread extension of credit, resulting in excessive installment buying, and consumer loans giving immediate purchasing power with its resulting demand for goods on a limited market.

2. The wage-price spiral of alternating increases in wages and prices, each supposedly

justifying the other.

3. Greatly increased public expenditures Federal, State, and local-which put special demands upon the supply of goods and services with consequent rise in the price level.

4. Federal appropriations beyond current income without provision for additional taxes to balance the budget.

5. Ever-increasing public debt-Federal, State, and local-which provides the immediate money to buy more goods and supplies than could otherwise be bought out of current income or savings with consequent pressure upon the sources of supply.

6. Vast increase in private and corporate debt, now far exceeding the total of all pub-lic debts, with possible inflationary effects.

7. Monopolistic practices and administered prices which fix prices at excessively high levels.

8. Failure to maintain production to meet the growing demand for goods, assuming full production can offset inflation.

9. Failure to make stability in general price levels an objective in the Employment Act of 1946 along with maximum employment, production and purchasing power.

10. Excessive foreign aid in the form of American products without a corresponding importation of foreign goods induced by lower or reciprocal tariffs.

11. Monetary policies of the Federal Reserve Board which may have intensified, instead of offsetting or preventing other inflationary developments.

The City Club concludes that a full understanding of inflation can be brought about only by the most painstaking and scientific study of the action and interaction of all major causes which produce inflation.

# Valedictory Address, Capitol Page School Commencement Exercises

EXTENSION OF REMARKS OF

# HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, May 25, 1959

Mr. CELLER. Mr. Speaker, my ap-pointee as page, Peter J. Wallison, has graduated from the Capitol Page School. He was valedictorian of his class and his address at the commencement exercises on June 15, 1959, was so felicitous and so fitting, that I deem it appropriate to place it in the RECORD. He has won a scholarship to Harvard University and I am sure he will bring to bear upon his work there the fine sense of responsibility, integrity, and resourcefulness that he has shown at the Capitol. I wish him much happiness in his forthcoming stay at a great university. His address follows:

Distinguished guests, my parents, faculty, and friends, this evening we are to be graduated from the Capitol Page School. Our commencement, however, represents more than merely the 4 years we have spent in high school; it is, in reality, the culmination of 12 important years of education and intellectual development.

What have we gained in our years of education that merits the solemnity and dignity of this commencement ceremony? Some knowledge, it is true, is the most evident of our achievements, but the individuality we have acquired far outweighs in importance all other intangible gains. This individualism implies not just the ability to know, but the ability to reason; it describes the power of the whole man to reach a conclusion through the workings of his own mind, and independent of unreasonable pressures.

Individuality is freedom lived. The concept of personal freedom has made the United States the greatest Nation in the world, and only the continued exercising of this prerogative by the citizen will preserve and sustain our international position. Today, however, individualism is too seldom fostered or encouraged in American schools. The accent in education has been upon the development of good citizenship and civic responsibility, and while these are worthwhile goals, high school students are rarely prodded to assert their differences of opinion. The ultimate duty of the American educational system should be to promote the liberty and freedom that can be exercised only in an active democracy.

Here at Capitol Page School, we have been encouraged constantly to think as individuals. On every issue, in every class, we were permitted and requested to state an opinion, and support that statement with the facts which influenced us in forming the idea. This, to me, is the ideal form of education, for no lecture or textbook can promote more student interest and participation than an active discussion, and we were anxious to exchange the ideas we had heard while serving in Congress. Thus, our classes were interesting, informative, and did more than teach us—they impressed us with the advantages of reasoned individual thought.

Inseparable from individuality is character. Character, combined with a free intellect, is the American ideal, and through the years America has grown great and has prospered on this formula. Strength of character is evidenced in resolution, in courage, in self-control, in taking the initiative, and in assuming responsibility. As such, character is a universal scale upon which we can measure the true wealth of nations. The individual development of a nation's people is essential to the preservation of liberty. We find proof of this in nations which possess constitutions practically identical with our own, yet who alternate between despotism and anarchy because their citizens elect to public office people who lack the essentials of good character.

Now, at commencement, we stand at a point beyond which our ideals will be tested by reality. Because of the nature of our preparation at Page School, we will enter college with minds developed to listen, to analyze, and to conclude. This is important to America, for the ability of the people to live freedom intelligently will determine the course of this democracy.

course of this democracy.

Therefore, if our educational training has succeeded in combining character and individuality, we can set now these ideals for the future.

We must reason with three indispensible factors: honesty, courage, and commonsense. We must recognize Government in its proper perspective not as the vehicle for personal satisfaction, but as the orderly base upon which the people can build their own great-

ness. We must take an active part in public life, realizing that the more people we have within our borders, the greater the obligation of each to his country and to himself. We must remember, if we enter politics, always to be principled, recalling that politics is more than the holding of office. Above all, we must look at issues objectively, and decide on the basis of fact and morality before casting our ballots. Today, we must elect and follow our leaders. Tomorrow, when we are leaders, we must act with resolution and faith.

Perhaps Sir Winston Churchill epitomized this juncture in our lives when he stated: "This is not the end, nor is it the beginning of the end, it is instead but the end of the beginning."

Foreign Service Institute Graduates First Scnior Officers' Class

EXTENSION OF REMARKS

## HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mrs. BOLTON. Mr. Speaker, last Friday a noteworthy event occurred in the life of our Foreign Service. Nineteen persons from various departments and agencies concerned with foreign affairs were graduated from the first class of the senior officer course at the Foreign Service Institute.

Inaugurated by Secretary Dulles in September 1958, the 9-month course is designed to provide the most advanced training possible in the field of international relations. Participants in the course are senior career officers, drawn from the Foreign Service, Armed Forces, U.S. Information Agency, International Cooperation Administration, and the Department of Commerce.

Truly, as President Eisenhower observed in his remarks to the graduates, we must see that officers charged with the conduct of foreign affairs are given the best information available in this increasingly complex and vital area. As a member of the Foreign Service Advisory Board, I am particularly gratified that the Institute has provided this additional opportunity for expanded service.

In the belief that the remarks of the President and Under Secretary of State Dillon will be of wide interest, I, under unanimous consent, include some in the RECORD:

PRESIDENT'S TALK AT FOREIGN SERVICE CLASS

To ask anyone whether or not he would like to say some words, if that person has had any experience in political life and omits such an opportunity or ignores it, is truly, if not miraculous, at least an error.

In the years that Secretary Dulles and I served together, he often spoke about the lack of opportunity among high officers of Government, and indeed of high officers in any profession, for contemplation. He felt so strongly about this that he believed that there should be some reorganization in the very highest echelons of the executive departments so that there could be more time to think about the job.

As a matter of fact, before I leave this office, I hope to lay before the Congress a

plan that I believe will do something of this

Mr. Dulles spoke about this school in the same terms. In keeping with that idea of contemplation, he once said such a school will give some of our foreign officers the opportunity to contemplate their own profession, to think about it not merely as cramming of more information into your heads or talking about new techniques or even possibly any plans or policies or ideas, but of providing the opportunity, under guidance, to contemplate your profession and all it means to the United States.

#### LOBBYING ADMITTED

I would like to voice my own tremendous interest in this school and my support for the idea that a few of our officers should be taken out from the normal activities of their offices, no matter where they are—as secretaries, counselors or whatever—and be given this opportunity.

Not only can our Government afford this; my belief is it cannot afford to ignore it. So, if I am guilty of lobbying for an appropriation for this particular activity, I plead guilty with the greatest of enthusiasm.

The program that you are undergoing is, of course, terrifically important. One of the things that I would like to bring out is this: Today we are exploring space, trying to expand our universe—but all the time we are contracting our own world.

We are so tied together now with communications that when a man has a bad temper in Moscow or in Bucharest or any other place in that region, we look at our reports to see whether it's going to have any effect before tomorrow morning.

When I was 3 years old—that was 1893—the first Ambassador of the United States was appointed. Today there are 77 ambasadors representing the United States abroad. We have representations in 86 different countries, and I think we have large groups or at least representation in something like 285 separate cities.

With each of these Ambassadors the State Department is in daily communication—often in communication to the extent of what should be described as transatiantic essays. But these have to be digested. And the next day there must be some kind of action taken on them very shortly. In other words, this world is not only small but it is extremely complicated, and these messages are necessary. Every kind of factor in human existence comes in—psychological reactions, political reactions. There are economic, military requirements to be met, and to think about.

If people are not going to get the kind of opportunity that this school is giving them, then the inevitable result will be to do them in keping with the past—either by preconceptions or routine or haibt.

We must have men who are capable of thinking—thinking objectively on the problem that is before them—who can give the best information with the best interpretation and the best advice they can provide to the State Department.

I would make one other observation: What we call foreign affairs is no longer foreign affairs. It's a local affair. Whatever happens in Indonesia is important in Indiana. Whatever happens in any corner of the world has some effect on the farmer in Dickinson County, Kans., or on a worker at a factory.

#### ONENESS OF THE WORLD

Now this means that even our news is no longer properly called foreign news. It's local news, because it is so important to us. All this means that everyone who is charged with foreign affairs or anyone that has any direct or indirect responsibility concerning them—indeed. I think, every citizen—should think of the oneness of the world.

We cannot escape each other, certainly not until the day we can emigrate to Mars. We pust can't escape each other. We must understand people. We must make it our business to know what they are thinking, and why—and what it means to us.

Because no nation, even one so directed and operated as is the Soviet's, can dominate all and be the controlling factor. Of course, a democracy would not even attempt it because it would be completely anti-thetical to their own conceptions and doctrines.

So while I was complimented that the Acting Secretary of State would think it worthwhile to quote from me, I think that expression "soldiers of peace" is a pretty good one. I go back to it to say this: You are soldiers of peace, but you must be soldiers of peace for all men. As long as any man, any significant sector of our world cannot enjoy the blessings of peace with justice, then indeed there is no peace anywhere.

That is the reason that again I express my feelings about the terrific importance of this kind of operation. I extend to each of the graduates my congratulations on your expanded capacity and opportunities for service, and my best wishes for good luck to each of you.

INFORMAL REMARKS OF ACTING SECRETARY OF STATE DOUGLAS DILLON TO THE SENIOR GRADUATING CLASS, FOREIGN SERVICE IN-STITUTE, JUNE 12, 1959

Mr. President, Mr. Hoskins, ladies, and gentlemen, I would like to begin my brief remarks with a quotation from Secretary of State Dulles. Two years ago he said:

"Never before in history has a nation had the degree of worldwide responsibilities for the maintenance of peace that is now carried by the United States. Our responsibilities are mounting almost daily. Whether or not they can be adequately discharged depends not just upon the broad principles acclaimed by America's leaders. It depends directly upon the performance of those who in the Department of State and in 81 countries carry on the day-by-day task of waging peace and defending freedom."

I can think of no better way to express the importance to the United States of our Foreign Service. In helping them to do the very best job possible, nothing can be more important than the training effort to prepare them—junior officers, midcareer officers, and now senior officers—in every way for their duties. In the short span of 2 years since Secretary Dulles made this statement our responsibilities, the responsibilities of the U.S. Foreign Service, have increased further. We have opened a number of new missions, particularly in Africa, and our responsibilities have broadened.

Our responsibilities are also broader in the number of subjects we have to deal with. Economic and psychological functions have grown greater, in a way that makes clear that they are an integral part of our foreign policy. We also have had to become in a way, specialists in science, in nuclear test suspensions, and the problems of outer space. All of these responsibilities indicate how very important are the training and the duties of the Foreign Service. That is why we feel it is so important that this Institute flourish and grow.

We are witnessing a real landmark in the graduation today of the first class of the senior officer course. There are a total of 19 members: 12 from the Department of State and 7 from other agencies of the Government interested in foreign affairs and foreign policy. This is as it should be. It emphasizes the coordination which is vitally necessary between the many departments

and agencies of the Government working in Pennsylvania Chapter, National Associa-

I find the curriculum to be particularly interesting. Some of the five segments are totally new and have not been included in any of the courses being given in the war colleges. One of them particularly struck me. It is devoted to contemporary American society. Certainly, a primary function of our representatives abroad is to represent America as it really is and to interpret it to other peoples. Through this course—which takes a good look at how our society is developing and examines our problems here at home—the members of the class should be better prepared to carry out their duties abroad.

Mr. President, we are happy and pleased that you have honored us today by coming to the graduation of this first class. You have always been a great supporter of the Foreign Service, and we appreciate it. I remember that once you described the members of the Foreign Service as "soldiers of peace," as "officers of the great army that has as its first business the developing and sustaining of a peace with justice and honor." We appreciate this expression of faith in our Service and I know that the Service will do everything it can to live up to your faith and justify it. In pursuit of this goal, the role of the Foreign Service Institute in training our officers to carry on their duties is vitally important.

Today, we are faced with a threat by the Soviet Union that is ideological, economic, and political. The particular area of contest is the economically underdeveloped sector of the world. Through psychological warfare, economic warfare, including trade and aid, the Soviets are carrying on a tremendous campaign. It is significant, in this connection, that we have sitting today on our platform, Ambassador Bunker, just back from India, who has just given us a very interesting report on the depth and breadth of the Soviet effort in India, which is probably the chief target of the Soviets at the moment

That leads me to another point which I feel very strongly about: today, particularly in the underdeveloped areas, there is no longer a sharp difference, indeed no longer any difference at all, between economics and politics. There is no political problem I know of that doesn't have some economic connotations. And, by the same token, we find that any problem that we seek to decide by economic means, immediately has national security or political overtones. Both aspects of foreign policy are intertwined.

Therefore, there is great satisfaction to me in the amount of emphasis the Foreign Service Institute is giving to economics, both in courses here and in sending officers to universities where at least half of them are taking classes in advanced economics. For every ambassador really has to know economics if he is going to do a whole, rounded job.

I certainly hope the Congress will provide, over the years, steady and continuing support to this Institute. I cannot think of anything that is more important to our Service in fitting our officers to do a better job abroad.

You members of the graduating senior class have had the privilege of studying here for a year. You have, during that time, had the chance to range broadly over the problems of our foreign policy. You have had your opportunity to stimulate your thinking and to develop a grasp of the overall problems with which the United States is concerned. It has been a high privilege. I hope that you will use this experience well. I wish each and every one of you the very best of luck in your future assignments.

Pennsylvania Chapter, National Association of Postmasters, Honors James J. Law, of Wilkes-Barre, at Its 25th Anniversary Convention Held at Wilkes-Barre

EXTENSION OF REMARKS

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following news article from the Wilkes-Barre Record of Friday, June 12, 1959, which reports the testimonial dinner held in honor of James J. Law, former postmaster of Wilkes-Barre, by the Pennsylvania chapter of the National Association of Postmasters at its 25th anniversary convention held last weekend in Wilkes-Barre:

JAMES J. LAW IS HONORED AT POSTMASTERS DINNER

Regional friends of James J. Law joined with members of the postal service in honoring the former postmaster of Wilkes-Barre at a testimonial dinner last night at Mayfair Supper Club.

Dinner was one of the highlights of the 25th anniversary convention of Pennsylvania chapter, National Association of Postmasters, in session in Hotel Sterling, and was in recognition of Law's efforts in organizing the State chapter and his service as its first president. Twelve other past presidents of the chapter in attendance also were honored at the affair.

About 600 persons attended, among them the honored guest's wife and children, James, Malcolm, and Joan Law Conway; his brothers, Dr. C. C. Law, Harrisburg, Thomas Law, Collingswood, N.J., and sisters, Mrs. Anna Myers, and Helen Law, East Orange, N.J. Also among the guests was Mrs. Edward J. Quinn, whose late husband preceded Postmaster William W. Davis in the Wilkes-Barre Post Office.

Postmaster Davis in introducing the toastmaster, held it was especially fitting to observe the 25th anniversary of the chapter in Wilkes-Barre, the home of one of its organizers and first president. He reported the chapter has grown to close to 2,300 members and is the largest in the Nation.

Chief Justice of the Pennsylvania Supreme Court and a member justice joined with national officers of the association, State officers, Post Office Department executives and local friends in testifying to the services of the honored guest.

Chief Justice Charles Alvin Jones described Law as a "high-minded man, courteous, gentle, and a friend whose loyalty I greatly respect and admire." In his remarks the chief justice also referred to Justice Benjamin R. Jones as a wonderful colleague, able man, and thorough gentleman.

Justice Benjamin R. Jones called Law a fine citizen of our community, respected and admired by all our people. He added the testimonial was a well-deserved tribute.

Judge J. Harold Flannery, who recalled his entrance into the political arena was at the instance of the honored guest, reported his pleasure at the opportunity to testify to the abiding respect, esteem and fond affection he holds for Law.

Robert W. Baggs, Beaver Falls, State president, declared that the testimonial could

not honor Law and the other past presidents who built the chapter into the largest and greatest in the country; "Your presence

honors us," he held.

Charles E. Puskar, executive secretary-treasurer of the national association, in his tribute to Law, presented him a copy of the original application for a charter for the State chapter, containing 10 signatures headed by Law's. He said the chapter and the association today represent the end product of the ideas and ideals of the founders and said of Law: "He was possessed of a staunch Americanism, devotion to duty and to the great service of which we are all field managers a sense of loyalty and devotion to the rights and dignity of the American postmaster as an individual and as a public servant."

Others who spoke in recognition of Law's loyalty, friendship and leadership were Charles Schloss, Erie, past president; Harry Shreiner, Columbia, State secretary and past president; and J. Griffith Boardman, Phila-

delphia.

In his acknowledgment of tribute, Former Postmaster Law disclaimed credit for the growth and success of the chapter, claiming it was due to the efforts of all who have served the association. "Thank you, and God bless you for making this night one that I will always cherish," he said.

Col. LeRoy V. Greene, regional operations director of the Philadelphia region, encompassing Pennsylvania, New Jersey, and Dela-

ware, was principal speaker. He spoke of the togetherness of the occasion, in which local friends and family of the guest of honor joined members of the postal service in

paying tribute.

"We are today engaged in a great revolution, and all of us who are engaged in this service with the fabulous mission of delivering one or more letters every day to every citizen in these United States 6 days a week, are going to do an even better job, a more perfect job," Greene said.

"To do that, in Pennsylvania, in the next 18 months, we will build 250 brand new post offices, ranging in cost from \$30,000 to \$6

million," he reported.

"The decision on which communities will get new buildings will be wholly based on need," he continued. "For 20 years our physical establishment has been sadly neglected and it must be restored at once to cope with the continuing increase in mail yolume."

He explained postal business has increased 20 percent in the last 5 years and said "We are going to make post offices completely mechanical, modernized, electronic, ready to cope with the additional 20 percent we ex-

pected in the 5 years to come."

Past presidents introduced were: Charles H. Schloss, Erie; James H. Rattigan, Pottsville; Daniel E. Walter, Lebanon; Joseph L. Kelly, Narberth; Harry P. Shreiner, Columbia; Joseph Regis, Rimersburg; James C. Smith, Pittsburgh; Scott E. Rhinedollar, Everett; Wilbur G. Warner, Lehighton; Helen Mack, Lafayette Hills; Edgar S. Husband, Jr., Landsdowne; James L. O'Toole, Sharon.

Rulison Evans was toastmaster. Rev. Edgar F. Singer offered invocation and Rev. John J. Jackson pronounced benediction. Humorist was Attorney Joseph L. O'Donnell. Decorations were in red, white, and blue.

Highlight of today's convention program will be the dedication of Station A of Wilkes-Barre Post Office, West Market Street, scheduled for 1 p.m.

Speaker will be Edward J. Bonin, assistant to the regional operations director and former congressman from Luzerne County. Others on the dedication program are Albert M. Bossard, president of Wyoming National Bank, lessor of the building; Post-

master William W. Davis, and Russell E. Gardner, president of Greater Wilkes-Barre Chamber of Commerce.

This morning's business session in Hotel Sterling will feature talks by officers of the national association, Hobart Wehking, national vice president, and Charles Puskar, executive secretary-treasurer. Principal address will be given by Leo Knoll, Office of General Counsel, Post Office Department. Others scheduled to speak are N. S. Miller, regional personnel manager, and N. L. Hummel, postal installations manager.

Officers' reports will be submitted. Rev. Irvin S. Wise, pastor of Dr. Edwards Memorial Congregational Church, Edwards-

viile, will offer invocation.

Today's convention program will conclude with a jamboree and dance starting at 8

p.m. in Hotel Redington.

Officers will be elected and installed Saturday morning. Closing dinner will be held Saturday night at 7 in Hotel Sterling. Congressman Daniel J. Floop will be toastmaster.

At the initial business session yesterday morning Tom A. Evans, Wilkes-Barre treasurer and tax collector spoke for Mayor Luther M. Kniffen in extending a welcome to the delegates. Russell E. Gardner also addressed the postmasters.

Rev. Dr. Jule Ayers, pastor of First Presbyterian Church, described Wyoming Valley, its history, present conditions and outlook for the future, and stated its residents have problems but also have the will to de-

feat odds of any size.

Others who spoke were LeRoy V. Greene, regional operations director, who was the principal speaker at last night's dinner; Postmaster Davis, James W. Daubert, Allentown; Arthur Parsons, regional real estate manager; W. D. Sullivan, regional controller; Harry P. Shreiner, Columbia, secretary-treasurer; William Reider, Shickshinny, and Samuel Braybrock, White Haven. Margaret Heiney, Jeddo, responded to the welcomes.

Delegates and their wives enjoyed a free afternoon yesterday following a showing of Post Office Department films. Some toured Stegmaier Brewing Co. and others golfed at

Wyoming Valley Country Club.

## Protection for Union Members

EXTENSION OF REMARKS

## HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "Protection for Union Members," from the Rockford, Ill., Register-Republic of June 4.1959:

PROTECTION FOR UNION MEMBERS

President Eisenhower threw his support Wednesday behind legislation to help protect working people against racketeers, and he made the valid point that such action should not be regarded as a punitive labor law. He said at his press conference that Congress should not adjourn this year without passing a labor-reform bill.

Mr. Eisenhower has, in recent months, called for laws to correct the abuses pointed up by the McClelland racket investigating committee and to outlaw blackmall picketing and secondary boycotts. Wednesday, the President spoke highly of a bill of rights

provision, originally written into the Senate bill by Senator McClellan, but watered down before final passage.

The President's strong backing of guarantees for rank-and-file union members will bolster the efforts of Chairman Graham Barden, of the House Labor Committee, whose bill of rights was the basis for the McClellan amendment. Barden submitted his version last February; it provides freedom of speech without penalty for union members, freedom of assembly, protection of an individual member's right to sue, the right to inspect membership lists, equal protection under union rules, and safeguards against improper disciplinary action.

President Elsenhower correctly regards this provision as a forward step for labor and not a punitive measure. He was highly critical of the theory that a constant state of warfare inevitably exists between labor and management; this, he says, dates back to the communistic teachings of Karl Marx.

Labor bosses have been trying to brand the Barden and McClellan guarantees for the rank and file as antilabor. These provisions are nothing of the sort. They do not put labor under controls of a special nature but merely get down to the basic structure of union membership. As the President said, the workingman's rights within his union should be protected, and organized labor should be operated in a democratic manner.

## Conservation: Protecting Historic Areas

EXTENSION OF REMARKS

# HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. McDOWELL. Mr. Speaker, interest in the preservation of historic buildings and sites is growing rapidly in the United States, according to Richard H. Howland, president of the congressionally chartered National Trust for Historic Preservation. In an article in the New York Times, June 14, 1959, Mr. Howland says:

Local laws prevent serious changes to the exteriorrs of buildings within the designated areas, just as certain streets, neighborhoods, and even entire villages are saved in France by being classed as protected zones. The benefits accrue not only to the owners and tenants, but to local real estate values and to the tax rate.

Tourists coming to see these historic or architecturally unique districts leave behind plenty of cash for local merchants, too. Visitors attracted by historic sites or neighborhoods can bring to an enterprising community more dollars per annum than many a more usual industry or business enterprise might offer.

Legislation sponsored by Senator Hubert H. Humphrey, of Minnesota; Senator James E. Murray, of Montana; Senator Joseph S. Clark, Jr., of Pennsylvania; the gentleman from Maryland [Mr. Foley], the gentleman from New Hampshire [Mr. Merrow], the gentleman from Wisconsin [Mr. Reuss], the gentleman from Mississippi [Mr. Smith], the gentleman from New Jersey [Mr. Thompson], the gentleman from New York [Mr. Wainwright], the gentleman from New Jersey [Mr. Wid-

NALL], the gentleman from Texas [Mr. WRIGHT], and myself would go a long way toward preserving some of the Nation's historic buildings and sites that, now or later, may be threatened with destruction.

Had such a system of safeguards existed in the past—

Said the Washington, D.C., Evening Star recently in a fine editorial regarding a number of these bills—June 8, 1959—

many American now gone might well have been saved for admiration and veneration today. This is a very meritorious cause.

At a session of the sixth annual Winterthur Seminar held at the great Henry Francis du Pont Winterthur Museum, Winterthur, Del., this legislation was brought to the attention of the participants. A resolution was adopted tendering the support of the participants of the seminar for these preservation bills. Although the participants were voting as individuals and not as representatives of their institutions, their interest in these historic preservation measures stemmed from their activities in such places as museums, historical societies, historic houses, and universities.

William J. Murtagh, assistant to the president of the National Trust for Historic Preservation, told the seminar this legislation was a cheering step in the right direction.

I include here an article from the New York Times, an editorial from the Washington, D.C., Evening Star, a copy of the attendance roster of the sixth annual Winterthur Seminar, and the text of my H.R. 7215:

[From the New York Times, June 14, 1959]
Conservation: Protection of Historic
Areas

(Bý Richard H. Howland, president, National Trust for Historic Preservation)

Washington.—The summer touring season has begun. Hundreds of thousands of families are planning itineraries, many of which include visits to historic structures or places of architectural significance. It is predicted that this year's attendance will greatly surpass that of last year for there has been a steadily mounting interest in historic preservation. Dozens of newlyopened and recently restored historic sites await this year's visitors.

Among the houses recently opened to the public are Tryon Palace, in New Bern, N.C., showing a courtly way of life in an 18th century Governor's mansion. A simpler mode of living, on the other hand, is seen in Galveston, Tex., where the Williams-Tucker House illustrates phases of the 1830's.

Farmington, close to Louisville, Ky., is a Jeffersonian structure that opened in April. The Hempsted House in New London, Conn., is a 17th century building with unique architectural features. The Wayside Inn in South Sudbury, Mass., scene of Longfellow's "Tales," has been restored by the National Trust after the fire of 1955. Like the phoenix rising from its ashes, the venerable inn is about to enter its second summer of renewed life.

#### LEGISLATION IS DESIRABLE

Increased visits to historic house museums, however, represent only one phase of a significant development of interest in the past. Notable is a healthy, vigorous growth of awareness, on the part of entire communities, that legislation to preserve whole neighborhoods is desirable. Beacon Hill in Boston, the Vieux Carré in New Orleans, the Battery area of Charleston, S.C., and a score of districts in other cities, western as well as Atlantic seaboard, are protected as civic assets.

Local laws prevent serious changes to the exteriors of buildings within the designated areas, just as certain streets, neighborhoods, and even entire villages are saved in France by being classed as protected zones. The benefits accrue not only to the owners and tenants, but to local real estate values and to the tax rate.

Tourists coming to see these historic or architecturally unique districts leave behind plenty of cash for local merchants, too. Visitors attracted by historic sites or neighborhoods can bring to an enterprising community more dollars per annum than many a more usual industry or business enterprise might offer.

In planning the future of our older American cities, today's young students of city planning in such universities as Yale and the University of California are now being taught that significant historic sites and monuments merit protection, and indeed can serve as focal points in new traffic plans and civic developments.

#### STUDY OF SITES

The Preservation Society of Newport County in Rhode Island has just been awarded a \$13,000 grant for a study of Newport's historic sites and the modern growth of the city.

Providence, R.I., and Portsmouth, N.H., are planning urban renewal programs, with Federal financial aid, that recognize the value of restoring once-derelict mansions for today's middle-income use, in happy juxtaposition with modern dwelling units. Such rehabilitation of urban slums is bringing back new life to our cities.

There are encouraging indications that substandard utopias for so many, or "suburbs, which too often have turned out to be substandard utopias for so many, or "subtopias:" Urban blight can be checked, from time to time, by intelligent use of modern preservation solutions.

A number of groups are finding such urban preservation projects profitable, both literally and figuratively. Georgetown citizens, here in Washington, formed a corporation to prevent a group of three fine brick buildings from being demolished. By the sale of common and preferred stock, enough money was raised to buy the property, a mortgage provided funds for sound rehabilitation, and the property was rented to approved shops and one of the city's leading restaurants. The stockholders saw a profit on the books last December, and, next December, Historic Georgetown, Inc., is expected to pay dividends on its stock.

In Baltimore the spread of urban decay has been arrested in the last remaining downtown residential section by another profit group. Bolton Hill, Inc., is a neighborhood organization that issues stock to finance a program of buying debilitated properties. These are repaired, restored and then rented or sold at a profit, with the proceeds used to add to the group's holdings in a neighborhood that has now been stabilized.

Financial aid sometimes is made available for organizations that can demonstrate an effective program of support and accomplishment for sound preservation projects. Foundations rarely give to groups that are starting a project, but funds are becoming increasingly available for missions that already have enlisted community support.

#### MATCHING FUNDS

Historic preservation in the opinion of some well-known foundations, is a worthwhile undertaking, meriting grants or match-

ing funds. One midwestern, philanthropic group has underwritten the expenses of several regional seminars on preservation topics which have been held under the joint auspices of the National Trust and local groups in St. Louis and Lexington, Ky.

Given for the benefit of curators, directors, administrators, and trustees of historic site museums and houses, these educational sessions bring in visiting experts to share their knowledge with local institutions. Other similar seminars have been held or are planned in various parts of the country.

The most recent was last weekend, when the New Jersey Historical Society, together with the Cape May County Historical and Genealogical Society, and the National Trust discussed historic preservation, especially as related to south Jersey.

A private benefactor has just given \$2 million to the city of San Francisco as matching funds, toward the restoration of the Palace of Fine Arts, to serve as a concert house and ballet theater. Many donors are looking favorably on restoration projects that can rehabilitate a building to serve a useful civic purpose. Every structure that merits preservation need not be a museum; there are scores of appropriate adaptive uses that may be made of many of our historic and architecturally significant structures.

Historic preservation flourishes on a countrywide basis. Tombstone, Ariz., the town too tough to die, has a flourishing preservation program that reflects the pioneer days of silver mining. The privately organized group concerned is now about to receive increased support from the State.

#### HISTORICAL HERITAGE

A new private association was formed last month to encourage the preservation of California's architectural and historical heritage, which includes not only the missions but very significant examples of later 19th and 20th century construction.

The true preservationist knows no chronological or geographical limitations. Mere antiquity is only one criterion; historical association, architectural importance, and cultural value are more valid criteria. All are among the reasons for so many examples of our rich and colorful past being intelligently preserved today, by both governmental and private groups, for the enrichment of the visitors of today and especially of the future.

[From the Washington, D.C., Evening Star, June 8, 1959]

## TO PRESERVE AMERICANA

Legislation sponsored by Senator Humphrey, of Minnesota, and Representative Thompson, of New Jersey, would go a long way toward preserving some of the Nation's historic buildings and sites that, now or later, may be threatened with destruction. Had such a system of safeguards existed in the past, many Americana now gone might well have been saved for admiration and veneration today.

Under bills proposed by Senator Hum-PHREY and Representative Thompson, the Secretary of the Interior would be authorized to protect "any site, area, building, or other object of historical significance" which is in the path of any Federal construction project-or one financed in part by Federal funds. The Secretary would be empowered to call public hearings to determine public sentiment in such cases and to consult with other governmental authorities, the National Trust for Historic Preservation and similar groups. Furthermore, the leg-islation would provide for a continuing "of ways to promote and encourage the restoration and preservation of historical sites and buildings and antiquities by governments, private organizations, and individuals."

This is a very meritorious cause. course, no action should be authorized that would prevent the construction of vitally essential public works if no feasible alternative can be found to sacrificing a place of historic interest. Usually, however, alternatives can be worked out if there is a sincere desire to do so. And the Humphrey-Thompson proposal would apply the pressure necessary to promote the study of

#### WINTERTHUR STAFF

Wesley A. Adams, operations administrator. Miss Helen R. Belknap, librarian, museum library.

Miss M. Elinor Betts, librarian, Joseph Downs Manuscript Library; editorial assistant.

Mrs. John Biggs III, research assistant, Index of American Cultures.

Miss Ethel C. Brown, assistant to museum librarian.

George B. Colman, custodian of the collection

Mrs. Dean A. Fales, Jr., special research. Dean A. Fales, Jr., secretary of the museum.

E. McClung Fleming, dean of education program.

Miss Dorothy W. Greer, assistant to the

Carles Hummel, assistant curator; assistant director, Index of American Cultures.

Sterling Lanier, research assistant, Index of American Cultures.

Charles F. Montgomery, director.

Mrs. Charles F. Montgomery, instructor in history of art.

Milo M. Naeve, assistant curator.

Mrs. John Pearce, cataloger.

Albert S. Roe, keeper of paintings and prints.

Alfred Chapin Rogers, survey of museum records.

Gordon K. Saltar, technical research. Charles Coleman Sellers, librarian, Waldron Phoenix Belknap, Jr., Research Library of American Painting.

Mrs. Robert R. Snively, secretary and assistant to Mr. Montgomery.

Frank H. Sommer, keeper of folk art collection.

John A. H. Sweeney, associate curator. Miss Elizabeth Young, research assistant,

Index of American Cultures. WINTERTHUR FELLOWS IN STUDY

Miss Ruth Y. Cox, class of 1960, William and Mary College.

Miss Catha J. Grace, class of 1960, Smith College.

Frederick B. Hanson, class of 1959, Syra-

cuse University. Henry H. Hawley, class of 1900, Stanford;

Robert E. Hendrick, class of 1960, Yale

University.

Miss Ruth Matzkin, class of 1959, University of Pennsylvania.

John C. Milley, class of 1960, Boston University.

John N. Pearce, class of 1959, Yale University.

Robert Raley, class of 1959, Notre Dame; University of Pennsylvania.

Frank J. Schmidt, class of 1959, Aquinas

Stuart B. Smith, class of 1960, Carroll College.

#### H.R. 7215

A bill to amend the Historic Sites Act of August 21, 1935, to provide a method for preserving sites, areas, buildings, objects. and antiquities of national, regional, or local historical significance which are threatened with destruction by federally financed programs, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the Act entitled "An Act to provide for the preservation of historic American sites, buildings, objects, and antiquities of national significance, and for other purposes," approved August 21, 1935 (16 U.S.C. 461), is amended to read as follows:

"That it is hereby declared that it is a national policy to preserve for public use historic sites, areas (including sections of cities), buildings, objects, and antiquities of national, regional, or local significance for the inspiration and benefit of the people of the United States."

SEC. 2. Section 2 of such Act (16 U.S.C. 462) is amended by redesignating paragraph (k) as paragraph (m) and by adding after paragraph (j) the following new paragraphs:

"(k) Carry out (insofar as practicable and appropriate) the same duties and functions with respect to historic areas (including sections of cities) as those which are specified in the preceding paragraphs of this section with respect to historic sites, buildings, and objects.

"(1) Protect and preserve, in the manner provided in section 8 and through the performance of such other functions of the t described in this section as the Secretary may deem appropriate, historic sites, areas (including sections of cities), buildings, and objects of national, regional, or local significance."

"(m) As used in this section the term 'objects', and 'antiquities' includes objects and antiquities of art."

SEC. 3. Such Act is further amended by adding at the end thereof the following new section:

"SEC. 8. (a) Whenever the Secretary ceives a petition from any State or political subdivision thereof, or from the American Institute of Architects, the National Trust for Historic Preservation, the Commission of Fine Arts, the National Wildlife Federation, the American Council of Learned Societies, the American Association for State and Local History, the Natural Resources Council, the Wildlife Management Institute, the National Parks Association, the American Institute of Planners, the American Automobile Association, the Society of Architectural Historians, the American Planning and Civic Associa-tion, the General Federation of Women's Clubs, the Garden Club of America, the American Society of Landscape Architects, the Urban Land Institute, the American Federation of Arts, the National Academy of Design, the National Council on Arts and Government, the National Art Education Association, the National Council of the Arts in Education, the College Art Association of America, the Artists Equity Association, the American Association of Museums, the Joint Committee on the National Capital, the National Capital Arts Council, or any other organization recognized by the Secretary for purposes of this section as being concerned with historic preservation, alleging that a Federal project or program or a State or local project or program financed in whole or in part with Federal funds will seriously damage or destroy a historical site, area (in-

<sup>&</sup>lt;sup>2</sup> Graduate of the Winterthur Program in Early American Culture.

cluding a section of a city), building, or object of national, regional, or local significance, or upon his own motion, the Secretary shall conduct an investigation, which shall include (but not be limited to) holding public hearings or affording the opportunity for such hearings, for the purpose of determining whether or not such site, area, building, or object is of national, regional, or local historical significance.

(b) Whenever the Secretary determines under subsection (a) that a site, area, building, or object is of national, regional, or local historical significance, he shall forthwith determine whether or not the proposed project or program will seriously damage or

destroy it.

"(c) Whenever the Secretary determines under this section that a site, area, building, or object of national, regional, or local historical significance will be seriously damaged or destroyed by a Federal project or program (actual or proposed) or by a State or local project or program which is or will be financed in whole or in part with Federal funds, he shall submit such determination to the head of the Federal department, agency, or instrumentality under the jurisdiction of which the project or program is to be carried out; and after the receipt of such determination the head of such department, agency, or instrumentality shall not commence or further proceed with such project or program, or expend or approve the expenditure of any Federal funds (or further Federal funds) for such project or program, unless and until such project or program has been modified and the plans, specifications, and contracts thereunder amended so as to provide to the satisfaction of the Secretary for the preservation of the historic site, area building, or object involved. Such modifica-tion or amendment may be made notwithstanding any provision of law limiting the right of a department, agency, or instrumentality to modify a project or program or amend plans, specifications, or contracts, but shall otherwise be subject to all the provisions of the law under which the project or program is being or will be carried out.

SEC. 4. The Secretary of the Interior, in consultation with the organizations named in subsection (a) of section 8 (as added by this Act) of the Act of August 21, 1935, and other organizations recognized by the Secretary as being concerned with historic preservation, shall make a continuing study of the tax advantages, technical and financial assistance, and other incentives which could be provided (by legislation and otherwise) to promote and encourage the restoration and preservation of sites, areas, buildings, objects and antiquities (including objects and antiquities of art), in the United States of national, regional, or local historical significance by the Federal Government, and by States, palitical subdivisions, private organizations, and individuals, giving appropriate consideration to the methods which have been used to encourage such restoration and preservation in other countries and in areas of the United States where intensive programs for historic preservation have been successfully carried out.

On Economy's Side

EXTENSION OF REMARKS

# HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 16, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Rockford, Ill., Register-Republic, of June 11, 1959, which is entitled "On Economy's Side";

ON ECONOMY'S SIDE

President Eisenhower has correctly called his campaign for economy in Government a fight to prevent rising prices from impoverishing every man, woman, and child in the Nation—especially workers who are earning their pensions and retired people who must live on pensions.

The President made his latest appeal for a balanced budget and an economically sound Nation at a dinner honoring Republican Members of Congress, who although outnumbered are battling at every opportunity for a dollar worth 100 cents.

Mr. Elsenhower's remarks, however, were addressed to the public at large, which is becoming convinced that it will never see a reduction in taxes until the public demand upon Congress for cuts in Government spending is heeded.

The Nation has a choice between an economy which will expand through sound fiscal policies and an economy which will stagger under inflation and high taxes. When the dollar's purchasing power is sapped by inflation and a burdensome amount of taxes has to be paid, there is not enough left to provide for the expansion of the free-enterprise system.

The President pointed out that by having the courage to stand up and be counted on the side of responsible, sensible fiscal policy in Government, Republicans in Congress are pointing to a major difference between the policies of the GOP and Democrats. The American taxpayer will recognize the worthiness of Republican candidates for office who are carrying out the fight for a sound dollar.

Foreign Policy Objectives

EXTENSION OF REMARKS

## HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mrs. GREEN of Oregon. Mr. Speaker, as the House turns to the consideration of the mutual security program, I note with deep pleasure that the distinguished members of the Foreign Affairs Committee have undertaken what amounts to a basic rethinking of our foreign policy objectives and techniques. Such a new direction is especially welcome in this period of executive abdication of leadership, and I believe the committee deserves the support and gratitude of this House and of every American.

At a time when such an important and far-reaching bill is on the floor, it seems appropriate to me that there should have crossed my desk a letter from one of my constituents, dealing with this very question. Like every Member of the Congress. I have received a number of letters in the foreign policy field. But no letter, has summed up as concisely, as accurately, and as compellingly, the need for continuing reexamination of our foreign policy as has this one letter from Mrs. Tolbert McCarroll, of Portland. Oreg. I might not necessarily agree with every detail of Mrs. McCarroll's recommendations. But her insight into fundamentals deserves the attention of every

interested person. Under unanimous consent I include this letter to be printed in full herewith:

PORTLAND, OREG.

Hon. EDITH GREEN, House of Representatives, Washington, D.C.

DEAR MRS. GREEN: I am writing this letter to all members of the Oregon congressional delegation in particular response to two news articles concerning American-Chinese relations appearing in the Sunday Oregonian of May 31, 1959. The main article indicated you have been discussing the need for a change in our foreign policy in regard to the Chinese Peoples Republic and Chiang Kai-shek's government on Formosa. The other article reported from admittedly limited information on current economic conditions on the mainland of China. While still a student at the University of Oregon I heard a speech made by Senator Morse in which he welcomed reasoned discourse on any field of government, and therefore I feel encouraged to write an expression of my thoughts which have formulated over the past few years about China and our foreign policy in general.

I believe a thorough re-examination of our foreign policy should be made and I suggest the following for your consideration:

Out of the chaos of World War II we emerged as one of the most powerful countries in the world and the majority of our citizens agreed that we should not and in fact could not remain aloof from world affairs. We found ourselves in a position of leadership. We helped form the United Nations in order to secure peace, provide a discussion ground for the solving of world problems, and to provide a focus point for attack upon such ills as disease and economic underdevelopment, and to encourage cultural exchanges between divergent peoples. Gradually the differences between what is now known as the East and West widened and rigidified. I believe it was approximately at the time of the Truman doctrine that we ceased striving for a new foreign policy. Since that time our policy has fallen more and more into the traditional mold of European power politics with its balancing of military and economic advantages which has failed generation after generation since the time of Metternich. We have emphasized vigorously our containment policy and its additional negative correlative of fighting communism wherever it appears, and also support either willingly, reluctantly, or incidentally 19th century European colo-nial and economic imperialism wherever it appears. Our economic assistance programs which were begun on the premise that the welfare of the individual was of paramount importance in society and that in order for the people of the world to be free to choose democratic principles and to reach their fullest development, they must have the economic necessities of life, have also slipped into the mold of power politics. Instead of deciding to give or not give aid on the basis of the above objectives, we decide upon the basis of alinement within the power camps, strategic location, the possibility of buying support for our side, etc. The number of our military bases around the world is becoming legendary and certainly our military aid now far outwelghs our economic aid in

Conversely, the Russians seem to have somewhat reversed the process. They started with military aggression and now depend primarily upon idealistic appeals. Through propaganda both negative in supplying motives and theories to explain our actions and positive in offering the collective system as the best means for the organization of society and for efficient and rapid progress toward industrialization, they spread their fields of influence. They also have expand-

ing economic aid programs which are offered without so many apparent strings and to groups which we do not accept.

Our foreign policy should stand on our basic philosophy and proceed from it. We cannot afford to become so involved in the shifts in power alinement so as to obscure our long-range objectives of furthering a world in which there is less disease, the problem of the distribution of wealth has been better solved, in which individuals are free and able to contribute to an improving world civilization, and in which the mind is as free to roam as the body.

It is incumbent upon us to realize now that Africa will be free; that the Near East will reject economic imperialism either Western or Russian and speak for itself politically; that recently subjugated or still subject peoples will achieve or continue to strive for self-realization. We have in the past encouraged people to strive for freedom, self-expression, and progress. However, in our fear that presently underdeveloped nations being particularly susceptible to communistic propaganda will be lost permanently from the West, we join the paternalists and the exploiters and demonstrate by our actions the very opposite of our professed beliefs. Thus making it necessary for these people to be at the very least neutral to us if not forcing them into the opposite camp.

Our professed principles are inimical to Russian communism, but I believe if we stood firmly on them we would lessen East-West tensions rather than increase them. Instead of playing power politics with the Russians and aiming missiles from outside her borders, we would join and oppose her on basic philosophical lines—a policy which would more nearly meet her challenge to us, and one which could by experience, discussion, and time cause modifications in our systems and possibly make peaceful coexistence a reality.

With these ideas in mind I should like to discuss with you Red China. We are dealing with a large country with a large population which has since the end of World War II made considerable economic progress. Unquestionably it is a world power. Its position as a world power cannot be altered by our recognition or lack of recognition—our approval or disapproval.

Our support of a useless past dictator who finds little other support does much to establish that we believe in self-determination when it is used to model a system similar to our own. It does not alter the fact that the Chinese people have rejected Chiang Kal-shek and are working out their future along other lines. It does effectively block the participation of the Chinese people in the United Nations. What have we achieved by this? We have weakened the United Nations by having a major power outside of this organization, where, by lipservice at least, we indicate that all major world problems are to be solved. We have formed a

Security Council which does not represent all factions necessary to achieve security. We summon a General Assembly with nothing but token representation of millions of people. The United Nations should not be a club with eligibility dependent upon our approval. We can hardly defend our puppet government while attacking the Russian satellite system.

It does not follow of necessity that if the Chinese Peoples Republic were a member of the United Nations Security Council that she would always vote in opposition to us, but even were she to vote against us or exercise her veto as often as the Russians, surely we are no worse off with two vetoes than one. And with easy communication possible between us it is conceivable she would vote with us on occasion. Even the Russians voted with us on Suez. But even if this did not come about, there is still the justification of justice.

I should like to take up one more related subject before closing this letter. We are spending millions for the warehousing of surplus food. Just in the last week it was reported that \$370,000 a day was being spent in the warehousing of corn alone. The newspapers report that the Chinese people are faced with appalling rations on food. They report regularly of famine and starvation in other parts of the world. Many of these areas such as China we are unable to trade with for security or other reasons. It seems we would make a great stride forward in demonstrating our belief in the essential brotherhood of man if we offered this food to these people. Let them come and take away what they can transport either with or without charge. In most cases it would not affect the price supports on agricultural products, and would be a deed heard round the world.

I should enjoy hearing your views on the above subjects should you have the time to answer my letter.

Sincerely,

Mrs. TOLBERT H. McCARROLL

# LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House

Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

#### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

# PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

# Appendix

## Proposed Commission on Metropolitan Problems

EXTENSION OF REMARKS OF

## HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. CLARK. Mr. President, one of the best statements in support of a bill to create a Federal Commission on Metropolitan Problems-S.1431-which I introduced earlier this year, has been made by the able and experienced junior Senator from New Jersey [Mr. WILLIAMS], in a recent speech before the New York chapter of the American Society for Public Administration.

I think it is particularly significant that the Senator gives his endorsement to this measure, because he comes from one of the most urban States in the Union and has been struggling with metropolitan problems both as an alert, aggressive Representative and as a Senator. I ask unanimous consent that that portion of the speech pertaining to this bill be printed in the Appendix of the RECORD.

I also ask unanimous consent that following the speech of the Senator from New Jersey, a copy of an editorial from the Bergen Evening Record, published at Hackensack, N.J., commenting on his remarks, be printed. The editorial is entitled "Things To Come as We Shape Them."

There being no objection, the speech and editorial were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR WILLIAMS OF NEW JERSEY You have given me an important topic here tonight.

S. 1431-which would establish a Federal Commission on Metropolitan Problems-is one of the most significant bills introduced this year, and I appreciate this opportunity to speak to a group which has such a keen interest in it.

#### DESCRIPTION OF S. 1431

Mr. Harvey was clear in his instructions. I am to discuss the bill introduced March 16, by Senator Joseph Clark, the distinguished Democrat of Pennsylvania. My first chore was to describe the provisions, and so here

The Commission on Metropolitan Problems would have 18 members.

The President of the Senate would appoint six Members, and the Speaker of the House would appoint six Representatives. The President of the United States would choose another six. These six appointees would include the heads of two Federal departments and two Governors from States having major urbanization problems (I hereby put in a nomination for New Jersey), and two mayors. and I leave that nomination up to my New York City friends in the audience.

The Commission would make a complete and full investigation into the Federal policies and programs affecting the Nation's metropolitan areas

In the works of the bill, the Commission

would try to determine-

"(1) the present and prospective needs of the Nation's metropolitan areas for public services, including but not limited to planning, highways, mass transit facilities, water resources, elimination of air and water pollution, health and welfare services, schools, recreation facilities, urban renewal and housing, ports, airports, and prevention of crime and delinquency;

"(2) capabalities of different levels of gov-

ernment to meet such needs;

"(3) the extent to which the Federal Government is assisting metropolitan areas in meeting such needs;

"(4) means for improved coordination of Federal, State, and local policies and programs that affect metropolitan areas;

"(5) such other matters as may be of assistance in solving the various problems of, and promoting the social and economic wellbeing of, the Nation's metropolitan areas."

The Commission would submit its report to the President and the Congress before

February 1, 1961.

I've been told by the Senate Committee on Government Operations that they hope to be ready within the next month or so to start hearings on Senator CLARK's bill. The committee is awaiting reports from heads of Federal administrative agencies before starting the hearings.

#### THE WALKING TOUR

Like many other legislators, I very much hope that the bill will be passed, and passed as soon as possible.

I think it will make possible what I would like to call a walking tour approach to our

metropolitan problems.

Let me explain what I mean by a "walking

A planner recently said that statistics don't help us at all when we try to understand urban blight. He suggested instead that citizens take a walk through the slums, through the so-called gray zones, through the new sections of cities which are already showing signs of decay. He was talking only about slums, but I think we need the same kind of approach when we talk about metropolitan problems.

The proposed Federal Commission would give the entire Nation the kind of tour I have

The Commission, and the experts it could hire, would have hearings in the key urban areas throughout the Nation. These hearings would focus attention on problems well understood by planners and political leaders, but understood only vaguely by the general

In other words, this Commission would help us take inventory.

For the first time, we would know, on a national basis, what our needs really are.

For the first time, we would know how Federal programs really are affecting our urban areas.

For the first time, we would know whether we're running neck and neck with the threat to the future of our cities or if we're far

On all sides we receive new evidence daily of the need for a true understanding of what is happening in our metropolitan areas.

our home communities, we complain about our tax bills, but we also say that we are not receiving the services we want.

We hear proposals for new giant agencies to govern areas which cross municipal, county, and State lines.

And above all, we hear the cry for more Federal aid, for our schools, for our airports, for our railroads, for our water supply, for almost every need which arises when millions of people move from established cities to new -

Now, I happen to believe that Federal aid can be a creative and well directed force in the life of our Nation.

But I also say this:

We must know more about how our Federal aid is being spent. All of you have heard stories about one Federal agency's duplicating the work of another-or undoing the work of another.

All here have heard reports that 13 million unsafe or unsanitary dwelling units are occupied by American families, and that most of these units are in metropolitan areas.

I think most persons in this room have wondered what will happen to our citles unless we can make our great new highways part of a city instead of a corridor through it.

When we turn to any major problem of our small towns and the cities they surround, we find that we have not yet taken an inventory of all our problems. We don't an inventory of all our problems. We don't know the total extent of the job which faces us.

American cities don't need a dole. They need a positive statement of urban program policy from Federal administrators. The proposed Commission, by unearthing and dramatizing the facts, will help us get the answers and political support we have needed for so long and have not had.

#### POPULATION BOOMS

Population experts are also giving us a

dismaying peek into their crystal ball.

A United Nations study said the world population may more than double by the year 2000.

One professor tells us that population jumps by about 4½ million persons a year. More than 50 percent of this increase is expected to take place in metropolitan areas, by the way.

One of President Eisenhower's advisers (Dr. Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers) played a few variations on this Maithusian theme at the action conference in Newark on May 4.

He quoted Census Bureau estimates to show that the population increase within the next 17 years will be between 40 and 68 million persons, and that about 4 million people will reach 18 years of age in 1975 alone. This would be nearly twice as many as reached their 18th birthday in 1958. And so it would seem that our metropolitan areas are going to be quite lively places in 1975-with demands for more schools, more homes, and more services for each of those

I quote all this to emphasize the fact that we can't sit back and hope the metropolitan problem will go away if we ignore it. It will become very much worse unless we take action as fast as possible, and it is my deep conviction that one of the best courses of initial action is to pass S. 1431.

#### STEVENSON QUOTE

We will have to do much more, of course, to save our cities and the suburbs which are now almost a working part of those cities.

I think that Adlai Stevenson—at that same action conference in Newark—described the task ahead in admirable and

inspiring terms.

His concluding statements shall be mine:
"There are people in the world today who say that tough public problems are best solved behind closed doors, by dictators or central committees. But in our land we dare not even reach for a goal of human improvement in disregard of human needs, human values, human judgments. The central tenet of statesmanship in a democracy is that unless the people understand it and participate in it, no long-term program can endure.

"So, as we put ourselves to the rebuilding of our cities, to the problems of their growth, we will look for leadership, a high quality of skill, in the managing of this task. But we will not buy the shibboleth that autocratic action is essential to achieve the desired result. We will not leave the

subject to an anointed few.

"The municipality of tomorrow must be renewed in the image of people's hopes and ambitions for a better life. The values to be re-created must have a sound political and economic pedestal, but they must flow from human needs.

"Thus will we build and rebuild our cities, and in so doing, renew and rekindle our faith in ourselves and in the limitless cre-

ativeness of freemen."

[From the Bergen Evening Record, June 3, 1959]

THINGS TO COME AS WE SHAPE THEM

What the Regional Plan Association is trying to tell us in the north Jersey suburbs in another of its provocative reports can be compressed into two words:

"Get ready."

The association's \$600,000 3-year study on population trends in the 22-county metropolitan area forecasts that within 15 years the population will increase 25 percent and that much of it will have to be absorbed by the older, handier, more heavily settled suburban areas. That, of course, means communities like Hackensack, Englewood, Garfield, Cliffside Park, Rutherford—in fact, any community having available what the Regional Plan Association accurately calls hand-me-down housing.

The trend is out of New York City. New York City will remain, the study said, the area's center of finance, commerce, and culture. But manufacturing and business are likely to move away from the city, and it will bring with it wherever it goes not only the structures of manufacturing and business but the people who work in them. Those people will seek homes near where they work. And as the younger native people move away from the crowded communities existing housing will be taken over by the new people from the city.

So what can we do about it?

Actually a great deal can be done. We have before us the Regional Plan Association projection. That's a help, because it tells us what to expect. Having digested it as dispassionately as possible, it might not be a bad idea to follow the suggestion of Senator Williams (Democrat, of New Jersey), who proposed a walking tour of any urban area under discussion for redevelopment. Find out what you have before you try to discuss what's to be done with it, Senator

WILLIAMS urged the New York chapter of the American Society for Public Administration. It is surprising and a little dismaying to discover how really little we know about the communities in which we live. That's the first step: get the facts. See them. Weigh

them. Get the feel of them.

After that comes the time for some reappraisal and then a plan for the future, a plan based on realities and implemented by sensible and practical zoning. Not one of the older communities is able at this precise moment to undertake an expensive job of urban renewal. Not all of them need it. But the day will come when they will, and this is the time to plan for it. Perhaps another examination should be made of the proposed Federal Commission on Metropolitan Problems which Senstor Williams mentioned. It could undertake an authoritative marshaling of fact.

The development portrayed by the Regional Plan Association will take place over a period of 15 years. As urban planning is reckoned, 15 years is little more than overnight. But there is yet time if we put it to good use. What the Regional Plan Association forecasts is not inexorable. It is not the voice of doom. It is the challenge of to-morrow.

FBI Director J. Edgar Hoover Receives American Citizen Award and Honorary Degree; Delivers Stirring Address

EXTENSION OF REMARKS

OF

## HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES
Wednesday, June 17, 1959

Mr. RANDOLPH. Mr. President, it was my privilege to have participated in the American Citizen Award banquet, June 16, 1959, at Charleston, W. Va. On this occasion the National Council, Junior Order of United American Mechanics, made its fourth biennial award to Hon. J. Edgar Hoover, Director of the Federal Bureau of Investigation.

Every 2 years, at its national convention, the Junior Order of United American Mechanics presents the organization's outstanding citation to a living American, of modest beginning, who has made a distinguished contribution to the American way of life. It is not a popularity contest; rather, it is the purpose of this splendid group "to provoke Americans everywhere into defining the qualities of citizenship." Recipients of the first three awards were the brilliant statesman, Bernard M. Baruch, in 1953, at Philadelphia; former President Harry S. Truman, in 1955, at San Francisco; and George Meany, president of the AFL-CIO, in 1957, at Knoxville, Tenn.

The selection of Director Hoover to be the recipient of the 1959 honor was indeed an appropriate one. Certainly he was a man who earned his education by diligent effort before receiving his master of laws degree at George Washington University. Indeed, as the courageous Director of the Federal Bureau of Investigation since 1924, Mr. Hoover truly has qualified for this award by meeting the criteria of having done much "to

provoke Americans everywhere into defining the qualities of citizenship."

As a Member of Congress, I wrote for the True Detective magazine an article entitled "The FBI Deserves Support," and I quote from the March 1940 edition an expression of my conviction that "unquestionably the ideals of Mr. Hoover are symbolic of law and order." Now, more than 19 years later, these ideals truly epitomize law and order.

There were approximately 1,200 persons present at Morris Harvey College in Charleston for the ceremonies, among them the Governor of West Virginia, the Honorable Cecil H. Underwood, and the mayors of the cities of Charleston and Dunbar, W. Va., the Honorable John T. Copenhaver and the Honorable Lawrence Barker. Also present was the Governor's 84-year-old father, Mr. Silas Underwood, of Tyler County, W. Va., who has held membership in the United American Mechanics organization for a half century.

Not only was Director Hoover given the American Citizen Award, but, also, he received the Morris Harvey College honorary doctor of laws degree from its dedicated president, Dr. Leonard Riggleman. This was the 18th institution of higher learning to so honor Mr. Hoover, who likewise was the recipient of a sculptured bust mounted on native West Virginia walnut. The bust of Mr. Hoover was by Charleston Architect Robert E. Martens, and was unveiled by Mayor Barker.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the speech delivered by the Honorable J. Edgar Hoover at Charleston, W. Va., June 16, 1959, in response to the awards made to him by the Junior Order of United American Mechanics, entitled "Citizenship: A Call to Duty."

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

CITIZENSHIP: A CALL TO DUTY

(Address by J. Edgar Hoover, Director, Federal Bureau of Investigation, at the Biennial Convention of Junior Order United American Mechanics, Morris Harvey College, Charleston, W. Va., June 16, 1959)

The American Citizenship Award I have received here today from the Junior Order of United American Mechanics and the honorary degree conferred upon me by Morris Harvey College fill me with humility, gratitude, and a deep sense of responsibility. Humility, because I am fully aware of the extent to which the achievements of my associates in the FBI have contributed to my presence here. Gratitude, because I have been chosen to receive the signal honors as well as this unique sculpture. A deep sense of responsibility, because of the need that exists to alert everyone to the dangers which threaten to destroy everything American citizenship represents.

Our Nation is faced today with a dual menace—the Communist conspiracy attacking from within and from abroad, and a criminal conspiracy made up of the lowest dregs of the lawless who are attacking our statutory and constitutional safeguards. Only by reevaluating and assuming the full obligations of citizenship can we hope to achieve the maximum protection for our Nation from these threats which crime and

communism represent.

Our forefathers fought to gain liberty; our struggle in this, the nuclear age, is to maintain and perpetuate it. The international conspiracy of atheistic communism threatens us with total extinction through the deadly destruction wrought by the devastating weapons of this era.

While blatantly repeating the big lie of peaceful coexistence, the Communist enemy, aided by followers working from within, has already subjugated 17 countries with a population of over 900 million people or about one-third of those on the face of the globe. One hundred years ago, communism was regarded as an impractical theory. Some 40 years ago, at the time of the Bolshevik revolution, communism commanded 80,000 followers. Today, it claims a total world membership of more than 33 million, with active party units located in 83 nations.

Soviet history is replete with instances of the treachery which made these gains possible. A U.S. Senate report of the study of nearly 1,000 treaties showed that in 38 years the Soviet Union had violated agreements with practically every nation to which it had given its solemn, written pledge. With such a record as this before us, we must not relax our vigilance for one instant.

As the No. 1 target of worldwide communism, the United States is the prime objective of Soviet espionage. Soviet defectors are unanimous in stating that between 70 and 80 percent of Russian officials in the United States are members of the Red intelligence services. The importance that the U.S.S.R. is currently attaching to the value of these intelligence agents is vividly borne out by the sharp increase in the number of Soviet diplomatic personnel assigned to the United States. In May 1954, there were 212 Soviet officials in the United States. Five years later, that number has increased to 313-or an increase of almost 50 percent.

Soviet esplonage activities in this country expose the fallacy of so-called peaceful coexistence. In recent years, pseudo appeals for peace by Communists have been more than matched by intensified Communist espionage efforts in the United States. Using blackmåil, bribery, and similar techniques, Communist agents, many with diplomatic immunity, are stepping up their efforts to obtain our military, scientific, and and industrial secrets for use against us.

The Communist Party, U.S.A., today is an integral part of the international Commuconspiracy and represents a very real danger to our freedom. It is composed of the true believers-the disciples, the hardcore militants for the Soviet Union-who stand by Communist Russia and sing its praise despite the terrible inhumanity to man which has ben inflicted in various parts of the world by the Soviets and their satellites.

These are the people so blinded by faith in the Soviet Union and hatred of the United States that they still give allegiance to the Communist Party despite Soviet brutalities in Hungary, the hearding of countless millions into communes in China, the rape of Tibet and the imprisonment and degradation of the consecrated men of the clergy whose only crime was teaching the word of

Foremost in the present battle plans of the Communist Party, U.S.A., are well-cal-culated efforts to embarrass the American economic system; to infiltrate and gain control in our labor organizations; and to secure footholds in basic American industries, such as transportation, manufacturing, communications and chemicals. Success of these Red objectives will be destruction for our way of life.

One tried and proven weapon the Communists have used in the past has been the rulthless smear. Congressional committees, patriotic organizations, the FBI and all

those who attack subversion and defend American concepts are primary targets. The FBI is proud to have earned from Communists and their fellow travelers the title of arch enemy. The best yardstick of the effectiveness of the first against communism is the fury of the smear attacks against the fighter-launched and conducted by the The smear of the FBI is not a new thing, having been a continuing part of Communist effort in America for years. It would be a sorry day if the FBI should cease to be the target of Communist attacks. We may well be judged by the enemies we make.

Many former Communist Party members, awakened to the fallacies of communism. have given the FBI and congressional committees invaluable aid in the fight against subversion. By doing so, they have fulfilled a major obligation of citizenship. Until those former Communists who still maintain silence are willing to cooperate, they must be considered as on the side of our enemies.

I have made numerous appeals, asking for-mer Communists to ald the FBI in exposing the true menace of communism. I realize that very real, human, and personal sacrifices are involved. However, there is also a moral duty involved which transcends these sacrifices. It is a duty to the country to which they have sworn allegiance and to future generations who would live in peace.

While godless communism stalks a peaceloving America, yet another force, the criminal underworld, is subverting our demo-cratic processes. It is not the purpose of the FBI to shock Americans with its compilation of crime statistics each year, but the figures for 1958, unfortunately, are exactly that—shocking. Crime in 1958 reached an all-time high, an appalling increase of more than 8 percent over 1957. The total cost of crime for the entire Nation has now reached the alarming figure of \$22 billion a year-or nearly one-third of the cost of running the entire Federal Government for a year.

We look back with horror upon the days of Capone, Dillinger, and a host of others whose names are synonymous with crimes; but what of today? Scum from the lowest levels of society have gained riches and respect in some quarters after they have drawn the very lifeblood from honest American insitutions.

A few leeches masquerading as legitimate labor leaders are casting a shadow of public distrust on thousands of labor men who have directed their unions with integrity and dignity over the years. Is it not time that the rank and file join hands with the many honest and conscientious labor leaders to rid themselves of these parasites?

The deeply entrenched forces of the underworld encompass, of course, many facets of organized crime beyond those connected with the labor movement. Many notorious hoodlums of the prohibition era, for example, now wear the mantle of respectability. With their ill-gotten gains some have bought into legitimate businesses. Others have simply strong-armed their way to the same objective. In this manner, these racketeers have succeeded in gaining social prominence and a measure of community acceptance. From this foundation of apparent legitimacy, they are spreading criminal control over many segments of the business world. Evidence of the spread of this despotism has been publicly revealed in the garment industry, jukebox, and vending machine businesses and others.

In addition, there are those tyrants of the underworld dealing in narcotics, prostitu-tion, and gambling who continue to inflict an immeasurable degree of suffering and sorrow on our citizenry through their increasing deflance for law and order.

In our zeal to effectively combat these sin-

ister forces, we must not lose sight of the fact that the responsibility is first and foremost that of the State and local law enforcement agencies. Local police power is one of the cornerstones of local government and should remain so.

This is not the time to reorganize law enforcement-it is the time for a vigorous activation and application of existing crimefighting techniques. A strong and united law enforcement profession remains America's most effective weapon against the professional hoodlums who dominate the underworld.

The strength of law enforcement can be maintained only through a scrupulous ob-servance of the rights of all our citizens. Law enforcement operates only for the protection of the people. It must operate within prescribed limitations as the servant of the people. Its duties must be performed within the strict meaning of the law, with full consciousness that the law represents a mandate from the people. These responsibilities must be met objectively, with a determination to maintain the maximum of individual rights which our citizens now enjoy. Supporting this basic premise, the FBI rigidly adheres to the principle of liberty for all but license for none. In this manner, law enforcement can curb our current wave of lawlessness while still protecting the rights of the community as well as rights of its members. It is not an attitude that makes headlines, but it is one that is profoundly American.

Righteousness, honesty and obedience to the law have no meaning whatsoever to many American youths. A tragically high percentage of crime in 1958 was committed by our young people. During that year, the arrests of persons under 21 years of age constituted 20 percent of the total arrests.

The significance of this situation is that we as adults have failed the younger genera-It means that the forces of the underworld have stained the lives of these thousands of boys and girls. It is time for us to wage an all-out war on our antagonists. If not now, it will be too late. Juvenile crime in the past few years has never declinedit is constantly increasing.

There are those who say that law enforcement officers are too strict in their interpretation of juvenile crime, that what we day call crimes were in prior years merely pranks. This is not true. In 1958 persons 17 years of age or less accounted for over 22 percent of the arrests for robbery, over 48 percent of the arrests for larceny, 50 percent of the arrests for burglary and 64 percent of all auto theft arrests. We are no longer dealing with delinquent children—we are dealing with vicious young criminals.
They should be treated as such.

We cannot evade the combined challenge of communism and lawlessness. As the criminal takes advantage of every weakness in our social structure, so the communist too often is able to exploit social, economic, racial and other problems which arise in our communi-We must join together to wage war on crime and subversion. It is not the problem of law enforcement alone. Neither is it the the problem of the people alone. cannot stand by themselves in the fight against the organized forces of tyranny. They must have the help and protection that honest law enforcement provides. Neither can law enforcement successfully protect the people against the ravages of crime and subversion without the full support of an alert and aroused citizenry.

While their motives are different, commu-

nists and criminals have many things in common-basically their actions spring from an utter contempt for the true principles of citizenship as expressed in a society based

on law and order.

This contempt is nourished in America by the moral and physical weakness of some of our citizens. There are all too many in the United States who believe in surrendering a principle of morality to the illusions of expediency. Where weakness prevails-fear takes over-and fear can cause a citizen to

This is true whether it be a Communist dictator or a criminal overlord. There is no basic moral difference in the tactics they use. The iron fist of the communist tyrant is often concealed by the velvet glove of so-called peaceful coexistence. The machine gun of the criminal overlord is also frequently hidden by the cloak of apparent respecta-

It is the seed of fear that Nikita Khrushchev hopes to plant in our minds when he threatens to unleash on us what he terms "the most devastating war ever known by mankind." In the criminal sense, this is blackmail—ballistic blackmail. It is the same seed of fear the hoodlum hopes to plant in the minds of prospective victims of a protection racket.

The ultimate results of this utter contempt for the rights of others—both by communists and criminals—are tragic consequences. Today, for example, in Communist China over 500 million persons have been herded into communes. In this completely regimented existence, families have been broken up; private property confiscated; work mili-tarized; and the individual robbed of practically all freedom of choice in his personal

Recently communists in Poland boasted that they had taken over the Boy Scouts there and turned them into a Red youth Could there be a better exemple of how the communists use even the most noble of organizations to further their insidious aims?

The same denial of personal rights occurs when murderers, robbers, and extortionists ply their evil trades against innocent citi-

These combined threats call for a new awareness of what citizenship actually means.

Good citizenship can best be described as a debt to the past and an obligation to the future. It is a solemn contract between the individual and his government.

The strength of our Nation lies in the hearts, minds, and souls of all of us. As the nuclear age progresses, we will be faced with problems even greater than those that confront us today. We must firmly resolve to inspire, especially in our youth, a strong faith in the moral and spiritual foundations of our Nation.

If we can instill into our young people the spirit of patriotism—respect for the rights of others, interest in our Government, love of dency-then and not until then will we see juvenile crime decline. And the best way to teach these principles to our sons and daughters is to lead the way ourselves and to remember that young people will emulate that which impresses them most.

We much teach our youth that although a man may be wealthy in the world's goods, he

may be a pauper in integrity.

As a youth I was taught basic beliefs. Cynics, perhaps, may regard them with derision. For instance, I was taught that no book was ever to be placed above the Bible. Children in my youth were taught the code of the American flag and to defend it against any manner of desecration, as a symbol of life, liberty, and justice. We would do well to reactivate this spirit of patriotism.

If we imbue our youth with reverence for their country and for freedom's symbols and if we teach them through our own actions that their Nation should be in their hearts second only to God, then, and only then, we will have developed citizens who will never be engulfed in the quicksands of crime and communism.

Communism is a materialistic, enslaving atheistic evil. It is impossible to compromise with that evil or with those who knowingly support it, directly or indirectly.

Communism and belief in God cannot peacefully coexist because God's truth is communism's mortal enemy. Communists and communism are hostile to God. It is a battle between the forces of God and the forces of evil in which there can be no truce.

In the battle for the life of our Nation, to paraphrase one of our great Presidents, we must lock to those who enter the arena of active struggle; whose faces are stained by dust and sweat and blood; who strive valiantly to overcome temporary obstacles; who, supported by faith, enthusiasm and devo-tion, assault the enemy stronghold with the sword of patriotism.

Here are seven basic points which should

- be part of our everyday lives: We must:

  1. Be alert and learn the true nature and tactics of the Communist and criminal enemy.
- 2. Make civic programs for social improvement our business.
- 3. Exercise our right to vote; elect representatives of integrity.
- 4. Respect human dignity-individual rights cannot coexist with crime and com-
- 5. Be informed-know the history, traditions, and heritage of our country.
- 6. Combat public apathy-indifference can be fatal when national survival is at stake. 7. Attack bigotry and prejudice where-ever they appear; justice for all is the bul-

wark of democracy.

These points-in all their simplicitymean America-the land we love and cherish. This is the America we must all work to protect against those enemies who seek to destroy her historic freedoms. This is the America which merits our entire devotion and support. This is the America which is the hope of freemen everywhere.

Some years ago I was in a small southern city and decided in the late afternoon to take a short walk. I passed a little church whose white steeple gleamed brightly in the rays of the setting sun. Drawn by its picturesque beauty, I saw on the announcement board near the door a phrase which I have remembered. It was the topic for the next Sunday's sermon, and it said simply: "Do what you can, with what you have, wherever you are, for God and America."

That is our call to duty. It is the tradition of free men-a tradition which we must carry on to ensure the future for those who take over our obligations.

## Investigation of Munitions Contracts

EXTENSION OF REMARKS OF

# HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. PROXMIRE. Mr. President, the Capital Times of Madison, Wis., has recently given strong editorial support to a Senate investigation of munitions contracts. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROBE OF MUNITIONS LOBBY COULD PRODUCE MAJOR SCANDAL

There is talk that the Senate may investigate the munitions lobby in Washington with particular attention to the brass whose duties involved purchasing and contracts and who retired to take cushy jobs with the corporations with which they had been dealing.

Such an investigation is long overdue, For years the Capital Times has been pointing out the serious question of public policy involved. A few Members of Congress have called attention to it.

But the practice has become increasingly Many of the big corporations prevalent. doing defense work employ retired military men at enormous salaries. Last Monday the Capital Times published a list of them.

In recent weeks Lt. Gen. Clarence Irvine retired as Deputy Chief of Staff for Material in the Air Force and took up a vice presidency with the Avco Corp., a major supplierof aircraft and missiles.

It is being predicted around Washington that if the right kind of an investigation is made it will produce one of the most messy scandals Washington has seen in a long time.

This practice has been a problem for many years but very little has been done to tackle it. Obviously, in this era of unprecedented peacetime spending for defense purposes and the strict secrecy in which most of this work is conducted there is reason to believe that the abuses are worse than ever.

If the Senate will go ahead with a really searching inquiry it can perform a much-needed service for the Nation.

# Mission 63 To Expand and Improve National Park System

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. NEUBERGER. Mr. President, many of us in the State of Oregon are particularly interested in the development of our national park system. Crater Lake National Park, located in the State of Oregon, is one of the most extraordinarily beautiful of all the national parks in the land. Furthermore, I now am sponsoring S. 1526, a bill to create an Oregon Dunes National Seashore as part of our national park

Mr. Don Jepsen, editor of the Oregon Daily Emerald, the official newspaper of the University of Oregon, has written an informative and thoughtful article about the expansion of our national parks under the Mission 66 program. All of us realize how much greater has become the pressure upon our park facilities as the population of the United States has expanded. Mr. Jepsen's article, which was published in the Eugene (Oreg.) Register-Guard of June 1, 1959. makes a powerful and effective case for the continuation of Mission 66. He also argues in behalf of the national wilderness bill, S. 1123, of which I am privileged to be a corponsor. The principal author of this bill is the distinguished senior Senator from Minnesota [Mr. HUMPHREY].

I ask unanimous consent, Mr. President, that the article from the Eugene Register-Guard by Don Jepsen, entitled "National Farks Fromised Rescue by Mission 66," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Eugene (Oreg.) Register-Guard, June 1, 1959]

NATIONAL PARKS PROMISED RESCUE BY Mission 66

(By Don Jepsen, editor, Oregon Daily Emerald)

On July 1, 1956, the National Park Service launched Mission 66, a 10-year improvement program designed to rescue the 29 national parks from the abuses of overcrowding. By 1966, the golden anniversary of the Service (hence the name), it is hoped that enough visitor facilities will have been developed to handle an estimated 80 million tourists expected by then. This includes new lodges, campsites, trailer courts, and administration buildings as well as improvements in the existing facilities such as roads and trails. New visitor centers will be developed to better educate the visiting tourist and make his stay more enjoyable and informative.

A program of this type was sorely needed. Since the end of World War II park visitation has leaped steadily upward until by 1957 over 59 million persons were crowding into areas equipped to handle less than half their number. A harassed, understaffed corps of park rangers not only became responsible for the education of these hordes of tourists but had added to their instructional and light maintenance duties the added burdens of law enforcement, direction of traffic, even the cleaning of latrines. Accommodations were badly overcrowded while improvements and expansion by private enterprise were almost nil. The more unscrupious concessionaires began taking advantage of the demand for food and lodging by raising their prices to a level which would laughed at outside park boundaries.

Herbert Maier, assistant regional Park Service director of region 5 in San Francisco summed up the problem of overcrowding and deterioration of park facilities:

"First we had to arrive at as realistic a visitation figure as possible in order to get a program such as Mission 66 formulated, approved, and into action. If two thing were static—cost and visitation—then there would be no problem. But they're not and that's a fact which we have ignored for so many years, while our park system kept getting worse and worse."

Maier continued, "The travel curve has always been our best justification for appropriations—whether we got them or not. Now we are going to project that curve through Mission 66 \* \* \* and our appropriations will always be commensurate with our increased visitation or planned increase of visitation—that we know now."

#### CERTAIN LIMITS NECESSARY

The Mission 66 expansion program gave rise to another vital question which needed to be worked out by the Service-wilderness preservation. The National Park Service credo is "preservation with use." How much preservation (in a wilderness State) to how much use has never been specifically designated. It goes all the way back to 1872 when our first national park, Yellowstone in Wyo-ming, was formed. Although the point was not specifically defined then, it was nevertheless understood that the park was to remain essentially a wilderness with a reasonable amount of accommodations and other improvements to be constructed for the comfort of visitors. Yellowstone had a stormy history; an area of lesser significance might not have survived the test. Today all the parks are governed by the rules first formulated for Yellowstone.

In 1916 when the National Park Service was formed the wilderness factor was defined a little more specifically in the act that created this body: "\* \* \* (exists) to conserve the scenery and the natural and historic objects and the wildlife therein \* \* \* to provide for the enjoyment of the same in such means as will leave them unimpaired for the enjoyment of future generations." Therefore a program of expansion had to be kept within certain limits in order to maintain the park system in a predominantly wilderness state.

Mission 66 is nearing completion of its third year. Through the program Park Service officials have fought to relieve some of the congestion in parks like Yosemite in California, Great Smoky in North Carolina, and Yellowstone. Included in plans for Mission 66 is the eventual relocation of facilities connected with administration outside park boundaries. This would include things as incinerators, some administration buildings, warehouses, and other facilities necessary to maintain the parks. A large section of ground has been purchased just outside the Arch Rock entrance of Yosemite, and eventually all facilities not essential for tourist accommodation will be moved here. In some parks plans are being made to move even the visitor facilities either to less scenic areas or completely outside park boundaries. This is true in both Mount Rainier Park in Washington and Rocky Mountain Park in Colorado.

#### NATIONAL RECREATION AREAS

At a Mission 66 Advisory Committee meeting in San Francisco, in October 1958, a report was issued reaffirming the preservation of the parks as the prime concern of the Mission 66 program: "\* \* we must specifically emphasize \* \* that Mission 66 is aimed primarily at protection and at preservation."

The report went on to say that it was possible to handle increasing numbers of visitors "within the forecasts of our lifetime" without sacrificing the protection and preservation of the basic resource, wilder-

An integral part of Mission 66 is a plan for "encouraging public and private agencies to develop other recreation areas to take the pressure off existing National Park Service areas." This has led to the formation of a Division of Recreation Resources Planning within the Service to analyze and evaluate proposals to include new areas in the park system as well as to encourage State and local authorities to develop areas for recreation on a State or county level.

Such areas in the park system would not be included as national parks, but as national recreation areas. The basic distinction is that in the recreation areas the emphasis would be on commercial recreation development as opposed to wilderness preservation. An outstanding example right now is the proposed Oregon Coast National Seashore Recreation Area between Florence and Reedsport, plus a portion north of this encompassing the Sea Lion Caves. The proposal for the Oregon area is currently the center of controversy, but a statement by President Eisenhower that the Service should go slow on the acquisition of new land until it can shape up present service areas with the Mission 66 program may postpone development of the coast area for a year or more.

As the Park Service was solidifying policy and moving ahead with its program, Senator HUBERT HUMPHREY, of Minnesota, introduced a wilderness bill on the floor of the Senate. HUMPHREY'S bill—the National Wilderness Preservation Act—is a plan to place continuous areas of 5,000 acres and more of roadless lands in a "wilderness vault" so to speak. The areas would remain roadless and devoid

of any commercial development or exploitation of any kind, even down to an inconspicuous toolshed. It would take an act of Congress or in some cases the consent of the President to open the portions included within the system.

#### ONLY ONE CHANGE

Portions of 23 national parks, along with other wilderness areas outside of Service jurisdiction, would tentatively qualify for inclusion within the wilderness system. As could be expected, conservation groups are unanimously in favor of the bill, but there is some opposition from the Service as to the division of authority which would be created of the Agency (as yet unnamed) were to govern lands within park boundaries. Maier said, "Where would the Wilderness Agency be placed? How can they administer the land when they don't even have title to it? You would be establishing an agency which has no title whatsoever to the wilderness it would govern.

The Service would continue to administer the land; the only change would be that there could be no construction or roadbuilding within these areas except by an act of Congress. All that is needed now for such construction is permission from the Secretary of the Interior.

How this bill would affect the Mission 66 program remains to be seen. Late in May or possibly early June, the Senate Interior Committee is expected to decide whether the bill should be sent to the floor for a vote. Backers of the bill call it a now-or-never proposition. The Wilderness Preservation Act is loaded with compromises including one being discussed by the Senate Interior Committee to require congressional approval before any land could be put in the wilderness system. This would let the strongest enemies of the bill, the commercial interests, have their say on every bit of land to be included. The measure is given a 50-50 chance, even with the deluge of conservation support.

Whether the bill passes or not the Mission 66 program will still be completed, additional improvement programs will be launched, and the tourists will continue to come. The national parks have finally come out of their major slump and adequate funds are currently being provided to execute a sound planning and development program for the most valuable real estate in America.

# Anniversary of Execution of Hungarian Patriots

EXTENSION OF REMARKS

# HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 17, 1959

Mr. HART. Mr. President, today is the first anniversary of the execution of the former Premier of Hungary, Imre Nagy, and his associates. There is much that all of us have learned, and more that we can learn, from this bitter incident.

I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Blood of the Martyrs" and also a letter written by Maj. Gen. Bela Kiraly, commander in chief of the National Guard of Hungary during the 1956 revolution, to the editor of the Washington Post and Times Herald, both of which were published in the

today, June 17, 1959.

There being no objection, the editorial and letter to the editor were ordered to be printed in the RECORD, as follows:

IFrom the Washington Post and Times Herald, June 17, 1959

BLOOD OF THE MARTYRS

This is a date of importance to all who are interested in the history of human liberty. It is the 204th anniversary of the Battle of Bunker Hill; but it is also the 1st anniversary of the executions of former Premier Imre Nagy of Hungary, of Gen. Pal Maleter, who commanded the freedom fighters of the heroic, and for a time victorious, Hungarian Insurrection of November 1956, and of two of their revoluntionary associates. The naked perfidy and cynicism of the circumstances under which the in-surrection was suppressed and its leaders seized horrified even a world long inured to tyranny and barbarism.

In what seemed the hour of Hungarian victory-after the Soviet forces had been forced to evacuate Budapest-General Maleter, as Minister of Defense, and some others representing the cabinet and the army were persuaded to go to the Soviet headquarters at Tokol on Cspel Island to work out the technical details of the promised evacuation of all Hungary by the Russian troops. What happened at Tokol has been described in the report subsequently prepared for the United Nations. The discussions, it seems, proceeded with apparent amicability for about 2 hours, throughout which the Hungarian delegates throughout which the Hungarian delegates were in touch with Premier Nagy at Budapest. Then "toward midnight telephone contact \* \* was broken off. Reconnaissance parties sent toward Tokol by General Kiraly failed to return. \* \* [Meanwhile] discussions \* \* at Tokol were in fact interrupted by the entry of a personage "who bore no insignia of rank"—General Serov, Chief of the Soviet Security Police. Accompanied by Soviet officers he announced that he was arresting the Hungarian delegation. The head of the Soviet delegation, General Malinin, astonished by the interruption made a gesture of indignation. General Serov thereupon whispered to him; as a result, General Malinin shrugged his shoulders and ordered the Soviet delegation to leave the room."

Premier Nagy, you will remember, was arrested on November 22, 1956, with some of his colleagues, after leaving the Yugoslav Embassy under promises of safe conduct. The circumstances, as described in the United Nations report, were these:

"At 6:30 p.m. a bus arrived at the Yugo-slav Embassy. \* \* \* As the group was boarding the bus, Soviet military personnel arrived and insisted on entering it. The Yugoslav Ambassador asked two Embassy officials to accompany the group to make sure that Premier Nagy and the party reached their homes as agreed. The bus was driven to the city headquarters of the Soviet Military Command, where the two Yugoslav officials were ordered by a Soviet lieutenant-colonel to leave. Under an escort of Soviet armored cars the bus then drove away to an unknown destination."

We know now that the destination was death by judicial murder.

[From the Washington Post and Times Herald, June 17, 1959] NAGY: A YEAR AFTER

On June 17, 1953-exactly 1 year ago-Radio Moscow announced the execution of

ter of Defense Gen. Pal Maleter and two of their associates who played leading roles in the 1956 Hungarian revolution.

The memory of those Hungarian patriots who laid down their lives in an attempt to make their country sovereign and inde-pendent and free deserves to be honored.

General Maleter headed the Hungarian Government's delegation negotiating with the Russian command on the withdrawal of Soviet troops from the country. An agreement was reached on the essential points. Then, on the evening of November 3, 1956, General Maleter was invited to the Russian headquarters in Tokol, outside of Budapest, allegedly to work out the remaining technical details of the agreement. He was never to return. Instead, a few hours later, in the early morning hours of November 4, the Russian surprise attack was launched throughout the country.

As the news of fighting started pouring into my headquarters, I suggested to Premier Nagy in a telephone conversation that he immediately issue a statement on the Soviet intervention, and simultaneously urge the freedom fighter groups and the armed forces to resist the Soviet advance. I insisted repeatedly that further fighting could in any case be carried on only on a guerrilla basis, but even guerrilla fighting must be directed from central headquarters, and be preceded by an appeal from the highest authority.

I was bewildered by the Premier's unwill-ingness to comply with my suggestion and by his instructions that the freedom fighters, whenever possible, should desist even from whenever possible, should desist even from answering enemy fire. "You must know that an order to open fire, or any such ap-peal, means war," he said. "The govern-ment will refrain from entering into open warfare with the Soviet Union.

A few minutes later the Premier broadcast an address to the nation: "Early this morning Soviet troops launched an attack against our capital, with the obvious intention of overthrowing the lawful Government of Hungary. Our troops are engaged in the fighting. The Government is at its post. am herewith informing the country and the world of the above facts."

Budapest was in flames and Soviet troops were entering the city in great strength.

Imre Nagy was a patriot. It pained him to see Hungarians dying in a gallant but futile effort. He did not want to weaken the spirit of resistance, but he was also reluctant to encourage the further shedding of blood, and he tried to avoid taking steps that might have given support to Soviet justifications for intervention.

His course of action was wise and patriotic. Time has proved that his decision, though incomprehensible to me at the height of the revolution, was that of a farsighted statesman who held his country's welfare uppermost in his mind.

His capture by the Russians after he had been assured safe conduct, and his execution, in 1958, despite repeated formal assurances that he and his associates would not be prosecuted, caused worldwide protests of unprecedented magnitude. Indeed, Imre Nagy and Pal Maleter are martyrs, and not to the Hungarian people alone. The Hungarian revolution was an important milestone in humanity's struggle for freedom; Imre Nagy and Pal Maleter have become symbols of that struggle.

Maj. Gen. BELA KIRALY, Commander in Chief of the National Guard of Hungary During the 1956 Revolution.

NEW YORK.

# Washington Post and Times Herald of Hungarian Prime Minister Imre Nagy, Minis- Death of Paul Tobenkin, Reporter for New York Herald Tribune

EXTENSION OF REMARKS OF

## HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES . Wednesday, June 17, 1959

Mr. JAVITS. Mr. President, I read with deep regret this morning of the passing of Paul Tobenkin, an outstanding New York reporter for nearly a quarter century. I knew him best in his role as a working newspaperman who was dedicated to the principles that have made his chosen profession of journalism a great one. He was a careful, thorough factfinder, whose distinguished reporting, particularly in the field of labor, civil rights and civil liberties was highly regarded by his associates on the New York Herald Tribune and the newspaper public he served. He will be sorely missed by all of us who knew him personally and by the millions of New Yorkers who had come to know and respect his byline on a news story. I ask unanimous consent that today's New York Herald Tribune editorial about Paul Tobenkin be printed in the Appendix of the RECORD. I also ask unanimous consent that an article published in the New York Herald Tribune of today be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

PAUL TOBENKIN, REPORTER FOR HERALD TRIBUNE, DIES

Paul Tobenkin, 46, a staff reporter for the New York Herald Tribune for 24 years, died early yesterday at Beth Israel Hospital after suffering a heart attack last week. He lived at 309 Avenue C, in Stuyvesant Town.

Among the many exclusive stories that Mr. Tobenkin reported as a specialist in labor news was the first account from Atlantic City, N.J., in 1935 of the formation of the CIO. In the next decade he wrote graphic accounts of major strikes, the career of John L. Lewis and other high points in the developing power of the labor movement. From 1945 to 1947, he worked in the Washington bureau of the Herald Tribune.

In recent years, in addition to generalassignment reporting, Mr. Tobenkin specialized in the activities of the various Jewish organizations, including those of Zionist and American-Jewish orientation. In a two-part series in October, he exposed the resurgent activity of racist hate groups in the United

Mr. Tobenkin, born in Chicago, came to New York as a child and began his newspaper career as a high school correspondent for the New York Times. He worked as a re-porter for the Milwaukee Sentinel in 1931, and as the New York University correspondent for the Herald Tribune from 1932 until he joined the staff in 1935.

## ACTIVE IN GUILD

In World War II he enlisted in the Army. He was an active member of the Herald Trib-une unit of the American Newspaper Guild and served a term as unit chairman.

Surviving is his father, Elias Tobenkin, author, journalist, and sociologist. His mother, Mrs. Rae Schwid Tobenkin, died in 1938. A funeral service for Mr. Tobenkin will be held at 10:15 a.m. today at the Riverside Memorial Chapel, Amsterdam Avenue at 76th Street. Dr. Henry Neumann, of the New York Ethical Culture Society, will speak. Burial will be at Old Mount Carmel Cemetery, Brooklyn.

#### PAUL TOBENKIN, REPORTER

For 24 years Paul Tobenkin was a staff reporter for this newspaper, and although he had recently been ill, his death yesterday came as a deep shock to his colleagues and friends here. Mr. Tobenkin was the kind of reporter who could cover any story and cover it well, but he was known particularly for his activities on two beats—labor news in the earlier years of his career, and news of Jewish organizations in recent years. In both fields he was respected and admired inside the office and out as an able craftsman who knew how to dig for news and how to write about it. His was the career of a good newspaperman, and it has been cut cruelly short at the age of 46.

# Constitutional Amendment To Insure Balanced Budget

EXTENSION OF REMARKS

# HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 17, 1959

Mr. BRIDGES. Mr. President, on May 26, 1959, I introduced on behalf of myself, the Senior Senator from Virginia [Mr. Byrd], and the senior Senator from Nebraska [Mr. Curtis], Senate Joint Resolution 99, which provides for a constitutional amendment in an effort to insure a balanced budget.

Since then I have received encouraging letters on my proposal from people throughout the country and, particularly, from residents of the State of New Hampshire.

The news media in my State have also given favorable coverage to this resolution. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on this subject which appeared in the Manchester (N.H.) Union Leader on June 8, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Manchester Union Leader, June 8, 1959]

## UP TO THE PEOPLE

Senator STYLES BRIDGES' proposed constitutional amendment to require that the Federal budget be balanced each year, save in time of war or national emergency, is a step in the direction of fiscal sanity. The Senator's desire to see the Nation placed on a sound pay-as-you-go basis is indeed commendatory.

Yet, is it not true that we are now in a time of extreme national emergency? Certainly neither Senator Bamces nor this newspaper would want to see any diminishing of the defense effort in the name of budget balancing. We are sure that Senator Bamces would be the first to oppose cutting military expenditures to balance the budget. But if the amendment were ratified, is it not conceivable that it is the defense program that

would suffer? Or are we to assume that the American people would forget their selfishness and demand that Government handouts be cut? We think not. That's the inherent evil of welfare statism. It appeals to the selfish interests of mankind. It brings out the worst in all of us.

Senator BRIDGES' constitutional amendment makes good legislative sense. But are the American people big enough and intelligent enough to demand a halt to the inflationary spiral, which—let's face it—is motivated in large measure by nondefense spending?

# Inconsistencies of Our Foreign-Aid Program

EXTENSION OF REMARKS

## HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, June 17, 1959

Mr. DODD. Mr. President, on May 30 a foreign policy article of unusual merit appeared in the Hartford Times. The article was written by Josef Kalvoda, and is concerned with the inconsistencies of our foreign-aid program.

I ask unanimous consent to have this penetrating analysis printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN AID FOR OUR FRIENDS BUT NOT FOR OUR ENEMIES

(By Josef Kalvoda, assistant professor of political science at St. Joseph College)

Over the years U.S. economic and military assistance has been extended to a large number of countries. The chief purpose for giving that aid has been to heip our allies to promote economic and political stability at home, and to prevent Communists from gaining power in areas friendly to us.

If foreign aid is an effective weapon for combating Communist expansion and winning the cold war, then most people would undoubtedly agree that the policy is sound and should be continued.

The giveaway program has been criticized, however, on several grounds. Not the principle itself, but the question to which countries aid should or should not be given has been at the heart of the controversies that have appeared periodically toward the close of each congressional session.

It has been accepted for a fact that our Latin American neighbors have received very little assistance during past years. Attempts have been made to correct the situation and to give our southern neighbors a better

There are clear indications that the mistaken policy toward Latin America will be alternated by a more appropriate one. In some years the entire economic aid to Latin American countries was considerably smaller than that given to a single country not allied with us in any military or political alliance—to Yugoslavia.

While our southern neighbors are members of the Organization of American States—a defensive alliance of the Western Hemisphere—the Yugoslav state is controlled by a Communist—totalitarian regime.

Also Communist Poland—a member of the Soviet sponsored Warsaw Pact—has received economic assistance from this country,

While our closest allies were neglected, governments composed of men professing Marxism-Leninism and committed to the cause of our destruction have received a preferential treatment.

Our American allies were taken for granted and very little assistance was given to them, while a Communist controlled country—Yugoslavia—received aid amounting to \$2 billion.

Instead of correcting the situation, Senators AIKEN and KENNEDY introduced recently a bill proposing a change in the Battle Act to that effect that all Communist controlled countries, except the Soviet Union, Red China, and North Korea, might be eligible for American assistance.

The sponsors of the bill say that the value of giving foreign aid to Communist-controlled states lies in the possibility of exploiting cracks in the Iron Curtain by offering a way to handle cold war strategy. They hope that other Communist controlled nations may follow Poland and Yugoslavia in moving toward independence.

moving toward independence.

The Kennedy-Aiken bill would allow the United States to give assistance to satellite countries provided they are attempting to loosen the ties that bind them to the Soviet Union

They also believe that the policy of aiding Communist regimes in Eastern Europe are more likely to weaken Soviet borders. A year ago a similar bill was defeated in the U.S. Senate by the margin of one vote.

The advocates of the above stated policy of aiding Communist controlled states call their proposal a realistic approach to the cold war problems. The policy, however, rests on false assumptions that include the misunderstanding of the nature of relations among Communist countries, the misconception of the nature of Communist power, and the disregarding of the revolutionary and dynamic creed of Marxism-Leninism.

It had been wrongly assumed that all Communist controlled states are bound to Russia, and that not communism as such but the Russian imperialism is the main issue in the cold war.

If this were the case, containment of Russian imperialism would be the right policy to pursue. Containment has been the guiding principle of the U.S. foregin policy since 1947. Yet the Communist power has not been contained or diminished.

During past years new countries fell under Communist control. These include China and North Vietnam, with populations of several hundred million. Since last year Iraq is moving toward communism, and under our noses Communists are entrenching themselves in the revolutionary regime in Cuba.

The Soviet Union is very often considered "just another national state." It has been easily forgotten that the Communist regime sprung from the Bolshevik revolution, and that the revolutionary creed and the idea of world revolution is the program of the Kremlin leaders.

Regardless of whether the Marxist-Leninists are of Russian, Georgian, Armenian, Croat, Czech, or American national origin, their objective is the same. Not Russian imperialism alone, but the aggressive, dynamic, and revolutionary communism is the key issue in the cold war.

When Pravda announced the dissolution of the Cominform on April 18, 1956, the reasons for it were given in clear and unmistakable terms. It was said that the makeup and content of activities of the Cominform no longer met the new conditions in the world, when socialism was extending beyond the boundaries of a single country and was transformed into a world system.

The cooperation among Communist parties, it was stated, would continue and each Com-

munist party or group of parties would establish links and contacts among them-

The aim of all Communist Parties, including the Soviet, Yugoslav, Polish, American, or Chinese, is the same: The victory of socialism in the world.

Disregarding the real nature of relations among Communist Parties and governments as well as the public pronouncements made by both Polish and Soviet Communist leaders, and justifying it by a suggestion that there had been a loosening of ties between Moscow and Warsaw, the U.S. Department of State declared in 1957 that Poland was independent of Moscow and economic assistance was extended to Gomulka's regime.

The provisions of the Battle Act as well as the congressional opposition was overlooked. Despite our aid to Gomulka, his regime did not cease to be communistic and did not

alter its pro-Soviet policy.

Despite\* our journalists writing about loosening of ties between Moscow and Warsaw, Gomulka's revolt against the Kremlin in October 1956, his defiance of Khrushchev, and triumphant national communism in Poland, the Polish Communists consistently asserted that what happened in October 1956 was inseparably linked with proletarian internationalism, with the community of goals and aspirations of all the Socialist countries and with the principle of unity of the Socialist camp.

Gomulka himself made it clear on several occasions that he was pro-Moscow, an internationalist, Marxist-Leninist, and that his Polish Communist Party had nothing in common with the so-called national communism, which was an invention of imperialist propaganda for disrupting the unity of Socialist

camp

American aid to the Communist government of Poland was said to be based on the Yugoslav pattern. However, Tito is in no way on our side. About \$2 billion of American taxpayers' money has been spent on Tito.

Yet he continues in exchanging telegrams of congratulations with his comrade Nikita S. Khrushchev. The Yuogoslav delegation to the United Nations never voted against the Soviet Union on any issue of importance. Yugoslav, Polish, and Soviet atomic scientists are collaborating.

Commercial transaction between Yugoslavia and countries of the Soviet bloc are normal. Tito recognized the East German

Communist puppet regime.

He promotes anti-American neutralism by words and arms. His policies are com-pletely consistent with the objectives of the world Communist movement. Without his help Communists could hardly have gained a foothold in the Middle East.

The occasional dialogues running between Borba and Pravda enable him to receive American aid and confuse those who are less familiar with the Marxist-Leninist con-

spiracy.

Similarly, as from other Communist controlled countries, from Yugoslavia tens of thousands refugees make their way across frontiers to the free world.

Only in 1957 the number went to 14,200. Of the 282 visitors to the Brussels World Fair who asked permission to remain as refugees 207 were Yugoslavs.

American aid is generously given to the totalitarian regime from which these people are running away for political reasons. On the other hand escapees are not welcomed in the West and thousands of them, being denied political asylum, are turned back. The avowed enemies of ours-the Marxist-Leninist rulers of the new class-are helped by the American taxpayers' money to stay in power, while our friends-the opponents of the totalitarian regime—are turned back to their enslavers. Whom do we expect to have on our side when the chips are down?

Similarly as in Tito's case several hundred million dolars of American taxpayers' money were spent on Gomulka. Yet he signed all Moscow-sponsored anti-U.S. resolutions.

The glorification of Gomulka by our journalists and all the money he was given did not make him change his pro-Soviet foreign policy or his anti-American stand on any issue of importance.

Explaining the Berlin situation, a Polish Communist newspaper, Slowo Powszechne of November 12, 1958, stated: "Khrushchev's adoption of the political initiative in the German case is the greatest result of Gomulka's and other representatives of the Polish state journey to Moscow.

"This initiative was agreed upon with the Poles \* \* \*." One should add that the initiative in the Berlin crisis was agreed upon with the Communist Poles who had been

receiving our aid.

# "Man Sent From God": Biography of Dr. John R. Rice

EXTENSION OF REMARKS OF

# HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting, profound article entitled "Man Sent From God," written by Dr. and Mrs. George S. Reuter, Jr. Dr. Reuter is a member of the staff of Arkansas A. & M. College, at Monticello, Ark. He has written some very enlightening articles, and this is one which I am pleased to place in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD.

as follows:

MAN SENT FROM GOD

(By Dr. and Mrs. George S. Reuter, Jr.)

Evangelist Robert L. Sumner has written one of the best biographies of this century about one of the greatest men who has ever lived. It is entitled "Man Sent From God," and is the life of Dr. John R. Rice. Dr. Rice is editor of the "Sword of the Lord," is the "Voice of Revival," and is often referred to as the preacher's preacher.

There are 17 chapters in this interesting book, which are: "Born To Preach," "Saved for Certain," "Early Life on the Texas Prairie," "Shaping the Vessel," "Finding a Good Thing," "The Great Surrender," "Early Experiences in the Harvest," "The Evangelist in a Pastorate," "The High Cost of Discipleship," "God's Hundredfold," "The Sword of the Lord and John R. Rice," "What Must I Do To Be Saved?" "The 20th Century's Mightiest Pen," "Sword Conferences on Evangelism," "\* \* and My House," "Hy-maneaus, Alexander \* \* and Peter," and 'Personality Portrait."

This worthy book came at a very special time, because it was April 29, 1959, Clifton Conrad Smith passed away at College Heights, Ark. The people of Arkansas are convinced that this Christian gentleman was a man sent from God, too.

In announcing his death on May 3, 1959, Dr. Thomas J. Welch, the great dedicated Christian minister, who is pastor, First Baptist Church, of Monticello, Ark., wrote:

"Our church has suffered an immeasurable loss in the passing of Mr. C. C. Smith. All of us join with the family in mourning. His interest can be summed up in the word 'others.' He spread his resources over many activities for good among many noble causes. He was especially interested in young people, civic affairs, A. & M. College, and his church. \* \* \* Space will not permit our stating his offices in our church.

Brother Smith was born in Ashley County, near Hamburg, Ark., on April 8, 1889. He attended Beauvior College at Wilmar and was graduated from Hinemon University at Monticello in 1910. In 1917 he went to Little Rock as State auditor, and prepared the first State budget in 1919. He came to Arkansas A. & M. College and College Heights in 1921, and has served in an out-

standing way since that time.

He served for many years as business manager of the college, and for the last several years has been executive assistant to the president. He has been a member of the board of administration of Bottoms Baptist Orphanage since 1922 (and chairman several times). He served on Selective Service and OPA Boards during the war years. He was a veteran deacon of the First Baptist Church of Monticello (and chairman several times), and he was one of the planners of the new church building that is about completed. He was active in the Gideons.

He was active in the chamber of commerce, the Masonic Lodge, the Lion's Club (president-elect), and he was one of the planners of the 50th anniversary celebration for Arkansas A. & M. College. While Arkansas A. & M. College and Ouachita Baptist College made serious mistakes in not awarding him honorary doctorates many years ago, he was recognized, beyond a shadow of a doubt, as one of few who could honestly be termed "Mr. Arkansas A. & M. College" and "Mr. Arkansas Baptist." It is now hoped that the board of trustees will soon name a building Arkansas A. & M. College in his honor. Also, perhaps the new auditorium of the First Baptist Church of Monticello will be named "The C. C. Smith Auditorium." The department of higher education of the Arkansas Education Association did award him a certificate for outstanding service to education in the State in 1956.

Brother Smith married in October 1910. Miss Willie Sykes. They were parents of Mrs. Fred Greeson of Portland, Vance of College Heights, and Wayne of Rome, Ga. The wife passed away in October 1954. He has three brothers and one sisters who also sur-

About the time of Mr. Smith's death, Dr. Joy Elmer Morgan, president of Senior Citizens of America, wrote "A Tribute to the Teacher." Mr. Smith was serving as the second person to ever hold the office of State Director of Senior Citizens of America. What Dr. Morgan wrote, described Mr. Smith:

'The teacher is a prophet; he lays the foundations of tomorrow.

"The teacher is an artist; he works with the precious clay of unfolding personality.

"The teacher is a friend; his heart responds to the faith and devotion of his students.

"The teacher is a citizen; he is selected and licensed for the improvement of society.

"The teacher is an interpreter; out of his maturer and wilder life he seeks to guide the

"The teacher is a builder; he works with the higher and finer values of civilization.

"The teacher is a culture bearer; he leads the way toward worthier tastes, saner attitudes, more gracious manners, higher intelli-

"The teacher is a planner; he sees the young lives before him as a part of a great system which shall grow stronger in the light of truth.

"The teacher is a pioneer; he is always attempting the impossible and winning out.

"The teacher is a reformer; he seeks to remove the handicaps that weaken and destroy life.

"The teacher is a believer; he has abiding faith in the improvability of the race."

While Professor Smith had great humility, this could be expressed much like Mr. Justice Felix Frankfurther of the U.S. Supreme Court did on April 10, 1959, at the 50th anniversary celebration of Judge Learned Hand's appointment as a Federal judge. Judge Hand had said his life had been "uneventful, unadventurous, easy, safe, and pleasant," but Justice Frankfurther thought he should have said "daring, romantic, antediluvian, sophisticated, and lucky."

President Samuel B. Gould at an Antioch College assembly in January 1956, also described Mr. Smith when he said "To me, a teacher is a person with a touch of im-

mortality."

Dr. A. G. Capps of the University of Missouri retired in 1957 and died in 1958, Dr. John L. Stone of Arkansas A. and M. College retired in 1957, Prof. Rolla F. Wood of Central Missouri State College retired in 1958, Dean James H. Hutchinson of Arkansas A. and M. College and Dr. W. W. Car-penter of the University of Missouri are retiring, and Miss Edith M. Howard of Central Missouri State College recently died. All of these educational statesmen join the select group with Professor Smith in which the world can give thanks for such great and humble Americans. As the years pass, many former students will sit and dream as Linda Wilson. She wrote "You Were My

"The time I spent with you was a sweet interlude from the busy days of life. It seemed as if I'd caught a breath of sweet air rushing in, and for a moment I breathed Then it was gone. It seemed as though I held a rose, pure and perfect, in my hand. But soon the petals wilted and it died. For a small time I had in my heart a newness, a gladness, a wiseness that came from being with you. I was a bud that opened out in bloom, bursting out with beauty I had not before you came. Simple things took deeper meanings, for I know I never saw the sun shine brighter, nor the rain seem more refreshing than when I was with you. The days passed by with swift-ness and beauty. And I found myself wiser, happier, more peaceful than I'd ever been before. I wanted to build something good of my life, for you had made something great of yours. You made me feel compassionate toward others by being kind to them yourself. God was near to me, for I could tell that it was He who had so richly blessed me with you. You were a part of everything I did. And then the parting came. The test comes now. It was not hard to act so wise when you were to guide But now you're gone. Can I continue as before, unchanged? When my own heart is breaking can I help another's wounded soul? My heart cries out, 'No. No. I can-not do it.' But I must. You were not sent to me by God without a reason. You were my teacher, helper, guide."

The Lord blesses humanity by giving some long and wonderful lives, like Dr. C. A. Phillips of the University of Missouri and Dr. H. A. Phillips of Central Missouri State College, but, like Mr. Smith, many leave us sooner.

Professor Smith also loved his family and has kept the faith with his children. Rabbi Emmet A. Frank has written "Ten Com-mands For Parents," which Mr. Smith observed:

"1. Thou shalt earn your children's respect and not acquire it through fear.

"2. Thou shalt not recreate your life through your children.

"3. Thou shalt give your children every opportunity to expand and express their individual personality and not smother their growth.

"4. Remember your children are human and have feelings, emotions, and problems as serious to them as your own.

"5. Thou shalt return understanding and instruction, not recrimination, when your children conflide in you. Let them feel comfortable in knowing they can turn to you for encouragement; do not frighten them away.

"6. Thou shalt teach by precept and example, serving as a model and not a critic for your children.

'7. Thou shalt not seek perfection from your children.

"8. Thou shalt keep your word and thereby teach your children the inestimable worth of honor.

"9. Thou shalt not shield your children from the realities of life.

"10. Thou shalt teach your children there is a right and a wrong and that God, not man, is the yardstick."

Yes, Professor Smith the world is a better place because you were truly a "man sent from God."

## The Peaceful Use of Outer Space

EXTENSION OF REMARKS OF

## HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. FULTON. Mr. Speaker, both as a member of the House Committee on Science and Astronautics and as a delegate to the United Nations Ad Hoc Committee on the Peaceful Use of Outer Space. I have had the pleasure of working with Dr. Hugh L. Dryden, Deputy Administrator of the National Aeronautics and Space Administration.

Under leave to extend my remarks in the RECORD I include the following statement of Dr. Dryden for my colleagues in the Congress and the American people.

PEACEFUL USE OF OUTER SPACE

(By Dr. Hugh L. Dryden, Alternate Representative of the United States to the United Nations Ad Hoc Committee on the Peaceful Use of Outer Space)

Mr. Chairman, I count it a privilege to share in our joint task of preparing a report to the General Assembly on topic 1(b) of the General Assembly's Resolution on the Peaceful Use of Outer Space. Our assignment is to outline "the area of international cooperation and programs in the peaceful uses of outer space which could appropriately be undertaken under United Nations auspices to the benefit of States irrespective of the state of their economic or scientific development, taking into account the following proposals, among

"(i) Continuation on a permanent basis of the outer space research now being carried on within the framework of the International Geophysical Year; and

"(ii) Organization of mutual exchange and dissemination of information on outer

space research; and

"(iii) Coordination of national research programs for the study of outer space, and the rendering of all possible assistance and help towards their realization."

The advancing progress of science and technology has brought us to a new frontier. the frontier of space. Man, until the end of the last century, was confined to moving to and fro in a two-dimensional world on the surface of the Earth. He observed with envy the easy flight of the birds through the air. He studied the heavens above. With he gained knowledge and understanding of the universe in which he lived. A half century ago he mastered the secrets of human flight and left the ground to travel in the atmosphere. Now he has sent his instruments into space, establishing new satellites in orbit about the Earth and two new planets of the Sun. He presses forward to gain new knowledge and understanding, and hopes himself to search out the new frontier.

Men of many nations have contributed to this forward surge of science and technology. Creative ability is not confined to any race or nationality. The records of past achievement repeatedly demonstrate this potential of men everywhere, given the opportunity to contribute. I am sure that the exploration of space will prove no exception. It is a task vast enough to enlist the talents of scientists of all nations.

Research with satellites and space probes began in the framework of the International Geophysical Year, itself a striking example of the power of a united attack on global scientific problems. The international scientific community has been so stimulated by the results obtained from the IGY space program that it has itself established a mechanism for further consultation and collaboration, the Committee on Space Research (COSPAR).

Other uses of satellites are foreseen for accomplishing better certain tasks now accomplished by other means. The fields of application so far identified are those meteorology and weather forecasting, long distance communication, navigation, and geodetic measurements. Others may develop as knowledge and experience are gained.

Because man is himself the most adaptive and versatile measuring instrument and because of his inner desire to see for himself, the manned exploration of the solar system will surely come to pass. Preparation for the initial steps have already been taken, the immediate objective being to place man in a satellite orbit about the earth for a short time, to study his physiological and psychological reactions, to measure his abil-ity to perform simple tasks, and to recover him safely.

These then, Mr. Chairman, would seem to be the three substantive areas which could most fruitfully be examined in our deliberations; space science, satellite applications in other areas, and manned exploration of space. Let us consider each of these areas briefly at this time, reserving fuller examination until the subcommittee on topic 1(b) meets on May 26. At that time an objective survey of these areas might be useful in developing information on which to base future consideration of outer space matters in the United Nations.

#### SPACE SCIENCE

Our newly acquired ability to hurl instruments into outer space makes it possible to carry out important scientific investigations that cannot be conducted at the surface of the earth. Eventually, when man himself enters the realm of space, such investigations will also include direct human observations. For such scientific investigations the convenient phrase "space science" has come into widespread use.

Space research as such is not really a separate scientific discipline. Included are the various branches of physics, chemistry, and the biosciences, supported by all the ingenuity that the engineering and technological sciences can bring to bear. Space science may be regarded as a continuation of the investigation of the earth and its atmosphere, of astronomy and astrophysics in general and of our solar system in particular, and of the origins and fundamentals of life: all from a new vantage point with new tools that promise increased effectiveness.

Just as the fullest development of space science involves the whole spectrum of scientific disciplines, so also does it require the interest, support, and participation of a whole world. In the mechanics of conducting a space research program there is need for international cooperation. tracking of satellites and space probes and the collection of data from their radio signals provide examples of cases where such cooperation is important. In scientific research itself there are also many areas in which international cooperation is essential to the fullest realization of potential scientific gains. Joint efforts in the investigation of the ionosphere and the fundamentals of radio propagation through the upper atmosphere are required to obtain the worldwide coverage that alone can provide a complete picture.

But most of all, Mr. Chairman, space research needs to draw upon an entire world for its ideas. Those ingenious insights into the real meaning behind a set of observed facts that lead to real advances in the understanding of our universe are not the prerogative of a single nation or group but come from every quarter of the world where men are seriously occupied with scientific research. So vast is the challenge of space research and so great is the promise to mankind in the way of increased knowledge and ultimate benefits that the world cannot afford to neglect or slight the opportunities that the before it.

To emphasize the vastness of space research and to indicate the potential usefulness of scientific data in dealing with prolems of concern throughout the world, perhaps a few specific examples may be helpful.

Sounding rockets and satellites can be used to continue investigations of our earth and its atmosphere. The pressures, densities, temperatures, composition, and winds in the earth's atmosphere need to be determined as a function of altitude, time, and geographic position, before a complete understanding of our atmosphere can be achieved. Since the sun is the primary source of energy affecting the earth's atmosphere, the details of the relations of solar activity to phenomena in the earth's atmosphere are important. Of practical significance are the relations that may exist between the high atmosphere and weather at the surface of the earth.

Of particular interest is the ionosphere, that portion of the atmsophere which is electrified. At the present time we have a fairly complete knowledge of the erath's ionosphere up to 100 kilometers, a less complete understanding of the ionosphere between 100 and 300 kilometers, and only scattered information about the ionosphere at higher altitudes. Immediate problems of interest call for the exploration of the ionosphere out to its farthest reaches, which may be some tens of thousands of miles from the earth's surface. It is also important to pin down the fluctuations in the ionosphere with time of day, season, sunspot cycle, and geographic position. It is, of course, the presence of the ionosphere that permits the reflection of radio waves for communication beyond the horizon. The state of the ionosphere is as important to long-range radio communications as is the state of weather in the lower atmosphere to transportation and other human activities.

Looking further to the future, both the atmosphere and ionospheres of the moon and planets will be of great scientific interest. The possibility exists that a careful investigation of these may provide increased insight into our own atmosphere and ionosphere and their behavior.

The discovery of the great radiation belt by Van Allen early in 1958 has opened an exciting new series of investigations in the general field of high energy particles in space. The opportunity exists now to continue investigations of cosmic radiation, various plasmas in space, and their effects upon the atmospheres of the earth and planets. Those particles that cause the aurora are of interest not only scientifically but also because of the connection that exists between the occurrence of auroras and disturbances to radio communications at the surface of the earth.

Electric and magnetic fields in space form an important area of study. Particular interest focuses upon the earth's magnetic field because of its role in trapping the particles that form the radiation belt. The question arises as to whether or not the moon and planets also have magnetic fields and how these might compare with that of the earth. Simultaneously the question arises of whether these bodies may have radiation belts like the earth's.

The opportunity to perform experiments over astronomical distances provides the scientist with a means of investigating the fundamental nature of gravity. Already the simple observation of satellites has yielded improved values for the shape of the earth. In the near future it will be possible to check the general theory of relativity by comparing the rate of a satellite-borne atomic clock with the rate of a smilar clock on the ground.

Through the use of satellites and observatories orbiting above the atmosphere, the astronomers will have an opportunity to observe in the wavelengths that do not get through to the surface of the earth.

Fundamental researches in the behavior of living organisms under the conditions of space and of space flight will be of interest in the area of the biosciences. Perhaps even more exciting is the possibility of finding life forms on other planets.

The conduct of research in space is itself the first useful application of satellites, and it is to be expected that man's new knowledge will be translated into forms that are meaningful and useful to men the world over. Of course, Mr. Chairman, we cannot yet predict the full impact of this endeavor. The benefits to mankind that may develop as a result of experimentation in space will only be fully appreciated with the passage of time.

#### OTHER APPLICATIONS

It is somewhat easier to identify at this time the potential benefits of other applications of space vehicles which are more closely related to familiar activities now accomplished with the more limited means currently available.

In the field of meteorology, as Ambassador Lodge pointed out yesterday, the satellite will open the possibility of a worldwide system for observing the weather. At present our attempts to predict the weather are based on data limited to a small portion of the earth. The meteorological satellite will give us the opportunity to fill the gaps existing today and to obtain a complete picture of global weather. With such information available, weather forecasting will be greatly improved with resulting benefits to agriculture, transportation, and other weather-dependent activities of importance throughout the world.

The communications satellite may well lead to vastly improved worldwide communications in terms of speed, capacity, re-

liability, and possibly economy. The value of communications among nations is universally appreciated, but as our demands become more and more stringent, we face the prospect referred to by Ambassador Lodge that present systems will not be adequate to meet these demands. The satellite may provide the means of meeting these needs and, in addition, may exceed minimum requirements thereby offering the possibility of fuller communication among nations than ever before. In its simplest form the communications satellite may be a large sphere of perhaps a few hundred feet in diameter, which would be used as a reflector for radio signals beamed at it from earth. A more complex form would be the so-called repeater satellite in which a radio repeater in the satellite picks up the radio signal from earth amplifies it, and retransmits it to a station on another part of the globe.

Geodetic satellites offer the means of improving man's view of the size and shape of the earth and distribution of land masses and water. Optical observation of geodetic satellites has the potentiality of yielding the observer's location to less than 100 feet. Improved data on geographical details of the earth may be of economic, as well as scientific, significance.

The navigational satellite may provide the basis for an all-weather long-range navigational system for surface vehicles and aircraft. With the use of suitable equipment it would be possible to establish positions with great precision irrespective of the weather. At the present time there is no such worldwide all-weather system of navigation.

These applications of satellites may become feasible within a decade, but it should be recognized that the timing of the availability of these applications depends on many factors over which the scientist can exercise no control.

#### MANNED SPACE EXPLORATION

Within this same decade we can foresee the beginning of manned space flight. The initial plans for manned space flight are of such a nature that man himself is the principal subject of the experiments, although there is involved the development of solutions for many problems in space technology which are prerequisites to further steps. It will always be necessary to return safely from the high speeds in satellite orbit or in free space by reentering the dense atmosphere, reducing the speed without having the vehicle burn ilke a meteorite, and landing at a safe speed. Much later, when large payloads of the order of 50 tons can be placed in orbit, it may be possible to build new types of vehicles and propulsion systems of a completely different character to be assembled and launched from a satellite for operation wholly in outer space.

Even with present technology it seems feasible to advance down the road of manned exploration leading in a few decades to manned exploration of the moon. Still later will come expeditions to Mars and Venus and eventually to the bounds of the solar system. Such programs become enterprises to warrant worldwide support and cooperation, particularly in the conduct of research in the manifold fields of science required to insure the success of such an undertaking.

## OTHER AREAS WHICH NEED TO BE STUDIED

In addition to the three types of activity just outlined, which might comprise the basis of the subcommittee's initial inquiries, there are other activities in international cooperation which are essential to and compliment the substantive program of scientific and technical work. We should consider some of the technical characteristics of the operation of space vehicles and should examine possibilities for international coopera-

tion in related matters. Some of the areas involved are registration of orbital elements, use of radio frequencies, termination of radio transmission from satellites, the problems posed by "spent" satellites which have completed their useful life, re-entry and recovery of space vehicles, identification of space vehicles, and the possibility of extraterrestrial contamination through the use of space vehicles. Most of these matters are of interest to many countries and cannot be effectively dealt with without some degree of international cooperation.

Referred to earlier in connection with the conduct of scientific research in space and implicit in some of the foregoing technical matters is an activity, the importance of which it occurs to me should be noted explicitly: the tracking of space vehicles. This activity already is and can continue to be one of widespread international cooperative

Just as these technical matters affect all of the substantive fields which we have identified, the problem of effective dissemination of scientific and technical information relates to all of these fields and merits careful consideration.

Finally, attention might be given to the possibilities of mutual assistance in increasing the competence and skill of all nations in space science and technology. This matter may become increasingly significant as opportunities to participate in various aspects of space programs increase.

U.S. WORKING PAPER ON TOPIC 1 (b)

The working paper on topic 1(b) submitted by the United States outlines the matters I have suggested here and explores in a preliminary way some types of cooperative activities which might be of interest. This paper may be useful in providing a basis for the discussions of the subcommittee which is to be concerned with this topic, and we would like to suggest that the items mentioned in this paper and in my remarks today be included in the working plan of the subcommittee with the addition, of course, of topics which may be suggested by other members.

Although the United States working paper indicates some tentative conclusions on our part respecting the peaceful uses of outer space and possible United Nations interest in and activities concerned with these peaceful uses, our paper should be viewed chiefly as an attempt to catalog some matters which it might be useful to consider. Only after a full exchange of views with other members of the committee can we hope to reach satisfactory conclusions within, of course, the limits of our present understanding of this yast field.

Mr. Chairman, in closing, may I emphasize the belief of our delegation that through international cooperation ways will be found whereby the benefits of space activities will flow to all countries and all peoples.

Let's Accentuate the Positive

EXTENSION OF REMARKS

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, June 17, 1959

Mr. WILEY. Mr. President, I have had called to my attention a very interesting article entitled "Let's Accentuate the Positive," written by Arthur Larson. I wonder, incidentally, if that is not a good slogan for us who serve in the Sen-

ate—"Let's Accentuate the Positive."
The article has particular reference to the international picture.

Mr. President, as a member of the alliance of free nations, the United States today faces a real challenge to its existence: namely, communism.

As a free nation, we have the best story to tell in the world. The American system provides its citizens with the fundamental recognitions and opportunities for which all men yearn.

Unfortunately, we have been relatively unsuccessful in presenting this image—featuring the ideas and ideals of freedom—to people of the world. By and large, this is the result of two factors: first, the Communists have engaged in a tremendous, far-reaching campaign to distort our image in the global mind. Second, we have failed (a) to recognize what the dangers of this distorted action by the Communists are; (b) to take effective measures to counter their propaganda machine; and (c) to make sufficient effort to present a real picture of our Nation, its people, and its system.

Recently, the publication Think, published by International Business Machines Corp., published the article entitled "Let's Accentuate the Positive." The article was written by Mr. Arthur Larson, former Director of the USIA Overall, the article is a thought-provoking review of our problems of creating a clear image of our system and ideals.

Among other things, Mr. Larson points to a crucial shortcoming of our efforts in this field, in that we present a clearer picture of what we are against on the global scene—communism—rather than of what we are for. The people of the world are looking for a positive—as well as a nonslave—way of life.

Too often, also, we present our case in terms of abstract ideals, rather than in concrete terms of food, houses, clothes, educational opportunity, and other necessities of life.

In addition to providing some very useful recommendations for our information service abroad, the article also contains astute reflections on the interrelationships of industry, labor, and government in the United States—a field in which, today, there is much misunderstanding.

I quote from the article:

The three elements in modern industry—private business, organized labor, and government—are not fundamentally antagonistic, but support and advance each other's interests.

Their function is not to thwart or destroy or displace or frustrate each other. Their function is to support each other. Rightly conceived, with proper leadership, and with an intelligent sense of self-interest in each case, these three forces have ultimately a common interest. By recognizing their proper roles and the roles of the other forces, and by playing their parts in advancing the mutual interest, these three elements can raise and have raised the standards of production and prosperity far beyond the level that could be attained by any one of them, no matter how unlimited the power and freedom given to that one might be.

Because the article contains additional food for thought on both domestic and

international problems, I ask unanimous consent to have the article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S ACCENTUATE THE POSITIVE (By Arthur Larson)

The most subtle, the most difficult, and the most crucial job facing Americans in the period ahead is to convey to people all over the world, simply and convincingly, what we are for.

Americans overseeas are often shocked, disillusioned, and puzzled by the wildly inaccurate mental picture many foreigners have of us and of our system. A poll taken in India some months ago, for example, showed that most Indians thought the United States was a greater threat to peace than the Soviet Union.

One primary reason for this unsatisfactory state of affairs, is that, in the precious years since World War II, when the current ideological contest was taking shape, we too often consumed our idea ammunition in being "against."

We knew what we were against. That was easy. It was communism.

And so our finest activities were frequently justified to Congress and to the people in this way:

We must have an oversea information program. Why? To counter Soviet propaganda.

We must have a foreign economic program. Why? To stem Soviet penetration. We must have a cultural program abroad.

Why? To offset the Soviet cultural offensive.

The net impression left by all this is that
the active force for change in the world is
communism, while we, by contrast, represent
an amorphous, ill-defined force for counter-

ing change.

The trouble is that most people, particularly in the crucial newer countries, want change. They are not satisfied with their life and world, and you cannot blame them.

And so, if we get maneuvered into the position of being antichange, while our opponents are pro-change, we enter any competition for the minds and hearts of people in the newly developing countries with a hopeless handleap.

hopeless handicap.

The truth is that what we are for is the active, positive force in the world. This country's pioneering success in practical political democracy and in rapid industrial progress has for years been an explosive force inspiring other countries and colonies around the world.

Let us be clear about what we are trying to accomplish in these countries.

We are not trying to get them to imitate or emulate us. This would be presumptuous, as well as impossible.

What we are seeking is identification. In dealing with the people of India, for example, we want to have a feeling on both sides of "we"—not "we" and "they."

We know that we have differences. But identification means understanding the common principles that bind us together, and realizing that the things that draw us together are far more important than those that differentiate us.

Identification is a two-way process. It requires, first, understanding one's self and, second, understanding the other fellow. For only then can we see the common elements and make the most of them.

The first great obstacle to our achieving mutual understanding overseas is of our own making. It is our own failure or refusal to recognize what we are and what our system really is.

By creating an image of ourselves which is in itself unreal, we make it almost impossible for others to identify themselves with us.

#### EXPLAINING WHAT WE'RE FOR

There have been quite a few books, pamphlets, and even courses of instruction, which set themselves the task of explaining "what we are for."

Many of these statements are eloquent on the great principles of liberty, individuality, religion, and private enterprise. As Chesterton said when comparing the works of George Bernard Shaw with the Venus de Milo, everything that is there is perfect.

But frequently the omissions leave an impression that is so out of date that it is dangerously misleading. You could read many of these statements and never learn that the U.S. Government does in fact regulate, stimulate, police, and even subsidize American business and agriculture in a thousand ways, large and small. You would never know that social insurance exists in the United States—far less that we have one of the world's most highly developed systems. You could be quite unaware of the vital roles played by organized labor, by Federal tax, credit, and purchasing policies, and by such agencies as the FTC, the FPC, the ICC, etc.

Now, suppose we go to a country like India with this picture of what we are for a sort of ineffable distillation of purest untrammeled free enterprise, with a laissezfaire government standing benevolently by.

What can India say? She will be driven to say, "We're sorry, but if that really is your system—while it may have worked for you—if cannot possibly fill the bill for us."

India has few capitalists, and very few of the other ingredients of an American-type, self-started, self-propelled private-enterprise economic development. She cannot possibly carry forward her plans for industrialization and development without a considerable degre of governmental involvement.

Therefore, if we create the impression, expressed or implied, the strong government involvement in the economy puts a system beyond the pale so far as we are concerned, our hopes of identification will be shattered.

Meanwhile, the Communists are saying, "You need a heavy degree of government participation in economic development. We stand for complete government control of the economy. You're really closer to us."

the economy. You're really closer to us."

If we ever let matters get in that posture, we would be guilty of one of history's most tragically inexcusable blunders.

For the actual fact is that we have a principle—the guiding principle of our own Government-business relation—that applies equally well to India and to the United States, and which can serve as the common ideological denominator between us and practically all the newer economies. I am going to suggest a name for it: enterprise democracy. The heart of the concept lies in a quotation from Lincoln which in recent years has become one of his best known sayings. He said that the function of Government is to do for people what needs to be done, but what they cannot do for themselves at all, or do so well.

When you transplant this principle to India, you find, first, that there is much more that needs to be done for the people, and, second, that there is a much larger part of it that they cannot do for themselves through private means. But the principle itself is just as valid, although the facts are changed.

This is not socialism. Indeed, it is the opposite of socialism, and the best practical antidote to socialism in today's world.

A Socialist is a person who says, "If something needs to be done for people, let the Government do it."

The Lincoln principle says, "If something needs to be done for people, other things being equal, let it be done privately. But if it

cannot be done privately—and if it must be done—then let the Government do it."

If we surmont the first obstacle to world understanding by discarding our delusions about ourselves, we still have the affirmative task of stating in simple, fresh, exciting terms what we are for.

In classical capitalism, only one force counted: private business.

Socialists enthroned a second force: government.

Now a third element has been added: strong organized labor.

The old view was one based on inherent antipathy between business and the other two elements.

The class struggle between capital and labor was accepted as a fact of life by both sides. At one extreme, fanatical Communists were willing to destroy the employer to gain their ends. At the other extreme, the 19th century capitalist was presumed to have no interest in labor except to wring as much exertion from it as possible for the lowest possible wage.

Similarly, as to the relation of Government and business, both sides agreed that the relation was, or should be, one of enmity. The employers dealt with Government on the assumption that any Government connection with business affairs was an evil, poisonous thing. The Socialists expressed the essential antagonism in another way, contending that the Government should destroy and take over private business.

#### ALL FOR ONE

The new and distinctive contribution of American thought is this:

The three elements in modern industry—private business, organized labor, and Government—are not fundamentally antagonistic, but support and advance each other's interests.

Their function is not to thwart or destroy or displace or frustrate each other. Their function is to support each other. Rightly conceived, with proper leadership, and with an intelligent sense of self-interest in each case, these three forces have ultimately a common interest. By recognizing their proper roles and the roles of the other forces, and by playing their parts in advancing the mutual interest, these three elements can raise and have raised the standards of production and prosperity far beyond the level that could be attained by any one of them, no matter how unlimited the power and freedom given to that one might be.

#### THE CAUSAL CHAIN

Let me give two or three examples.

Many businessmen used to assume, almost automatically, that they should be opposed to the social insurances, such as workmen's compensation, unemployment insurance and

social security.

Most of them are now beginning to accept
the fact that our private-enterprise economy
could not exist without social insurance.

Thus, our present level of economic activity is largely consumer based. The level of consumer buying, in turn, is heavily dependent on installment purchasing. Installment purchasing, in turn, is heavily dependent on social insurance. It could never be undertaken on its present scale unless hourly wage earners had confidence, thanks to social insurance including unemployment insurance, that they would not forfeit their goods and payments during periods of wage interruption. The causal chain is clear. Social insurance is not merely helpful, it is indispensable to our high-level, consumer-based economy.

Similarly, almost the entire complex known as Government regulation, which has so often been denounced as "interference," proves on examination to be essential to the functioning and prospering of modern business. How could there be a television industry, for example, if the Government did not assign channels? If channels were grabbed on an every-man-for-himself basis, the industry would soon smother itself under a blanket of screeching, howling, overlapping signals.

How could our modern packaged food, cosmetic, and drug industries exist without Government regulation? Who would buy a jar of pickles or a bottle of shampoo—if he could not rely on Government food and drug laws to assure him that the pickles would not poison him nor the shampoo burn off his scalp?

Who would ride in a commercial aircraft, if he could not rely on Government ordering of air traffic and enforcement of safety standards?

Examples could be multiplied, up and down the entire roster of current goods and services. What it comes to is this: in simpler times the customer bought his pickles from a barrel, and could handle and inspect and smell them to be sure they were sound. But, if you want to have an economy which sells its pickles in sealed jars, you must also accept an economy in which Government standards and regulations are normal. Under a laissez-faire concept of government, business could never rise above the pickle barrel stage. Only with the aid of government can it achieve the age of mass distribution and supermarkets.

It hardly need be added that if government activity goes one inch beyond what is clearly necessary to do this kind of job in the interest of the public, then its effect does, indeed, become harmful and stifling, as it often was in medieval times, and still is in some countries now.

One more example of this theory of mutual interest: the essential unity of interest between management and labor is becoming widely accepted in this country. The surface contest over wages and benefits is obvious. There is also a contest between a wholesaler and a retailer, and between a retailer and buyer, over the price of a washing machine. But that does not mean that there is a class struggle in each case—much less that each is so bitterly opposed to the other that the perfect culmination of his effort would be the other's complete destruction.

Marx, like most writers on economics prior to John Stuart Mill, was obsessed with the problem of distribution. The problem appeared to him as a matter of dealing with a fixed amount of wealth, which must be taken away from the capitalists and redistributed.

At about the same time, Lincoln adumbrated the modern theory, which is that the real secret of prosperity for all is to increase the total stock of goods through added production. Lincoln said:

"Let not him who is houseless pull down the house of another, but let him labor dillgently and build a house for himself."

Then came Henry Ford and his voluntary \$5-a-day wage, and the American pattern began to emerge: high production, good wages, and widespread purchasing power as the mutual goal of both employer and employee.

#### A COMMON GOAL

There is one further task. We must reach out into the future. We must conceive and display an inspiring ideal—not just of what our system is—but of what we want it to become.

One sometimes has the uncomfortable feeling that too many of us have a mental picture of the world situation rather like this: We have "arrived"; we have the ultimate in political and economic arrangements; we have a high standard of living; now the problem is for everyone else to catch up with us.

The right picture, the only kind of picture that will inspire people and impel them to

associate themselves with us, is this: There is a goal, far out in the distance, that both they and we are striving toward-and it is a

long way off from all of us.

This American objective of a society of widely shared capital, with its concomitants of widely shared leisure, culture, security, recreation, material well-being and intellectual and spiritual fulfillment, may seem remote, even more remote from others than it is from us. But it is far more appealing, far more rich in what it offers, far more valid in conception, and far more attainable than the phony Communist utopia. And when we consider that this phony Communist utopia has been the principal exhibit used to support the worldwide Communist claim to being the "wave of the future," it will give us some idea of the vastly greater intellectual fire we could kindle around the world with both the reality and the vision of what we are for, a reality and a vision that are infinitely more rewarding, more promising, and more exciting than anything the world has yet seen.

## Required Reports

EXTENSION OF REMARKS OF

# HON, MERWIN COAD

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to submit the following article written in protest against the reports Government agencies require from private business. This most interesting article appeared in the Jewell Record, Jewell, Iowa, under the heading of "Warren's Column." The article fol-

#### WARREN'S COLUMN

Our purpose in this particular column is a It is to register a protest, loud and probably long, against Government re-Our arrows are aimed at the dadratted reports Government agencies and bureaus require from private business.

Concede, if you will, that some of the information sought by these Federal bureaus and agencies may serve a useful purpose. Have any of the bureaucrats who think up the forms ever considered whether the value to the Government is commensurate with the time and effort a businessman must expend in completing and filing these reports? We doubt it.

Why should some brass hat in Washington worry over the additional workload these reports impose on a small businessman out in the sticks? If a bureau has too many idle employees, why not just put them to work gathering and compiling statistics from private business?

And that term "private business" certainly is a misnomer any more. What's private about a business activity from which so much information is required?

Our not-so-slow burn was fueled by the receipt of an oversize envelope stated to contain an "Official United States Government Document." Inside are a four-page form (MC 27z-3), a letter from the Bureau of Census Operations Office advising that the Bureau was directed to take the census and that we are required to report; also a statement of the Advisory Council on Federal Reports advising that the Council has reviewed the enclosed forms. All quite offi-

cial, as are the notices that the report is required by law and is to be filed within 30 days of receipt.

That time apparently having elapsed, along comes an official notice. We are told to check our files and if the report has not been mailed to kindly mail it at once. Apparently there is nothing for us to do but to dig the forms out of the desk drawer and start adding up figures. Sidetrack all the regular work concerned with earning a living, the Government must be kept in-

So here goes for Form MC 27z-3: The first page isn't so tough. Maybe we've mis-judged the difficulties of supplying the required information. Name of establishment, the Jewell Record Publishing Co., State, county, is the establishment within the legal boundary of a municipality? etc., etc., all fairly simple questions for which we have the answers.

Comes next blanks to be filled in with figures, all value figures to be entered in thousands of dollars: Total payroll, total number of paid employees by quarters; cost of materials, fuels, electricity, etc.; values of inventories, capital expenditures, etc. All of this information, mind you, in thousands of dollars, for a two-man printing estab-

The next page gets tougher still. Here again we must report in thousands of dollars, first on selected materials consumed. then on products and services, products made, printing activities and allied activ-Before that throws us entirely we read that the quantity of paper is to be reported in short tons, also that there are special columns to be filled in if \$5,000 worth or more or somewhat less than \$5,000 worth of listed materials was consumed.

So where do we get the figures, remembering that we must certify that the report is substantially accurate. The files yield a statement showing the purchase of 30 reams of 81/2 ×11 white carleton mimeo, a ream of 25×38 white wove Hamilton offset, perhaps 20-pound stock, a carton of this, a bundle of that. Should we add reams, bundles, and cartons, and come up with short tons?

So here is a stumbling block. The form hasn't yet been completed and it's getting late in the day. Perhaps, tomorrow, there'll be more time to work for the Government in supplying this vital information.

## Gold and Oregon's Settlement

EXTENSION OF REMARKS

## HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. ULLMAN. Mr. Speaker, as part of their observance of Oregon's centennial celebration, the Ore-Bin, published by the State department of geology and mineral industries, has printed a number of articles concerning Oregon's early development. One such article, "Gold and Oregon's Settlement." provides an interesting account of the vigorous years during which eastern Oregon was first

Mrs. Irving Rand, the author of this fine article, and the Ore-Bin are both to be congratulated for their interest in this historic development. I am sure "Gold and Oregon's Settlement" will

provide enjoyable reading for my colleagues and I ask that it be printed in the RECORD!

> GOLD AND OREGON'S SETTLEMENT (By Helen B. Rand) INTRODUCTION

One of the odd quirks of history is the fact that situations so well known to one generation are soon forgotten, overlooked, or never known to later generations. A good example of this is the discovery of gold in the Inland Empire (eastern Oregon, eastern Washington, and Idaho) which proved to be a major incentive to its settlement and to the progress of Oregon as a whole during the decade from 1860 to 1870. The importance of this fact seems not to be generally known today.

For 30 years emigrants to Oregon passed through the vast interior on their way to the Willamette Valley. Many admired the high valleys but no one tarried. There were several reasons for this, among which were fear of Indians and severe winters, the wish to be near ocean transportation, the desire to become part of an already settled community, and, not least, to gain the protection of the Hudson's Bay Co. In 1845 one ill-fated company, headed by Stephen Meek, departed from the usual route and dared to cross through central Oregon. Their sufferings were so great that when one member of the party discovered gold on a small stream it went almost unregarded at the This strike, now known as the Blue Bucket legend, while ignored then, assumed importance in later years.

The settlements along the Willamette River struggled along, making no great gains in population until about 1855. Leslie Scott has said that early progress in Oregon proceeded at ox wagon speed and Oregon was a district proverbial for retarded growth.

THE SEARCH FOR GOLD TURNS FROM CALIFORNIA

Value of gold production reached its peak in California in 1851, and by 1855 had dropped more than \$20 million due to exhaustion of the easy pickings. As a result, the search for new gold-rich areas was rapid and widespread. One of the first major discoveries was made in British Columbia. Not only miners but carpenters, merchants, and laborers of all kinds rushed from California to Victoria. It took all the available ships to carry them north, and many could get passage only as far as Portland with the hope that other ways could be found to get them to the new camps. Fares from San Francisco to Portland were \$60 for the "nobs" and \$30 for the "roughs." Supplies were bought in Portland, and this gave local trade a big lift.

A few hardy souls tried their luck on the John Day and Burnt Rivers of Northeastern Oregon in 1855 and sent word to Portland that gold was found, but nothing came of

their discovery at that time.

Due to Indian troubles, General Wool, then commander of the department of the Pacific at Fort Vancouver, had discouraged settle-ment east of the Cascades, but he had excepted miners because the Indians considered them to be temporary and not likely to preempt their lands. In 1856 Fort Walla Walla was established near the confluence of the Snake and Columbia Rivers.

Two parties prospected in eastern Oregon in the summer and fall of 1861. Both were in search of the stream where the Blue Bucket find was made. One party was led by a man named Adams who claimed to know its location. Soon after the start of the expedition the men realized that their leader knew no more than they did about the location. The angered men turned on Adams and he barely escaped with his life. This party, consisting of four men, one of whom was named Griffin, went east toward

the Snake River through Blue Mountains. Gold was discovered in what is now Baker County, and the locality was given the name Griffin Gulch, later named Auburn Camp. Two men from this group went to Fort Walla Walla for supplies and from there the news reached Portland that gold had been found on a tributary of Powder River.

The other party prospecting along the John Day River was set upon by Indians who killed all but two of the group. These two made their way back to The Dalles and told of finding gold. Part of the journey had been made through the present Wheeler County and the men told of building a bridge of juniper logs across a small stream. This little bridge was a landmark for later travelers who gave the name Bridge Creek to the stream.

Joined with the talk about these two strikes came a much greater piece of news. It was the word of the big gold strikes in the Idaho country at Oro Fino and on the Salmon River. In the following spring (1862) the miners burst into the Inland Empire, almost, it seemed, by spontaneous combustion. Some came from the Willa-mette Valley by way of the Columbia River and others from California by the overland

#### MINERS "RUSH" CANYON CREEK

The Canyon Creek and John Day mines of Grant County were discovered by two parties converging, one from Portland and another from California. The California party was on its way to the Salmon River in the Idaho country. When gold was found on Canyon Creek it seemed to be so plentimany of the men stopped right there without going any farther. The experienced California miners took charge of the camp management and in a few days the firstcomers were joined by many others.

G. I. Hazeltine, writing from Canyon Creek (then spelled Canon) on July 5, 1862, estimated by the number of animals and tents that there must be a thousand men camped on a 2-mile stretch between Whiskey Flat, where gold was first found in June 1862, and the confluence of the creek with the John Day River. Mr. Hazeltine and his brotherin-law, Van Middlesworth, with a party of about 20 men, had left Shasta County, Calif., in May and were on their way to the Idaho mines. Following a route up the Pit River, entering Oregon near Goose Lake, and going north by the Malheur Lakes and Silvies River, they reached the Blue Mountains. They continued along the Silvies River through the present Izee country to the head of Sollinger's Gulch and dropped down onto Canyon Creek from the west.

This party had been preceded a few days earlier by another containing many old friends and acquaintances of Hazeltine, among them George Woodman. These old hands among the miners had organized the new camp along the lines used in the California camps, and Mr. Woodman had been made recorder of claims. Mining laws had been drawn up and copies posted on trees up and down the creek. In part they were as follows:

"This district shall be known as the John Day's district, the limit of which shall be as follows:

"Commencing at the mouth of Canon Creek and running south to the head of the canon including all of its branches and tributaries, thence north to the middle fork of the John Day's River, thence west to the place of beginning and shall be governed by the following laws, to wit:

"Article 1. Each person in the district shall be entitled to two claims by location, one in a ravine, hill, gulch, creek, or flat as the case may be and one in the river and one by purchase. Every claim located or purchased shall be represented.

"Article 2. Claims in Canon Creek shall be 75 feet up and down and from bank to bank, present occupants or owners to have choice of ground and to have until 10 o'clock Monday the 7th inst. to make such selection.

"Article 3. Bank claims shall be 75 feet face and running back to centre of hill.

"Article 4. A creek claim shall be considered workable from the first of June until the first of November except Canon Creek which shall not be deemed workable until the 20th of July.

"Article 5. A ravine claim shall be 150 feet in length by 100 in width running up and down the ravine gulch and creek. Claims to have the same limits and boundaries except Canon Creek.

"Article 6. A hill claim shall be 150 feet face and extend back to centre of hill

"Article 7. Quartz claims shall consist of 100 feet on the vein or lead with all its widths, depths and angles, the discoverer to hold 50 feet extra."

Article 14 was as follows: "Chines or Tartars are hereby prohibited from working these mines under any and all circum-

Since it was assumed that the mines could not be worked during the winters and that miners would leave the camp until spring, this provision for holding to a claim (a fore runner to the "assessment work" provision in our present mining laws) was included: "Article 8. No claim shall be deemed forfeited from the first day of November until the 20th of June A.D. 1863."

Article 19 acknowledged other conditions of pioneer life: "No person disabled by sickness or absent in any Indian wars shall be deemed to have forfeited his claim by reason of service or sickness." (In recent years "moratoria" have been granted for doing assessment work on claims during the war years and for other emergencies.)

All told there were 30 articles. These articles, or laws, spelled out the "do's" and "don'ts" for the miners quite completely.

## MERCHANTS FOLLOW MINERS

The rapidity with which news of a new mining camp spread in a remote wilderness never fails to astonish us. Already in July of 1862 people were on hand to provide service to the miner and enrich themselves. Mr. Dye had come in from Coos Bay, a seaport in southwestern Oregon, with a small herd of cattle to furnish meat for the miners. Mr. Sharp, who had a contract carrying freight over the portage below The Dalles on the Washington side of the Columbia, immediately went to The Dalles and bought a stock of goods to pack in to Canyon Creek. This train was attacked by Indians along the banks of the John Day River and most of the goods lost. What remained, Mr. Sharp took into camp and it became the first merchandise sold on the creck. Mr. Cosart, another merchant, was almost as early as

While the route from The Dalles via the John Day River was the main road into Canyon Creek, it was always a dangerous one. The brush-covered banks of the river and its tributaries afforded excellent cover for the Indians, and many trains were attacked. But because of the high profit involved, danger proved to be no deterrent and goods kept coming in. As always, the saloons and hurdy-gurdy houses appeared as if by clairvoyance and were soon running full blast.

#### RANCHERS FOLLOW MERCHANTS

Almost at once the possibilities of the fertile John Day Valley were recognized. B. C. Trowbridge, Charles Belshaw, Henry and William Hall, and others went to farming and cattle raising. The Olivers came in later. What is said to be the first claim for farmland was made by Stephen Burdge. He said "I claim possession of \* \* a certain tract of land \* \* which I take up for farming purposes being a man of family.'

At an early date John Herburger stated that he got a fine crop of potatoes and offered them for sale at 25 cents a pound. He was forced to limit the sale to any one person to 4 pounds so that all might have some.

#### SURROUNDING AREA EXPLORED AND SETTLED

William H. Packwood called Auburn "the mother of mining camps" in Baker County, and this was true also of Canyon Creek in Grant County. From these two bases men fanned out in all directions looking for "color." They explored streams, mountains, and sage-covered hills. They penetrated into locations which seem almost inaccessible today, dependent as we are on the gasoline engine. Some had horses but many more were on foot. Practically every inch of the Blue Mountains was explored in the first few weeks. Mr. Hazeltine said, "Men are coming and going in all directions."

One of the first gold discoveries made near Canyon Creek was on Little Pine Creek a few miles east of the present Canyon City. This led to the settlement of Marysville, quite a hamlet in its own right. The days but now just a school district. The Prairie Diggings camp was another. finders of this camp included F. C. Sels, a long-time resident of Canyon City and owner of the first brewery. One of the first ditches in the district was constructed here and a joint stock company formed. It has been said that the original stockholders cleared \$10,000 each in the first year.

These early miners usually worked in companies. There were not enough good claims to go around so they formed partnerships. Men who had no claims worked for the others as day laborers.

The first ditch, appropriately called the Raw Hide, constructed on Canyon Creek was flumed with raw hide because of the lack of lumber. Other ditches were the Lone Star, built by Texans, and the Humboldt, which was used for many years.

Another good strike was made on Dixie Creek, a tributary of the John Day River. Good strikes were made at Granite Creek, Olive Creek, Vincent's district, and the north fork of the John Day River by miners working out from both Auburn and Canyon Creek.

## PERMANENT RESIDENCE ESTABLISHED

Mr. Hazeltine spent the winter of 1862-63 on Canyon Creek writing homesick letters to his bride whom he had left at Oak Run. Shasta County, Calif. These letters went by way of Wells Fargo express or were taken by anyone who happened to be returning to California, Practically all reached their destination safely.

Mr. Hazeltine kept careful account of his

expenses. Not only food was listed, but supplies such as lumber for sluice boxes for which he paid \$3.36, a rocker iron for \$1.25, horseshoe nails for 50 cents. Gloves cost him \$2.50, boots \$8.50, and a comforter when the weather got cold, \$2. He bought 100 pounds of "spuds" for \$16, beef at 25 cents a pound (which he considered high), 500 pounds of flour for \$20, and a bake oven for \$2.75. He remarked that coffee and sugar were very scarce. A few luxuries included 50 cents for tobacco and \$5.75 for whisky and "segars." There were entries for medicine and several listed merely as "charity."

In the fall of 1862 he and Middlesworth decided to build a house. They hired a man named Hudson to work on it and leave them free to mine. Mr. Hudson was paid \$37 for hewing logs and 5 days' work on the house. When completed, it cost \$350 and was the best on the creek. Although the two owners continued to live in the house, it was rented to a merchant.

In the spring of 1863, Hazeltine and Middlesworth brought in their famlies and spent the rest of their lives in Canyon City and John Day.

THE LATER YEARS

Search for the "mother lode" on Canyon Mountain was to go on for many years, but the mountain seemed to consist of only. Around the turn of the century the whole site of the first strikes on Canvon Creek was dredged and this was the last gold that has been extracted from this famous district.

A few romantics still look for the legendary Blue Bucket mine but many old timers were sure it had been found on Canyon The late George H. Himes, curator of the Oregon Historical Society for many years, quoted a statement made to him by William F. Helm who, with his father, mother, brothers, and sisters, was a member of the Stephen Meek party that made the Blue Bucket discovery. Mr. Helm was on Canyon Creek in 1863 and always insisted that Canyon Creek or another tributary of the John Day was the site of the finding of the Blue Bucket gold. Support is given this by letters from pioneers writing to the Oregonian newspaper in the spring of 1919 who agreed that location of the fabled discovery was somewhere in the John Day country. J. N. Barry, Portland, well-known authority on Oregon history, also holds this view.

By the end of the decade the easy workings were over, although quartz and hydraulic mining went on for a long time. The "Chines" were permitted to come in to work over the tunnels and tailings piles. The late J. L. Kraft of the Kraft Cheese Co. has advanced the theory in his book, "Adventure in Jade," that the Chinese were looking for jade as well as gold. He knows that jade was found in a northern California mountain. Perhaps it was found in other places too. Who knows?

By 1870 the first boom was over. But it served its purpose. Eastern Oregon, Idaho, and Montana had permanent settlement. The founding of Boise and Lewiston, Idaho; Baker, Oreg.; Helena, Mont.; and many other cities was the direct result of the gold rush. An additional benefit was that the railroads came in sooner than they otherwise would have.

As for Portland, the impetus created by the search for gold carried this city forward toward the metropolis which it now is. By 1867 the total production of gold in Oregon, since the beginning of working, was \$20 million. But Portland was also the receiving station for gold from other fields. Durthe same period, Idaho produced \$45 million, Montana \$65 million, and Washington \$10 million. Even this does not tell the whole story as it applies only to gold on its way to the mint. Surely as much gold again must have gone for food, supplies, investment in land, livestock, and other materials and services needed by the miner, to say nothing of what was lost in gambling and saloons

Probably the greatest source of wealth to early day Portland came from the proceeds of the Oregon Steam Navigation Co. This company was organized to handle transportation and trade to the inland empire. It had a monopoly on Columbia River travel and some of the solid fortunes of Portland were founded on the proceeds of its operation. Money was also made by packers and stage coach companies.

Today, gold mining in Oregon is at an all-time low. Mining for other metals, such as uranium, nickel, chrome, and mercury, and building materials, such as limestone, sand and gravel, and pumice, have taken its There are some who say that present domestic gold production must be increased as our monetary stock is being depleted and that there is insufficient gold to back the increasing amount of currency that will be needed in coming years. There is still gold needed in coming years. There is still gold in Oregon and, if conditions ever permit, the old mines may be reopened and possibly new discoveries will be made. If this happens, rest assured gold mining once again will work to the benefit of the State.

### Asia's War of Words

EXTENSION OF REMARKS

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. WILEY. Mr. President, yesterday I was pleased to introduce a bill to establish a Citizens' Council for Advocacy of Freedom.

The purpose was to better enable the United States-and the free world-to stage a counteroffensive against the propaganda war being waged by the Communists. Globally, the Red propaganda machine is operating on an around-the-clock, all-year-long sched-

This ideological battleground is not one which we can take lightly or ignore. Rather, we must realistically realize that the "war of ideas" may well determine the victor in the struggle of communism versus freedom-if outright war can be avoided-as we hope and pray will be possible.

We can be assured of one thing: The Communists are not sleeping-or taking a lackadaisical attitude toward this conflict. Rather, they are tailoring specific plans to promote their interests in every country around the globe. accomplish their purpose, they are utilizing every method and technique in the book. These include: newspapers and magazines, radio broadcasts, films, native friendship societies, international front organizations, local front clubs. cultural, economic, governmental and other exchange groups, exhibitions, diplomatic missions.

Recently, the Detroit News carried an article entitled "Asia's War of Words."

The article is a prime illustration of how the Communists are using each and every propaganda weapon to further their causes in Asia.

I ask unanimous consent to have the article printed in the Appendix of the

There being no objection, the article was ordered to be printed in the RECORD. as follows:

[From the Detroit News, May 12, 1959] ASIA'S WAR OF WORDS-RID CHINESE USE

EVERY PROPAGANDA WEAPON AGAINST UNITED STATES

### (By Don Frifield)

Hong Kong, May 12 .- While America's best propaganda minds are thousands of miles away in New York, declaiming the merits of one cigaret versus another or the frenzied joys of the housewife in some new detergent discovery, the merchandising talents of the Chinese Communist world are

trained full force on the vulnerable and restless lands of east Asia.

Awakening from their long colonial slumber, beset with problems that hitherto concerned only their colonial masters, they look for excuses, justifications, rallying points, slogans, and even solutions.

The United States has been useful and generous with money and technical aid. The best minds in each of these lands knows

this is the truth.

#### UNITED STATES BLAMED

But by the uncounted millions, the illiterates and the possessionless, the frustrated intellectuals and the even more frustrated semi-intellectuals, the uncommitted youthall are likely and numerous targets for the Communist appeal.

Excepting only Japan, Nationalist China (Formosa), and Thailand—all these lands are former colonies. This sensitive point is everlastingly reiterated, with the accusation that colonialism still persists under whatever new basis that American ingenuity and avarice can derive.

These are the 10 major media that Peiping uses to gain adherents in the free lands of

the Orient.

1. Newspapers and magazines: The Communists publish seven major newspapers in the area. Total circulation is about 150,000. Most influential of all the magazines is China Pictorial, published in English and eight other languages. Magazine printing is generally excellent, photography is well done, and color plates are often more frequent than in most American "slick" maga-

2. Radio broadcasts: The Communist bloc has stepped up its radio assault on East Asia. In December of last year, for example, American monitors compiled 542.5 hours of broadcasting to the Far East alone, as contrasted with 481.25 hours in December 1957.

Broadcasts are in 7 major Chinese dialects and 10 other languages, including English and French. Peiping now broadcasts to Europe, North Africa, the Middle East and Australasia a grand total of 22 hours and

40 minutes every day in foreign languages.
3. Films: Last year Communist China sent feature films, short subjects, and documentary films to Japan, Indonesia, Burma, Malaya, Thailand, and Cambodia. Pelping is beginning to expand and promote her motion picture industry, aiming at international appeal.

At present, most of her films are so loaded with happy peasants, laughing laborers, and idyllic families living joyously apart on the communes that they are admittedly not fit for export.

4. Posters and pamphlets: These have an importance in the Orient far beyond their function in the West. Posters can be put up at night where the Communist Party is illegal, and pamphlets can be secretly published and distributed.

5. Native friendship societies: Founded on ostensibly cultural grounds, they are excellent fronts for the dissemination of Comnist Party literature, forums for speeches,

resolutions, and lobbying.

6. International front organizations: Their names are innocent-sounding: World Peace Council, World Federation of Democratic Youth, Women's International Democratic Federation, International Medical Association and numerous others.

7. Local front organizations: These are "patriotic" societies, but are nominally closely linked to the local Communist Party, where it is legal, or to the local branch of the international front organization, where the Communist Party is illegal.

8. Exchanges of groups: American ob-servers believe these have been all too effective, considering the reports that many visitors to Communist China have published in the local press. Most of the visitors had never been elsewhere, such as to Europe or the United States. Exchanges may be classified as cultural, economic, government, front, and scientific-technical. Last year Japan led in the number of such exchanges.

9. Exhibitions: These include the tours of the Cantonese Opera and the Amoy Opera to Cambodia, as well as the recent agricultural and industrial exhibit in that country. In this field, however, the Soviet Union is thus far more active than Communist China in the Orient.

10. Diplomatic missions: Last, but not least, are the Communist embassies in the free Orient, which operate propaganda machines under the traditional diplomatic freedom from customs inspection, police scrutiny, and other harassments.

#### REBUTTAL

Confronting this 10-pronged Communist propaganda offensive in the Orient, the United States and the rest of the free world depend preponderantly on their prestige and general reputation.

The only major apparatus of the Western World to combat Communist propaganda in this area is the U.S. Information Service (USIS), which disposes of less money in its worldwide operations, including the Voice of America, than each of no fewer than nine major U.S. advertising agencies.

major U.S. advertising agencies.

The USIS has about \$100 million this year to spend all over the world. In countries like Japan, budgeted at \$1.5 million, or Thailand, budgeted at about \$500,000, the sums involved verge on the iudicrous in comparison to the multi-million-dollar propaganda investments of the Communists.

### Honor Awarded to Senator Paul Douglas

EXTENSION OF REMARKS

# HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. HUMPHREY. Mr. President, a recent editorial in the Illinois State Register, of Springfield, comments on an honor awarded to the senior Senator from Illinois by the Abraham Lincoln Center in Chicago. This editorial gives an excellent account of the reasons for the high esteem which members of the Senate and the American people have for the distinguished Senator from Illinois

I think my colleagues will agree that no one is more deserving of the Humanitarian Service Award of the Abraham Lincoln Center than Senator Douglas, whose long battle to provide equality and opportunity for the poor and the oppressed is an inspiration to all Americans.

Mr. President, I ask unanimous consent that the editorial to which I have referred be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Illinois State Register, June 4, 1959]

DESERVED HONOR FOR PAUL DOUGLAS—STATE'S SENIOR SENATOR CHAMPION OF EQUAL RIGHTS

Senator Paul H. Douglas will receive the 1959 Humanitarian Service Award of the

Abraham Lincoln Center settlement house in Chicago at a testimonial dinner on June 15.

Proceeds of the dinner will go to support the settlement house which, for more than 50 years, has provided nonsegregated, non-sectarian educational, recreational, child care and other services in South Chicago. Besides the classes and other services provided by the center, it conducts an outdoor summer camp for children in the months when city living is hardest.

All of the fine humanitarian work of this center is in keeping with the sentiments, the devotion, and the work of Senator Douglas. Interestingly enough, the Center was established by Dr. Jenkin Lloyd Jones, a worldfamous lecturer and humanitarian who was devoutly attached to the spirit of Abraham Lincoin. The bronze tablet on the center states that "This building is dedicated to public service honoring the memory of Abraham Lincoin, democrat."

We can subscribe heartily to this dedication. For, if Illinois has produced a spirit more kindred with Abraham Lincoln than that of Senator Douglas, we do not know it. No man, in our opinion, has worked harder to advance the ideals which Lincoln so nobly established.

Dr. Randall Hilton, director of Abraham Lincoln Center, says that "in choosing Senator Douglas for the Humanitarian Service Award, our trustees considered his great ideals, his character, his depth of feeling for the individual person, and his desire to better the condition of all people as expressed in his public record."

What is that record?

Senator Douglas has fought longer and harder than almost any other public figure for a strong and workable civil rights program.

No man has done more to provide decent housing for low-income families through passage of public housing measures.

Senator Douglas has fought many rugged battles for the principle of equality in taxation and to make taxation according to ability to pay a reality.

He has fought for the conservation of our natural resources, and to save for all people the parks, rural preserves, and playgrounds which, in particular, serve the underprivileged.

He has given brilliant support to the ideal of education for all persons regardless of creed or color, on a nonsegregated and equal basis, and for the improvement of schools and teaching staffs.

The Senator led the fight to provide a \$1 minimum hourly wage which benefits all workers, to extend social security and provide for disability allowances under the social security system; to establish workmen's compensation and unemployment benefits. He has worked to provide decent rights for organized labor, and to protect those rights, and the pension and welfare systems from mismanagement or abuse by unscrupulous persons.

A firm friend of labor, Senator Douglas has always insisted that labor live up to its responsibilities along with all other segments of our society. Small business, which provides the jobs and services for a majority of our people, has a stanch friend in the Senator. He believes in the future of the small businessman and he works to assure that this future will be a bright one.

We are especially pleased that Senator Douglas has been chosen for this great honor. We are confident the chairman of the occasion, Angelo Geocaris, a Chicago attorney, will have a turnout that will swamp the dining hall.

Senator Douglas has many times earned the award, and the Abraham Lincoln Center is to be congratulated on its choice. Address Delivered by His Excellency M. Herve Alphand, French Ambassador to the United States

EXTENSION OF REMARKS

### HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. KEFAUVER. Mr. President, I had the great honor and privilege last week of accompanying M. Herve Alphand, the Ambassador from France to the United States, and his charming wife, Mme. Alphand, to my State.

During our visit in Tennessee, M. Alphand delivered a speech at the Oak Ridge Rotary Club on the Common Market. M. Alphand's clear description of how the Common Market functions and his presentation of all the ramifications of this important economic device was of great value to the relationship between our two great nations. It was also a most valuable contribution to the understanding of the economic problems that face all the free nations in the continuing cold war with Russia. I ask, unanimous consent that M. Alphand's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the Record, as follows:

SPEECH DELIVERED BY HIS EXCELLENCY M. HERVE ALPHAND, FRENCH AMBASSADOR TO THE UNITED STATES. AT THE DINNER OF THE ROTARY CLUB OF OAK RIDGE, TENN., JUNE 11, 1959

I am glad to address you and to have this opportunity to say a few words about the meaning, the character and the prospects of the European Economic Community, or of what is known more simply of the Common Market.

By virtue of the treaty signed at Rome on March 25, 1957, six countries of Western Europe: France, the Federal Republic of Germany, Italy, Beigium, the Netherlands, and Luxembourg decided to gather together in an economic union which, step by step, over a period of 12 to 15 years, will create a free circulation of goods, of workers and of capital within their frontiers. At the end of this period, only one tariff system will apply to the importation of foreign goods into the Common Market.

The delay of 12 to 15 years has been set in order to allow those six countries to adapt themselves and without a grave crisis to the new competitive situation. They will find their task made easier by the harmonization of their conomic, social and fiscal policies, by the help of some funds created to guarantee full employment of the workers who might be hurt by the reconversion of certain industries and to facilitate investments.

The first step was taken by the Common Market on January 1 this year, when the six countries brought their import duties down by 10 percent and liberalized, in an appreciable way, certain quantitative restrictions still applied by some of them.

Having recalled these essential characteristics of the Common Market, I would like to examine with you the economic advantages and the political consequences we can expect from it.

Truly, those who conceived such an economic union of Western Europe, were inspired by the example set by the United States of America. American prosperity is. as you know, based upon two essential elements: a freedom of trade within a vast territory and a free competition guaranteed

by an appropriate legislation.

As General de Gaulle was saying recently: "We enter the era of great ensembles." It is such a "great ensemble" that has been formed by the six nations of the Common Market. They represent 165 million consumers and 200 million if one includes the Africans They are the first market which in the free world can compare with America. In a way, we can say that from now on, we shall have two Americas in the Western World.

This "six nations' Europe" has a gross national product greater than half of that of the United States (\$230 billion against \$450 billion in the United States). It is the second industrial producer of the world and one of the most important agricultural producers. It makes more steel, more cars, more manufactured goods than Soviet

Already this six nations' Europe is the greatest importer of the world as it buys about three times as much abroad as does the United States.

The Common Market will have a tremendous influence upon the prosperity of Western Europe. Industrialists and farmers will be able to specialize in the productions for which they are the best equipped, thanks to the freedom they are gaining. Pooling of enterprises wil take place. What was impossible within certain relatively small and tariff-protected nations will become easy inside a great and free market, such as, applying modern technics of production, of research and of distribution-technics which will pare down the costs of production and improve the quality of production-and on the whole will considerably increase the standard of living of all the populations.

Already the prospects of competition incite the enterprises to modernize themselves, to merge and to specialize their production. We have some examples in the field of automobile manufacture, of electrical and mining equipment, of aviation and of loco-

motive building.

But do not believe that this movement will lead to the creation of cartels or monopolies in order to curtail production or to fix prices. If such practices were to appear, it would be the role of the institutions of the Community to put an end to them. The Common Market treaty includes antitrust clauses comparable to those of American laws. The firms which would violate those clauses could be sued and fined by the Economic European Commission, placed under the jurisdiction of the European Supreme Court of Justice. Expansion is the chief objective of the Common Market. This is not a protectionist or malthusian organ-

Whilst I am on this subject, I would like appease certain concern which might have been created in this country by erroneous interpretations of European intentions. Some American producers fear that Common Market will exercise a restrictive influence upon world trade and as a consequence have a regrettable effect upon exchanges between Europe and the United States. To me, this seems to be wrong. The Common Market tariff is subject to the obligations suscribed in the GATT (General Agreement on Tariffs and Trade) and according to which this common tariff cannot be superior to the average tariff of the six participating countries. As a unit, I believe that the Common Market will be less protectionist than the six countries which compose it, taken separately. Thanks to internal competition their industries will adapt themselves to international competition. The very reasons for their present protectionist attitude will gradually disappear.

A Western market, more wealthy and more prosperous will buy more from America in raw materials and in equipment machinery than the six European markets individually

protected as they are today.

Already, the Common Market attracts the attention of American industrialists anxious to invest in it, drawn as they are by the advantages of mass production. Seldom is a meeting of businessmen-like yours for example-not interested in this problem of American investments in Europe. I believe that this represents a sound and profitable evolution for all concerned.

In this way, the United States and the world will gain much in this economic field by the establishment of the Common Mar-

And now, I would like to emphasize the political advantages of the European Economic Community.

A Western Europe, economically sound is bound to contribute more efficiently to peace a divided and weakened Within the framework of those European economic institutions, one can see the secular antagonism between France and Germany dwindle away. If, tomorrow, for reasons I cannot perceive, this European framework was to disappear, if all alone Germany once again wanted-without any link with Europe-to face world competition I would fear the renewal of her nationalism to which her neighbor states would respond. This is a prospect that we must avoid at all costs. unless we want to resuscitate the old quarrels which so often led to war.

"The Common Market," said Mr. Michael Debré, our Prime Minister, on May 16, "must bring us European political solidarity." Economic union naturally leads to a political cooperation between the six. We note this fact, today in Geneva. We must see it in Africa, and as a rule wherever in the world our interests are at stake.

But, you may say, such a policy-far from uniting Western Europe, can create new divisions as Great Britain, Scandinavia and other European states are not members of the Common Market. First, I want to tell you that France ardently wishes that such divisions never occur. In the new Europe we are thinking about, Great Britain has place of course. France has not gotten and will never forget what Great Britain did in the defense of freedom. My country is looking for a solution of the difficulties that the Common Market may create for England. A European economic war will not take place.

I would like to add that the Common Market is not limited to six nations. Any European country willing to accept its rules would be welcome. But naturally we could not extend the advantages of the club's membership to those who will not pay their

From this point of view, the solution proposed by England does not seem acceptable to us. The free trade area does not entail a common tariff at the boundaries of the participatign countries. It does not include a gradual harmonization of economic, social and fiscal legislations. It includes industrial products but excludes agricultural ones. This suggestion is rejected by us, but this does not mean that we are not willing to find other solutions or a kind of modus vivendi.

I am personally convinced that we shall find a type of association agreeable to England, that is necessary for the good of Eu-

rope and of the whole world.

The Common Market is a dynamic formula which will greatly contribute to the general prosperity and in particular to an increase in sales and to the stability of prices for raw materials produced by underdeveloped countries. I am now thinking of these billions of people who, in India, in Southeast Asia, in certain parts of Africa,

of the Middle East and of Latin America, live a miserable existence. The economic development of a united Europe will enable these countries to sell their production more easily and to buy more as a result.

In my view this is the best answer the free world can give to the economic infiltrations of international communism.

As far as it is concerned, the French Government has resolutely taken measures for the economic improvement which, already in 1959, allows it to assume all the obligations undertaken in the Rome Treaty.

By stabilizing, under the leadership of General de Gaulle, the French political institutions, the Fifth Republic has made possible a vast financial and economic reform allowing France to open her frontiers to international competition and to break with her old traditions of protectionism and malthusianism.

Our Minister of Finances, M. Antoine Pinay, who is in this country has explained in New York how we have put a stop to inflation, given back to our currency its real value and weight, how we have got rid to a great extent, of the antieconomic system of subsidies which burdened heavily our budget and suppressed a good proportion of the quantitative restrictions imposed upon the import of certain products.

Our reserves in gold and currency are being reconstituted: since January 1, our balance of external payments shows a credit of about \$1 billion, our currency is stable and we are less hurt than our neighbors by the economic recession as we have practically no unem-

ployment.

In this situation, we can, without fear, enter the era of the European Economic Union. This rebirth of France was a necessity for the rebirth of Europe. Without a strong France, no Europe is possible.

France whose ideas were at the origin of this vast movement for a European union, France who is prolonged by the African community, thus contributes to the establishment of a better world, where freedom will be strongly protected and peace made more secure

#### June 17. Anniversary of Martyrdom

EXTENSION OF REMARKS OF

# HON, KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. KEATING. Mr. President, today marks the first anniversary of the announcement from Moscow that two of the great leaders in the Hungarian freedom uprising had been executed by the Communists. The cruel demise of former Premier Imre Nagy and of Gen. Pal Maleter marks one of the blackest pages in the long record of perfidy and barbarity of the international Communist conspiracy.

Reverberations of these assassinations were felt all over the world and revulsion at these acts of tyranny was manifested everywhere. The General Assembly of the United Nations later denounced this action and strong words of condemnation were heard, even in nations nor-mally friendly to the Soviets.

Mr. President, this anniversary has a wider importance for all men who believe in human freedom and liberty. For although Imre Nagy and Pal Maleter are martyrs to their own people, they are equally heroes to freemen everywhere. These two brave men symbolize the courageous freedom fighters of Hungary who showed, by raw dedication to liberty, the finest stuff of which men can be made. They showed the world the unquenchable force of men who believe in freedom and who are willing to fight and die for it. That is a lesson all peoples of the world—and particularly the men in the Kremlin—would do well to ponder well.

The flame of liberty cannot forever be suppressed. The people of Hungary have proven that throughout their history and all the peoples now chained behind the Iron Curtain will one day prove that to the sadness of their Red overlords.

We in America have been singularly blessed throughout our history with an influx of fine new citizens from Hungary. They have brought with them the rich culture and traditions of their homeland, plus a sincere and burning dedication to democracy, which has made them exemplary citizens.

In the United States today there are a number of organizations dedicated to preserving the traditions and ideals of Hungary. One of these groups is the Hungarian Committee, with headquarters in New York City. This organization is composed of postwar Hungarian political leaders and many men who participated in the Hungarian Revolution of 1956. The stated purpose of the committee—which I heartily applaud—is to work for the independence of Hungary and for the restoration of the freedom of the Hungarian people.

Representatives of this fine organization this morning presented me with two documents issued yesterday in New York City. Since they are appropriate to the important anniversary we are observing today, I ask unanimous consent to have this material printed in the Appendix of the RECORD.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

STATEMENT OF HUNGARIAN COMMITTEE, NEW YORK, N.Y.

On June 17, 1958, Moscow Radio officially announced the execution of Prime Minister Imre Nagy, Minister of Defense Maj. Gen. Pål Maleter and two other leaders of the 1956 Hungarian revolution. The fact that it was Moscow which broadcast the first news of the executions stirred a strong protest all over the world. The United Nations Special Committee on the Problem of Hungary issued a statement and report and the United Nations' General Assembly expressed its strong condemnation of this action. The executions took place despite many official and solemn assurances that Premier Nagy would not be prosecuted. As to General Maléter, he was arrested by Soviet security forces under General Serov's command while continuing negotiations with the Soviet army representatives for the withdrawal of Soviet armed forces from Hungary in accordance with the October 30, 1956, Moscow declaration and the November 30, 1956, official Soviet Government communication.

In commemorating the first anniversary of their execution a tribute would be paid to these Hungarian patriots.

IMRE NAGY

Imre Nagy was born in 1896, in Kaposvár, His parents were Hungarian peasants. Be-World War I he worked in a steel mill. During the First World War he served on the Russian front and was taken prisoner by the Tzarist Russian Army. In 1917 he participated in the revolution and returned to Hungary as a Communist in the twenties. All through his political career his attention was focused on agricultural problems and the peasantry. He lead the illegal Com-munist Party's activities in the Hungarian countryside and worked later, from 1930 on, in the International Agricultural stitute in Moscow. He returned to Hungary, in 1945, became Minister of Agriculture in the first postwar Hungarian provisional government. In this capacity he organized the land reform which gave land to the landless peasants. Due to the stepped up collectivization campaign of the Communist Party, in 1948, which followed the strict Soviet instructions, the differences be-tween Imre Nagy and his fellow members in the Politburo started.

After Stalin's death and the collapse of the Rakosi industrial policy Imre Nagy became Prime Minister on June 3, 1953, and introduced the popular reforms aimed at the abolition of the police terror and the easing of the burdens of the peasantry. The important political measures introduced by him in 1953 and 1954 brought him into conflict with the orthodox of Stalinist Communists. He was relieved of his post and, after a series of reprisals, excluded from the party membership. He was readmitted to the party on October 4, 1956, as a result of the pressure of the people on the regime demanding the liberalization of party control and the reaffirmation of Hungarian independence. Imre Nagy was constitutionally (according to the constitution promulgated by the Communist Party itself) elected Prime Minister during the night of October 23-24, 1956. As the head of the revolutionary government, Imre Nagy declared Hungary's neutrality and called upon the great powers and the United Nations to guarantee this neutrality. The Soviet Union, in her negotiations with Imre Nagy, recognized him as the constitutional head of the Hungarian Government and started discussions for the withdrawal of Soviet troops from Hungary. Breaching, however, the many solemn promises and guarantees the Soviet Government gave to Imre Nagy and to the United Nations, the Soviet launched a second attack against Hungary on November 4, 1956. Imre Nagy was forced to take refuge in the Yugoslav Embassy in Budapest. After the Soviet Imposed Hungarlan Government headed by János Kádár gave assurances to the Yugoslav Government of his safe conduct, he left the Embassy on November 22, 1956, and was taken by Soviet forces to Rumania. Despite many assurances to the opposite, he was brought to trial in February 1958 and after many months of secret proceedings, executed on June 17, 1958.

#### MAJ. GEN. PÁL MALÉTER

Born in 1917, Pál Maléter graduated from the Hungarian Military Academy and served on the Soviet front in 1942. He was taken prisoner by the Red army and attended political lectures and indoctrination courses. He was parachuted in 1944 behind the German lines as a captain of a partisan unit. Pál Maléter was heavily decorated for bravery and became a member of the Communist Party in postwar Hungary. Pál Maléter rose gradually to the rank of colonel in the Hungarian Army and served, from 1949 on, in the Ministry of National Defense.

After the outbreak of the October 23, 1956, revolution, Pál Maléter was ordered to lead a Hungarian army armored unit to the scene of the fighting and to liquidate the revolutionaries entrenched in the Killian Barracks. In going to the scene of the fighting he contacted the revolutionaries and became convinced of their just cause that they were fighting for the freedom of the people and for the independence of the country. He informed his superior of his decision to join the revolutionaries and took command of the Killian Barracks. During the ensuing days the Killian Barracks became the center of resistence and a famous stronghold of the revolutionaries and a primary target of incessant Soviet attacks. Soon the streets around the barracks were obstructed by burnt-out Soviet tanks destroyed by gasoline bottles and hand grenades. For his bravery he became a revered popular hero of the Hungarian revolutionary youth.

After the cease-fire and the victory of the

revolution, the Soviet Red army units withdrew from Budapest and Prime Minister Imre Nagy called upon Pál Maléter to join his government as Minister of National Defense. After being promoted to major gen-eral, he headed the Hungarian Government's delegation which negotiated the withdrawal of Soviet troops from Hungary with the Soviet Army command in accordance with the Soviet Government's wishes. An agreement was reached on the major issues and during the evening of November 3, 1956, General Maleter went to the Soviet Army headquarters in Tököl, a large village south of Budapest, at the invitation of the Red army's commander to clear the technical details of the withdrawal. A few hours later, in the early hours of November 4, 1956, he was taken prisoner by the head of the Soviet Secret Police, General Serov, and the second

STATEMENT BY MSGR. BÉLA VARGA, CHAIRMAN OF THE HUNGARIAN COMMITTEE, IN CONNECTION WITH THE FIRST ANNIVERSARY OF THE EXECUTION OF IMRE NAGY, PÁL MALÉTER, AND OTHER HUNGARIAN PATRIOTS

Soviet attack was launched against Hungary.

June 17 marks the first anniversary of the execution of Imre Nagy, Pál Maléter and other Hungarian patriots; a political crime which shocked the world. This murderous action was later denounced in the General Assembly of the United Nations last fall. The Kádár régime proved again that its existence depends on the use of terror and brutality, and there is no doubt that the Hungarian people would rid themselves of the Communist agents in a matter of days if they were free to choose the government under which they wish to live.

The first anniversary of the executions of the leaders of the glorious 1956 revolution coincides with the meeting of the International Labor Organization in Geneva. seating of the Hungarian delegation is on the agenda of the International Labor Organization. During the 1957 session the credentials committee of the International Labor Organization rejected the credentials of the Hungarian employer and worker delegates in reaction to the 1956 revolution, However, due to the attitude of the British delegation the credentials of the two government delegates were not rejected. The situation changed at the 1958 session when the delegates received the tragic news from Budapest; the credentials of all the Hungarian delegates [government, employers and workers | were rejected by an overwhelming majority of votes.

This refusal by a respective world organization, affiliated with the United Nations, to seat the representatives of the Kådår regime indicated to the oppressed people of Hungary that they have not been forgotten and, indeed, that they have the moral support which they need and deserve so much.

As conditions have not changed in Hungary during the past year, it is our opinion, free Hungarians, on behalf of the oppressed Hungarian nation, that the credentials committee of the International Labor Organization should again recommend the rejection of the Hungarian delegation's credentials. In doing so the organization will pass judgment on the entire Kádár regime which distinguished itself by nothing as much as its tracherous conduct toward the revolutionary workers' councils.

Upon the collapse of Communist power in Hungary in October 1956, workers' councils were immediately formed and, by taking over the administration of the country, helped in effect to save the nation from disaster and chaos. During the revolution the workers' councils demanded, among others, the abolition of work competitions and norms. These workers' councils held out even after the massive Soviet attack of November 4, and were able to call a general strike to resist the demands of the puppet regime of János Kádár, which was imposed upon the country by the Red army.

So great was the popular support of the workers' councils, on November 14, 1956, that Kådår himself was forced to confer with a workers' delegation and to make far-reaching promises. He told the workers: "Let us consider the position of the party; we want a multiparty system and free, honest elections." As late as November 21, 1956, the published draft of a law on workers' councils indicated that the regime was considering recognition of this revolutionary system of workers' self-government.

As matters turned out, however, Kadar was acting from weakness and not conviction. He was prepared to betray the workers the instant he was entrenched firmly enough. When the Greater Budapest Workers' Council called a conference of plant representatives to discuss the regime's draft law, the meeting was immediately prohibited. By early December large-scale arrests of labor leaders were under way.

On December 9, 1956, a general strike was called by the workers' council of Budapest to protest this policy of arrests and terror.

The regime countered by ordering the dissolution of all workers councils. Two days later it arrested Sándor Rácz and Sándor Ball, the president and secretary of Greater Budapest Workers' Council. Both men were subsequently put to death for no other crime than to have represented the true will of the Hungarian workers. In the weeks and months which followed, hundreds and thousands of workers followed their leaders into prisons and concentration camps until the ranks of labor were so decimated that the regime could once again use the trade unions as a docile instrument of state policy. Strict norms were imposed immediately and the work competition was quickly reintroduced.

After such a record of deceit and treachery the Kådår regime's delegates cannot be admitted to a highly respected world labor organization. The admission of such a delegation would undermine the Interantional Labor Organization's own position.

### Next Steps Toward Health

EXTENSION OF REMARKS

# HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Wednesday, June 17, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the text of

an address which I delivered at the ninth annual Group Health Institute luncheon in New York City on May 26, 1959 be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### NEXT STEPS TOWARD HEALTH

(Remarks of Senator Hubert H. Humphrey at the ninth annual Group Health Institute luncheon, New York City, May 26, 1959)

I never cease to wonder at the range of Mrs. Roosevelt's capacity for doing good. You know her wonderful work for the United Nations, for human rights, and for peace. Within the last few weeks she has been in Washington helping to improve the conditions of migrant workers, helping to get the minimum wage raised, helping in the campaign for better housing. Today she is here giving of her time and her immense influence in the cause of health. Wherever there is good to be done, we can be grateful that she is on hand to do it.

And I want to pay tribute also to that patron saint of medical care—Mary Lasker. Without her crusading interest and support and her wonderful work we would not be nearly so far along toward the goal of good health and good medical care for everybody in this country.

That is our goal. I am pleased and honored that you have invited me here to take counsel with you on some of the next steps we must take. I am particularly flattered to be here because in this room are some of the best brains and bravest spirits in the business. The solutions to these problems, when they come, will come from people like

In a few days we will mark the 25th anniversary of Franklin Roosevelt's message to Congress laying down the guidelines for what has since become the social security system of the United States.

"Among our objectives," he said in that message, "I place the security of the men, women and children of the Nation first."

In that sentence F.D.R. summarized one

In that sentence F.D.R. summarized one of the great revolutions in American political thinking—one which grew out of the great depression. In that sentence he put the final seal of rejection on the degrading, poor law philosophy which had dominated American public attitudes toward dependency and the problems of dependency.

Of course, there were diehard dissenters. My good friend, Arthur Schlesinger, Jr., in his great book on "The Age of Roosevelt" records that a distinguished Republican, now ranking minority member of the House Appropriations Committee, greeted the social security system with these words: "Never in the history of the world has any measure been brought in here so insidiously designed as to prevent business recovery, to enslave workers, and to prevent any possibility of the employers providing work for the people."

The spokesman for the Illinois Manufacturers' Association said that social security would undermine our national life "by destroying initiative, discouraging thrift, and stifling individual responsibility."

The spokesman for the American Bar Association labeled it the beginning of a pattern which "sooner or later will bring about the inevitable abandonment of private capitalism."

Yes, my friends, as we try to move on to round out the coverage and the protections of our social security system we can expect the same opposition, the same gloomy alarm, that has greeted every reform and every great forward step in our history.

But the fact remains that we must get on with this unfinished business.

The question is not whether we are going

to finish it, because we will. The question is how and when.

We need to modernize our unemployment compensation laws. I have sponsored legislation to accomplish this. It is a cause for great disappointment that this has recently been rejected by the House Ways and Means Committee, But we will try again—and soon.

We need to increase the amount of old-age benefits, which in many cases are disgracefully low. I have been among the sponsors of legislation to do this, and I regret very much that the increases enacted last year were so meager. Within the next decade our social security benefit standard should be increased not by 10 percent, but by 50 percent or more.

When we enacted the social security system, we embarked on a program which would provide not only the material basis for subsistence to those who could not be self-supporting. We embarked on a program which would also preserve their self-respect. Even so long as there is poverty in the United States, let there never be paupers.

In no aspect of welfare is this more true than in health. Our system of economic security should enable people to buy the necessaries of food, housing, and clothing. It should enable them to obtain the necessaries of health. Food, clothing, shelter—to these basic needs I add health, the right of every American to adequate health services, regardless of his income.

We have made enormous strides forward in the science of health, both in the prevention and the treatment of illness.

We have made considerable progress in the financing of health services through voluntary health and hospital insurance, and particularly through the union health plans and prepaid group health organizations. Those in this room have been among the leaders in these promising developments.

And yet we cannot honestly say we have in sight a comprehensive solution for the gigantic task of bringing good medical care within the reach of every American.

Those who can afford to buy it individu-

ally can get it.

Those who are fortunate enough to belong to unions which have won comprehensive health plans through collective bargaining can get it.

Those who have had the foresight to organize and join prepaid group health associations can get it. But for large segments of our population, medical care is limited to emergencies, and even when the medical emergency is surmounted, it leaves a financial emergency in its wake.

I am not an expert in medical care. It is my job to worry about the practical problems of legislation.

I do not profess to know how we will solve all the difficult and complex problems of bringing good medical care within the reach and within the means of all our people. But we who struggle with legislative practicalities must look to people like you for the design of health programs of general legislative application. We must look to you to experiment with new forms of the organization and administration and financing of medical care. We must look to you to experiment in the reorganization of medical practice to provide total medical care.

Our objective should be to do this as far as possible through voluntary means, by doctors and patients acting freely together. In this, developments like group practice, group health associations and HIP are important milestones. Legislation should en-

portant milestones. Legislation should encourage such voluntary action.

In the meantime, however, there are things we can do, things we can and must

do quickly.

We must move on to overcome the shortage of health personnel—doctors, nurses, therapists, medical social workers. The shortage of these is becoming acute and will become worse as our population increases.

We need to expand our medical schools and other training facilities.

We need to expand our hospital facilities. Recent amendments to the Hill-Burton program have made possible the expansion of facilities for long-term medical care and for rehabilitation and outpatient services.

We need to encourage the establishment of group practice facilities for voluntary nonprofit, prepaid, health service associations. Since the 81st Congress, I have introduced community health facilities bills to provide long-term, low-interest loans for such facilities. I have reintroduced that bill within the last week. It is essential that we encourage and help these voluntary associations to bring health services to American people just as the principles of cooperative voluntary association brought electricity to rural America. And like the REA cooperatives, these facilities are particularly important in bringing medical services to rural communities.

We need to step up the pace of medical research. We should thank Senator Hill and Congressman FOGARTY for taking the lead in providing for expanded appropriations for the National Institutes of Health.

We need to encourage research not only in the diagnosis and treatment of illness. but also in the social and economic aspects of health and medical care.

And we must be sure that we train com-

petent research personnel.

I wish that I could make the case for medical research as eloquently as Mrs. Lasker did a few nights ago in her interview with Ed Murrow on TV.

Politically we are in the stage where we need to experiment with programs for meeting the needs of special groups within our population. We must try to legislate wisely, but this does not mean that we should procrastinate. As the AFL-CIO sald not long ago, paraphrasing the old legal maxim, "Health delayed is health denied."

There are two groups in our population for whom it is possible and necessary in the near future to develop special health pro-

One of these groups consists of those employed by the Federal Government. The 21/2 million Federal employees have been denied the benefits of health plans under collective bargaining, but the Federal Government, their employer, has the same responsibility as private employers for the health of employees. Legislation is now pending before Congress to provide health insurance for these 21/2 million employees and their families. Under the leadership of Senator Neu-BERGER a bill is now taking shape in the Senate. I intend to support it. I hope it will permit employees to choose from among various types of plans, including group practice plans

The other group whose health needs require and permit special attention are our bolder citizens. They deserve special attention for a number of reasons. The reasons boil down to this: Older people have low incomes, small liquid assets, and heavy medical This alone would demand of us that we take special and tender cognizance of them.

I believe we should consider the health needs of our older citizens in the context not only of the Nation's health needs and resources, but in the context of the total needs of our older citizens and our resources for meeting them. These basic needs include income adequate to their needs, employment opportunities and suitable housing, as well as health.

Forgive me if I cite briefly some facts which are part of your every day's work but which I think must be in the forefront of

our thinking here.
In these days of medical miracles and longer life, a man who reaches the age of 65 has a life expectancy to 79 years; a woman, a life expectancy to 81 years. There are now more than 15 million people in these age groups and their number is increasing by about 1 million every 3 years.

The aim of any program for our older citizens must be to keep them functioning happily and usefully in the community. What we need is a many-sided program which insures their productiveness, independence and self-reliance and which prevents physical and moral decay.

The No. 1 objective of a sound program is the maintenance of incomes. Three-fifths of all people 65 and over have money incomes from all sources of less than \$1,000 and only one-fifth have more than \$2,000. Only recently, for the first time, the number of people receiving social security benefits exceeded the number of older people receiving public assistance. It is here that we have made the greatest progress through the social security system, and it is here that the direction of future progress is clearest. The case for rapid increase in old-age benefits is imperative.

But there is no magic in the age 65 which makes it good public policy to force people to leave employment while they are still healthy and productive. Full employment means jobs for all who are able and willing to work. Older workers are among the chief beneficiaries of a full employment program, just because they are especially vulnerable to unemployment in times of job scarcity.

Certainly we must do everything possible to prevent discrimination against older

workers in the labor market.

We must provide suitable housing for older people. We must make it possible for them to live out their years fruitfully in a community rather than in an institutional environment. One of the most promising developments in this direction is the provision recently written into the Housing Act of 1959 by the House Banking and Currency Committee, under the leadership of Congressman Rains, to make available direct low interest Federal loans to non-profit corporations for housing for elderly people. The House of Representatives should be congratulated for refusing to delete this provision of the bill and I hope fervently that the Senate will accept it and that the President will forbear to veto it.

We must provide medical and hospital care for our older people.

We must see that it is furnished to them in a way which will preserve their independence and their self respect and their peace of mind. These have been also, of course, the objectives of the old age and survivors insurance program. Consequently, it was logical and practicable to turn to the framework and machinery of social security as a means of providing the necessary health care efficiently, economically, universally, and democratically

I do not think we can ever overstate our debt to Congressman FORAND for the courage and foresight of his efforts to bring this sound and workable idea to reality.

I realize that this is a much disputed subject and I wish to make my position perfectly clear.

I am in favor of providing hospital and nursing home care as part of the social security system immediately.

It will meet a pressing and urgent need. Costs associated with hospital and nursing home care account for a very large part of the total expenses of medical care for older people. By insuring these costs we lift a heavy burden of expense and of fear.

In my own State of Minnesota, the largest expense in the entire welfare program is for hospital care for the aged. Many of these people are victims of diseases which keep them in hospitals for months. Hospital and nursing home benefits under social security would help not only the beneficiaries, but

would relieve local and State governments of these very heavy burdens, thereby releas-ing public funds for a positive health program.

There is no question that a problem exists. The rising costs of medical care and hospital care, coupled with the greater medical needs and lower incomes of older people, have created the problem. But there some who argue that it is not a problem which calls for action by the Federal Govern-

The fact is that no satisfactory voluntary hospital plan has yet been brought forward which will give to people over 65 protection they need at costs they can afford to pay. Period. This is why I have advocated and will continue to advocate hospital insurance for social security beneficiaries as an integral part of our social security system.

I wish to make it plain that when we have reached this objective-which we will, and soon, I hope-we will not be finished, by any means. Important as hospital insurance is, there will still be the need for a total health program for older people. The primary emphasis should be on the prevention of illness and the maintenance of health. The first objective of a health program for older people should be to keep them out of the hospital and functioning in their homes and in the community.

The medical profession and those associated with it have a special obligation and a unique opportunity to develop programs and personnel to meet this total need.

Financing is not the only problem. Equally important is raising the quality of medical care and making it universally available. If social security financing is required to make health services of high quality available to social security beneficiaries, I will be the first to support it.

I am perfectly aware that even a bill for hospital and nursing home insurance will provoke outcries of "socialism," "socialized medicine," and such. This does not worry me. As I said before, this has been the cry that has greeted every significant advance of this country. I do not believe that this is the view even of the doctors of this country. though it is the cry of some who claim to speak for them. No one knows better than the doctors the devastating effects of ex-pensive hospital and medical care on older people of limited means. I cannot believe that the doctors, who have done so much for medical welfare, wish to pauperize these most economically defenseless of their patients

No one can forget that our doctors and hospitals have given of their services and facilities to people who could not afford to pay. For a long time this was the only way for poor people to get medical care at all. But by now we have progressed beyond the free ward concept of medical care.

Now medical care and hospital care for those on public assistance is a challenge to provide high quality, sensitive, individualized service equivalent to that we give to more fortunate patients.

These public assistance patients, young and old, are a first order of business in the search for comprehensive health services. Here, also, is a challenge to the medical profession to cooperate with Government in working out programs to meet the need.

The search for solutions to our medical needs must go on-on all fronts. Young and old, in high, middle, or low income, Americans are entitled to the best medical care that science can invent and our economy can provide, without sacrifice of professional freedom or individual dignity.

The search must go on, in private medicine, in group practice, in voluntary insurance, in labor health programs, and in Government. It must go on in the medical school, in the laboratory, in the hospital, and in the clinic. It must go on with open eyes and open minds. Let us not get bogged down in dogmas or in vested interests of the

past.

I promise you this: As fast as you who are in the business of health come up with solutions that are workable and equitable, we who are in the business of Government will do our best to take the legislative and administrative action needed to make them work. Together we will get it done.

### Address by Francis W. Sargent, Executive Director of Outdoor Recreation Resources Review Commission

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 17, 1959

Mr. NEUBERGER. Mr. President, the Outdoor Recreation Resources Review Commission has embarked upon a crucial 3-year study under the able guidance of Mr. Francis W. Sargent as executive director. Mr. Sargent recently addressed a meeting of the Outdoor Writers Association of America, and told of plans being made by the Commission and its staff for evaluating the future outdoor recreational requirements of our Nation.

I believe Mr. Sargent's report contains much information of value and pertinence to the Members of Congress who wish to be kept abreast of the progress being made by the Outdoor Recreation Resources Review Commission. I ask unanimous consent that the text of Mr. Sargent's address to the Outdoor Writers Association be printed in the Appendix of the Record, along with my remarks. I am pleased to serve on this Commission which is headed, as chairman, by Laurence S. Rockefeller.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Address by Francis W. Sargent, Executive Director, Outdoor Recreation Resources Review Commission, Before the Outdoor Writers Association of America, Hot Springs, Aek., June 10, 1959

This is my first public appearance as Director of the Outdoor Recreation Resources Review Commission. I am, therefore, particularly honored to have this opportunity to discuss with you the long-range plans of our Commission.

Many of you have traveled great distances to gather here this evening, in the picturesque State of Arkansas for your annual convention, and I hope that I may take full advantage of the fact that you have done so.

An occasion such as this not only affords all of us the opportunity to visit this fine recreational area at Hot Springs National Park, but also enables us to keep abreast of the progress being made in the field of outdoor recreation, to exchange opinions and suggestions, to iron out differences, and pass along information.

First, I would like to talk to you about the aims and purposes of the Outdoor Recreation Resources Review Commission—subjects in which your membership has long demonstrated deep interest.

The very establishment of the Commission represents an awareness on the part of the President and the Congress of the United States of the problems which lie ahead—in the not too distant future—in fact, wise development and protection of our Nation's outdoor resources should be a subject of vital concern to every American.

Legislation to establish the Commission was initially sponsored by the Izaak Walton League of America and presented in the early days of the 85th session of Congress, enacted in the 2d session, and became law on June 28, 1958. The objectives of the bill were commended by nearly every organized group connected with resource development. Also, the Federal and State agencies concerned were almost unanimous in supporting the measure.

Just this past month, the urgency of the national outdoor recreation situation was pointed up in a talk given by Gen. Omar Bradley. The general said: "Year after year, our scenic treasures are being plundered by what we call an advancing civilization. If we are not careful, we shall leave our children a legacy of billion-dollar roads leading nowhere except to other congested places like those they left behind. \* \* \* We are building ourselves an asphale treadmill and allowing the green areas of our Nation to disappear—especially along the eastern seaboard, where 11 percent of the population is living on one-half of 1 percent of the land area of the Nation."

I can but echo General Bradley's thoughts, and point out as have others that our present generation could be the very last generation still to have an effective opportunity to preserve our outdoor recreation resources for the welfare and enjoyment of future generations of Americans.

Because of the importance of our project, it is earnestly hoped that the Commission will have the active and continued support of all interested groups. You, the Nation's outdoor writers, are unusually well qualified both to understand and foresee the problems and to make others understand and foresee them through your columns. We hope that we may turn to you for advice and suggestions from time to time during the course of our study.

the course of our study.

I do not have a total figure for the number of organizations concerned with outdoor recreation, but it adds up to, as you know, many thousands when one takes into consideration all of the local and private groups concerned, as well as the municipal, State, and Federal agencies. Although these agencies try to cooperate rather than compete, much needs to be done to promote better coordination of both planning and operations, and to correlate results of studies and research.

Congress stated very clearly three specific goals in the act establishing the Commission:

- 1. To preserve, develop, and secure accessibility for all American people of present and future generations such outdoor recreation resources as will be necessary and desirable for individual enjoyment, to assure spiritual, cultural, and physical benefits that such outdoor recreation provides.
- 2. To inventory and evaluate the outdoor recreation resources and opportunities of the Nation and to determine the types and location of such resources and opportunities which will be required by present and future generations.
- 3. To make comprehensive information and recommendations leading to these goals available to the President, the Congress, and the individual States and Territories.

This may not appear to be a particularly difficult task, given proper tools and time to do the job. Consider, however, that we

have information on hand indicating that by the year 2000 demands for outdoor recreation opportunities may be as much as 10 times what they are today. Imagine the problems presented by demands of this magnitude.

If we do not start now to plan for the future, there is little hope that future Americans will have adequate recreation facilities of the right kind, in the proper amount, and in the most needed locations. And the future is closer than we think.

For example, since World War II, recreational visits to our national forests have multiplied seven times and they are expected to nearly double again in the next decade. Secretary of Agriculture Benson predicts that recreational visits to national forests will increase to 130 million by 1969 and possibly to 600 million by the year 2000. The same trend is visible with regard to our national parks, Federal reservoirs, and State and municipal parks, beaches, and forests.

One has but to visit a teeming public beach or park on a hot summer day to be made aware of the strong social and economic forces and population pressures that are at work, and to envision their increasing impact in the years to come. These increasing pressures are brought about largely as a result of: (1) Mushrooming population; (2) higher income per capita; (3) more leisure time; (4) earlier retirement age; (5) longer life expectancy; (6) increased mobility and a combination of other factors which we tend to take for granted.

As long as these forces continue to grow, we will have a problem which enlarges in magnitude with each passing year—unless we do some constructive planning and programing right now. These are the basic reasons for the establishment of the Commission.

The Commission for which I am privileged to serve as its Executive Director is made up of seven members from the public at large appointed by the President and eight congressional Members, four from the Senate and four from the House of Representatives, divided equally from both political parties and named from the Interior and Insular Affairs Committees of both Houses.

The four U.S. Senators are; CLINTON P. ANDERSON, of New Mexico; RICHARD L. NEUBERGER, of Oregon; HENRY C. DWORSHAK, of Iddaho; and THOMAS E. MARTIN, of IOWA. The four Members of the House of Representatives are: HAROLD R. COLLIER, of Illinois; GRACIE PPOST, of Idaho; John Saylor of Pennsylvania; and AL ULLMAN, of Oregon Each of these Members of Congress has been active in one or more of the various fields with which this Commission is concerned.

The citizen members of the Commission, with whom many of you are acquainted, have been long identified with the same broad areas. They include: Joseph W. Penfold, a member of your own executive board, as well as conservation director of the Izaak Walton League of America: Samuel T. Dana. former dean of the School of Natural Resources of the University of Michigan; Mrs. Katharine Jackson Lee, of Peterborough, N.H., who is a director of the American Forestry Association; Bernard Orell, vice president of the Weyerhaeuser Timber Co., Ta-coma, Wash.; M. Frederik Smith, vice president of the Prudential Insurance Co. of America and member of the Advisory Committee to the Secretary of the Interior on National Parks, Monuments, and Historic Sites; Attorney Chester S. Wilson, former director of the State Conservation Commission of Minnesota; and Laurance S. Rockefeller, who is the distinguished Chairman of Mr. Rockefeller, as you our Commission. know, is held in high regard in conservation circles, and has contributed generously of his time and effort in furthering the causes of conservation and outdoor recreation.

In addition to the 15 members of the Commission, there is an Advisory Council consisting of 25 members appointed by Commission, plus 14 liaison officers appointed by the Secretary of each Federal department or head of an independent agency having a direct interest and responsibility in any phase of outdoor recreation. This has been The Federal agencies have named individuals from the Under Secretary or Assistant Secretary level to work with the Commission.

May I emphasize that the Commission, in pursuit of its mandate from the Congress, will not be duplicating in any way the work now in process in any Government agencies but rather will be in a position to take full advantage of any existing studies of those

now being made.

There are over 500 individuals recommended by conservation organizations and more than 200 nominations from special groups for the Advisory Council—each one of them well qualified. You can imagine the task of the Commission in selecting only 25 of them.

Offsetting this dilemma was the realization that everyone who had been recommended for Advisory Council membership was in accord with the objectives set forth in the act creating the Commission. This being the case, the selection was then narrowed down to categories of interests, abilities, background, and geographical location—representative of the various major geographical areas and citizen interest groups including: State game and fish departments, park departments, forestry departments, private organizations working in the field of outdoor recreation resources, landowners, State water pollution control agencies, livestock interests, petroleum and mining interests, commercial fishing interests, commercial out-door recreation interests, industry, labor, public utilities, and municipal governments.

I should point out that uppermost in the minds of the Commission members in selecting the Advisory Council was their desire to get persons to participate actively on the basis of broad understanding of the underlying problems-rather than only representing their particular interest or geographical

region.

It was on this basis that the Commission chose the Council members and I believe an unusually able group has been appointed to assist the Commission.

In addition we have been in touch with each of the 49 States through their respective Governors, requesting appointment of an official State representative to act as a liaison officer with the Commission. The response from 46 States has been both prompt and enthusiastic. Thus far, in almost every case, the State conservation or natural resource department head or park administrator has been appointed.

An initial appropriation of \$50,000 was made by the Congress to set up the mechanics of operation for which the legislation was originally enacted, and just recently

\$100,000 more was made available.

We are now embarking on an overall staff study and correlation of all available material, following which we will concentrate on developing conclusions, policy, and program. Then we will direct our energies to fashioning a report and making recommendations.
In the words of our act: "The Commission

shall present not later than September 1. 1961, a report of its review, a compilation of its data, and its recommendations on a State by State, region by region, and national basis to the President and to the Congress, and shall cease to exist not later than 1 year thereafter. Such report, compilation, and recommendations shall be presented in such form as to make them of maximum value to the States, and shall include recommendation as to means whereby the

review may effectively be kept current in the future."

We are carefully selecting a versatile staff modest size but of outstanding competency. We will also rely heavily on outside assistance and experience. In addition to consulting with Federal, State, and local government agencies, we will be in touch with university staffs, study groups, private consulting firms, and also individual authorities in such fields as economics, sociology, cultural anthropology, statistical data,

Among the projects presently under consideration are:

1. Analysis of outdoor recreation in present day American life;

2. Projection of society as it may be in 1976 and 2000;

3. Summary of existing data on present

and potential outdoor recreation areas;
4. Study of the use of private lands for public recreation, including policy and management aspects;

5. Consideration of legal aspects of public use of private lands for recreation;

6. State-by-State estimates of expected use of each major type of outdoor recreation area for 1976 and 2000;

7. Special study of urban and suburban open space as affecting demand for more distant park facilities;

8. Detailed study of the cost and ways and

means of financing proposed programs.

Aside from the experts I have enumerated, the so-called user of outdoor recreational resources can be of particular assistance to the Commission. He is the one who encounters the problems in the field and is vitally aware of dwindling resources-probably we can best seek firsthand information and support from him through such organizations as your Outdoor Writers Association of America.

In a manner of speaking, you not only provide the recreational user with sound information, but you also act as his voice.
It has been stated that people are gen-

erally divided into three groups: The few who make things happen, the many who watch things happen, and the vast ma-jority who haven't the slightest idea of what has happened. Gratifying it is to know that you, who collectively wield so much influence, are members of the first group. To paraphrase a familiar slogan, wishing won't do it, action will.

That is the job in a nutshell. Undoubtedly some of our recommendations will be controversial, but we will not run away from our responsibilities. Our recommendations must be practical enough to be adopted and will be made without regard to outside pressure or influence.

In conclusion, I would like to point out that the work you people have been doing. and the obvious interest that you have in conservation and recreation resources, are so closely allied with the goals of this Commission that, in a very real sense, ours is but a formalized extension of your efforts.

Three years from now, I hope that our Commission can invite you to share credit for a truly constructive accomplishment.

### Refreshing Words in High School Graduation Speeches

EXTENSION OF REMARKS OF

### HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. PROXMIRE. Mr. President, the Capital Times, of Madison, is one of the

most useful newspapers in the country. It is expert at exploding stuffed shirts and at pricking the hot air balloons of self-adulation by politicians, the press, the leaders of business, labor, or any other group.

In a recent editorial the Capital Times points with justifiable pride to the valedictorian speeches by Madison's high school graduates. These young Madison people who have achieved intellectual distinction in their high school speak with a refreshing vigor for freedom of the mind and in frank pride for intellectual independence and the right to disagree and to be controversial.

Mr. President, in an era of togetherness-team players, the organization man-it is refreshing that our Madison, Wis., youth speak strongly for individu-

ality.

Of course, Mr. President, in my judgment it is no accident that this willingness to be different thrives in Madison, Wis. One big reason for it is that Madison is the hometown of the Capital Times. Almost every Madison family reads the Capital Times and is influenced by the rugged independence, the unique individuality of this stirring and militant newspaper. More newspapers like William Evjue's Capital Times would make it possible for far more Americans to recognize the vital importance of individuality, personal freedom, and pride in intellectual attainment.

Mr. President, I ask unanimous consent that the editorial from the Capital Times be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

#### REFRESHING WORDS IN HIGH SCHOOL GRADUATION SPEECHES

After hearing some of the babbittry that was poured out by adult commencement speakers at some of the college and university graduating ceremonies, it was refreshing to read some of the speeches of the spokesmen for the local high school classes-West, Central, and Monona Grove.

Incidentally, we regret that East does not follow the tradition of addresses by valedictorian, salutatorian, and class orator.

The challenging nature of these graduating addresses makes it hard to believe that only a few years ago this country was engulfed in a wave of anti-intellectualism, when the word "egghead" was used to describe people of intellectual attainment.

We have pulled ourselves out of that morass but intellectualism is still suspect in much of the adult world and it is good to hear these young people pressing for greater emphasis on intellectual attainment.

John Nelson, valedictorian at West, challenged his class to think independently and to live by personal beliefs "without concern for the attitudes of our surrounding society." He warned against the danger of travelling with the mob in order to avoid social ostracism.

In her class oration, Patricia Hamilton called on her class to be "rebels for a cause."

"Rebellion against blind acceptance of useless customs and shallow values will free us from the 'hidden persuaders' who would manipulate us for their own advantage," she said. 'It will also permit us to direct our best efforts into creative activities for a better world."

William Dahlk, salutatorian, drew on the life of the great genius and humanitarian Dr. Albert Schweitzer, whose individualistic way of life cannot be understood by those who follow the mob, to point an example for his classmates.

At Central, John Apinis, class orator, called on the United States to "use our great prestige, power, and mental capacity to promote the rise of all people to freemen."

There was none of the fear that haunts the adult isolationists in Mr. Apinis' chal-

"A strong united organization of nations outlawing war is vital to our very survival," he declared.

Helen Subey, Central's valedictorian, warned against a "life of mediocrity."

The adult population, which through fear has brought the world to its present unpleasant plight, would do well to read and ponder the challenge these youngsters presented so forcefully.
